MASK.

MASK, *v.*

MASK, *n.*

MA'SKER,

MA'SKERY.

MA'SKERADE, OR

MA'SQUERADE, *n.*

MA'SQUERADER.

Fr. *masquer, masque*; It.

mascherare, maschera; Sp.

mascara; Fr. *masquerade*; It.

mascherata; Sp. *mascara*. The

Etymologists have written large-

ly and elaborately upon this

word, especially the contribu-

tors to the *Etymologique de la Langue Française* of Menage; all very unsatisfactorily. See them. Salmasius from the Gr. *βασκavla*, (*fascinum*), larva, worn to avoid fascination. Martinius, (*in v. Masca*), from the D. *masche*, a net, to veil the face. Menage and Skinner from the Arabic *mascara*, sport, jest, or joke. See also *Maske* in Wachter. Martinius alone approaches to probability, and requires no more in confirmation than the historical fact, that *Masks* were originally of network. See his *Lexicon Philologicum*.

A *mask* is applied, first, to a visor or cover to the face, worn to disguise it; an entertainment at which the parties wore such *masks*; generally, an entertainment or revelry; consequentially, a disguise or concealment.

And all the worthy dwelling enuiroun
Young, fresh, and lusty he gadrid to the toun,
Maskewed his wals and his toures.

Lidgate. *The Story of Thebes*, part iii. p. 593.

Thus in the net of my conceit,
I *masked* still among the sort
Of such as fed vpon the bayte,
That Cupide laide for his disporte.

Vncertaine Auctors. *The Louer that once disdained Loue*, &c.

Some haue I sene ere this, ful boldlie come daunce in a *maske*,
whose dauncing became theym so well, that yf theyr vysours had
beene of theyr faces, shame woulde not haue suffired theym to set
forth a foote.

Sir Thomas More. *Workes*, fol. 1039. *Answers to the Poysoned
Boke*, &c.

VOL. XXV.

Cause them to be deprehended and takē and their *maskers* taken
of and theyr hipocrisie to be dyscouered.

Sir Thomas More. *Workes*, fol. 758. *The Second Part of the Con-
futation of Tyndall*.

Yet wrote he at an other tyme to pope Zachary, to see the mani-
fest abusyons of Rome reformed, specially theyr *maskynges* in the
night after the Pagan's manner.

Bale. *English Volaries*, part i. p. 60.

After whom marcht a jolly company,
In manner of a *maske*, enranged orderly.

Spenser. *Faerie Queene*, book iii. can. 12.

One time the king came sodainly thither in a *maske* with a dozen
maskers all in garments like sheepeheards.

Stow. *Henry VIII. Anno* 1516.

And, when they ceast, it gan again to play
The whiles the *maskers* marched forth in trim aray.

Spenser. *Faerie Queene*, book iii. can. 12.

So Demetrius threw aside his *masker's* habit, and attiring him-
self poorly, did fearfully steal away out of his own camp.

Ralegh. *History of the World*, book iv. ch. vii. sec. 7. fol. 530.

MAC. Wee'l first thank heauen

And then wee'l see some *maskery*.

Nabbes. *The Unfortunate Mother*, E. 3.

If it were but some *mask-house*, wherein a glorious (though
momentary) show were to be presented, neither white staves nor
halberts could keep you out.

Bishop Hall. *Contemplations*, book iv.

And seen of life's delights the last extremes,
I found all but a rose hedg'd with a brier,
A naught, a thought, a *masquerade* of dreams.

Drummond. *Urania*, st. 2.

A bird's was proper, yet he scorns to wear
Any but that which might his thunder bear.
Down with his *masquerading* wings he flies
And bears the little Trojan to the skies.

Croxall. Ovid. *Metamorphoses*, book x.

But the battery raised for the demolition of both [the kingdom
and priesthood of Jesus Christ] was *masked* with such an hypocrisy
as the world never saw before, nor (it is to be hoped) will ever see
again.

Horne. *Works*, vol. v. p. 132. *Discourse* 9.

B

MASK.

MASK.

Meanwhile the face
Conceals the mood lethargic with a mask
Of deep deliberation, as the man
Were task'd to the full strength, absorb'd and lost.
Cowper. *The Task*, book iv.

What if I give a *masquerade*?—I will.
But how? aye, there's the rub! (*pausing*) I've got my cue:
The world's a *masquerade*! the *maskers* you, you, you.
Goldsmith. *Epilogue to the Comedy of the Sisters*.

The dreadful *masquerader*, thus equipt,
Out-sallies on adventures.

Young. *The Complaint*. Night 5.

Origin.

MASKS, the most brilliant and imaginative among all the entertainments of our ancestors, are traced with much probability to the Religious Processions of the Church of Rome, in which various Scriptural characters were frequently represented, not without some occasional tinge of burlesque solemnity. The transition from the original purpose to one of mere amusement may be easily conceived, and the Mask, or, as we should rather call it in its infancy, the MASQUERADE, in order to distinguish it from that lofty species of Drama into which it ultimately ripened, very early became a prevalent fashion among the Princes and Nobles of Europe. In our own History we are told by Hall and Holinshed that the conspirators in the assassination plot against Henry IV., in 1400, intended "to have set upon the King in the Castell of Windsore, under colour of a Maske, or Mummerie, and so to have despatched him:" but the expressions of the authority which they cite by no means bear the Chroniclers out in those words by which they have rendered them; for Thomas of Walsingham says no more than *sub simulatione ludorum natalitiorum*, (*ap. Cambdeni Anglica*, p. 362,) and it by no means follows that those sports were Masks. At a later period, however, Holinshed has afforded numerous accounts of these diversions. The Court of Henry VIII., before the Tyrant's sanguinary licentiousness had deluged it with blood, presented many of these gorgeous Spectacles; and the earliest of which we read occurred in the first year of his reign, not long before the ill-fated Katharine of Arragon was delivered of his first-born Henry. On the 14th of November, 1510, after Justs at Richmond, the King banqueted some strangers from the Emperor's Court and the Ambassadors from Spain; and after supper, having willed them to retire into the Queen's chamber, himself and fifteen others changed their dresses, and "apparelled in Almaine jackets of crimson and purple sattin with long quartered sleeves and hosen of the same sute, their bonnets of white veluet, wrapped in flat gold of damaske, with visards and white plumes, came in with a mummerie; and after a certeine time that they had plaiied with the Queene and the strangers, they departed. Then suddenlie entered six minstrels, richlie apparelled, plaieng on their instruments; and then followed foureteene persons, gentlemen, all apparelled in yellow sattin, cut like Almains, bearing torches. After them came six disguised in white sattin and gréene, embrodered and set with letters and castels of fine gold in bullion; the garments were of strange fashion, with also strange cuts, euerie cut knit with points of fine gold, and tassels of the same, their hosen cut and tied in likewise, their bonnets of cloth of siluer woond with gold. The first of these six was the King, the Earle of Essex, Charles Brandon, Sir Edward Howard, Sir Thomas Kneuet, and Sir Henrie Guildford.

"Then part of the gentlemen bearing torches de-

parted and shortlie returned, after whom came in six ladies, apparelled in garments of crimson sattin embrodered and trauersed with cloth of gold, cut in pomegranats and yokes, stringed after the fashion of Spaine. Then the said six men densed with these six ladies: and after that they had densed a season, the ladies took off the men's visors, whereby they were knowen: whereof the Queene and the strangers much praised the King, and ended the pastime." (iii. 557. Ed. 1808.)

The Pageant, a show derived more immediately from Chivalry, is strikingly intermixed with the Masquerade in the next entertainment which we shall notice as described by Hall, (*ad ann. 1512*), from whom Holinshed has borrowed it with a few slight verbal alterations.

"The Kyng this yere kept the feast of Christmas at Grenewiche wher was such abundaunce of viâdes serued, to all comers of any honest behauor, as hath been fewe times seen. And against Newyeres night, was made in the halle a castle, gates, towers, and dungion, garnished with artilerie, and weapons after the moste warlike fashion: and on the frount of the castle was written *le Fortresse dangerus*, and within the castle were vi. ladies, clothed in russet satin, laide all ouer with leues of golde, and euery owde knit with laces of blewe silke and golde. On their heddes, coyfes, and cappes all of gold.

"After this castle had been caried about the hal, and the Quene had beheld it, in came the Kyng with fiue other, appareled in coates, the one halfe of russet satyn, spangled with spangels of fine gold, the other halfe riche clothe of gold, on their heddes cappes of russet satin, embroudered with workes of fine gold bulliō. These vi. assaulted the castle, the ladies seyng them so lustie and coragious, wer content to solace with them, and vpon farther comunicacion, to yeld the castle, and so thei came doune and daunced a long space. And after the ladies led the knightes into the castle, and then the castle sodainly vanished out of their sightes.

"On the daie of the Epiphanie at night, the Kyng with a xi. other were disguised, after the maner of Italie, called a Maske, a thyng not seen afore in Englande; thei were appareled in garmentes long and brode, wrought all with gold, with visers and cappes of gold, and after the banket doen, these Maskers came in, with sixe gentlemen disguised in silke, bearing staffe torches, and desired the ladies to daunce, some were content, and some that knewe the fashion of it refused, because it was not a thyng commonly seen. And after thei daunced and commoned together, as the fashion of the Maske is, thei tooke their leaue and departed, and so did the Quene, and all the ladies."

In like manner, without reciting the costume, we may state that on New Year's night four years afterwards, the King, accompanied by three noblemen and four ladies, in rich and strange apparel, which much pleased the Queen, came into her chamber "with great light of torches, and danced a great season, and then put off their visors, and were all well knowne, and then the Queene hartlie thanked the King's grace for her goodlie pastime and disport."

Hitherto the Maskers appear only to have danced without any approach to histrionic representation, and entirely in dumb show, but at a banquet given to some Ambassadors from France on the 8th of October, 1519, an advance appears made towards dramatic exhibition.

"At night they were brought into the hall, where was a rocke full of all maner of stones, verie artificiallie

MASK.

First dramatic character.

MASK.

made, and on the top stood five trees, the first an olive tree, on which hanged a shield of the armes of the church of Rome; the second a pine-apple tree, with the armes of the Emperour; the third a rosier, with the armes of England; the fourth a branch of lillies, bearing the armes of France; and the fift a pomegranat tree, bearing the armes of Spaine: in token that all these five potentats were ioined together in one league against the enimies of Christes faith.

"In and vpon the middest of the rocke sate a faire ladie, richlie apparellled with a dolphin in hir lap. In this rocke were ladies and gentlemen apparellled in crimsin sattin, couered ouer with floures of purple sattin, embrodered vpon with wrethes of gold, knit together with golden laces, and on euerie floure a hart of gold moouing. The ladies apparell was after the fashion of Inde, with kerchifes of pleasance, hatched with fine gold, and set with letters of Gréeke in gold of bullion; and the edges of their kerchifes were garnished with hanging perle. These gentlemen and ladies sat on the nether part of the rocke, and out of a caue in the said rocke came ten knights, armed at all points, and fought together a faire tournie. And when they were seuered and departed, the disguisors descended from the rocke, and danded a great space; and suddenlie the rocke mooued and receiued the disguisors, and immediatlie closed againe. Then entered a person called Report, apparellled in crimsin sattin full of toongs, sitting on a flieng horsse with wings and féet of gold called Pegasus. This person in French declared the mening of the rocke, the trées, and the tournie." (Holinshed, *ut sup.* 633.)

In 1520, during the negotiations for the delivery of Tournay to Francis I., divers young gentlemen of England who remained in the French Court, "with the French King rode dailie *disguised* through Paris throwing egges, stones, and other foolish trifles at the people." These plainly were mere Carnival frolics. But they were Masquerades which Henry exhibited to the hostages who had been delivered to him for assurance of the fulfilment of the Treaty by the French, first at Greenwich and afterwards at Havering in the Bower.

"The King vsed familiarlie these foure hostages, and on the seuenth daie of Maie prepared a disguising, and caused his great chamber at Gréenwich to be staged, and great lights to be set on pillors that were gilt, with basons gilt, and the rooffe was couered with blue sattin set full of presses of fine gold and flowers: and vnder was written Jammes, the meaning whereof was, that the flower of youth could not be oppressed. Into this chamber came the King, and the Quéene, with the hostages, and there was a goodlie comedie of Plautus plaied; and that doone, there entered into the chamber eight ladies in blacke veluet bordered about with gold, with hoopes from the wast downeward, and sléeues ruffed and plited at the elbow, and plaine in the middest, full of cuts, plucked out at euerie cut with fine camerike, and tired like the Ægyptians verie richlie. And when these ladies had passed about the place, in came eight noble personages in long gownes of taffata set with flowers of gold bullion, and vnder that apparell cotes of blacke veluet embrodered with gold all to cut, and plucked out with cuts of white sarcenet, and euerie man had buskins of blacke veluet full of agglets of gold.

"Then the eight men danded with the eight ladies all being visarded, and suddenlie the men cast off their

large gownes, and then their vnder apparell was séene. And when all was doone, euerie lord and ladie put off their visards, and then it was knowne that the King, the Duke of Suffolke, and the French Quéene were there, which were present at the plaie time." (*Id. Ib.* 635.)

"After the banquet ended, with noise of minstrels entered into the chamber eight Maskers with white beards, and long and large garments of blew sattin paned with sipers, powdered with spangles of bullion gold, and they danded with ladies sadlie, and communed not with the ladies after the fashion of Maskers, but behaued themselves grauelie. Wherfore the Quéene plucked off their visors, and then appeared the Duke of Suffolke, the Earle of Essex, the Marquesse Dorset, the Lord Aburgauennie, Sir Richard Wingfield, Sir Robert Wingfield, Sir Richard Weston, Sir William Kingston: all these were somewhat aged, the yoongest man was fiftie at the least. The ladies had good sport to see these ancient persons Maskers.

"When they departed, the King and the foure hostages of France, and the Earle of Deuonshire with six other yoong gentlemen entered the chamber, of the which six were all in yellow sattin, hose, shooes, and caps, and six other were in like maner in greene: the yellow sattin was fretted with siluer of damaske, and so was the greene verie richlie to behold: then euerie Masker took a ladie and danded. When they had danded and communed a great while, their visors were taken off, and they knowne, and the King gaue manie brooches and proper gifts where he liked." (*Id. Ib.* 640.)

Maskings were often repeated during the well-known interview of the Monarchs in the *Field of Cloth of Gold*. But we shall only notice one more instance, the Masquerade at Cardinal Wolsey's, of which Shakspeare has made so good use by introducing Henry at it to the unfortunate Anne Boleyn. After describing the magnificence in which Wolsey lived, the Chronicler proceeds. "On a time the King came suddenlie thither in a Maske, with a dozen Maskers, all in garments like shepherds, made of fine cloth of gold, and crimosin satten paned, and caps of the same:"—a sort of garment which no shepherds but those of El Dorado can be supposed to wear:—"with vizards of good physionomie, their haire and beards either of fine gold-wire silke, having sixtene torch-bearers, besides their drums and other persons with visards all clothed in sattin of the same color." The reception of this gorgeous company was much as Shakspeare has described it; the Cardinal understanding they were foreigners, and being himself unable to speak French, communicated with them through the Lord Chamberlain, and gave them license at their request to play at mumchance, and to dance with the bevy of beauties which surrounded him. The Maskers then saluted all the dames, and having well perused them, opened a great cup of gold filled with crowns and other pieces, and commenced play. In the end they poured the remainder of the gold before Wolsey, "At all!" quoth the Cardinal, threw the dice and won the main. Then suspecting the King's presence, he stated his conjectures to the Lord Chamberlain, and begged him to show him *that one* who was more worthy than himself to occupy the place of honour. The Lord Chamberlain having apprized the visitors, they confessed the truth of the Cardinal's suspicion, and that if he could discover the particular per-

MASK.

Cardinal
Wolsey.

MASK. sonage, he would accept the seat of estate. "With that the Cardinal, taking good advisement among them, at the last quoth he, 'Me seemeth the gentleman with the blacke beard should be even he;' and with that he arose out of his chaire and offered the same to the gentleman with the blacke beard with his cap in his hand. The person to whom he offered his chaire was Sir Edward Nevill, a comelie knight that much more resembled the King's person in that Mask than any other. The King perceiving the Cardinall so deceived could not forbear laughing, but pulled downe his visor and Master Nevill's also, and dashed out such a pleasant cheere, that all the Noble estates there assembled, perceiving the King there among them, rejoised very much." Henry then changed his dress, a fresh banquet was served up during his absence, and the remainder of the night was passed "with banketting, dancing, and other triumphs, to the great comfort of the King, and pleasant regard of the Nobilitie there assembled." (*Id. ibid.* 705.)

Elizabeth. The Spectacles exhibited before Elizabeth were for the most part rather Pageants than Masks, and among them the festivities of Kenilworth are, perhaps, the most remarkable. Nichols, however, in his *Progresses of the Virgin Queen*, (iii. 194.) has printed from a MS. volume a collection of Masks represented before her, which are reasonably supposed to have been written by George Ferrers, sometime Lord of Misrule in her Court. They are in prose, interspersed with occasional songs, execrably dull, and without any notices from which we can ascertain whether they were accompanied by decoration.

Accounts of the Master of the Revels. Malone, who was too staunch a commentator to have much sympathy with Poetry, and who, therefore, has spoken slightly of "the wretched taste of those times which found amusement" in Masks, has nevertheless illustrated them, as became an Antiquary, by some curious extracts from the Accounts of the Master of the Revels and the Treasurer of the Chamber, still remaining in the Audit Office. Some of those entries, which have been printed by the late Mr. Boswell in an appendix to Malone's *History of the Stage*, (Shakspeare, vol. iii.) we shall throw together below. The charges are stated to be "for the apparelling, discharging, furnishing, fitting, garnishing, and orderly setting forth of men, woomen, and children, in sundry Tragedies, Playes, Maskes, and Sports, with their apte houses of paynted canvas and properties incident, such as might most lively expresse the effect of the Histories, Plaies, and devises, in Masks this yeare, (begining with 1571, the 13th of Elizabeth,) shoven at the Coorte for her Ma^{ties} regal disporte and recreacion." John Carow charges £13. 11s. 1d. "for sundry parcells of stuff by him bowghte and provided for the use of this office, and for the Plaies, Masks, and Showes, sett foorth theroff by the seide M^{tie} comandement, viz. Sparres, rafters, boords, punchyns, nayles, wires, hookes, hinges, horstayles, hobbyhorses, pitchers, paper, branches of sylke, and other garniture for pageants, feathers, fagbroches, tow, trenchers, black gloves, septers, wheatestaves, bodyes of men in tymber, dishes for devills eyes, devices for hell, hellmouthe, staves for banners and bowes, bills, daggs, targetts, swoordes, daggers, fawchins, fierwoorke, bosses for bitts, speares, paste, glew, packthrede, whipcorde, holly, ivy, and other greene bowes, and strewing erbes, and such like implements by him employed at the Coorte, and in th' office." This may be accepted as an average inventory of the "properties" required for a

MASK. Mask. In a Joiner's Bill are charges "for a bolte shackles, and a collar for Discorde," the "curling of whose heare made of black silk being 60 ounces," cost 7s. 8d. This allegorical personage made her appearance in a Mask exhibited in June 1573, in honour of the Duke of Montmorency, Ambassador from France, in a temporary Banqueting House erected at Whitehall, "the floore therof being all strewed with rose leaves pickt and sweetned with sweet waters." During the same year "thappoticary," is paid 27s. 4d. for "sugar plate, musk *kumfets*, corianders prepared, clove *cumfets*, (a remarkable instance of the uncertainty of orthography in those days,) synnamon cumfets, ginger cumfets, rose water, spike water, &c. all of which served for flakes of yse and hayle stones in the Maske of Janus—the rose water sweetned the balls made for snowballs, and presented to her Ma^{ty} by Janus." The Haberdasher received for "white berds, aberne berds, a black fyzician's bearde, berds for fishers, curled heare for fishers caps, heares for palmers and red berds." Among sundry expenses occur "canvas for monsters and greate hollow trees, mosse and young okes for wylde men, poles and wands for Licters, bayes for the Prologgs and properties, ivy for the wilde men and tharbor, armes of okes for the hollo tree, a Jebbett to hang up Diligence, Fishes counterfeit, viz. whiting, place, mackarell, paste and paper for the dragon's head, one Maske of Ladies with lights, being six Vertues prepared and brought in redynesse, but not shoven for the tediousnesse of the Playe that night." Also on occasion of a Mask at Blackfryers on Ash Wednesday, 1573, in which appeared dyvers children with their tutors and ten Italian women, a charge is made "for fyer and vittells for the children when they landed, some of them being sick and colde."

Again we read of "lambeskinnes for shepperds, horstayles for the wylde mannes garment, arrowes for Nymphes, three Devells cotes and heads, and one olde mannes frier cote, skynnes to cover hornes, a corde and a halter for an asse, heare to stuff bootes for the horses, fair wryting of pozies for the Mask, long poles with brushes for chimney sweepers in my L. of Leicester's mens Play, pulleys for a clowde, double gyrts to hang the Soon (sun) in the clowde, monsters, mountaynes, forrestes, beasts, serpents, heaven, hell and the Devell and all, a periwigg of heare for King Xerxes' syster, a houndes head moulded for a Cenofall, (*Cynocephalus*), aquavite to burn on a rock, and rose water to alley the smell thereof, a garland of grapes and leaves for Baccus, a hoope and blewe lynneth cloth to mend a clowde that was borrowed, and cut to serve the rock in the *Burning Knight*, syze, cullers, pottes, nayles, and pensills, used and occuppyed upon the payntinge of seven cities, one villadge, one countrey house, one battlement, 10 axes, a braunche lillyes, and a mounte, a vizard for an ape's face, and a chariote of 14 foote long, and 8 foot brode, withe a rocke upon it, and a fountayne therein, with the furnishing and garnishing thereof for Apollo and the Nine Muzes."

Splendid as were these exhibitions, for splendid they continue to be, even when we are admitted as above behind the scenes, it remained for the 1st James to carry to its height the glories of the Mask. Without claiming for that King the same merits which Mr. D'Israeli has allotted him, (for in spite of that pleasing writer's most ingenious and most agreeable defence, we still believe James to have been sufficiently coarse

James I.

MASK. and odious,) we must admit that his Court was in many instances magnificent, probably, as Mr. Gifford has told us, through the good taste of his Queen, "who loved pomp and understood it." Accordingly, under her auspices the Mask, which, as described by Warton, and as we have seen in the instances given above, consisted hitherto of music, dancing, gaming, a banquet, and a display of grotesque personages and fantastic dresses, now assumed a far higher character, and became "married to immortal verse." "I do not find," continues Warton, "that it was a part of their diversion in these entertainments to display humour and character." (He is speaking of Henry VIIIth's time, and Ashby adds a pungent note. "Of these (humour and character) there was probably about as much as would be found in a modern Masquerade, consisting of the King and his Court, Lords of the Bedchamber, and Maids of Honour.") "Their chief aim seems to have been to surprise by the ridiculous and exaggerated oddity of the visors, and by the singularity and splendour of the dresses. Every thing was out of nature and propriety. Frequently the Mask was attended with an exhibition of some gorgeous machinery, resembling the wonders of a modern Pantomime. For instance, in the great Hall of the Palace, the usual place of performance, a vast mountain covered with tall trees arose suddenly, from whose opening caverns issued Hermits, Pilgrims, Shepherds, Knights, Damsels, and Gypsies, who being regaled with spices and wine, danced a morisco or morris dance. They were again received into the mountain, which, with a symphony of rebecs and recorders, closed its caverns, and tumbling to pieces was replaced by a ship in full sail, or a castle besieged." (*Hist. of Eng. Poetry*, sec. 44.)

Ben
Jonson.

This glittering chaos was reduced to order by the powerful genius of Ben Jonson; not that we would assert him to be the first who united Poetry with Music, dancing, and scenery, nor that he always excelled his contemporaries in that union, but that as he was more largely employed than any other Poet of his time in this branch of the Drama, so it is to him that we ought to refer for our standard of it. Without viewing Jonson with admiration equally unqualified with that which Mr. Gifford has expressed, and perceiving much in his Masks which is frigid, wearisome, and pedantic, it must, at the same time, be acknowledged that they present much more belonging to very lofty Poetry. The study of Jonson's gnarl'd, (if we may so call it,) knotty, nervous, and masculine style, would form a salutary corrective to the tinsel and meretricious taste of our own day, and we may be permitted on that account to pause a little longer upon it.

We find a Mask at Hampton Court, in which the Queen and eleven Maids of Honour performed, on January 8, 1604. It was composed by Daniel, (Nichols's *Progresses of James I.* i. 305.) and it was not till the following year that Jonson appears to have commenced his career at Court (for we omit his exquisite little entertainment at Althorpe, which Mr. Gifford has named *The Satyr*, because it contains no more than the elements of a Mask) with the *Queen's Mask of Blackness*, personated on Twelfth Night, 1605, at a cost of £3000. We shall give at length the author's own very beautiful prose description of its plot. "Hence (because it was her Majesty's will to have them blackmoors at first) the invention was derived by me, and presented thus: first, for the scene, was drawn a

Mask of
Blackness.

landtschap (landscape) consisting of small woods, and here and there a void place filled with huntings; which falling, an artificial sea was seen to shoot forth, as if it flowed to the land, raised with waves which seemed to move, and in some places the billows to break, as imitating that orderly disorder which is common in Nature. In front of this sea were placed six Tritons, in moving and sprightly actions, their upper parts human, save that their hairs were blue, as partaking of the sea colour: their desinent parts fish, mounted above their heads, and all varied in disposition. From their backs were borne out certain light pieces of taffata, as if carried by the wind, and their music made out of wreathed shells. Behind these, a pair of sea-maids, for song, were as conspicuously seated; between which, two great sea-horses, as big as the life, put forth themselves; the one mounting aloft, and writhing his head from the other, which seemed to sink forward; so intended for variation, and that the figure behind might come off better: upon their backs, Oceanus and Niger were advanced. Oceanus presented in a human form, the colour of his flesh blue, and shadowed with a robe of sea-green; his head gray, and horned, as he is described by the Ancients: his beard of the like mixed colour: he was garlanded with alga, or sea-grass; and in his hand a trident.

"Niger, in form and colour of an Æthiop; his hair and rare beard curled, shadowed with a blue and bright mantle: his front, neck, and wrists adorned with pearl, and crowned with an artificial wreath of cane and paper-rush.

"These induced the Maskers, which were twelve Nymphs, Negroes, and the Daughters of Niger: attended by so many of the Oceaniae, which were their light-bearers.

"The Maskers were placed in a great concave shell like mother of pearl, curiously made to move on those waters and rise with the billow; the top thereof was stuck with a cheveron of lights, which indented to the proportion of the shell, struck a glorious beam upon them, as they were seated one above another: so that they were all seen, but in an extravagant order.

"On sides of the shell did swim six huge sea-monsters, varied in their shapes and dispositions, bearing on their backs the twelve torch-bearers, who were planted there in several graces; so as the backs of some were seen; some in purple or side; others in face; and all having their lights burning out of whelks, or murex shells.

"The attire of the Maskers was alike in all, without difference: the colours azure and silver; but returned on the top with a scroll and antique dressing of feathers, and jewels interlaced with ropes of pearl. And for the front, ear, neck, and wrists, the ornament was of the most choice and orient pearl; best setting off from the black.

"For the light-bearers, sea-green, waved about the skirts with gold and silver; their hair loose and flowing, gyrlanded with sea-grass, and that stuck with branches of coral.

"These thus presented, the scene behind seemed a vast sea, and united with this that flowed forth, from the termination, or horizon of which (being the level of the state, which was placed in the upper end of the hall) was drawn by the lines of perspective, the whole work shooting downwards from the eye; which decorum made it more conspicuous, and caught the eye afar off with a wandering beauty: to which was added an obscure

MASK.

MASK.

Sir Dudley
Carleton's
remarks.

and cloudy night-piece, that made the whole set off. So much for the bodily part, which was of Master Inigo Jones's design and act."

This show, however gorgeous it appears when written down, was probably not a little defective in exhibition, and we are much inclined to accept the comment of an eye-witness as very generally applicable to the *getting up* of these Spectacles. Sir Dudley Carleton writes to Winwood as follows. "At night we had the Queene's Maske in the Banqueting House, or rather the Pagent. There was a great engine at the lower end of the room which had motion, and in it were the Images of Sea-horses with other terrible fishes which were ridden by Moors. The indecorum was that there was *all fish and no water*. At the further end was a great shell in form of a skallop, wherein were four seats, on which sate the Queen and her Ladies, (whom he enumerates.) Their apparell was rich, but too light and Curtezan-like for such great ones. Instead of vizzerds their faces and arms up to the elbows were painted black, which was disguise sufficient, for they were hard to be known; but it became them nothing so well as their red and white, and you cannot imagine a more ugly sight than a troop of lean-faced Moors." (Winwood's *Memorials*, ii. 44.) Mr. Gifford is very angry with this statement, which he considers to be an ill-natured criticism, like that of a modern Newspaper-writer; and respecting the Fish and water he observes, that "there was assuredly as much of one as of the other." Now on the authority of an absolute spectator we cannot but believe that there was assuredly *not* so much of one as of the other; that there was probably a huge troop of Moors bestriding monsters, which wallowed in a scanty shallow of pasteboard waves, an absurdity of not unfrequent occurrence even in our present highly improved condition of theatrical machinery. But this was the fault of Inigo Jones, who superintended the *motions*, not of Jonson, who wrote the Dialogue. Again, says Mr. Gifford, a little peevishly, "The plot required the actors to appear as Moors, and he (Sir D. Carleton) finds out that they would look better if they were in their natural colour! It is to be hoped that some handsome Othello will take the hint." This is by no means fair; Sir Dudley Carleton does not find fault with Ben Jonson's plot, but expresses surprise that the Queen, whose object no doubt was to exhibit her personal beauty to the best advantage, should have chosen a disguise which deformed her. But to proceed to the conduct of the Mask. "The Spanish Ambassador was taken out to dance and foote it like a lusty old gallant with his Country-woman. He took out the Queen, and forgot not to kiss her hand, though there was danger it would have left a mark upon his lips. The night's work was concluded with a Banquet in the Great Chamber, which was so furiously assaulted that down went table and tressels before one wit was touched." (*Id. Ib.*) This specimen of the manners of James's Court does not convey much notion of refinement. Yet it is not quite so bad as some occurrences a few months before at the celebration of the nuptials of Sir Philip Herbert and Lady Susan Vere, when we are told, "there was a Mask in the Hall, which for conceite and fashion was suitable to the occasion. *There was no small loss that night of chaines and jewells, and many great Ladies were much shorter by the skirts, and were well enough served that they could keep cut no better.*" (*Id. Ib.*) This rude over-night scene of romping and junketing was succeeded on the

following morning by a most unseemly and unmanly MASK. outrage on decency, which we will not recount, perpetrated by the King himself on the Bride and Bridegroom; that King, whom it has latterly become a fashion to invest with merits which were at least undiscovered by his contemporaries.

Neither the *Mask of Blackness*, nor the *Mask of Beauty*, which succeeded on Twelfth-night, 1608, are distinguished by any great vein of Poetry, and they were more honoured by the nobility of their performers, the Queen acting in each, than by their intrinsic merit. On the unhappy marriage of the Earl of Essex with his infamous Countess in 1608, Jonson's Muse was again called into exercise, and he pressed Catullus into his service to frame Hymenæals more closely bearing upon the exposition of their theme, than modern ears willingly admit. In his Mask on that occasion the four Humours and Affections were quaintly introduced to interrupt the ceremonies, "being tropically brought in before marriage as disturbers of that mystical body," till they are quelled by Reason sitting "on the top of a globe as in the brain or highest part of man." If the machinery, however, was at all adequate to the Poet's conception, few Spectacles ever exceeded this in splendour. The Barriers which were celebrated on the following Night, were preluded by a controversy, from the same pen, between *Time* and *Opinion*, as to the respective advantages of Matrimony and Celibacy. The former pleads ably and Poetically in favour of Marriage:

Marriage Love's object is; at whose bright eyes
He lights his torches and calls them his skies.
For her he wings his shoulders, and doth fly
To her white bosom as his sanctuary.
She makes him smile in sorrows and doth stand
'Twixt him and all wants with her silver hand.
In her soft looks his tender feet are tied,
And in his fetters he takes worthy pride.

Sixteen Knights on either side then engaged in combat, which they "performed with that alacrity and vigour, as if Mars himself had been to triumph before Venus, and invented a new Mask." Truth at last descends "in a second Thunder," proves *Opinion* to be but a counterfeit, and decides in favour of Marriage.

Without entering into the perplexed question of the chronology of *Macbeth*, Middleton's *Witch*, and Jonson's *Mask of Queens*, it may be sufficient to say that from Malone's *Disquisition* it appears at least very probable that Shakspeare claims priority, and that it is manifestly unjust in Mr. Gifford to call him broadly and without qualification "a copyist" in this instance. The date of those respective pieces, however, has nothing to do with the comparative merits of Shakspeare and Jonson, and such a comparison, indeed, is altogether impertinent, and, from their widely different courses, ought never to have been instituted. Even if Shakspeare had Middleton before him when he wrote, the most purblind Critic must acknowledge the magnificence of his improvement upon the few thoughts which he permitted himself to borrow. If both Shakspeare and Middleton preceded Jonson, it is equally plain how very little use the last made of either. Shakspeare in his *Incantation* drew almost entirely upon the prolific stores of his own fancy for images. Jonson, on the contrary, had recourse, as usual, to the copious treasures which he had amassed by reading, and no doubt his magic is far the more erudite and legitimate of the two, however inferior it may be in grandeur. His opening is most spirited.

MASK.

Mask of
Hymen.Mask of
Queens.

MASK.

Hag. Sisters stay we want our Dame,
Call upon her by her name,
And the charm we use to say,
That she quickly anoint, and come away.
1 Charm. Dame, Dame! the watch is set:
Quickly come, we all are met.—
From the lakes and from the fens,
From the rocks, and from the dens,
From the woods and from the caves,
From the Church yards and the graves,
From the dungeon, from the tree
That they die on here are we.

Neither does Jonson fall off in the enumeration which the eleven Hags give of their contributions prepared for the caldron. But the Charm itself loses the grotesque of terror, and is degraded into the downright ludicrous. The distinction is nice; but how exquisitely has it been maintained both by Shakspeare and, for the most part, by Goethe! how completely has it been forgotten by Jonson in the following lines:

The sticks are across, there can be no loss,
The sage is rotten, the sulphur is gotten
Up to the sky that was in the ground.
Follow it then with our rattles round;
Under the bramble, over the brier,
A little more heat will set it on fire.
Put it in mind to do it kind
Flow water and blow wind.
Rouncey is over, Robble is under,
A flash of light and a clap of thunder,
A storm of rain and another of hail.
We must all home in the egg-shell sail;
The mast is made of a great pin,
The tackle of cobweb, the sail is thin,
And if we go through and fall not in.—

A cloud of pitch, a spur and a switch
To haste him away and a whirlwind play,
Before and after with thunder for laughter,
And storms for joy of the roaring boy;
His head of a drake, his tail of a snake.

Mask of
Oberon.

The *Mask of Oberon*, composed in 1610 for the elevation of Henry, then in his sixteenth year, to the title of Prince of Wales, is among the lightest and most delicate specimens of Jonson's Muse. The Satyrs and Sylvens converse in very playful language, and the Poet, in this instance, borrows from his inexhaustible classical stores without stiffness or pedantry. Silenus assures his followers that Oberon (Prince Henry) will henceforward be their ruler, and this declaration is followed by some very characteristic inquiries.

4 Sat. Will he give us pretty toys,
To beguile the girls withal?
3 Sat. And to make them quickly fall?
Silen. Peace, my wantons! he will do
More than you can aim unto.
4 Sat. Will he build us larger caves?
Silen. Yes, and give you ivory staves
When you hunt; and better wine—
1 Sat. Than the Master of the Vine?
2 Sat. And rich prizes to be won
When we leap or when we run?
1 Sat. Aye, and gild our cloven feet?
3 Sat. Strew our heads with powders sweet?
1 Sat. Bind our crooked legs in hoops
Made of shells, with silver loops?
2 Sat. Tie about our tawny wrists
Bracelets of the fairy twists?
4 Sat. And to spight the coy Nymphs' scorn;
Hang upon our stubbed horns
Garlands, ribands, and fine posies?

Vision of
Delight.

In the *Vision of Delight*, we find much more harmonious versification than Jonson is usually solicitous to employ. If we had space for citation, we should will-

ingly transcribe the opening recitative, most of the Songs, and the exquisite conclusion. Even amid these beauties, however, we are obliged to shut our eyes to a tiresome speech of Phantasie, which, if it were taken singly, would justify Mr. Chamberlain's criticism when writing to Sir Dudley Carleton, "There was nothing in it extraordinary, but rather the invention proved dull," and that it was represented a second time "with alterations and additions but little bettered." It was in this Mask, or in the one which we are next about to notice, that Charles I., then Prince of Wales, made "his first exercise of the kind" as a principal actor.

Perhaps Mr. Gifford's voluntary blindness in regard to Jonson is nowhere more strikingly exhibited than in his short criticism on *Pleasure reconciled to Virtue*. "The entrance of Comus," he says, "is picturesque and full of voluptuous gaiety;" and he then implies that Milton must have been indebted to this Mask for his own incomparable masterpiece. We beseech our readers to turn to the exquisite lines beginning "The star which doth the shepherd fold," introductory to Milton's "rout of monsters," and then to compare them with the following kitchen stave by which Jonson invokes the "God of Cheer."

Room! Room! make room for the Bouncing Belly,
First father of sauce and deviser of jelly,
Prime Master of Arts and the giver of wit,
That found out the excellent engine the spit—
Hail, hail plump Paunch! O the founder of taste
For fresh meats, or powder'd, or pickle, or paste,
Devourer of broil'd, bak'd, roasted; or sod;
And emptier of cups be they even or odd.—&c. &c.

And these bald, dull, vulgar verses are followed by still broader prose, which we dare not quote. This Mask was sufficiently unbecoming the Audience before which it was produced. Perhaps, however, notwithstanding the elegance with which some of the fortunes are told, the *Gipsies Metamorphosed* was the most rude and unseemly Drama ever presented to the Beauties of a Court; yet so favourite was it with James, that it was thrice performed before him at different places.

With the serious and heroic portions of his Masks, Jonson often mingled a kind of buffoonery, the Anti-mask, or "Anticke-mask," as he himself names it, (in spite of Mr. Gifford's reclamation,) in the *Mask of Augurs*, "a foil, or false Mask," as he somewhere else calls it, which accorded as little with his main Drama, as the comic underplot of his contemporary Tragedians did with their "Cambyses' vein." That the Anti-masks occasioned "much mirth, and were eagerly hearkened after," as Mr. Gifford assures us, we have little doubt, for such is the case (and long may it so continue) with the antics of the Clown in every Christmas Pantomime; how far they were "not unfrequently the vehicle of useful Satire conveyed with equal freedom and humour," the reader may judge for himself by a few specimens. In *Mercury Vindicated*, Vulcan first dances with a troop of "threadbare Alchemists," and then with a choir of "imperfect creatures with heads of limbecks on their heads." In the *Vision of Delight*, "a she monster (is) delivered (on the stage) of six Burratines, (probably Imps clothed in a stuff so named,) that dance with six Pantaloons." In *Pleasure reconciled to Virtue*, we find a dance of "men" in the shape of bottles, tuns, &c. In *Love freed from Folly*, "twelve She Foxes enter and dance." In *Time Vindicated*, "Tumblers and Jugglers are brought in by the Cat and

Fiddle, who make sport with the Curious and drive them away;" and in *The Fortunate Islands*, the Anti-mask consists "of these twelve persons: Howleglass, the Four Knaves, Two Ruffians, (Fitz-Ale and Vapor,) Elinor Rumming, Mary Ambree, Long Meg of Westminster, Tom Thumb, and Dr. Rat." In conclusion, we transcribe the whole entry in the *Mask of Christmas*—*unus instar omnium*—performed "the Court being seated!"

"Enter his (Christmas's) Sons and Daughters, (ten in number,) led in, in a string, by *Cupid*, who is attired in a flat cap, and a prentice's coat, with wings at his shoulders. *Misrule*, in a velvet cap, with a sprig, a short cloak, great yellow ruff, like a reveller, his torch-bearer bearing a rope, a cheese, and a basket. *Carol*, a long tawney coat, with a red cap, and a flute at his girdle, his torch-bearer carrying a song-book open. *Minced-pie*, like a fine cook's wife, drest neat; her man carrying a pie, dish, and spoons. *Gambol*, like a tumbler, with a hoop and bells; his torch-bearer armed with a colt-staff and a binding cloth. *Post and Pair*, with a pair-royal of aces in his hat; his garment all done over with pairs and purs; his squire carrying a box, cards, and counters. *New Year's Gift*, in a blue coat, serving-man like, with an orange, and a sprig of rosemary gilt on his head, his hat full of brooches, with a collar of gingerbread, his torch-bearer carrying a marchpane with a bottle of wine on either arm. *Mumming*, in a masquing pied suit, with a vizard, his torch-bearer carrying the box, and ringing it. *Wassel*, like a neat sempster, and songster; her page bearing a brown bowl, drest with ribands, and rosemary before her. *Offering*, in a short gown, with a porter's staff in his hand, a wyth born before him, and a bason, by his torch-bearer. *Baby Cake*, drest like a boy, in a fine long coat, biggin, bib, muckender, and a little dagger; his usher bearing a great cake, with a bean and a pease."

In Nichols's *Progresses of James I.* we find several Masks by other writers of that King's reign. We shall begin with one "invented and set forth by Thomas Campion, Doctor of Physicke," and presented before the King at Whitehall on Twelfth Night, 1604. (vol. ii. p. 109.) Little as this very elegant Poem is known, it may justly compete with any of Jonson's, and we doubt whether the latter has ever introduced a song equally harmonious with the opening strain which Campion puts into the mouth of Zephyrus and his Silvans, who are engaged plucking flowers on a hill adorned with the bower of Flora.

Now hath Flora robb'd her bowers,
To befriend this place with flowers;
Strowe aboute, strowe aboute!
The skye rayn'd never kindlyr showers.
Flowers with Bridalls well agree,
Fresh as Brides and Bridegrooms be;
Strowe aboute, strowe aboute!
And mix them with fit melodie.
Earth hath no princelier flowers
Than Roses white and Roses red
But they must still be mingled.
And as a Rose new pluckt from Venus' throne, (thorne?)
So doth a Bride her Bridegroom's bed adorne.

Divers divers Flowers affect
For some private dear respect;
Strowe aboute, strowe aboute!
Let every one his own protect.
But he's none of Flora's friend,
That will not the Rose commend.
Strowe aboute, strowe aboute!
Let Princes Princely flowers defend.

Roses the Garden's pride
Are flowers for love, and flowers for Kings,
In Courts desired, and Weddings.
And as a Rose in Venus' bosome worne,
So doth a Bridegroom his Bride's bed adorne.

MASK.

Mr. D'Israeli has quoted part of the second stanza, and the equally graceful Dialogue between a Silvan and an Hour with which the Mask concludes. The quaintness which marked the Poet's time is strongly exhibited in one of his notes, and it is not a little to his praise that he was so far able to burst his fetters, as he has shown himself to be in the above musical lines. The piece was represented by nine Maskers, for which arrangement he pleads as follows. "Their number nine, the best and amplest of numbers, for as in Musicke seven notes containe all varieties, the eighth being in nature the same with the first, so in numbering, after the ninth we begin again, the tenth being, as it were, the diapason in arithmetick. The number of nine is formed by the Muses and Worthies, and it is of all the most apt for change and diversitie of proportion." It should not be omitted that the machinery, dresses, and scenery of this Mask were of rare magnificence.

At Prince Henry's Creation in 1610, Daniel, whom Daniel's we have already mentioned, then one of the Grooms of Tethys' the Queen's Chamber, was employed, besides Ben Jon- Festival.
son, and composed *Tethys' Festival*, Tethys herself being represented by the Queen. It contains the following very delicate song.

Are they shadowes that we see?
And can shadowes pleasure give?
Pleasures only shadowes be
Cast by bodies we conceive,
And are made the thinges we deeme
In those figures, which they seeme.

But those pleasures vanish fast
Which by shadowes are exprest;
Pleasures are not if they last,
In their passing is the best.
Glory is more bright and gay
In a flash, and so away.

Feed apace then greedy eyes
On the wonder you behold;
Take it sodaine as it flies,
Though ye take it not to hold.
When your eyes have done their part,
Thought must length it in the hart.

Campion was again the Poet on the nuptials of the Princess Elizabeth with the Count Palatine in 1613, when he produced his *Lord's Mask*. It must have been a superb Spectacle, and the Bard warmly expresses his gratitude to Inigo Jones, who presided as Machinist. After one of the Songs, we are told, "According to the humour of this Song, the Starres mooved in an exceeding strange and delightfull manner, and I suppose fewe have ever seene more neate artifice then Master Innigoe Jones shewed in contriving their motion, who in all the rest of the workmanship which belonged to the whole invention shewed extraordinarie industrie and skill, which if it be not as lively exprest in writing as it appeared in view, robbe him not of his due, but lay the blame on my want of right apprehending his instructions for the adorning of his arte." This Piece opens with a Dialogue between Orpheus and "Mania, the Goddess of Madnesse, (who) appeares wildly out of her cave, her habit was confused and strange, but yet graceful, she as one amazed speaks;" then "at the sound of strange musicke twelve Franticks enter, six men and six women, all represented in sundry habits

MASK. and humours; there was the Lover, the Self-lover, the Melancholike man full of feare, the Schoole-man overcome with phantasie, the overwatched Usurer, with others that made an absolute medley of madnesse, in midst of whom Entheus (a Poetick Furie) was hurried forth and tossed up and downe, till by vertue of a new change in the musicke, the Lunatics fell into a madde measure, fitted to a loud phantasticke tune. But in the end thereof the musicke changed into a very solemne ayre, which they softly played while Orpheus spake." The Mask is printed entire by Nichols. (*Ibid.* 554.) On the same occasion, a Mask, which is somewhat dull, was "supplied, applied, digested, and written," by George Chapman, and exhibited at Court by the Gentlemen of the Middle Temple and Lincoln's Inn. The Procession from the House of the Master of the Rolls to Whitehall, as well as "the ground and speciall structure of the whole worke," was "invented and fashioned by our Kingdomes most artfull and ingenious Architect Innigo Jones," and it resembled in character, and perhaps equalled in splendour, that magnificent pageant which we have already described as exhibited by the INNS OF COURT to Charles I. in 1633.

George
Chapman.

Beaumont's
Mask of
the Inner
Temple and
Gray's Inn.

The Mask of the Inner Temple and Gray's Inn was to have been presented on the night following that of the Middle Temple and Lincoln's Inn, and the students, with Sir Francis Bacon, at that time Solicitor General, at their head, made a splendid triumphal procession by water. Sorely, however, to their disappointment, and with no little want of grace on the part of the Court, they found the Banqueting House at Whitehall too full for their admission. The King also was so wearied and sleepy with sitting up almost the whole night before, that "he had no edge to it;" and when Bacon ventured to entreat him, that "by this disgrace he would not as it were bury them quicke," he answered, that if they stayed "they must bury him quick, for he could last no longer." Alas! for the wearisomeness of pleasure. A similar want of courtesy was exhibited on another occasion, when nine of the chief Court Beauties had prepared, at their own cost, a Mask for their Majesties in 1617. "They had taken great pains," writes Mr. Chamberlain to Sir Dudley Carleton, "in continual practising, and were almost perfect, and all their implements provided, but whatsoever the cause was, neither the Queene nor King did like or allow of it, and so all was dashed." On the following Saturday, however, the Lawyers were admitted, and performed their Mask; which was written by Beaumont, its plot being the marriage of the Thames and the Rhine; a sufficiently frigid and obvious allegory, plentifully encumbered with all the ruling inhabitants of Olympus and their lesser *cortège*, Nymphs, Naiads, Hyades, and Cupids. The first Antimask was danced by Statues, and both it and the second were especially gratifying to the King. "The second Antimask rusheth in, they dance their measure and as rudely depart, consisting of a Pedant, May Lord, May Lady, Serving-man, Chamber-maid, a Country Clown or Shepherd, Country Wench, a Host, Hostess, a He Baboon, a She Baboon, a He Fool, She Fool, ushering them in, all these appalled to the life, the men issuing out of one side of the boscage, and the women from the other. The Musick was extremely well fitted, having such a spirit of Country jollity as can hardly be imagined, but the perpetual laughter and applause was above the Musick. The Dance likewise was of the same strain, and the Dancers, or rather Actors, expressed

VOL. XXV.

every one their part so naturally and aptly, as when a man's eye caught with the one, and past on to the other, he could not satisfy himself which did best. It pleased his Majesty to call for it again at the end, as he did likewise for the first Antimask, but one of the Statues by that time was undressed." (*Ibid.* 597.)

The detestable marriage between Carr Earl of Somerset and the divorced Countess of Essex on the 26th December in the same year, was distinguished by a Mask from the pen of Campion. When the circumstances attending that foul and miserable connection are called to mind, some of the personages represented may be thought remarkable. The Piece opened with a discourse between four Squires, who related how twelve Knights, three from each quarter of the Globe, voyaging to this nuptial Ceremony, had been wronged by

Mask at
the marriage of
Somerset
and Lady
Essex.

those that never favoured good intent,
Deformed Error, that enchanting Fiend,
And wing-tongu'd Rumor his infernall friend,
With Curiositie and Credulitie,
Both Sorceresses.

These Demons then entered, and "whispered awfully as if they had rejoiced at the wrongs which they had done to the Knights." Ben Jonson also took his share in this inauspicious solemnity, in two Pieces entitled *A Challenge at a Tilt at Marriage*, and *The Irish Mask*; the latter a poor composition, well adapted to the childish taste of James, who was delighted by the broken English attributed to the Hibernians. Nichols has printed both these pieces, and has clearly shown Mr. Gifford's error in denying that Jonson was employed on occasion of this marriage. The festivities to which Somerset's favouritism gave rise were long protracted. The Lord Mayor, by the King's desire, entertained the guilty pair in Merchant Tailors' Hall on January 5, 1617, and presented two Masks and a Play written by Thomas Middleton the City Poet; and on Twelfth Night, the Gentlemen of Gray's Inn performed at Court the *Mask of Flowers*, in which the chief humour of the Antimask, to the great satisfaction of the King, was the dispraise of Tobacco.

In *Cupid's Banishment*, by Robert White, presented before the Queen on May 4, 1617, "by younge Gentlemen of the Ladies' Hall in Deptford at Greenwich," which Nichols thinks "was probably one of the principal Schools of the period," (*Ibid.* iii. 282.) among many passages which must have sounded oddly from the lips of Boarding-school Misses, we find the following very pleasing Song.

Robert
White.

The Nymph's Song in joy Cupid is gone.

Harke, harke how Philomell,
Whose notes no ayre can parallell;
Marke, marke her melody,
Shee descants still on Chastity.
The diapason of her song is "Cupid's gone."
Hee is gone, hee is gone, is quite exil'd,
Venus' brat, peevish ape, Fancie's child.
Let him goe, with his quiver and his bow,
Let him know wee are not subject to him, though
He can command, yet wee are free
From Cupid and his tyranny.

To pass on to Milton, the *Arcades* is a most noble fragment. *Comus*, according to Mr. Gifford, is defective as a Mask, and according to Mr. D'Israeli it is not a Mask at all. It is indeed a Poem wholly *sui generis*, one to which *Non viget quidquam simile aut secundum*; and if it be 'defective,' it must be for the reason

Milton's
Comus.

MASK.
MASON.

assigned by Warton, no ill judge, "As there is less music, so there is less machinery in *Comus* than in any other Mask. The intrinsic graces of its exquisite Poetry disdained assistance." And again, "On the whole, whether *Comus* be or be not deficient as a Drama, whether it is considered as an Epick Drama, a series of lines, a Mask, or a Poem, I am of opinion that our Author here is inferior only to his own *Paradise Lost*." Mr. D'Israeli tells us that *Comus* was composed by Milton to celebrate the creation of Charles I. as Prince of Wales. This is a very singular anachronism. The creation of Charles, it is true, was celebrated with great splendour at Ludlow Castle in 1616; but the incident upon which *Comus* is founded, the loss of the Earl of Bridgewater's children in Heywood Forest, did not occur till more than sixteen years afterwards, nor was the Mask itself represented at Ludlow Castle till Michaelmas 1634. We have paused long upon the Masks of Ben Jonson, who is altogether far less generally read than his high merits deserve, but upon *Comus* we need not dwell. Lord Monboddo's enthusiastic eulogy is in our minds by no means overcharged. "If it were to be properly represented with all the decorations which it requires of machinery, scenery, dress, musick, and dancing, it would be the finest exhibition that ever was seen on a modern stage."

Other
Masks
temp.
Charles I.

Of the splendid Mask presented to Charles I. by the Four Inns of Court in 1633, we have already spoken at some length, and we need here add only that it was called the *Triumph of Peace*, and written by Shirley, then a student of Gray's Inn. From the *Inner Temple Mask*, written in 1620 by William Browne, the undeservedly neglected Author of *Britannia's Pastorals*, Warton has quoted one most pleasing song, breathing the "Doric delicacy of *Comus*;" (*History of English Poetry*, 8vo. iii. 229.) and many other writers might be noticed and cited if our limits would permit. We have spoken also of none but professed and independent Masks; but many will be found introduced into Plays, as in the *Tempest*, and frequently in the Works of Beaumont and Fletcher, very sorely to the embarrassment of the audience in pursuing the story of the Drama.

Charles II.

The sombre reign of Puritanism banished the Muses, and Masks in their train. Evelyn, while at Paris in 1651, speaks of "attending the Ambassador to a Mask at Court, where the French King in person daunced five entries;" and after the Restoration he mentions a "solemn foolerie" at Lincoln's Inn in 1661, attended by the King, Duke, &c., which began with a Mask. In 1663, 1654, and 1666, he was present at Masks at Court also, but it is plain that these exhibitions had then once more degenerated to Masquerades. "Feb. 18, 1666, I was present at a magnificent Ball or Mask in the Theater at Court, where their Majesties and all the

greate Lords and Ladies daunced, infinitely gallant, the men in their richly embroidered most becoming vests." Pepys too, the most solemn of all coxcombs, relates, that on the 3d of Feb. 1663, "Mr. Pickering, after private discourse ended, we going into the other room, did at my Lady (Sandwich's) command, tell me the manner of a Masquerade before the King and Court the other day. Where six women, my Lady Castlemaine and Duchesse of Monmouth being two of them, and six men, the Duke of Monmouth, Lord Avon, and Monsieur Blanfort being three of them in vizards, but most rich and antique dresses, did dance admirably and most gloriously. God give us cause to continue the mirth."

MASK.
MASON.

From the same most unwise and uxorious old gentleman, we learn the date at which a custom, long afterwards disgracing our fair Countrywomen, took its rise. He records that on the 12th of June, 1663, he saw Lady Mary Cromwell at the Royal Theatre, who, "when the House began to fill, put on her vizard, and so kept it on all the Play: which of late is become a great fashion among the ladies, which hides their whole face. So to the Exchange to buy things with my wife; among others a vizard for herself;" and again in the same year he goes "to Covent Garden, to buy a Maske at the French House, Madame Charett's, for my wife."

Ladies'
Masks.

Lord Bacon has an admirable Essay on *Masks and Triumphs*. His refined taste led him to appreciate a higher excellence than he found in Jonson; and had he lived to see *Comus* performed, if we may judge from the following expressions, he would have ranked it in the position which it deserves to hold. "Acting in Song," he says, "especially in Dialogues, hath an extream good grace, I say *acting* not *dancing*, for that is a mean and vulgar thing;"—"turning dances into figure is a childish curiosity, and generally let it be noted that those things which I here set down are such as do naturally take the same, and not respect petty wonderments." Then highly commending Music, Songs, and Scenery, he continues, "Let Antimasks not be long, they have been commonly of Fools, Satyrs, Baboons, Wildmen, Antiques, Beasts, Spirits, Witches, Ethiops, Pigmies, Turquets, Nymphs, Rusticks, Cupids, Statues moving, and the like. As for Angels it is not Comical enough to put them in Antimasks, and any thing that is hideous is on the other side as unfit." "But," as we may conclude in the same great writer's closing words, "enough of these toys."

Lord
Bacon's
Essay on
Masks.

The Theatrical Masks of the Ancients are discussed at length, and with much learning, by Ficoroni, in a Treatise which had better be sought in a Latin Translation, *De Larvis Scenicis*, than in his own native, but inelegant, and often ungrammatical Italian.

Ancient
Theatrical
Masks.

of masonry; could you not infer from the effect that it was a work
of design and contrivance?

Hume. Essays, vol. ii. sec. 11. p. 144.

MASONRY, FREE, is the term applied to the peculiar
and secret system of the Free and Accepted Masons,
and is, in modern times, a speculative Science, uncon-
nected with Architecture or Operative Masonry, if we
except a partial illustration of the former in some of
the Lectures. According to its own peculiar language
it is founded on "the practice of Social and Moral
Virtue;" its distinguishing characteristic is Charity, in
the most extended sense; and *Brotherly Love, Relief,*
and *Truth* are exemplified and inculcated in the strongest
manner. Nor is it a valid objection that Masons in
general are not better than their fellow-men; this, if it
be the case, arises from the infirmity of human nature,
and not from any defect in the system itself.

Like every other Society of any magnitude, it has
been the object of hyperbolical encomium from its
friends, and unmerited obloquy from its enemies. The
uncertainty of its origin, the secrecy of its transactions,
the supposed obligations entered into by the initiated,
the power which Masons have of recognising each
other, have thrown a shade of mystery over the Craft,
as it is called. Many Brethren endeavour to increase
this shade, thinking thereby to obtain additional vene-
ration for the Order; but the effect is, probably, the
reverse, and in the present Age it might be better to
inform the "profane" of the general purport of the
tenets of the Society, so far as may be done consistently
with the duties of a Mason. They would then see in the
theory much to admire and nothing to condemn.

Origin.

There has been great diversity of opinion among the
writers on Free-Masonry, (*i. e.* Speculative Masonry,) as to its antiquity and origin, and a good deal of fanciful assertion has been hazarded, which necessarily will mingle itself with our following account. While some have not hesitated to make it coeval with the World itself, others have attributed its rise to the Jesuits. The Egyptian Priests, the Dionysiac artificers, the Ishmaelites, the Templars, the trading Free-Masons of the Middle

Ages, have, in their turn, had their advocates. The periods of building the Tower of Babel, of the Pyramids of Egypt, of King Solomon's Temple, of the Cathedral at Strasburg, have each been named as the epoch of its commencement. The advocates for its early origin rely on the similarity of many of the rites with those used in the various Pagan Mysteries, and thus endeavour to prove identity with them.

But it appears that Speculative Masonry, to which alone the term "Free-Masonry" is now applied, was scarcely known before the time of Sir Christopher Wren; that it was engrafted upon Operative Masonry, which at that time was frequently called Free-Masonry, adopting the signs and symbols of the operative Masons, together, probably, with some additional customs, taken partly from the Rosicrucians of the XVIIth century, and partly imitated from the early Religious rites of the Pagans, with the nature of which Ashmole and his friends (some of the first framers of Speculative Masonry) were well acquainted. Some of the peculiar ceremonies and tokens of the Operative Masons thus adopted, might have descended to them also from the same rites. For instance, at the erection of the Tower of Babel, or any edifice of great magnitude, the builders, among whom might be numbered the most scientific characters of the Age, might form themselves into a Society with peculiar signs of recognition, or symbols connected with their Science, in order to secure to themselves the power and rank arising from their knowledge, and to prevent the same from being improperly divulged to the world at large. As early public edifices also would in general be constructed for Religious purposes, there would be an intimate connection between the Priests and the Architects, they would frequently be initiated into the same Mysteries, and the characters of Priest and Architect would often be united in the same person, as we find was the case in the early Christian Ages. On the dissolution or dispersion of any such Society, the knowledge of its tenets and mysteries would still exist, although scattered, and perhaps somewhat perverted, till another Society would arise, formed, perhaps, for a similar purpose, the members of which would incorporate in their own institutions such symbols of the former Brotherhood as were consistent with their purpose, modified only by change of time and place: and they would claim to be not merely the representatives of such former Society, but to be such Society itself existing from time immemorial. On failure of this last incorporated Body, their Mysteries, with their love of ancient descent, (a desire inherent in the breast of Man,) would pass to other Societies, modified as before, and by such a progression might the Operative Masons have obtained symbols similar to those used in the earliest Pagan rites. It has been said that the system of Free-Masonry is universally diffused, and that the various secret institutions found throughout the World, even among the most uneducated nations, are connected with it, and therefore prove that it must have originated at a very remote period. These institutions may, however, in some cases, be founded on imperfect and corrupted traditions from early Pagan Idolatry; and in others, indeed in all the really Masonic customs, the commencement can safely be fixed within a century and a half back.

In order to give some idea how Operative Masonry (and from that, Speculative Masonry) may have indirectly derived some of its peculiar symbols and ceremonies from primitive sources, it will be necessary to refer

ligion.

shortly to the nature of Religious rites in the first Ages, when the Priests or Ministers of Religion were in general the depositaries of Science as well as of power. Omitting the Masonic History of the World before the flood,* of Enoch, the first Royal Arch-Mason, and Tubal Cain, the first Grand-Master, according to some Brethren, it will be sufficient to begin with Noah. He was, doubtless, well acquainted with all Antediluvian Science and had a perfect knowledge of the History of the World, having lived for 600 years with Methuselah who had been for nearly 250 years contemporary with Adam. Noah's information, therefore, on the subject of the Creation, of the temptation by the serpent, of the Fall of Man, and of the promised Redemption, was of the most accurate description, and could scarcely be called tradition. On the formation of society after the Deluge, he, as the Father of the renovated World, would be looked up to as the chief oracle and minister of the Deity, and would inculcate the purest principles of Religion, introducing into his instructions particulars of the origin of Sin and the future shadowy anticipations of Atonement. While the limits of population enabled his descendants to dwell in his vicinity, the Religion of the Earth would remain pure, as taught by him; but, after no great lapse of time, we find his posterity gradually extending the limits of the habitable World, and as they receded from him in most cases either from ignorance or pride, they gradually confused and perverted the true Religion. Mistaking the attributes and symbols of God for the Deity himself, they began to worship them; and some daring characters, unawed by any fear of divine vengeance, seized the opportunity of aggrandizement, by declaring themselves the favourites of these new Divinities. Thus, the Tower of Babel, which is supposed to have been a Temple to Bel, or Bâl, the sun, was erected by order of Nimrod, at no very great distance of time from the Flood. The worship of the Sun, the most resplendent symbol of the Deity, and of the other Heavenly bodies, seems to have been the earliest corruption of Religion, and this species of Idolatry spread over a great portion of the Eastern World; so that even at the present day, traces of Zebianism, or Fire-worship, are to be found among the Guebres, or Parsees, the Hindûs, the Chinese, and the Mexicans.

After the dispersion at the Tower of Babel, the colonies which peopled different parts of the Earth, took with them, in general, principles of corrupted Religion,

* The Harleian MSS. 1942 and 2054 seem to have been entirely overlooked by Free-Masons. They contain copies of the Orders and Constitutions of the Fraternity, and are about the date of the middle of the XVIIth century; and therefore, probably, are the oldest authentic Manuscripts relative to the Craft in existence. The latter belonged to a Lodge at Chester, apparently of Operative Masons, and contains a list of the Members. The charges themselves are sensible and plain, many of them, indeed, are retained to this day; but the short History at the commencement will satisfy the most eager Masonic antiquary. The following is the Antediluvian account: "If you ask mee how this Science was first invented; my answer is this: That before y^e Generall Deluge, which is comonly called Noah's Flood, there was a man called Lemeck, as you may read in the 4th of Genesis, whoe had twoe wives, the one called Adah, the other Zilla; by Adah hee begot twoe soñes J (s) abell and Juball, by Zillah hee had a sonne called Tuball and a daughter named Naahmah; these fower children found y^e beginning of all y^e craft in the World; Jabell found out Geometry and hee divided flocks of sheepe and lands; hee first built a house of stone and timber; Juball found out Musick; Tuball found out the smyth's trade or craft alsoe of gold, silver, copper, iron, and steele," &c. MS. 1942.

or rather of Idolatry, the true Religion being fostered in Syria and its neighbourhood, as we find in the time of Abraham, and Melchisedec, the Priest of the true God, at Salem. As different Kingdoms or States were established, they would respectively frame their own system of Idolatrous worship, all having one common origin, but varied in the detail, according to climate, disposition of the founders, and other circumstances. In order to preserve a greater control over the minds of the people, the Priests concealed the tenets of their Religion by means of allegories and symbols, of which the true meaning was known only to the initiated; thus, the existence and unity of the Supreme Deity is supposed to have been one of the secret doctrines, together with the prospect of a future state. The traditions of the temptation and Fall of Man, and his Redemption, to which, after the dispersion, was added that of the Deluge and deliverance in the Ark, were, probably, before much time had elapsed, so far corrupted, that even the Priests became ignorant of the true facts. As the Priesthood possessed great privileges, the Sciences being in general fostered by them, and a knowledge of their mysteries being supposed to ensure future happiness, great anxiety was shown to be initiated among them; severe tests were established before candidates could be admitted, and obligations were afterwards imposed on them, accompanied with the heaviest penalties, if they divulged any of the secrets to the uninitiated.

The striking similarity of Pagan worship throughout the World has been commented on and strongly exemplified by every writer on the subject; it will be necessary here to refer to it only very cursorily, in order to suggest why similar symbols and traditions may be traced almost universally. The worship of the Sun and Heavenly bodies has already been mentioned; coeval with this appears that of the Serpent,* wherein two Principles are said to have been typified, namely, Typho, or the Dragon, as the Evil Principle; Noûs, or the Serpent, as the Good. In Babylonish and Persian antiquities we find the Serpent, and in the Hindû Mythology it is very prevalent; so also in China and Japan, being the emblem of Royalty in the former. In Whidah and Congo it is worshipped with the grossest superstition, and several of the first English visitors of the coast of Guinea were massacred in consequence of having killed one of the sacred reptiles; on another occasion all the hogs in the Country were proscribed, and many of them destroyed, for the same reason.

Traditions of the Deluge may be discovered throughout the World, and Mr. Faber, in his *Dissertation on the Cabiri*, deduces the Mysteries from a union of the rites commemorative of the Deluge with the adoration of the Host of Heaven, or the Zebian superstition introduced by Nimrod, and identifies Noah with Mercury, Adonis, Thammuz, Anubis, Bacchus, and the other great characters celebrated in the Mysteries. The higher Egyptian Mysteries represented allegorically a passage through death to renewed life, and an introduction to the Deity, with a glimmering of the promised means of redemption, as unfolded in the assassination of Osiris, his death, burial, descent into hell, and triumphant resurrection.†

Most of the Mysteries commenced with lamentations for the death or loss of some great character, and ended

with joy for his resurrection or recovery ; thus the rites respecting Osiris, Adonis, Apollo, Bacchus, Maneros, Manes, Balder, and perhaps Hossein in Persia, with others similar, would all originate from the same tradition.*

As the ceremonies were alike, so were many of the symbols, among which will be found some in use by the Free-Masons of the present day, received or adopted by them in the manner before mentioned. The *Cruz ansata*, or Egyptian cross, is considered by many to have been an emblem of the Resurrection from the dead.† The initiated in the mysteries of Isis and Osiris had the Egyptian Tau impressed on their foreheads. The truncated Oak among the Celts was considered as the emblem of stability, while the Egyptians borrowed the Pillars of Seth or Hermes for that attribute. By the Square was represented Matter ; a figure of Dagon on an ancient Zodiac holds in one hand an Infant, the sign of renewed life, and in the other a Square, possibly symbolizing the great Demiurgus, or Machinator.‡ By the Triangle was portrayed generating fire, and from its junction with the Square, as in the quadrangular pyramid, all things were considered to proceed.§ The interlaced or double Triangle, (the Pentalpha of Antiochus,) an emblem well known to Royal-Arch-Masons, is of frequent occurrence. Colonel Todd mentions its existence on large blocks of the walls at Mundore, and on some ancient medals in his possession dug up from the ruins of Oojein, containing the symbols of the twenty-four Jain Apostles.|| In a representation of Diana of Ephesus joined with Isis and Serapis, it appears over the right shoulder of Serapis.¶ It is afterwards found, with many other Masonic emblems, among the Templars. Many of the ancient statues of the Heathen Divinities discovered in Egypt, Greece, Persia, Hindústan, and America, are decorated with superb Aprons, and the Levitical Priesthood, we are informed, wore Girdles or Aprons composed of the three colours, blue, crimson, and purple ; but the Free-Masons may find a more recent and more probable origin for their decorated vestiture, in the leathern aprons of their Operative Brethren.

Egypt.

The Egyptian Mysteries were amongst the most celebrated, the Priests, especially at Memphis and Heliopolis, were noted for their Learning. In consequence of their repute, many Philosophers and persons of rank from all nations sought to be initiated, and afterwards introduced some of the peculiar rites into their own Countries. Thus Lycurgus, Solon, Pythagoras, and others intermingled them with their own doctrines. Even Moses is said to have been initiated, and to have applied, in the worship of the true God, such forms as he thought might be useful for the conduct of the Levites, establishing at the same time certain proofs, in order to keep them more distinct from the rest of the people ; which proofs are supposed to have existed un-

divulged, until the time of King Solomon, and indeed until the troubles of the Jews commenced, when they became partially known to their conquerors. Among the Druids, the Priesthood of the Celtic nations, we find similar secret rites, probation, and obligation to secrecy ; with hidden doctrines like those of the Magi, the Gymnosophists, the Brahmins, the Chaldæans, and the Priests of Egypt. The same may be traced in the rites of Vitzliputzli in Mexico, and of Pacha-Camac in Peru.

From Egypt the Religious Mysteries would naturally travel to Greece with the earliest colonizers, or would soon follow them. The celebrated Mysteries established at Eleusis in great splendour in the reign of Erichonius in the year B. C. 1500, are better known to us than any others in consequence of the numerous allusions to them in different old writers. They were afterwards carried to Rome, where they flourished until suppressed by Theodosius the Great in the beginning of the Vth century ; but so popular were they, that even after that time traces of them may be discovered.* In all cases the candidate had to undergo severe and lengthened trials, sometimes even death ensued. At the commencement of his probation, he was purified by ablution and admonished to lead a new life, founded on the strictest rules of virtue. He was then led in darkness through winding avenues, with gloomy recesses, and startled at every step by terrific noises, the howling of wild beasts, the hissing of serpents, and other strange cries. His resolution was put to the proof by the infliction of bodily suffering : according to Tertullian, a drawn sword was opposed to him on his entrance into the Mithraic cavern, from which he occasionally received wounds. His progress was fearful, through night and darkness. Voices were heard, now whispering, now bursting into thunder. Intermittent flashes of tremulous light exposed to his affrighted view scowling faces and terrible spectres. Sounds of grief and lamentation for the departed God were heard ; and as the time of probation (which was sometimes protracted at intervals for many days) drew to a close, the severity of his trials increased. The earth quaked beneath his feet, and he was left apparently suspended over an abyss. Sometimes he underwent a symbolical death, in a bed or coffin, and after a certain time was raised therefrom to participate in the mysteries. Arrived at the confines of death, the candidate was hurried rapidly through the trial of the four elements. At length, when just exhausted, he received the reward of his courage and perseverance ; his persecutions ceased ; soft sounds with melodious symphonies were heard, and the gloom of night gradually subsiding, fair groves and flowery plains were disclosed to view. The gates of the inmost sanctuary were opened to him ; he was admitted to the sight of celestial beauty in all the dazzling splendour of its perfection, and beheld the sun shining with meridian lustre, even in the middle of the night. He was crowned, and clothed in a white garment, various symbols were explained to him, and he was finally declared

* The Brahmins who accompanied the Indian army to Egypt in 1801, recognised their own Deities at Luxor, Thebes, and Dendera, and worshipped them, complaining of the Egyptians for not treating them with more respect.

† Clarke, *Travels*, 8vo. vol. v. p. 152, 153.

‡ Calmet, *Fragments*, 512.

§ *Classical Journal*, No. 55. p. 51.

|| Todd, *Antiquities of Rajasthan*, 4to. vol. i. p. 727. "It occurs also," he says, "in some of our Gothic edifices, e. g. the Abbey Gate of Eury St. Edmond's, erected about 1377."

¶ Calmet, *Fragments*, 127. Calmet, however, calls it a star.

* In the time of Tiberius, the worship of Isis was suspended at Rome, her Temple was destroyed, and the Priests were crucified, in consequence of a lady of rank, named Paulina, having, with their connivance, been debauched by Decius Mundus, in the semblance of the God Anubis. (Josephus, *Antiq.* book xviii. ch. iii. sec. 4.) It was, however, soon restored again, for Commodus was partly initiated. Caracalla built superb Temples to the Goddess ; and in the time of Heliogabalus, a prodigy is related, that a statue of Isis turned its face completely round.

FREE-
MASON-
RY.

to be born again, and made perfect, and dismissed with the mysterious formula,* "*Konx, Omphax.*" The entrance of the candidate through intricate passages and in darkness, was emblematical of the toilsome wanderings of the soul through the mazes of vice and error before initiation. The noises and spectres, surrounding him, typified the various calamities, diseases, and evil passions incident to that mental bondage from which he was about to be emancipated, and exemplified the punishment of the guilty in a future state. His admission into the full splendour of the rites, and the dispersion of the shades of night, before the brilliant sun of the Mysteries, represented the dispersion of the clouds of mental error before the sun of Truth.† The foregoing description of initiation, has chiefly reference to the Eleusinian Mysteries, of which we have fuller accounts extant than of any others; but wherever we have records of or allusions to others, we find a similarity.

Sacred
names of
the Deity.

The Pyramids, with many celebrated Caves, as that of Trophonius, have been considered as the scenes of initiation, and there is said to have been a large cave at Eleusis; but frequently the necessary apparatus and chambers were attached to, and perhaps partly beneath the Temples. The severest penalties were denounced against a breach of the obligation to secrecy, and Ovid is thought by some to have been banished, upon mere suspicion of having encroached too much on the Eleusinian secret, in the XVth Book of his *Metamorphoses*.‡ In many of the Religious ceremonies, the initiated was finally intrusted with a mysterious word, having reference to the Supreme Being, or Omnipotence. The Egyptian word was *On*, that of the Hindús *Om*, compressed from the triliteral word AUM, representing the creating, preserving, and destroying power of the Deity, and typifying therefore the Indian Trinity, Brahma, Vishnú, and Siva.§ The Chinese, Japanese, and Ceylonese, who practised Buddhism, used the word "*O-Mi-To-Fo*," to signify Omnipotence. The sacred term of the Thibetians was "*Om-ha, hum.*" The Druids expressed the sacred name in a manner known only to themselves, but used for the purpose the letters "*O. J. W.*" The mysterious name of some of the North American Indians is curious from its similarity to that of the Jews. They call their Supreme God "*Ishtohoollo*," but they have also a tetragrammaton, never used in common speech, compounded of four notes, and confined to their most sacred ceremonies. It consists of the syllables "*Yah, O, He, Wah*," thus composing the word "*Yohewah*."|| The veneration with which the Pagans made use of the name of the Deity should be an instructive lesson to those who daily abuse it. Far from being introduced into general discourse, it was con-

sidered as a subject for devout and private meditation. Cicero says they did not dare to mention the names of their Gods,* and Lucan states that but to name the Name would shake the Earth.† The Jews believed that the true pronunciation and import of the sacred tetragrammaton, composed of "*Jod, He, Vau, He*," if recovered, would be sufficient to work wonders, and attributed our Saviour's miracles to his knowledge of this unutterable word, the "*Shemhamphoresch*." Josephus says,‡ that the name was never known, until God himself revealed it to Moses in the Wilderness, and that Moses afterwards did not dare to mention it, since it was forbidden to be used, except once a year, by the High Priest alone, when he appeared before the mercy-seat, on the day of expiation. He adds, that it was lost through the wickedness of Man. Philo (*De vitá Mos.*) mentions the time when, and the reason why, it was lost. In common the Jews used *Elohim*, or *Adonai*, and when it was necessary to write the name in the volume of the sacred Law, peculiar ceremonies were laid down for the usage of the Scribes on the occasion.§

Among the Mysteries established in Greece, B. C. 1500, were the Dionysian, in honour of Bacchus, who, after the introduction of Theatres, had the credit of being their inventor. With these Mysteries were subsequently connected the Dionysiac artificers, a body of Scientific men, Architects, and Engineers, who claimed the exclusive right of building Temples, Theatres, and other public edifices; much in the same manner as the trading Free-Masons in after Ages endeavoured to monopolize the building of Cathedral and Conventual Churches. Their chief Mysteries and most important secrets were comprised in the Mechanical and Mathematical Sciences. The Temples of their Gods and their Theatres required an immense apparatus of machinery for some of their Mysteries.|| At the time of the migration from Attica into Ionia, about 1044 B. C., a few years before the erection of King Solomon's Temple, the Dionysiac artificers had attained considerable reputation, and had spread through various parts of Asia, even so far as India. In order to distinguish them as a Body, and to preserve inviolate the peculiar secrets of their Science, they had appropriate signs and symbols, taken most probably from those Mysteries with which they were so intimately connected. When engaged in their work, they are supposed to have been formed into what we should now call Lodges, each having its Master with his assistants or Wardens. The poorer Brethren of the Order were relieved and employed, and in many respects their institutions remind us of the Free-Masons of the Middle Ages. As they flourished in the vicinity of Judæa at the time of the building of the Temple, it may fairly be inferred that they assisted in the erection of that stately edifice, and the knowledge of some of their peculiar secrets may have been imparted to their fellow-builders. About the year B. C. 300, they were incorporated by command of the Kings of Pergamus, who assigned to them as a settlement, Teos, where they had erected a superb Temple to Bacchus, the patron of their Order. From the remnant of these Dionysiacs probably sprang some of the first trading Free-Masons,

FREE-

RY.Dionysiac
Artificers.

* These words, formerly considered inexplicable, are now ascertained to be Sanscrit, and are still used by the Brahmins, at the conclusion of several of their Religious ceremonies. They should be expressed, *Kanska, Om Paksha*. The first is the subject of our most ardent vows; *Om* is the mysterious name of the Deity; *Paksha* means change, turn, vicissitude, &c. though it appears to have been used in the sense of silence; whence the words *Pax* in Latin and *Paix* in French, used with the same signification. *Class. FREE-MASONRY.

FREE-MASONRY.

or early Christian architects, among whom, we are told, were many Greeks. After the erection of the Temple, a confraternity of the Jews was formed, called the Kassideans, or Assideans, consisting of persons of rank and opulence, connected by secret tokens, and bound by solemn ties to preserve and keep up the Temple and the edifices connected with it. A company of them joined Mattathias and the Maccabees; their distinguishing character being to fight zealously for their Religion, and in defence of the honour of the Temple.* From them were derived the Essenes, a Sect whose doctrines inculcated the necessity of leading a pure and chaste life, discarding the luxuries of the World. None were admitted without a long and strict probation, and on their admission all were obliged to engage, by the most solemn oaths, to observe the laws of piety, justice, and modesty; fidelity to God and their rulers; to preserve the books of their institutions, to keep carefully the names of the Angels, and never to violate the secrets of the Order. This sect was not confined to the Jews, but persons of any nation, or of any rank, if otherwise properly qualified, might be admitted. There were two classes, the one practical, the other theoretical, called *Therapeutæ*, and of this last the principal Society was formed, near Alexandria.† It does not, however, appear that the Essenes particularly applied themselves to the architectural Sciences.

Many of the primitive Christians had doubtless been instructed in the Pagan rites, and initiated therein, and belonged to some of the Societies just mentioned. They would perhaps, in some cases, in order to obtain a respite from the Persecution, symbolize their Religious rites; borrowing, for that purpose, such of the Pagan usages as they deemed suitable. Some of the early teachers of Christianity, adopting a mistaken course in their zeal for conversion, would, in order to make a greater impression on the weaker part of their congregations, make use of such coincidences as struck them between the Pagan and Christian Religions. Gregory Nazianzen relates the manner in which some of the popular Pagan rites were thus made subservient, as was thought, to the advancement of the Christian Faith. When Pope Gregory the Great sent over St. Austin to convert the Anglo-Saxons, in the year 596, he expressly instructed him to humour his intended proselytes, and to accommodate to their forms, so much as he could, those of the Christians; to convert their Temples into Churches, and the Pagan into Christian Feasts. This indulgence to the weaker disciples of Christianity existed even in the time of the Apostles, and met with just rebuke from them.‡ St. Paul particularly warns the Colossians from mixing up any part of Heathen devotion with their Christian worship; and St. John denounces the Church of Pergamus for practising Heathen rites, through fear of temporal inconvenience. The existence of such practices, however wrong, is thus proved, and may account for the preservation of many Pagan symbols; while others probably were retained by early Christian architects, who had obtained knowledge of them from the before-named Societies. In some cases, the Fraternities of primitive Christians required proofs, by certain signs and tokens, previously to admitting any

stranger to participate in their ceremonies: and it is stated in a French Work on Free-Masonry, (which gives Jovet, *Cultes Religieuses*, for its authority,) that there was in existence, so late as 1751, a Religious Fraternity of Greek Masons, in possession of the secret constitutions of their Order so far back as A. D. 327, when they officiated at the erection of the magnificent Temple of Constantine the Great; and that their rules were similar to those of the Priests of Memphis, so far as we have any knowledge of them.*

Some Masons rely for the great antiquity of their Pythagorean Order upon an old manuscript, said to be in the Bodleian Library, in the hand-writing of Leland, being a copy of one still older in the hand-writing of King Henry VI. This attributes the introduction of Masonry in England to "Peter Gower, (Pythagoras,) a Grecian;" "who wacksynge and becommynge a myghtye wyseacre," "framed a grate lodge at Groton," (*Crotona*), "wherefromme, yn processe of tyme, the arte passed in Engelande." Without questioning the authenticity of this manuscript, which has, however, never been formally proved, as might easily be done, if it be in the Bodleian Library, we may shortly refer to the Pythagoreans, as the writer appears to lay some stress on their institutions. They were originally formed into a Society at Crotona, by Pythagoras, in the VIth century before Christ, and possessed many forms and ceremonies in common with the Essenes. Pythagoras, as is well known, had travelled much, and had studied the rites of most of the Pagan Mysteries, many of which he adopted and applied to his own School of Philosophy. The Society founded by him obtained much repute, and the members spread over considerable part of the South of Europe; but their tenets appear to have had more reference to theoretical than to practical Science.

On the introduction of Christianity, considerable changes would be introduced in sacred architecture. Temples, formerly reeking with the blood of the numerous expiatory victims required in Heathen worship, were replaced by Churches for the adoration of Him whose sacrifice was the atonement for the sins of all mankind; and the gorgeous splendour of the Pagan rites was superseded by the simplicity of Christian worship. The ancient Priesthood would lose their power, but the architects and builders, whether Dionysiac artificers or others, would in many cases accommodate themselves to the new mode of building required; would become Christians, but would still retain several of their peculiar symbols, although their Society might be broken up as an integral Body. When the demand for Ecclesiastical architecture increased, these architects or their descendants would again rise into distinction as a Body, and from them would probably spring the Free-Masons, to whom we are indebted for the construction of the most celebrated Churches, particularly those usually called Gothic, whether in England or on the Continent. In this way, also, it will be seen how they would obtain the signs and tokens of the earlier World, discarding those that were applicable only to the Mysteries of the Pagans; but preserving such as appeared connected with their Science, and adapted to the preservation of the secrets of their Fraternity from the World at large.

Transition of Pagan Masonic symbols to Christian Architects.

Intermixture of Pagan with Christian rites.

FREE-MASONRY.

Progress of Ecclesiastical architecture.

First Lodges.

Grand Lodge of Strasburg.

The primitive Christians frequently made use of the Heathen Basilicæ for their places of worship, being well suited for that purpose, and their first Churches were probably built on a similar plan, until the erection or rather the rebuilding of the Cathedral of Sancta Sophia, in 532, by Justinian, in the shape of a Greek Cross, caused some change. In the first thousand years of Christianity, a corrupted imitation of Roman architecture prevailed, known by the different names of Saxon, Norman, Lombard, &c. After that period the Gothic or Pointed style became gradually introduced. The Cathedrals at Spire, Mentz, and Worms, partaking in some degree of both Orders, were built about the beginning of the XIth century; those at Rheims and Amiens in the beginning of the XIIIth century; and in 1277 the beautiful edifice at Strasburg was commenced. A long list of intermediate Churches might be given, if not foreign to the present Essay; but it is necessary to mention Strasburg Cathedral, as intimately connected with the Free-Masons, who had at the date of its erection become a large and renowned Society. That Church was looked on as the wonder of the modern World, as a second Solomon's Temple. In progress at the same time with, or just following it, were the Churches at Vienna, Cologne, Zurich, &c. The Architects, with their assistants and pupils, formed associations (as was the custom of the Free-Masons) called *Hütten*, (or Lodges.) At an assembly held at Ratisbon in 1459, it was agreed that a Grand Lodge should be formed at Strasburg, as the place of general assembly, and that the architect of that Cathedral, for the time being, should be the Grand Master; and accordingly Dotzinger of Worms, the successor of John Hülz of Cologne, who completed the spire in 1449, was chosen the first Grand Master. The Society was composed of Masters, Companions, and Apprentices, who had a secret word with signs of recognition. In 1464 and 1469, there were general assemblies at Strasburg, but they were afterwards neglected for some time, until the Emperor, Maximilian I., being at that city in 1498, granted them certain privileges by charter, or diploma, which were renewed and confirmed by subsequent Emperors. These diplomas, together with the regulations and statutes, were kept in the house of the architect of the Cathedral, in a chest with triple locks, of which the architect and the two oldest Masons kept the keys, so that it required the presence of all before the chest could be opened. These documents were in existence until the French Revolution, when they were destroyed, with many other papers, to prevent their falling into the hands of the Jacobin Commissioners. Their rules impressed the necessity of leading moral lives,—submission to the Masters, whom the Companions served for five or seven years—attention to their Religious duties—and charity to the poorer brethren, &c. Among their symbols were the Square, the Plumb-rule, and the Compasses, which are distinguishing marks of the officers of a Free-Mason's Lodge at this day. Grandier, in his account of the Cathedral, relates, that when the foundation stone of the tower was laid by Bishop Conrad of Lichtemberg, the Master Masons contended who should next lay their hands to the work, and that in the scuffle one of them was killed by blows from a maul. According to him the first Strasburg Lodges were held in a building called the *Maurerhoff*, in the

Place opposite the Chapel of St. Catherine, which used formerly to be the workshop in which the choicest ornaments of the Church were cut.* In the Cathedral at Vienna, are two half-length sculptures of the architect Antony Pilgram, of the date 1313;—in one, he appears holding a pair of compasses, in the other a square: some accounts call the former figure the Master-builder, and the latter his apprentice.† A story is also related, respecting the completion of two circular windows in the South Transept of the Abbey of St. Ouen, at Rouen, finished about the year 1439. One was executed by the Master-Mason, and the other by his apprentice, but the latter was considered superior, which so excited the anger and jealousy of the Master, that he poniarded his unfortunate apprentice.‡ For this crime he was tried, condemned, and executed in January 1440; but the Monks gave him Christian burial, as appears from a tomb to his memory, whereon he is described, as *M. Alexandre de Berneval, Maistre des Œuvres de Massonnerie au Balliage de Rouen, et de cette Eglise, &c.*§ A similar tradition of the death of an apprentice through the jealousy of his master, occurs respecting two pillars in Scotland.

The Knights Templars were much connected with the Masons, and are supposed to have been frequently initiated among the Syrian Fraternity. On the dissolution of their Order in the XIVth century, the Provincial Grand-Master of Auvergne, Pierre d'Aumont, with two Commanders and five Knights, fled, disguised as Masons, to one of the Scottish Isles, where they found the Grand Commander Hauptoncourt, and other Members of their Order; and they resolved to preserve the institution, if possible, although in secret, and adopted many of the forms of the Free-Masons, to conceal their real designs. They held a Chapter on St. John's Day, 1313, when D'Aumont was chosen Grand-Master; in 1361, their seat was moved to Aberdeen, and by degrees the Order spread, under the veil of Free-Masonry, over great part of the Continent, though its power and rank were at an end. The dispute concerning the justice or injustice of their dissolution has been long and eagerly maintained; among the latest Works which the controversy has produced, we may notice one by the celebrated Orientalist Hammer, who in his *Mysterium Baphometi Revelatum*, &c. published in the *Mines de l'Orient*, vol. vi. part i. Vienna, 1818, fol. attacks the Templars in no measured terms: he accuses them of Infidelity and Gnosticism, and from the monuments in their Churches, he taxes them with the commission of those crimes charged against them by their enemies at the time of their persecution. He gives several representations of the figure Baphomet, which, he contends, is typical of their secret doctrines; but Raynouard, in the *Journal des Savans* for March and April 1819, in a review of the above Treatise, endeavours to prove that the above figure was Mahomet; and refutes, apparently with success, the imputations cast upon the Order by Hammer. In some of the Churches formerly belonging to the Templars, strictly Masonic emblems are found, as at Erfurt,

Schoengravern, Prague, &c. especially in the last, of which Hammer gives several specimens, including among them the Square, the Level, the Triangle, the Compasses, the Compasses with Quadrant, the Maul, the Interlaced Triangles, the Flaming Star, (*étoile flamboyante* of French Masonry,) the Truncated Cross, &c.* Hammer wishes to derive the Free-Masons from the Ismaelites, who originated in the *Ædes Sapientiæ*, founded at Cairo in the XIth century, where Philosophy and the Sciences were taught, and various degrees given.

Establishment of Free-Masonry in England.

It is possible that some of the travelling Masons may have visited England at an early Age of Christianity, as St. Alban, the proto-martyr of England, is represented to have been a great patron of the Art, and to have increased the emoluments of its professors; but this report stands principally on the traditions of the Society. The earliest authentic account of their introduction into this Country is in the year 674, when Wilfrid, Archbishop of York, built the Church at Hexham, and Benedict Biscop, the Abbey at Weremouth. The latter personage went to France to collect a number of Masons, to build his Church of stone, after the Roman manner, as it was then called, at the same time he procured some glass-makers, their art being unknown in England. Before that time, the Churches had, with little exception, been built of wood; the Anglo-Saxon term for building being *getymbrian*, to make of wood; for although Bishop Ninias is stated by Bede to have built a Church of stone near Wigton in 432, yet the stone Churches built before the VIIIth century were probably on a small scale. The first Christian Church in Northumbria was built by Paulinus in 627, of wood. When Alfred, in the IXth century, formed the design of rebuilding his ruined Churches and Monasteries, the greater part of the new buildings were of wood; he was also obliged to send abroad for more artificers, to assist his own people. In the middle of the Xth century, Edgar the Peaceable, after his accession, complained that the Monasteries of England were in a ruined state, and consisted of rotten boards only.†

First Grand Lodge of England.

The introduction of these Masons in the VIIth century by Benedict Biscop, improved by degrees the Architecture of the Country; though at first they were principally confined to the North of England. Alfred, subsequently, brought over some more, as above stated, and others perhaps occasionally joined their comrades. The Society thus would soon obtain a permanent establishment; keeping themselves a distinct Body from other artificers, and preserving their scientific knowledge secret from those not admitted into the Order, by means of their peculiar signs and tokens. According to the traditions of the Society, the first Grand Lodge of England was formed at York in the time of King Athelstan, A. D. 926, where Prince Edwin presided as Grand Master, having obtained a charter for it.‡ At the same time he collected all the writings connected with Masonry, "and there was some in French, some in Greeke, some in English, and some in other languages."§ Whatever credit may be due to the Grand-Mastership of Prince Edwin, it appears certain that York was considered the principal seat of Free-Masonry

* Several Masonic emblems may be seen in the Church at Calais, but this is of a more recent date.

VOL. XXV.

until the division which took place in the Craft in the beginning of the XVIIIth century. The Members of the Society were not strictly confined to the Masons themselves, though the exceptions were in general Kings, Princes, and men of rank and wealth, who patronized and fostered the Science, and protected the inferior brethren in a great measure from the evils incident to a state of vassalage. Great improvements took place in Architecture in the XIIth century. The Clergy, many of whom were architects themselves, increased the ardour for building Churches and other Religious edifices, by offering pardons and indulgences to those who expended their property in such pious uses. Yet the first English Architect of whom we have any positive account, is one William, who was employed about Canterbury Cathedral from 1178 to 1184. In the XIIIth century, the Science still improving, and the demand for builders being great, the Popes, in order to encourage them, granted many indulgences, by means of their Bulls and charters, of which one is stated to have recited in its preamble, the precedent of the chief builder of King Solomon's Temple having incorporated a Body of Architects, with the power (among others) of regulating the prices of their labour. This recital was afterwards taken for the record of a fact, as if the Society had existed uninterruptedly from the time of King Solomon.* Among the privileges thus granted to them by the Popes, were those of setting their own prices, of taking apprentices, and of admitting and accepting approved Masons into their corporation. In consequence of these advantages, the Fraternity called themselves *Free-Masons*, claiming to be exempt from the laws which regulated common labourers, and to be exonerated also from the burthens then thrown upon the working classes of the community, whether in England or on the Continent. They consisted in a great measure of Italians, with some Greek refugees, French, Germans, and Flemings, and ranged from one nation to another, to build Churches and other edifices. A surveyor governed in chief, and every tenth man was called a Warden, overlooking the other nine. Persons of rank frequently gave materials, either from feelings of Religion and charity, or as commutation of penance.† That part of the Fraternity which had passed into England, would be more stationary and of a more permanent duration than its brethren on the Continent, being in a Country less liable to the distractions occasioned by becoming the seat of war;‡ and, in consequence of its insular position, offering less facility for removing.

In the XIIIth and XIVth centuries, a considerable number of Churches and other Ecclesiastical structures were built, including several of the Colleges at Oxford and Cambridge. In the reign of Henry III. alone, upwards of 150 Abbeys, Priories, and Religious Houses were erected. The style became highly ornamented in the XVth century, finishing with those beautiful specimens, St. George's Chapel at Windsor, King's College Chapel, Cambridge, and King Henry VII.'s Chapel at Westminster, which was not finished until the beginning of the XVIth century, in the reign of Henry VIII.

* *Archæologia*, vol. ix. p. 117, &c. Governor Pownall states that in the year 1773, with the sanction of the Pope, he caused accurate search to be made for this charter, but without effect.

† Henry, *History of England*, vol. viii. p. 273. Wren, *Paren-talia*, p. 306, 307.

‡ During the wars of York and Lancaster, Masonry was at a low ebb, and was saved almost from destruction by being taken under the protection of the Grand Master and Knights of Malta.

FREE-MASONRY.

Privileges obtained in the XIIIth century.

FREE-
MASON-
RY.

After that date the pointed Architecture declined, and the Grecian Orders were introduced, under the skilful conduct of Inigo Jones. Records may be found of several contracts with Masons for the performance of work. In 1306, the Dean and Chapter of Lincoln contracted with Richard de Stow, Mason, to attend to and employ other Masons under him for the new work; when the additional East end, as well as the upper parts of the great tower and of the transepts, were done.* King Edward III., in the twenty-fourth year of his reign, when founding the College at Windsor, granted to John de Sponlee, the office of Master of the stone-hewers, and gave him power to take and press, as well within liberties as without, so many Masons and other artificers as were necessary, and to convey them to Windsor, to work at the King's pay, but to arrest and imprison such as should disobey or refuse, until the King took other order; with a command to all Sheriffs, Mayors, Bailiffs, &c. to be assisting to him on the King's behalf.† It appears that the Masons, being dissatisfied with "the King's pay," entered into a combination in many places to evade the Writs issued in consequence of this charter or grant, (and this description of grants was not singular in former times,‡) availing themselves of their peculiar signs and tokens to recognise and assist each other from being pressed into the service. The Masonic Constitutions mention, among others, an Architect, at this time called Henry Yevele, the King's Free-Mason. Weaver (582.) mentions an inscription, in St. Michael's Church, St. Alban's, on Thomas Wolver, (or Wolven,) Master Mason, or Surveyor of the King's stone-works, in the time of Richard II. By an Indenture, dated 5th June, 21st Henry VII., John Hylmer and William Vertue, Free-Masons, undertook the vaulting of the roof of the choir of St. George's Chapel, Windsor, for seven hundred pounds, and to finish it by Christmas, A. D. 1508.§ And in Dugdale's *Monasticon* is an agreement between the Commissioners of Richard Duke of York and William Harwood, Free-Mason, for the rebuilding of the Chapel in the College of Fotheringhay, Northamptonshire.|| In the fourth year of Henry VIII. Mr. Robert Hacomblein, Provost of the "Kynge's College Royal at Cambrydge, and the scolers of the same with the advise and agrement of Mr. Thomas Larke, surveyor of the Kynge's works there," entered into a contract with "John Wastell, Master Mason of the said works, and Henry Severick, oon of the wardens of the same," that the said Wastell and Severick should set up a vault for the Church to be completed in three years' time for £1200; and in the following year Wastell contracted to set up the vaulting of two porches and seven chapels in the body, and nine chapels behind the choir of the

* *Archæologia*, vol. ix. p. 125.

† Ashmole, *History of the Garter*, p. 135.

‡ A similar commission was issued in 1377, 1st Richard II., preparatory to his coronation. (Rymer, *Fœdera*, vol. vii. fol. 1728.) Henry V., in the third year of his reign, 1415, issued his writs to collect 100 of the best Masons (among other artificers) to accompany him abroad. (*Ib.* vol. ix. fol. 1729.) Henry VI., about 1440, directed commissions to Robert Westerly, Master Mason of the works at Eton, John Beckelry, Mason, John Smyth, Warden of Masons, and Robert Wheteley, Warden of carpenters, empowering them to take Masons and other workmen, and carriages, &c. necessary for building the College at Eton. (*Excerpta Historica*, No. 1.)

§ Ashmole, *History of the Garter*, p. 136. In Privy Purse expenses of Henry VII. on September 8, 1494, appears, "To William Este Fremason, the first payments for making of Wodestok Hall, £11."

|| Dugdale, *Monasticon*, vol. iii. p. 162.

Church, and battlements, &c. and undertook to keep continually forty Free-Masons working on the same. Other examples might be given, if necessary. The first notice of Masons in any legislative enactment, is in an old Act of 34 Edward III. c. 9., wherein it is declared that all alliances and covins of Masons and carpenters and congregations, chapters, ordinances and oaths between them made shall be void. In the twenty-third year of that reign there was a great pestilence, in consequence of which the first Statute of Labourers was passed,* there being a scarcity of servants of all descriptions from the mortality that had taken place amongst them, and those that survived endeavoured to get excessive wages. These forbidden meetings were probably considered to have for their object, in part, a monopoly of trade and combination for keeping up the price of labour. This was supposed to be the case also in 1425, when the Act of 3 Henry VI. c. 1. was passed; as the preamble states, that by the congregations and confederacies made by Masons in their general assemblies, the good course and effect of the Statutes of Labourers were openly violated and broken, wherefore, "chapters and congregacions of Masons shall not be from hensforth holden, and they that do so assemble suche chapters and congregacions shall be punyshed as felons, and other Masons commynge to the same shal be imprysonyd and make fyne and raunsome at the kynge's wyll." This Statute, however, does not appear to have been acted on, and Henry VI. is said to have been himself initiated when he came to manhood. Wherever Free-Masons are mentioned in any statutes or ordinances respecting the rates of wages, they are classed with the highest rate, and in some few cases, higher than any other artificers. Leaving St. Alban out of the question, (who, according to the manuscripts before mentioned, allowed the Masons 3s. 6d. per week,) one of the earliest statements respecting their wages appears in a roll of the expenses of King Edward I. at Rhuddlan Castle in Wales, in the tenth and eleventh years of his reign.† In this account, sundry payments are charged to Masons, (*Cementarii*,) on the following scale: the Master Mason 6d. *per diem*, other Masons 4d., and workmen 3d. In 1351, the wages are lower, and this too was just after the year of pestilence. A Master Mason by the day 3d., other Masons or tilers 2d., their servants or boys 1½d.‡

In a Petition from the House of Commons, presented A. D. 1445, in the 23d of Henry VI., to regulate wages, which was granted and converted into a law, it is prayed with respect to Masons, &c. "yat from the Fest of Ester unto Mighelmesse y^e wages of euy free Mason or maister carpenter excede not by the day iiij^d. with mete and drynk, and withoute mete and drynk v^d. ob." "A maister tyler or sclatter, rough Mason and meen carpenter, and other artificiers concernyng beldying, by the day iiij^d. with mete and drynk, and without mete and drynk iiij^d. ob." and from Michaelmas to Easter the Free-Mason and master carpenter a penny less, and the other artificers one half-penny less by the day.§ In 1446, from Easter until Michaelmas, a Free-Mason, with diet by the day, 4d., without diet 5½d. A master tiler, slater, rough Mason, by the day, with diet 3d.,

Elizabeth's intention to suppress Masonry.

There is a tradition recorded of Queen Elizabeth, that jealous of the Masons being in possession of peculiar secrets, which they would not divulge, she sent an armed force to York to break up the Grand Lodge; but that Sir Thomas Sackville, the Grand Master, interposed, and procured the initiation of some of the principal officers, who, consequently, made such a favourable report of the Society, that she countermanded her intended persecution.‡

Institution of Modern English Free-Masonry.

A. D. 1646.

Under the superintendence of Inigo Jones, the Fraternity prospered and held regular assemblies, and many gentlemen were initiated; but not long after his Grand-Mastership, the Civil dissensions in the Kingdom commenced, which caused great interruption to Free-Masonry, though, in the midst of them, the origin of the Free and Accepted Masons, or of Speculative Masonry, appears to have taken place, although it did not become fully established for some time. Elias Ashmole was made a Mason at Warrington in the year 1646. At the same time, a Society of Rosicrucians had been formed in London, founded partly on the principles of those established in Germany about 1604, and partly perhaps on the plan of the Literary Society, allegorically described in Bacon's *New Atlantis* as the House of Solomon. Among other emblems, they made use of the Sun, Moon, Compasses, Square, Triangle, &c. Ashmole and some of his literary friends belonged to this Society, which met in the Mason's Hall, as well as to the Masons', and they revised and added to the peculiar emblems and ceremonies of the latter, which were simple, and had been handed down to them through

many Ages. They substituted a method of initiation, founded, in part, on their knowledge of the Pagan rites, and connected, partly, with the system of the Rosicrucians, retaining, probably in a somewhat varied form, the whole or greater part of the old Masonic secrets; and hence arose the first Degree, or Apprentice of Free and Accepted or Speculative Masonry, which was, shortly after, followed by a new version of the Fellow Craft Degree. The Master's Degree is said to have been invented during the Commonwealth with reference to the unhappy fate of King Charles I.; but there is no sufficient proof of this, and it is more likely to be of a later date, and that for some time none were recognised as Master Masons, but those who either filled or had filled the chair of a Lodge. These innovations by Ashmole were not perhaps immediately adopted by the Fraternity in general, but Speculative Masonry gradually increased and mingled with Operative Masonry, until the beginning of the XVIIIth century, when it was agreed, in order to support the Fraternity, which had been on the decline, "That the privileges of Masonry should no longer be restricted to Operative Masons, but extend to men of various professions, provided they were regularly approved and initiated into the Order."* This had the effect of rendering Free-Masonry still more a Speculative Society, as it entirely became in a few years more. In the mean time, since the initiation of Elias Ashmole, two Kings who were Freemasons had reigned, namely Charles II. and William III., and Sir Christopher Wren had succeeded to the Grand Mastership, and also presided over the old Lodge at St. Paul's, now represented by the Lodge of Antiquity, of which his Royal Highness the Duke of Sussex is the present Master. This Lodge has in its possession, among other relics, the mallet with which King Charles II. laid the foundation stone of St. Paul's Cathedral in 1673.†

In the year 1718, Sir Christopher Wren, then aged eighty-six, was superseded in his office of Surveyor of the Buildings to the King, by Mr. William Benson. A great number of Masons in London, disgusted at this treatment of their Grand-Master, refused to act in conjunction with the new officers, particularly as some innovations were introduced into the Craft in 1717, as will be hereafter mentioned, which did not meet with their approbation. They accordingly, together with a considerable number of the Country Lodges, declared themselves to be acting under the old Lodge at York; where the Grand Lodge, under this system, which was now called Ancient Masonry, (as they professed to keep inviolate all the ancient landmarks of the Order,) was now established and supported; and for many years no friendly intercourse subsisted between this and the Grand Lodge of London, or of the Modern Masons as the Ancients styled them. These last, however, flourished, and added to their numbers many men of rank and fortune. The Ancient Masons removed their Grand Lodge to London in 1757, the Earl of Blessington being chosen as Grand Master. For many subsequent years the schism continued between the two Societies; until, in 1813, a union was happily effected between them under the auspices of the Dukes of Kent and Sussex, their respective Grand-Masters; the Duke of Athol, who for fifty years previously had presided

over the Ancient (hence frequently called Athol) Masons, having resigned in favour of the Duke of Kent, for the express purpose of facilitating the union.

Sir Christopher Wren vacated the office of Grand-Master before he was superseded in the office of Surveyor of the Buildings, but no successor was immediately appointed, and the meetings of the Society were much neglected. Several of the London Masons, in opposition to those, who, as we recently mentioned, ranged themselves under the banners of the York Masons, endeavoured to renew the assemblies and revive the Fraternity. They met accordingly (including the only four Lodges at that time in the South of England) in 1717, to make such arrangements as they conceived were requisite, and appointed a Grand-Master. Dr. Desaguliers, who was appointed to that office in 1719, took great interest in the proceedings; he revised and introduced some alterations in the usages of the Craft for these brethren, which were the more readily received, in order to make some slight distinction between themselves and the Ancient Masons, who were looked upon as seceders. Each party, however, probably preserved the original emblems of the Society, differing only in those ceremonies of recent introduction. At the same time the peculiar toasts of the Masons were revived* or arranged; and from this period may be dated the establishment of the present system of Free-Masonry in London, and the commencement of its authentic annals. Searches and inquiries were also made for any records or manuscripts relating to the origin or doctrines of the Society for the purpose of compilation; but several valuable papers were destroyed, for fear of divulging too much to the uninitiated.† In the year 1723, the first edition of the *Constitutions* of the Fraternity was published under the sanction of the Grand Lodge.

Recent
History.

Henceforward, this branch of the Society rapidly increased, the Grand-Master being generally some Nobleman of high rank. As has been previously stated, the two branches into which the Society was divided, were not on friendly terms; and frequent opportunities were given of confirming their mutual jealousy. In the year 1734, the Grand Lodge of England constituted Lodges under its jurisdiction, in the district of York, the seat of the Ancient Masons, among whom this proceeding caused great discontent, and put an end to all hopes of an amicable intercourse. In 1749, some Brethren, who conceived that they had cause of complaint against the Grand Lodge of England, seceded; and taking advantage of the disputes between the Societies, formed Lodges for the practice of Ancient Masonry, declaring themselves to be acting under the Ancient York Constitution; and these secessions happened at intervals for a considerable time, occasioning many strong resolutions on the subject in the records of the Society. In the year 1782, the late Duke of Cumberland was elected Grand-Master, upon whose death King George IV., then Prince of Wales, succeeded to the office, and continued until the time of the Regency in 1813, when it being considered unfitting that he should exercise any personal superintendence over the Craft, he took the title of Grand Patron. Towards the close of the last century, some severe and unwarranted attacks were made on the Fra-

ternity, particularly in Barruel's *Memoirs of Jacobinism in France* and Robison's *Proofs of a Conspiracy*. Those publications unjustly taxed the Brethren with making their meetings subservient to Politics, and connected them with the modern *Illuminati*. So little effect, however, was produced by these charges, that in the Act, passed in the year 1799, for suppressing seditious Societies, clauses are expressly introduced in favour of the Free-Masons.* On the 27th of January, 1813, one of the most splendid Masonic banquets on record took place on the occasion of presenting a superb Jewel to the Earl of Moira, previously to his departure to the East Indies. Six Royal Dukes were present, and about five hundred other Brethren. In the same year, the Duke of Sussex was elected Grand-Master in the place of the Prince Regent; and in December, the union between the two Societies, respecting which there had been negotiations pending for a few years previous, took place, all distinctions in their respective Constitutions were put to an end, and perfect harmony and unanimity ensued.

The Scotch Masons claim their origin as a Body from the time of building the Abbey of Kiluriming, about 1150. The Chapels at Roslin and Holyrood, and the Abbeys of Melrose and Kelso, with many others that might be named, sufficiently attest their skill. Robert I., King of Scotland, is said to have founded the Grand Lodge of Heredom of Kiluriming in the year 1314.† James II. of Scotland made the office of Grand-Master hereditary in the family of Sinclair, Lord Roslin, and the Society prospered until 1640, after which, in consequence chiefly of the political state of the Country, its labours were much relaxed for nearly a hundred years, until, in the year 1736, William Saint Clair, the hereditary Grand-Master, convened a meeting of the existing Lodges, and constituted the Grand Lodge of St. John of Edinburgh, and having then resigned his hereditary right, was elected the first Grand-Master of the renovated system; and this may be considered the commencement of Speculative Masonry in Scotland. The Scotch Masons held communication only with the Ancient Masons of England until the year 1805, when they also entered into a friendly alliance with the Grand Lodge of England, and elected the Prince of Wales their Grand-Master. A schism took place among the Scotch Masons in 1744, in consequence of the Kiluriming Lodge and that of the Chapel of St. Mary at Edinburgh each claiming the post of honour as the oldest Lodge. It was generally understood that the former possessed the greater antiquity, but this could not be proved by written evidence; while the latter produced a document so far back as 1598; the Grand Lodge therefore decided in its favour. The Kiluriming Lodge, feeling itself aggrieved, withdrew from the control of the Grand Lodge, and established the Grand Chapter of the Royal Order of Heredom of Kiluriming, reserving the power of conferring all the higher Degrees, and leaving to the Lodge of St. John the superintendence of the symbolic or common degrees. Scotch Masonry has been in great repute on the Continent; the Brethren in many Countries have received Constitutions from the Grand Chapter and Grand Lodge to enable them to use the same rites, and many of the higher Degrees

have derived their names from their connection with Scotland. It consisted of thirty-three Degrees; the eighteenth in order was the Rosycross of Heredom of Kiluriming, on which the Brethren placed great reliance, as containing all the principles of Masonry. The thirtieth Degree was the Grand-Inspector-Grand-Elect-Chevalier-Kadosch, which was esteemed the perfection of Scotch Masonry, commemorating the abolition of the Order of the Templars, (with whom the Fraternity professed to have been intimately connected,) and the punishment of the last Grand-Master Jacques Molay, who perished in the flames, 11th March, 1314. The thirty-third Degree was called the Sovereign-Grand-Inspector-General. The Ancient Masons of England recognised twenty-five Degrees, but these higher Orders will be referred to again. It may be mentioned as matter of curiosity, that in the year 1784, the late Dr. John Brown instituted a Latin Lodge at Edinburgh, called the Roman Eagle, which was carried on for some time with much spirit. The Grand Lodge in Ireland was organized in 1729.

Irish.

French.

Free-Masonry (i. e. Speculative Masonry, as we shall now consider the term to mean) was introduced into France at Paris by Lord Derwentwater and other Englishmen in 1725, although, according to some accounts, there were two Lodges opened during the Grand Mastership of the Duke of Montagu in 1721. For several years it met with little encouragement; indeed Louis XV., in 1737, forbade any Masons from appearing at Court, and a Bull, which Clement XII. issued against the Fraternity in 1738, was sought to be enforced by the Clergy. The institution having been introduced from England, the Brethren still continued to act under the control of the Grand-Master of that Country; and when the first Grand Lodge was established in 1743, it was called *La Grande-Loge Anglaise de France*, which name it retained until the year 1756, when it declared its independence of any foreign interference. In the mean time, the magistracy frequently had recourse to vexatious measures against the Brethren, and from their unsettled state, frequent innovations and dissensions occurred among themselves. Some Lodges, by means of spurious documents, endeavoured* to procure credit for indefinite antiquity, and various fantastical Degrees were invented. After proceeding in this manner for some years, a complete schism took place in 1772, when two Grand Lodges were formed, *Le Grand Orient*, under the Duc de Chartres, and *La Grande Loge de France*. In 1777,† the *Couvent Philosophique* was formed, intended for Lectures and mutual instruction on the doctrines of Masonry. *Court de Gebelin*, the well-known writer on Mythology, was the first Lecturer giving a Dissertation on the allegories of Masonry. These meetings were continued at intervals until 1789, when they were interrupted by the troubled state of the nation. In 1812 they were renewed, when M. Alex. Lenoir (author of *La Franche Maçonnerie rendue à sa véritable origine, &c.*) delivered a course on the resemblance of the ancient Mysteries of the Egyptians and Greeks with those of Free-Masonry.‡ From 1788 to 1796, the general proceedings of the Fraternity were nearly put an end to, in consequence of the Revolution; in the latter year the labours were resumed, and in 1799 a union was agreed upon between the Grand Orient and the Grand Lodge,

which thenceforward formed one assembly. There are now nearly 300 Lodges in France, of which about one-fourth are at Paris.

MASON-
RY.

Dutch.

The first introduction of Masonry into Holland was in the year 1731, at the Hague, by the Earl of Chesterfield and some other Englishmen.* In 1735 it was interdicted by the Government, and the Roman Catholic Clergy endeavoured to abolish it, by refusing the Sacrament to the initiated; and in consequence of the difficulties thus thrown in the way, the Grand Lodge was not instituted until the year 1756.

In Russia, it was established in 1731, also by the English, but made little progress until 1763, when Catherine II. declared herself the Protectress of the Order.† Towards the latter end of her reign, she became suspicious of it, and in 1794 the meetings were forbidden. The Emperor Paul continued and enforced the interdict; but in 1803, Monsieur Boeber so fully convinced the Emperor Alexander of the correctness of the Masonic doctrines, that he not only patronized the Brethren, but was himself initiated.

Russian.

Italy first received a Masonic Lodge from the English, at Florence, in 1733. The institution met with considerable persecution, the members of the Church in particular were zealous in their endeavours to stifle it. In 1738, Clement XII. issued a Bull to abolish it; and this was renewed in 1751 by Benedict XIV.‡ From time to time, various members were imprisoned or banished. About 1777, the King of Naples, being strongly excited against the Masons, ill-treated and punished several of them, until his Queen, Caroline, interfered, and begged him first to examine their Constitutions that he might become acquainted with the object of the Fraternity. He accordingly did so, and was so satisfied, that he became their Patron.§ Free-Masonry, however, has not flourished in Italy, and up to the present time there have always been severe edicts against it, and the Inquisition itself has occasionally interfered.

Italian.

Still less has it succeeded in Spain (where a Lodge was first formed in 1728) and Portugal. In those Countries it has been constantly subject to persecutions, and although in 1809 a Grand Lodge was established in the former Kingdom, yet on the accession of Ferdinand VII., in 1814, he renewed the former proscriptions with increased severity. It was introduced into many parts of the Continent before the middle of the last century, and, with scarcely an exception, under the auspices of the English or Scotch Grand Lodges, as in Poland, Denmark, Hungary, Bohemia, Savoy, and Switzerland, and also in the Island of Malta, between the years 1737 and 1745; but in none of these States did it meet with much encouragement; on the contrary, the Bull of Clement XII. was, in general, enforced against it, and it was frequently suppressed for a time, although the Brethren continued to preserve the existence of the Order throughout the whole of their persecutions. Lodges were formed at Constantinople, Smyrna, and Aleppo, in 1738. In 1733 Masonry found its way to America, where Washington was Grand-Master in 1797. It was established in Prussia and Germany as early as in any part of the Continent, and at first met with similar persecutions. In 1738, the Order of the *Mopses* was founded, in order to enable

the Brethren to meet without incurring the penalties declared in Clement's Bull. Frederick-William II., King of Prussia, having been admitted a Mason when Prince Royal, patronized and personally superintended the Order after he came to the Throne, and from that time, as might be expected, it prospered. But the introduction of a number of high Degrees about the middle of the century, altered the system from its original simplicity; besides which other Societies were formed, perhaps for political purposes, as, for instance, the *Illuminati* in 1776, by Professor Weishaupt, under the veil of Masonry, with which they were perfectly unconnected. The Emperor Francis II., on coming to the Throne, suppressed the Masonic meetings in his dominions. The first Grand Lodge in Sweden was under the Scotch system at Stockholm, in 1754, although Masonry was probably in existence in that Country before 1738. Indeed, there is a tradition among the Swedish Masons, (how far its authenticity may be relied on is best known to the initiated,) that Free-Masonry was established in Europe by eighty-one Masons under the conduct of Garimont, the pretended Patriarch of Jerusalem, who went to Sweden in 1150, and repaired to the Archbishop of Upsal, in which City had formerly existed one of the most famous Temples of Odin. The Archbishop received them with eagerness, and they communicated to him the Masonic secrets and symbols, &c., which he inclosed in a marble tomb sealed with four seals, and placed it, with the assistance of the Brethren, in a cave or vault in the tower where the treasure of the Kings of Sweden was kept.* The Science has flourished in Sweden. Gustavus IV. was initiated; Charles XIII. fostered it, and raised it to a high pitch of reputation in his dominions, having even established the Order of Charles XIII., to be worn solely by Masons of high rank, assigning the high merit and active benevolence of the Society as the reason for this distinction. The first Lodge in the East Indies was formed at Bengal in 1740; and in Africa at James Fort in 1736, at the Cape of Good Hope in 1773.†

Fantastical
Degrees.

About the middle of the last century, as has been previously observed, numerous high and figurative Degrees were introduced into Masonry, by persons of lively imagination, particularly by Ramsay, Rosa, Zinnendorf, Cagliostro, &c. The exuberant number of these Degrees is almost beyond conception; a list of those invented up to the present time would contain very little less than eight hundred; the sect of Misphraim alone possesses ninety Degrees, and its followers claim an origin so far back as the early Egyptians. The titles of some of these fanciful Orders prove that the select Brethren who obtained them sufficiently appreciated their dignity. The humbler Brethren of the common Masonic Degrees, can hardly imagine how the *Souverains des Souverains*, or the *Grand et Sublime Trésorier*, or *Dépositaire des Secrets du grand Salomon*, *Gardien fidèle de Jehova*, or one of the *Souverain Grand Tribunal des illustres Souverains Princes*, or the *Très-illustre Souverain Prince de la Maçonnerie*, or *Grand Chevalier sublime Commandeur de Royal Servet*, or the *Empereur de tous les Maçons*, can descend to the duties of common life. The *Chevalier de l'Arc en Ciel*, the

Illustre Grand Prince des Septs Planètes, and the *Suprême Commandeur des Astres*, are pretty titles, but we fear the uninitiated may think the Moon has more to do with these dignitaries than any other of the heavenly bodies. The Rosicrucians, who also have their Sovereign Prince, lay claim to being the only depositaries of true Masonry, which they declare has descended to them unchanged from the times of the Priests of Memphis. The Royal Ark Masons, or Ark Mariners, commemorate the Deluge; their allegorical ceremonies being founded on the Ark, and Noah and his sons. The Noachites, or *Chevaliers Maçons Prussiens*, claim a high origin, as they profess to descend from Phaleg, the Grand Architect of the Tower of Babel, and say they coalesced with the other Masons at the time of the Crusades. They meet only at the full of the Moon, and admit no light into their Lodge but from that luminary.* This multiplicity of Degrees, and the facility with which they may be obtained, has an injurious effect; for the uninitiated, seeing the Knights of these chivalrous Orders (who must, previously to obtaining them, have been initiated into the recognised Degrees of Masonry) decorated with numerous gaudy ornaments, immediately consider them essential to Masonry, and adopt a system of parade and form, without having any beneficial object in view. The Grand Lodge of England, with great judgment, recognises only the Degrees of Apprentice, Fellow-Craft, and Master-Mason, including in the last the Degree of the Royal Arch;† considering that the real distinctions which a man can obtain in Masonry consist in the appointment to Office in the Lodge to which he may belong, or in the Grand Lodge itself. Notwithstanding these restrictions, however, and that consequently the members of any of these higher or chivalrous Orders, as they are sometimes called, can enjoy their decorations only in their own private and limited assemblies, yet the use of arbitrary medals and jewels has been gradually encroaching on the simplicity of the essential badges of the Craft. The true Mason will attach no merit to such adventitious ornaments, but will place his ambition on fulfilling, to the best of his power, those duties, and practising those doctrines of morality, inculcated by the system; at the same time, taking the opportunity of acquiring such information connected with Architecture and other Sciences as the Masonic lectures will afford.

The French have, or had, up to a very recent period,‡ Female a sort of mock Masonry, called *Maçonnerie d'Adoption*, Female wherein females were admitted, the allegorical ceremonies having allusion, we believe, to the apple eaten by Eve. It consisted of several Degrees, and at one period was well supported, for in 1777 there was a fête given of this description of Masonry, in which the Duke and Duchess of Chartres, the Duchess of Bourbon, and the Princess de Lamballe assisted.§

In the most distant parts of the Globe, even among uncivilized nations, secret Societies may be found, bearing some similarity to Masonry in form, though perfectly unlike in their objects. It is not, therefore, necessary to dwell on the subject here, although two or three examples may be given by way of curiosities. In China, they had the *Tien-teé-wheé*, (Association of Heaven and Earth,) and *Tien-Lée*, (Celestial Reason,) Other secret Societies.

* Thuileur de l'Ecosisme, 8vo. Paris, 1821, p. 168, 169.

§ *Acta Latomorum*, vol. i. p. 129.

FREE-
MASON-
RY.

FREE-
MASON-
RY.

but they appear to have been Political Societies, and proscribed on that account. There is also said to be a Society called the *San hō hwuy*, or the Triad Society, whose professed design is benevolence. The members are called Brethren, and they have among them certain secret words and signs. The candidate, on admission into the Society, receives the obligation to secrecy under an arch or bridge of swords, held over him by the Brethren.* René Caillié, in his *Travels to Timbuctoo*, mentions, among the Tribes on the banks of the Rio Nuñez, a secret Society, of which the head is called the *Simo*, who lives in the woods with his disciples, and exercises great authority in cases of sorcery, witchcraft, adultery, &c. His disciples live with him for seven or eight years, that time being requisite for their instruction; any stranger venturing into their recesses without knowing the secret watchword of the Society is severely beaten.† Throughout the whole of Bambarra, he says, there is a similar custom. Other travellers mention secret Societies among the most uncivilized nations.

Since the union of the two Systems of Masonry in 1813, the Fraternity has been managed by "The United Grand Lodge of Ancient Free and Accepted Masons of England," consisting of the Grand Master, with his Deputy, Grand Wardens, and other Officers, the Provincial Grand Masters, and the Masters and Wardens of all regular Lodges, with a certain number of Stewards annually elected, who meet four times a year for the despatch of business, independently of the annual Masonic Festival, at which every Brother is entitled to attend.

The general business of the Society, together with its finances and the Fund of Benevolence, which is considerable, being supported by annual payments from every Brother, are managed by Boards of experienced Masons, appointed for the purpose. We cannot, of course, be expected to give any description of the peculiar rites and ceremonies of Free-Masonry; they are allegorical, forcibly impressing, by means of symbols and illustrations, the beauties of morality and benevolence, and avoiding all topics which might lead improperly to Religious or Political discussion. If properly attended to, they would inform the mind and improve the heart of every Brother; but in a large and mixed Body, it will occasionally be found that these symbols and instructions are considered as mere empty forms, and the Society itself perverted into a mere convivial meeting. It is, however, a more pleasing task to view the merits of our fellow-creatures, where we can, than to search out their errors; and in answer to those who complain of the Masonic banquets, it may be stated, that the Fraternity annually expends several thousand pounds in relieving the poorer Brethren and their families, including establishments for the maintenance and education of nearly one hundred and fifty children, mostly orphans or fatherless. The present Grand Master, the Duke of Sussex, has paid great attention to the Society, and under the influence of his rank and talents, it has greatly increased in numbers and respectability, and there are about 850 Lodges under the jurisdiction of the Grand Lodge of England, including 100 in London. The late Duke of York was the actual Master of a Lodge, in which he was succeeded by his

present Majesty, now the Patron of the Order. The Dukes of Cumberland and Gloucester also are Masons, together with many of the Nobility. Indeed, the Society is apparently in as prosperous a state as it has been at any time since its commencement, and while it remains under its present able administration there is every prospect of its continuing to flourish.

There are several publications professing to treat of Free-Masonry, but the greater part of them are little to be trusted; the following are the most approved and useful:—*The Constitutions of the Ancient Fraternity of Free and Accepted Masons, containing the History, Charges, Regulations, &c.*, by James Anderson, D. D. London 1723, 4to.: there were editions also in 1738, 1756, and 1767, and one in 1784 revised and enlarged by John Noorthouck. This Work was published under the authority of the Grand Lodge. *Aheinan Rezon; or a Help to a Brother*, by Brother Laurence Dermott, London, 1764, 8vo. Of this there have been several editions, the latest being that of 1813, revised by Thomas Harper, formerly Deputy Grand Master. *A candid Disquisition on the Principles and Practices of the most Ancient and Honourable Society of Free and Accepted Masons*, by Wellins Calcott, P. M. London, 1769, 8vo. *Illustrations of Masonry*, by William Preston, P. M. of the Lodge of Antiquity, London, 1772, 8vo. There have been fourteen editions of this Work, the last having been recently edited by the Rev. George Oliver. *The Use and Abuse of Free-Masonry*, by Captain George Smith, London, 1783, 8vo. *The Free-Mason's Magazine; or General and Complete Library*, published monthly, from June 1793 to December 1798. *The History of Free-Masonry, &c., with an Account of the Grand Lodge of Scotland from its Institution in 1736*, by A. Lawrie, Edinburgh, 1804, 8vo. *Magazin für Freymaurer*, Four Parts, 8vo. Leipsic, 1805—6. *Annales Maçonniques, &c.* 8 vols. 8vo. Paris, 1807, et seq. An edition also in 18mo. *Masonic Miscellanies in Poetry and Prose*, by Stephen Jones, new edition, London, 1811, 12mo. *Neues Journal für Freymaurer*, 8vo. 1812. *La Franche Maçonnerie rendue à sa véritable origine, ou l'Antiquité de la Franche-Maçonnerie prouvée, &c.* par Alexandre Lenoir, 4to. Paris, 1814. *Acta Latomorum, ou Chronologie de l'Histoire de la Franche-Maçonnerie Française et Etrangère, &c.*, par Cl. Ant. Thory, 2 vols. 8vo. Paris, 1815. *Aperçu Général et Historique des Principales Sectes Maçonniques*, par Jacq. Ph. Levesque, Paris, 1821, 8vo. *The Antiquities of Free-Masonry*, by the Rev. George Oliver, London, 1823, 8vo. *The Masonic Manual, or Lectures on Free-Masonry*, by the Rev. Jonathan Ashe, D. D. 2nd edition, London, 1825, 8vo. *The Constitutions of the Ancient Fraternity of Free and Accepted Masons, Part II., containing the Charges and Regulations, &c.*, by William Williams, Esq. London, 1825, 4to., and a subsequent edition in 8vo. In the Preface, dated 19th February, 1819, the first Part, containing the History of Masonry, is promised, but from some cause or other it has not yet appeared. This Work was published under the authority of the Grand Lodge. *Lectures on Free-Masonry*, by the Rev. George Oliver, 2 vols. 8vo., London, 1828—9. The first volume contains "Signs and Symbols explained in Twelve Lectures on Free-Masonry." The second is the "History of Initiation, comprising Rites and Ceremonies, &c. of all the Sacred and Mysterious Institutions of the Ancient World."

MASORAH. See the Quotation from Grew, and the *Miscellaneous* notice under BIBLE.

Masorah, a certain *Critica Sacra*, wherein are delivered the varieties of writing and reading throughout the Old Testament, not performed by any other author, but the successive labours of many, and continued for some hundreds of years, probably begun about the time of the Mackabees, certainly before the Jerusalem Talmud, a Hebrew comment on the law; which is observed to mention some of the *masoretick* notes, and was first published, as saith Calvisius, in the year of our Lord 396.

Grew. *Cosmo Sacra*, book iv. ch. i. fol. 140.

Ye have an author great beyond exception, Moses; and one yet greater, he who hedg'd in from abolishing every smallest jot and tittle of precious equity contained in that law, with a more accurate and lasting *masoreth*, than either the synagogue of Ezra or the Galilean school at Tiberias hath left us.

Milton. *Works*, vol. i. fol. 165. *Doctrine and Discipline of Divorce*.

MASOREUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. Palpi six, of which the external maxillary ones are quadri-articulate, with the second joint compressed, obovate, the third short, cup-shaped, the terminal one as long as the second, subcylindric; *mentum* transverse, the sides produced anteriorly, the centre simple; *antennæ* slightly thickened towards the extremity, composed of eleven nearly equal joints; *labrum* transverse, somewhat emarginated; *labium* subquadrate; *thorax* broad, transverse, rounded at the sides; anterior *tibiæ* with a notch within near the apex; *tarsi* pentamerous, anterior a little dilated.

The type is *C. luxatus* of Creutzer, a native of the South of Europe and of Britain; Sturm's *Deutschland's Fauna*, vol. vi. pl. 150, fig. D.

MASQUERADE. See MASK.

MASS, } Fr. *masse*; It. and Sp. *massa*; Lat.
MA'SSY, } *massa*; Gr. *μάζα*, from *μάσσω*-ειν, sub-
MA'SSINESS, } *igere*, to beat or press (into a lump.)
MA'SSIVE. } Span. *massar*, *amassar*, to knead the
dough.

The quantity or magnitude formed by collecting or compressing into one heap or bulk; a heap or accumulation, a bulk or body, a lump.

MASS.

Answer me with truth:

Wherto was wrought the *masse* of this huge hors?

Surrey. *Virgil. Æneis*, book ii.

The vessels eke that were of *massy* gold,
And vestures spoiled, were gather'd all in heap.

Id. *Ib.* book iv.

Belike bicause lande and mountaines are rare, which minister cause and matter of tempests, and because a deepe *masse* of continuall sea is slower sturred to rage.

Savile. *Tacitus*, fol. 188. *The Life of Jol. Agricola*.

Wee bee certainly informed, that our said enemy is purposed and prepared to flye the land, hauing already made ouer great *masses* of the treasure of our crowne, the better to support him in forraigne parts.

Bacon. *King Henry VII.* fol. 159.

On which there stood an image all alone
Of *massy* gold.

Spenser. *Faerie Queene*, book iii. can. 11.

Matchable to these was the famous platter of Esope the Tragædian, saue that it was more notorious for the daintinesse of the provision which he served in it, then for the *massines* of the dish itselfe.

Hakewill. *Apologie*, book iv. ch. vii. sec. 1. fol. 376.

There shall we find, that when the world began,
One common *mass* compos'd the mould of man,
One paste of flesh on all degrees bestow'd,
And kneaded up alike with moistening blood.

Dryden. *Sigismonda and Guiscardo*.

No sideboards then with gilded plate were dress'd,
No sweating slaves with *massive* dishes press'd.

Congreve. *The XIth Satire of Juvenal*.

The common military sword is a heavy *massive* weapon, for close engagement: wielded by a strong and skilful arm, it stabs and cuts, opens dreadful gashes where it falls, severs limbs, lops the head, or cleaves the body.

Horsley. *Sermon 7.* vol. i. p. 124.

Rude was the pile, and *massy* proof,
That first uprear'd its haughty roof,
On Windsor's brow sublime, in warlike state.

Warton. *Ode 20. For the New Year, 1788*.

Hall. *Works*, vol. i. fol. 724. *The Honour of the Married Clergie*.

There is indeed one sort of sacrifice, which if it were true, (as it is confidently pretended) would be really an available propitiation for sin; and that is, the repeating of the great sacrifice of the death of Christ; which those of that communion now mentioned affirm to

MASS. be done daily in their sacrifice of the *mass*. But this, the Apostle expressly tells us, is impossible.

Clarke. Works, vol. ii. fol. 143. Ser. 137.

Importing or selling *mass-books*, or other popish books, is by Statute 3 Jac. c. 5. § 25. only liable to a penalty of forty shillings.

Blackstone. Commentaries, book iv. ch. viii.

Derivation. *MASS* may be satisfactorily derived either from *Missa catuchemenorum*, the dismissal of the Catechumen Penitents and Energumens, which in the Primitive Church took place before the celebration of the Communion, by the words *Ite, Missa est*; or from *Missa fidelium*, the similar dismissal of the Communicants themselves after that service. But the Romanists, perhaps, believed that their doctrine of the Mass being a sacrifice would be strengthened by tracing the name to the Hebrew *מִסָּח*, *oblatio, tributum*. Be this as it may, the word itself is of great antiquity, and it imports the office at the celebration of the Eucharist. The order almost universally adopted among Roman Catholics is that of the Roman Missal; to this, however, there are a few exceptions: the Church of Milan prefers that of St. Ambrose; the Spanish Dioceses of Toledo and Salamanca, the Mozarabic or Gothic; and most National Churches introduce certain variations peculiarly adapted to their own spiritual condition.

Different kinds.

Missa Alta, High Mass, is offered up with the greatest solemnities by a Bishop or Priest, attended by a Deacon, Subdeacon, and other Ministers, each officiating in his respective part, and it is always sung. Masses bear also names from the Holy personages through whose intercession they are offered, as a *Mass of the Beata or our Lady*, a *Mass of the Holy Ghost*, a *Mass of any particular Saint*, &c. Each day also has some peculiar prayers introduced into its own Mass. There is a *Missa sicca*, or *Dry Mass*, without consecration, or any administration of the Holy elements. This is said to have been authorized by St. Louis while voyaging to Palestine, and hence is called also *Missa Nautica*: the reason assigned for the omission of the Eucharist is, that on account of the motion of the sea it could scarcely be offered without hazard of effusion. In the *Mass of the Presanctified, Missa Præsanctificationum*, elements before consecrated are administered. A *Solitary Mass, Low Mass, Missa solitaria, bassa, privata*, is that said by the Priest alone without a congregation for the benefit of a departed soul; and when those Masses became a source of great lucre, an abuse crept in which some of the Romish Divines have bitterly condemned. In order to save time, and because they were forbidden for the most part to say more than one Mass in a day, the Priests contrived to throw a great many Masses into one, first saying the Mass of the day so far as the Offertory, and then repeating to the same resting place as many special Masses as they pleased, for all of which one consecration (or Canon as it is termed) sufficed. These Masses were opprobriously called *Bifacialæ*, or *Trifacialæ*, because they were double and triple-faced. In a *Missa Animarum, Mass for the Dead*, the Introit generally commences with a *Requiem*.

Doctrine.

We shall not here investigate the controversy concerning the doctrine of the Mass, the chief disputed points in which between the Romish and Reformed Churches are, whether it is a positive sacrifice renewed at every celebration, or only a solemn feast on a sacrifice once offered by our Lord; whether Christ in body and blood is absolutely and corporally, or only spiritually and really, (whatever interpretation may be assigned to

the last words,) present in the Elements. This dispute of Ages cannot be treated briefly, and is more or less interwoven in the writings of every Divine who has treated of either Church, a bare catalogue of whose names would occupy many pages. It may be enough on the part of the Romanists to mention Cardinal Bona *de Rebus Liturgicis*; on that of the Protestants the XVth Book of Bingham's *Antiquities of the Christian Church*, (a ponderous but very learned collection of facts and arguments,) or Hey's *Lectures*, book iv. art. 28, a section marked by that distinguished writer's characteristic acuteness and candour. We omit also the symbolical and allegorical interpretations which the Romanists attach to each action of the Priest during the Service. All of them are declared to bear relation to incidents in our Saviour's passion, and their mysteries are elucidated (or perhaps it may be thought rendered more obscure) at great length by Durand, (*Rationale*, lib. iv.) and briefly explained by Picart. (*Cer. Rel.* vol. i.)

Allegories.

The following Office of the Mass is extracted from the *Service. Garden of the Soul* by the late Bishop Challoner, and may be accepted therefore as the authorized rite of the English Roman Catholics.

"At the beginning of the Mass, the Priest at the foot of the altar makes the sign of the cross, *In the name of the Father, and of the Son, and of the Holy Ghost, Amen*, and then recites with the Clerk, the 42d Psalm, *Judica me, Deus*, &c.

"Then the Priest bowing down says the *Confiteor*, by way of a general confession to God, to the whole Court of heaven, and to all the Faithful there present, of his sins and unworthiness; and to beg their prayers to God for him. And the Clerk, in the name of the people, prays for the Priest, that God would have mercy on him, and forgive him his sins, and bring him to everlasting life. Then, in the name of all there present, the Clerk makes the like general confession to God, to the whole Court of heaven, and to the Priest, and begs his prayers. And the Priest prays to God to show mercy to all his people, and to grant them pardon, absolution, and remission of all their sins. Which is done to the end that both Priest and people may put themselves in a penitential spirit, in order to assist worthily at this divine sacrifice.

"After the *Confiteor*, the Priest goes up to the altar, saying, *Take away from us we beseech thee, O Lord, our iniquities, that we may be worthy to enter with pure minds into the holy of holies, through Christ our Lord. Amen*. And kisses the altar as a figure of Christ, and the seat of the sacred mysteries.

"When the Priest is come up to the altar, he goes to the book, and there reads what is called the *Introit* or *entrance* of the Mass, which is different every day, and is generally an anthem taken out of the Scripture, with the first verse of one of the Psalms, and the *Gloria be to the Father*, &c. to glorify the blessed Trinity.

"The Priest returns to the middle of the altar, and says alternately with the Clerk the *Kyrie eleison*, or *Lord have mercy on us*, which is said three times to God the Father; three times *Christe eleison*, or *Christ have mercy on us*, to God the Son; and three times again *Kyrie eleison*, to God the Holy Ghost.

"After the *Kyrie eleison*, the Priest recites the *Gloria in Excelsis*, or *Gloria be to God on High*, &c. being an excellent hymn and prayer to God, the beginning of which was sung by the Angels at the birth of Christ.

MASS.

"N. B. This being a hymn of joy, is omitted in the Masses of *requiem* for the dead, and in the Masses of the *Sundays* and *Ferias* of the penitential times of *Advent* and *Lent*, &c.

"At the end of the *Gloria in excelsis*, the Priest kisses the altar, and turning about to the people says, *Dominus vobiscum, The Lord be with you.* Answer, *Et cum spiritu tuo, And with thy spirit.*

"The Priest returns to the book, and says, *Oremus, Let us pray*, and then reads the collect or collects of the day, concluding them with the usual termination, *Per Dominum nostrum, &c. Through our Lord Jesus Christ, &c.* with which the Church commonly concludes all her prayers.

"The collects being ended, the Priest lays his hands upon the book, and reads the *Epistle* or *Lesson* of the day. At the end of which the Clerk answers, *Deo Gratias, Thanks be to God*, viz. for the heavenly doctrine there delivered. Then follow some verses or sentences of Scripture, called the *Gradual*, which are every day different.

"After this the book is removed to the other side of the altar, in order to the reading of the *Gospel* for the day; which removal of the book represents the passing from the preaching of the Old Law, figured by the Lesson or Epistle, to the Gospel of *Jesus Christ* published by the Preachers of the New Law. The Priest, before he reads the Gospel, stands a while bowing down before the middle of the altar, begging of God in secret to cleanse his heart and his lips, that he may be worthy to declare those heavenly words.

"At the beginning of the Gospel the Priest greets the people with the usual salutation, *Dominus vobiscum. The Lord be with you*, and then tells out of which of the Evangelists the Gospel is taken, saying, *Sequentia S. Evangelii secundum, &c. i. e. What follows is of the Holy Gospel, &c.* At which words both Priest and people make the sign of the cross. 1st, Upon their foreheads, to signify that they are not ashamed of the cross of Christ, and his doctrine. 2dly, Upon their mouths, to signify they will ever profess it in words. 3dly, Upon their breasts, to signify that they will always keep it in their hearts. The Clerk answers, *Gloria tibi Domine, Glory be to thee, O Lord.*

"At the Gospel stand up, to declare by that posture your readiness to go and do whatsoever you shall be commanded by your Saviour in his Gospel.

"At the end of the Gospel the Clerk answers, *Laus tibi Christe, Praise be to thee, O Christ*; and the priest kisses the book in reverence to those sacred words he has been reading out of it. Then upon all Sundays, and many other Festival days, standing in the middle of the altar, he recites the Nicene Creed, kneeling down at these words, *He was made man*, in reverence to the great mystery of our Lord's incarnation.

"Then the Priest turns about to the people, and says, *Dominus vobiscum, The Lord be with you.* And having read in the book a verse or sentence of the Scripture, which is called the *Offertory*, and is every day different, he uncovers the chalice, and taking in his hand the paten, or little plate, offers up the bread to God; then going to the corner of the altar, he takes the wine and pours it into the chalice, and mingles with it a small quantity of water, in remembrance of the blood and water that issued out of our Saviour's side; after which he returns to the middle of the altar, and offers up the chalice. Then bowing down, he begs that this

sacrifice, which he desires to offer with a contrite and humble heart, may find acceptance with God; and blessing the bread and wine with the sign of the cross, he invokes the Author of all sanctity to sanctify this offering.

"At the end of the Offertory, the Priest goes to the corner of the altar, and washes the tips of his fingers, to denote the cleanness and purity of soul with which we ought to approach to these divine mysteries, saying, *Lavabo, &c. I will wash my hands among the innocent, and I will encompass thy altar, O Lord, &c.* as in the latter part of the 25th Psalm. Then returning to the middle of the altar, and there bowing down, he begs of the blessed Trinity to receive this oblation in memory of the passion, resurrection, and ascension, of our Lord Jesus Christ, and for an honourable commemoration of the blessed Virgin, and of all the Saints, that they may intercede for us in heaven, whose memory we celebrate upon earth.

"Then the Priest, kissing the altar, turns to the people, and says, *Orate Fratres, &c. that is, Brethren pray, that my sacrifice and yours may be made acceptable to God the Father Almighty.*

"Then the Priest says, in a low voice, the prayers called *Secreta*, which correspond to the collects of the day, and are different every day.

"The Priest concludes the *Secreta* by saying aloud, *Per omnia sæcula sæculorum*, that is, *World without end.* Ans. *Amen.* Priest. *Dominus vobiscum, The Lord be with you.* Ans. *Et cum spiritu tuo, And with thy spirit.* Priest. *Sursum corda, Lift up your hearts.* Ans. *Habemus ad Dominum, We have them lifted up to the Lord.* Priest. *Gratias agamus Domino Deo nostro, Let us give thanks to the Lord our God.* Ans. *Dignum et justum est, It is meet and just.* Then the Priest recites the *Preface* (so called, because it serves as an introduction to the Canon of the Mass.)

"After the *Preface* follows the *Canon* of the Mass, or the most sacred and solemn part of this divine service, which is read with a low voice, as well to express the silence of Christ in His passion, and His hiding at that time His glory and His divinity, as to signify the vast importance of that common cause of all mankind, which the Priest is then representing as it were in secret to the ear of God; and the reverence and awe with which both Priest and people ought to assist at these tremendous mysteries.

"The *Canon* begins by the invoking the Father of mercies, through Jesus Christ His Son, to accept this sacrifice for the holy Catholic Church, for the Pope, for the Bishop, for the King, and for all the professors of the Orthodox and Apostolic Faith throughout the whole World. Then follows the *Memento*, or commemoration of the living, for whom in particular the Priest intends to offer up that Mass, or who have been particularly recommended to his prayers, &c. To which is subjoined a remembrance of all there present, followed by a solemn commemoration of the Blessed Virgin, of the Apostles, Martyrs, and all the Saints; to honour their memory by naming them in the sacred mysteries, to communicate with them, and to beg of God the help of their intercession, through Jesus Christ our Lord.

"Then the Priest spreads his hands, according to the ancient ceremony of sacrifices, over the bread and wine, which are to be consecrated into the body and blood of Christ, and begs that God would accept of this oblation which he makes in the name of the whole

MASS.

MASS. Church; and that he would grant us peace in this life, and eternal salvation in the next. After which he solemnly blesses the bread and wine with the sign of the cross, and invokes the Almighty, that they may be made to us the body and blood of his most beloved Son, our Lord Jesus Christ. And so he proceeds to the consecration, first of the bread into the body of our Lord, and then of the wine into his blood; which consecration is made by Christ's own words, pronounced in His name and person by the Priest, and is the most essential part of this sacrifice, because thereby the body and blood of Christ are really exhibited and presented to God, and Christ is mystically immolated. Immediately after the consecration follows the *Elevation*, first of the Host, then of the chalice, in remembrance of Christ's elevation upon the cross. At the elevation of the chalice, the Priest recites those words of Christ, *As often as you do these things you shall do them for a commemoration of me.* Then he goes on, making a solemn commemoration of the passion, resurrection, and ascension of Christ, and begging of God to accept this sacrifice, as he was pleased to accept the oblation of *Abel, Abraham, and Melchisedech*: and to command that it may, by his holy angel, be presented upon the altar above, in presence of His divine Majesty, for the benefit of all those that shall partake of these mysteries here below.

"Then the Priest proceeds to the *Memento*, or commemoration of the dead, saying, *Remember also, O Lord, thy servants N. and N. who are gone before us with the sign of faith, and repose in the sleep of peace*; praying for all the Faithful departed in general, and in particular for those for whom he desires to offer this sacrifice.

"After this *Memento* or commemoration of the dead, the Priest raising his voice a little, and striking his breast, says, *Nobis quoque peccatoribus, &c. And to us sinners, &c. humbly craving mercy and pardon for his sins, and to be admitted to some part and society with the Apostles and Martyrs through Jesus Christ.* Then kneeling down, and taking the sacred Host in his hands, he makes the sign of the cross with it over the chalice, saying, *Through Him, and with Him, and in Him, is to thee O God the Father, in the unity of the Holy Ghost, all honour and glory*; which last words he pronounces, elevating a little the Host and chalice from the altar, and then kneels down, saying, with a loud voice, *Per omnia sæcula sæculorum, For ever and ever. Answer Amen.* After which he recites aloud the *Pater noster*, or *Lord's Prayer*, the Clerk answering at the end, *Sed libera nos a malo, But deliver us from evil.*

"After this the Priest breaks the Host over the chalice, in remembrance of Christ's body being broken for us upon the cross; and he puts a small particle of the Host into the chalice, praying that *the peace of the Lord may be always with us.* Then kneeling down, and rising up again, he says, *Agnus Dei, &c. Lamb of God who takest away the sins of the world, have mercy on us.* He repeats this thrice; but at the third time, instead of *Have mercy on us*, he says, *Grant us peace.* After the *Agnus Dei*, the Priest says three short prayers, by way of preparation for receiving the blessed sacrament; then kneeling down, and rising again, he takes up the host, and striking his breast, he says thrice, *Domine, non sum dignus, &c. Lord, I am not worthy that thou shouldst enter under my roof; speak only the word, and my soul shall be healed.* After which he makes the sign of the cross upon himself with the Host, saying, *The body of our*

Lord Jesus Christ preserve my soul to life everlasting. Amen. And so receives it. Then after a short pause in mental prayer, he proceeds to the receiving of the chalice, using the like words, *The blood of our Lord Jesus Christ preserve my soul to life everlasting. Amen.* Then follows the communion of the people, if any are to receive.

"After the communion, the Priest takes the *lotions*, or *ablutions*, of wine and water in the chalice, in order to consummate whatever may remain of the consecrated species. Then covering the chalice, he goes to the book and reads a versicle of Holy Scripture, called the *Communion*; after which, he turns about to the people with the usual salutation, *Dominus vobiscum*, and returning to the book, reads the collects or prayers called the *Post-communion*. After which he again greets the people with *Dominus vobiscum*; and gives them leave to depart with *Ite, missa est*; the Clerk answering *Deo Gratias, Thanks be to God.* Then the Priest, bowing down before the altar, makes a short prayer to the blessed Trinity: and then turning about to the people, gives his blessing to them all, in the name of the blessed Trinity; and so concludes the Mass, by reading the beginning of the Gospel according to St. John, which the people hear standing, till these words, *Et verbum caro factum est, And the word was made flesh*; when both Priest and people kneel down, in reverence to the mystery of Christ's incarnation. At the end the Clerk answers, *Deo Gratias, Thanks be to God.* And so the Priest returns from the altar to the Sacristy, and unveils himself, reciting in the mean time the *Benedicite*, or the Cantic of the three children, inviting all creatures in heaven and earth to praise and bless the Lord.

"With regard to the vestments, in which the Priest says Mass; that as the Mass represents the passion of Christ, and the Priest there officiates in His person, so these vestments in which he officiates represent those with which Christ was ignominiously clothed at the time of his passion. Thus the *Amice* represents the rag or clout with which the Jews muffled our Saviour's face, when at every blow they bid Him prophesy who it was that struck him, St. Luke xxii. 64. The *Alb* represents the white garment with which He was vested by Herod: the *Girdle*, *Maniple*, and *Stole*, represent the cords and bands with which He was bound in the different stages of His passion. The *Chasuble*, or outward vestment, represents the purple garment with which He was clothed as a mock king; upon the back of which there is a cross, to represent that which Christ bore on His sacred shoulders: Lastly, the Priest's *Tonsure* or crown, is to represent the crown of thorns which our Saviour wore.

"Moreover, as in the Old Law, the Priests, that were wont to officiate in sacred functions, had, by the appointment of God, *vestments* assigned for that purpose, as well for the greater decency and solemnity of the divine worship, as to signify and represent the virtues which God required of his Ministers: so it was proper that in the Church of the *New Testament*, Christ's Ministers should in their sacred functions be distinguished in like manner from the laity by their sacred vestments; which might also represent the virtues which God requires in them: thus the *Amice*, which is first put upon the head, represents divine *hope*, which the Apostle calls the *helmet of salvation*; the *Alb*, innocence of life; the *Girdle*, (with which the loins are begirt,) *purity* and *chastity*; the *Maniple*, (which is put on the left-arm,)

MASS. *patient suffering* of the labours of this mortal life; the *Stole*, the sweet yoke of Christ, to be borne in this life, in order to a happy immortality; in fine, the *Chasuble*, which is uppermost, and covers all the rest, represents the virtue of charity.

"In these vestments the Church makes use of five colours, viz. the *White* on the feasts of our Lord, of the Blessed Virgin, of the Angels, and of the Saints that were not Martyrs; the *Red* on the feasts of Pentecost, of the invention and exaltation of the cross, and of the Apostles and Martyrs; the *Violet*, which is the penitential colour, in the penitential times of *Advent* and *Lent*, and upon *vigils* and *emberdays*; the *Green* on most of the other *Sundays* and *Ferias* throughout the year; and the *Black* on *Good-Friday*, and in the *Masses* for the dead.

"We make a reverence to the altar upon which Mass is said, because it is the seat of these divine mysteries, and a figure of Christ, who is not only our *Priest* and *sacrifice*, but our *altar* too, inasmuch as we offer our prayers and sacrifices through him. Upon the *altar* we always have a *crucifix*, that, as the Mass is said in remembrance of Christ's passion and death, both *Priest* and people may have before their eyes during this sacrifice, the Image that puts them in mind of his passion and death. And there are always lighted candles upon the altar during Mass; as well to honour the victory and triumph of our Great King (which is there celebrated) by these lights, which are tokens of our *Joy* and of his *Glory*, as to denote the light of *Faith*, with which we are to approach to him."

Duties of
the Priest.

The *Priest* who is to celebrate Mass must previously confess all his mortal sins in order that he may feel morally sure that he is in a state of grace, since for the recovery of that state by such as have once fallen from it, confession, or contrition, if confession cannot be obtained, is absolutely necessary. Confession is unattainable, when there is no Confessor, or when there is none but an excommunicated person, or one whose powers have expired, or whose powers do not extend to absolution from the particular sins of which the Penitent is guilty, or one who is justly suspected of having betrayed the secrets of Confession, or who requires an interpreter, or when it is impossible to go to Confession without manifest inconvenience from distance, badness of the roads, inclemency of the season, or the murmurs of the Congregation impatient for Mass. Even if any of these reasons can be pleaded, no unconfessed *Priest* ought to celebrate Mass unless he be compelled by menaces of death, or through fear that a sick person may die without receiving the *viaticum*, or to avoid scandal when a congregation is waiting, or to finish a Mass in which another *Priest* has been accidentally interrupted. If a *Priest* during the celebration of Mass should recollect that he is in a state of mortal sin, excommunicated or suspended, or that the place in which he is celebrating it, is interdicted, he must quit the Altar unless he has already consecrated the Host; and even if he has done so, or any fear of scandal induces him to proceed, (as it is morally impossible but that some such fear must arise,) he must perform an act of contrition, and make a firm resolution to confess, if in his power, on the very same day. No *Priest*, without committing venial or perhaps mortal sin, can celebrate Mass before he has recited matins and lauds, unless from the necessity of administering the *viaticum* to the dying, or of exhorting such a one during the night, from pressure of con-

fessions on a holiday, or to quiet murmurs among the Congregation. It is a mortal sin for a *Priest* intending to say Mass to taste food, drink, or medicine, after the preceding midnight. The provisions on this head are so ludicrously severe that we give them below, as they are paraphrased in the *Bibliothèque Sacrée* of les *Révérends Pères, Richard et Giraud, Dominicains*, from the Canons of *Conc. Tolet. vii. 2.* and *Concil. Braccar. iii. 10.* *Rien de ce qui passe dans l'estomac par manière de salive ou de simple respiration n'empêche le jeûne naturel. Ainsi la pituite, le sang qui coule des gencives ou du cerveau, les restes de vin ou d'eau avec lesquels on s'est lavé la bouche, les parcelles de viande qui quelquefois s'attachent aux dents, et qui sans qu'on pense, ou malgré qu'on en ait s'avalent avec la salive ne doivent pas empêcher la Communion. Il en est de même si on se borne à goûter du vin ou un bouillon, à mordre un fruit ou quelqu'autre chose semblable, sans rien faire passer, si ce n'est peut-être par manière de salive, parce que dans ces occasions on ne peut dire qu'un homme ait mangé ou bu. Ce serait autre chose s'il allait jusqu'à avaler, car alors la plus petite chose romprait son jeûne. On ne doit pas non plus s'inquiéter de ce qui ne passe dans l'estomac que par manière de respiration, comme la poussière, la pluie, un moucheron, la fumée de tabac ou des viandes, si ce n'est peut-être qu'on l'avale de plein gré, ou par le moyen de quelque instrument. Les choses qui ne sont point capables d'être digérées ni de nourrir en aucun sens, telles que l'or, le plomb, des osselets extrêmement durs, ne rompent point le jeûne naturel. Il en est de même du tabac en poudre, des eaux et autres drogues qui se prennent par le nez, à moins qu'on ne fit passer volontairement dans l'estomac ces drogues qu'on prend par le nez. A l'égard du tabac qui se mâche Henri de Saint Ignace (Ethica Amoris, p. 75.) et quelques autres Théologiens en croient l'usage contraire au jeûne naturel, parce qu'il n'est guère possible que plusieurs des parties les plus succulentes ne passent dans l'estomac.* Even an involuntary transgression of these rules is a mortal sin; so that a *Priest* offends in that degree if he celebrates Mass after having been forced to eat or drink the smallest morsel or drop while the hour of midnight is striking, or a single moment afterwards.

The exceptions are, 1st, to save the profanation of the Host; thus, if a Heretic is about to profane the Host, and there be no one else by, who can otherwise prevent it, a *Priest*, although not fasting, may swallow it without sin. 2dly, When a *Priest* has so far proceeded in Mass that he cannot stop, as when water has been accidentally put into the chalice instead of wine, and he does not perceive it till he has swallowed it, or when he recollects after consecration that he is not fasting. 3dly, When after having performed the *lavabo*, he perceives any scattered fragments of Hosts, provided he be still at the altar, these he may eat. 4thly, To prevent scandal, such as a suspicion that he had committed a crime the night before. 5thly, To administer the *viaticum*. 6thly, To finish a Mass commenced by another *Priest*, and accidentally interrupted. 7thly, When he is dispensed.

It is *very probably* a mortal sin, as we are assured by the same authorities, to celebrate Mass before dawn, but this rule is to be accepted *dans un sens moral, non dans une rigueur mathématique*. This regulation may be dispensed with in France and other Northern climates during Winter, *parce que c'est un usage que les évêques*

MASS.
Fasting.

MASS. *connaissent et qu'ils ne condamnent pas*; a qualification which opens a door for evasion somewhat widely. Any other *very particular* reason also may justify a breach of this rubric. So also, and with similar exceptions, Mass must not be celebrated after noon, and never, unless for the dying, on Good Friday. It is a mortal sin to celebrate Mass without the necessary vestments and ornaments, or with unconsecrated vestments, &c., unless in cases of the uttermost necessity. These vestments lose their consecration if any portion has been torn off and sowed on again, not if they are repaired before absolute disjunction, even if it be by a downright patch. No worn out consecrated vestment should be applied to any other purpose, but it should be burned, and the ashes thrown in some place in which they will not be trampled on. But on the other hand, with a very wise distinction, the precious metals which have served profane uses may be applied to sacred purposes, after having been passed through the fire, which changes their very nature by fusion. No dispensation has ever yet been granted by any Pope to qualify the rigid precept enjoining the necessity of an altar for Mass; and this must have been consecrated by a Bishop, not by a simple Priest, unless through dispensation from the Holy Father himself. Three napkins are strictly necessary, two may suffice if such be the common usage of the Country, one in very urgent cases, and even that, provided it be whole and clean, may be unconsecrated; but a lighted taper must not on any account be dispensed with even to secure the receipt of the *viaticum* by a dying man. Mass must stop if the taper be extinguished, and another cannot be obtained. On that account a lamp should be kept burning day and night before every altar on which the Host is deposited, and those to whom the care of this lamp appertains, commit a mortal sin if they neglect it for one whole day. In no case must a woman be allowed to assist a Priest at the altar.

Superstitions forbidden.

Certain prevalent superstitions during the celebration of Mass are forbidden, such as picking up from the ground, during the *Sanctus* of the Mass on Palm Sunday, the box-wood consecrated on that day, infusing it for three quarters of an hour, neither more nor less, in spring water, and drinking the water as a cure for the colic; keeping the mouth open during the *Sanctus* in the Mass for the dead, as a charm against mad dogs; writing the *Sanctus* on a piece of virgin parchment and wearing it as an amulet; saying Mass for twenty Fridays running as a security against dying without confession, contrition, full satisfaction, and communion, and in order to obtain admission into heaven thirty days after decease; ordering a Mass of the Holy Ghost to be said in certain churches by way of divination. If a fly or a spider fall into the cup before consecration, a fresh cup should be provided; if after consecration, it should be swallowed, if that can be done without repugnance or danger, otherwise it should be removed, washed with wine, burned after Mass, and its ashes thrown into the

Sacristy. If a fly, having drunk from the consecrated cup, take wing, *il faut, si on ne peut la prendre, l'abandonner à la Providence sans se troubler*. It might be difficult to do otherwise. There are some nice precautions to be observed in case of the accidental fall of a Host among the clothes of a female communicant; if the wafer fall on a napkin it suffices that the napkin be washed by a subdeacon, but if it be stained by no more than a single drop of wine, the office must be performed by a Priest.

The Augsburg Confession (*syntagma* 30.) protests against any notion that it abolishes Mass; and the word indeed, according to its original meaning, conveys no meaning from which a Protestant need recoil. It continued among ourselves to be the name for the Lord's Supper during part of Edward VI.'s reign, and it was disused only in consequence of that bitterness which in all disputes, more particularly in those connected with Religion, wages inveterate war against words and things indifferent and inoffensive, if they have once been employed by opponents.

Perhaps no better commentary on the possible effects of the Mass can be offered than that which Picart has subjoined to his explanation of the allegories contained in its various ceremonies. The cautions which he proposes may be salutary even without the pale of the Roman Catholic Church. *Pendant la Messe il doit être défendu de parler et de discourir, de regarder de côté et d'autre, de se tenir en des postures indécentes. Une femme doit éviter d'y essayer la force de ses attraits, et ne point faire usage de son pouvoir en présence de l'Etre Suprême. Pour les hommes, armés de la modestie Chrétienne ils doivent travailler à repousser les armes de la coquetterie. Leurs yeux, s'il est permis de parler ainsi, doivent ignorer les êtres de la Paroisse, ne pas savoir où les Dames peuvent être vues, ni en quel endroit ils pourront en être vus. Des habits superbes, une gorge nue, des yeux vifs, pétillans, noirs et amoureux ne peuvent que débaucher le Chrétien du Service Religieux. La modestie du Prêtre n'est pas moins recommandable. Un Prêtre frais, qui jouit d'une santé que l'on peut appeler agréable, et qui sait mettre à profit les talens de la Nature, dont la voix flexible et harmonieuse se fait écouter, qui affecte d'avoir une dévotion douce et polie, qui lève ses yeux au ciel avec une humilité toute qfable, distribue le Communion d'une main potelée et blanche, dont il fait parade, accompagne d'un œil tendre et amoureux la bénédiction qu'il donne au peuple, et lui témoigne par des gestes éloquens, mais étudiés à loisir, qu'il ne pense qu'à le sauver: un tel Prêtre sauve peu d'âmes et a beaucoup de peine à sauver la sienne. (Cérém. Relig. i. 87.)* No expressions can be more nationally characteristic than those in which the above pictures are conveyed, and in the last of them we are forcibly reminded of more than one white-handkerchief exhibition, even among the Reformed.

MASSACHUSETTS.

General instructions.

MASSACHUSETTS.

Boundaries, &c.

MASSACHUSETTS, one of the United States of America, is situated between 41° 13' and 43° 52' of North latitude, and between 69° 50' and 73° 10' of West longitude; and is bounded on the North by

Vermont and New Hampshire, on the East and South by the Atlantic, Rhode Island, and Connecticut, and on the West by New York. It is about 190 miles long, and about 90 broad, and includes, according to

MASSACHUSETTS.

Warder, 6250 square miles, but Malte-Brun extends it so as to embrace 7800 miles of surface. *Nantucket*, an Island in the Atlantic, about fifteen miles long, and where widest, eleven broad, forms a part of the State. This Island contains 29,380 acres, has a thin, sandy soil, but yields much hay as well as grain, is good for grazing and dairy husbandry, and forms an excellent fishing station. The *Dukes*, a group of Islands which constitute a County of the State, lie between the shore and Nantucket. There are also several Islands of considerable extent in Boston harbour, as well as in some of the other great inlets which distinguish the coast.

Mountains.

This part of America exhibits a surface greatly diversified. Its Western parts are ribbed over by high ridges of mountains running from South to North. Among these are Tayhkannuc range, the Green Mountain range, and the Tom or White Mountain range. Saddle mountain, the highest land in the State, is 4000 feet above the level of the Ocean; Hoosack is 3500 feet. Helyoke is 1100 feet above the surface of the river Connecticut which flows at its base; its Western side is composed of basaltic columns, from sixty to a hundred feet in height; and the diameter of the prisms, which are truly hexagonal, is from two to five feet. The summit of this mountain is cleared of wood and shrubs, so as not to interrupt the prospect which it commands, the finest and the most extensive in New England.

Lake. Quinsigamond.

Among the waters of the State is the Lake Quinsigamond, or Long Pond, a beautiful expanse, seven miles long, and, in some places, a mile in breadth, with a surface studded with Islands; the Rivers also are numerous, and every where remarkably clear and beautiful. Connecticut River rises from two sources in New Hampshire, and forms the boundary line of Vermont, before it enters Massachusetts, and after a circuitous course through that State of sixty miles; then it enters the State to which it gives its name; and after a course, nearly 400 miles in length, it falls into Long Island sound. Within that State it is from 160 to 350 yards wide, and from five to twelve feet deep. Throughout Massachusetts, and beyond it as far as Barnet, in Vermont, it is navigable for boats of twenty tons burden, the navigation being continued beyond the numerous falls and rapids which occur in its course by means of canals. It is augmented from its right, or Western bank by Green River, Deerfield River, Agawam River, Farmington River, and other streams; and from its left or Eastern bank by Miller's River, Chikapee River, Scantic River, Salmon River, and others. The Merrimac rises among the mountains of New Hampshire, and holds a North-Easterly course through Massachusetts to its outlet in the Atlantic, near Newbury Point. The most important of its tributary streams are Nashua and Concord. It is navigable for large vessels to Haverhill, twenty miles from its mouth, and for boats to Salisbury in New Hampshire, eighty miles further. The Ipswich rises in the County of Middlesex, and flows in a North-Easterly direction to the sea, and is navigable to the village of the same name. Charles River also has its source in the County of Middlesex, and, after a course of fifty miles, it falls into the Boston harbour. The Mystic and some other streams have also their outlet in this bay. There are mineral waters at the towns of Boston, Brighton, and Sym, but though they possess medicinal qualities, and are on that account (especially

the last) much frequented, they have not as yet been analyzed.

The heat of Summer and the cold in Winter are much greater than in the corresponding latitudes in the Old World. The mean temperature of caverns and wells is about 49° of Fahrenheit; but the daily, monthly, and annual variation, compared with the South of Europe, to which the State is parallel, seems excessive; the mean daily variation being in Winter 8° and in Summer upwards of 12°, the monthly 50° in January, and in July 34°, and the annual at Salem nearly 115°, while at Marseilles, in France, it is only 69°. At certain seasons the thermometer indicates a change of temperature of more than 30° in less than twenty-four hours. Winter commences in December, and terminates in March. In Winter the ground is covered with snow to the depth of several feet on the mountainous parts, the thermometer sinks occasionally 20° and even 30° below zero, and the ice on the rivers is strong enough to bear loaded waggons. The Spring is of short duration, and vegetation is amazingly rapid. In Summer the thermometer often stands at 90°, and has been observed at 100°; and the changes are sometimes so sudden that the thermometer has been at 90° at noon, and down at 60° the same evening. The autumn, and especially the month of October, is generally pleasant weather of an agreeable temperature; but even then, Captain Hall experienced a great deal of very heavy rain. The most prevailing winds blow from the West and the North-West; and they are also the coldest. By observations taken at Boston, Deerfield, and Warwick, it was found in 1807, that the North-West wind blew throughout the year except the months of June, July, August, and the first days of September. In Summer the warmest wind is from the South-East, and the coldest from the North-East and East. In fair weather, during Winter, the North-West wind is 16° colder than those that blow from the East and South-East. Owing to the gradual clearing of the country, the East wind, which formerly did not extend forty miles beyond the coast, now penetrates to the base of the inland mountains, nearly 100 miles from the sea. The progress of cultivation has tended to improve the climate; but the prevalence of the dry Westerly winds in Summer is still injurious to vegetation. The annual number of fair days is 200, of cloudy weather without rain 100, of rain or snow 60, and of rain 44. There is about one-third more fair weather in Summer than in Winter. It is obvious from this statement that there is far more fair than rainy weather; and yet the annual quantity of rain has been ascertained to be nearly 80 inches, which is double what falls in many parts of Europe.

The minerals found in this State are numerous and valuable. Granite abounds in the Eastern parts of it, is easily wrought, takes a good polish, and exhibits a variety of colours. Slate is found in the County of Franklin and other places. Steatite is found in regular strata in the County of Hampshire, is so soft when first quarried that it may be sawn like timber, and is excellent for chimneys and stoves, as it resists a common fire heat for many years; it is also used for building houses. Magnesian stones are found in the same district, and are also applied to architectural purposes. Limestone is very abundant, and some of the marbles, though of a somewhat coarse texture, are beautifully diversified. An elastic species of marble is found at Pittsfield. The colour is a snowy white, and a slab, when supported by

MASSACHUSETTS.

Climate.

Mineralogy.

MASSACHUSETTS.

the ends, bends down by its own weight and forms the segment of a circle. When exposed to heat it loses its elasticity, but recovers it on being plunged into water. Iron-ores abound in the Counties of Plymouth, Bristol, Berkshire, and Hampshire. *Galena*, or lead-ore is found in the last-mentioned district, and is wrought by a Company associated at Boston for that purpose. Rock crystals, garnets, and other precious stones are found occasionally in different places. Serpentine occurs in beds of granular limestone. A fine white sand, of which glass is made, is deposited in extensive beds on a high hill in Cheshire. Turkey, or whitestone, is found at Dorchester in alternate strata of white and brownish-red. Anthracite, or blind coal, is found near Worcester, and is used as a pigment. Peat earth and brick clay are abundant in most places of the State.

Soil.

The Country contains almost every possible variety of soil. The Islands and the coast have the poorest soil, it being generally sandy and light, though in some places good and fertile. The soil of the more inland parts derives its character from the nature of the prevailing rocks and trees, and from the alluvial deposits on the banks of the rivers. The hills are distinguished by a brown loam, mixed with sand, gravel, and clay; the valleys have a rich soil, free from loose sand and gravel; the soil of the plains covered with white pine is a light loam, and that of those covered with yellow pine consists of sand and gravel. The valley of the river Connecticut, which is from two to twenty miles in breadth, is exceedingly fertile.

Vegetable productions.

In this Country there are twelve varieties of pine, six of cedar, nine of oak, seven of maple, seven of hickory, four of elm, four of ash, two of beech, four of poplar, two of laurel, two of tulip tree, and two of alder. The pine is almost the only tree in the plains; chestnut, cherry, bitternut, and boxwood, together with most of the sorts already enumerated, clothe the mountains; elm, maple, butterwood, aspen, and bitternut, adorn the banks of the rivers; and the red cedar thrives on dry barren soils, while the white variety grows in low, wet situations called *cedar swamps*. Apple trees are exceedingly abundant as well as various, and yield a finely flavoured fruit; pears, peaches, plums, cherries, apricots, nectarines, quinces, grapes, figs, almonds, nuts in great variety, and berries of many kinds, melons, pumpkins, cucumbers, and many other sorts of fruit thrive well in all parts of the Country. Maize, wheat, barley, peas, hemp, flax, and grass are among the principal objects of culture. Medicinal plants abound in countless numbers, and in endless varieties. Flowering plants too, of many sorts, adorn this highly favoured Country.

Fish.

The waters of the State teem with a vast variety and number of fish. Among the shell-fish lobsters, crabs, oysters, clams, scallops, and that which is called the horse-shoe or king's crab, which is sometimes a foot in breadth, also several sorts of muscles. Cod, haddock, pollock, mackerel, and herring frequent the bays. Halibut, sturgeon, shad, bass, eels, and other fish swarm around Nantucket Island. The salmon is common in the rivers. Whales are taken near Nantucket, and especially that sort termed *black fish*, which weighs about nine tons, and arrives annually in shoals. The birds are equally numerous. The bald eagle is the most formidable of the birds of prey; it is upwards of three feet in height, its extended wings measure nearly eight feet, its claws often exceed two inches in length,

Birds.

and it is sufficiently strong and fierce to destroy lambs, sheep, and even calves. The common hawk is the most numerous of the birds of prey, but is overmatched by the little bird called the king bird, or bee eater. This bird is an excellent defence of a garden against every enemy of the feathered kind. The brown thrush and the mocking bird hold a conspicuous place among the singing birds; they are both imitators, and resemble each other in their manner of singing. The cat bird has a resemblance to these two, but is more active. Turkeys, grouse, partridges, quails, and pigeons, are not now so plentiful as formerly, and on that account are more highly valued as luxuries. Water fowl are abundant, and the wood duck is at once beautiful and delicious. The most common wild quadrupeds are the bear, the panther, and the wolf, which have now retired to the woods, the wood chuck which burrows in the ground and destroys the crops, and the grey, striped, and flying squirrels. As for the insects, the hornet, wasp, and honey bee exist, but do not abound. The mosquito is troublesome in hot weather in the vicinity of salt marshes. The locust of this Country differs essentially from that of the East; it appears regularly every seventeenth year, and does some mischief to a few of the forest trees; beyond this it is perfectly harmless. The greatest enemies to the growing crops are the Hessian fly, the palmer worm, the canker-worm, the peach-worm, and the white grub.

MASSACHUSETTS.

Quadrupeds.

Insects.

The following Table shows the progress of population. Population.

In 1731.....	120,000	} including slaves.
1742.....	164,000	
1753.....	220,000	
1763.....	241,024	 5214 slaves.
1784.....	357,510	 4377
1790 by census ..	378,787	 5463
1800.....	422,845	 6432
1810.....	272,040	 6737
1820.....	523,287	 6740
1828 by estimation	557,003	

In 1790 this State was the second in the Union in point of population; in 1810 it was only the fourth; and in 1820 it was the seventh. The reason assigned for the smallness of its increase in comparison with that of the other States, is the emigration from it to New York and the Western country. Being one of the earliest settled Countries in North America, it sooner became crowded with inhabitants than the other more recent colonies.

Although the changes of temperature be sudden and great in this State, yet the climate is found not to be unhealthy. Small pox and dysentery have decreased; the yellow fever has not visited the Country for many years, and never ascended above the forty-third degree of latitude. Consumption and a variety of other diseases are common enough.

Diseases.

The people of this State attain to a good stature, and have a healthy complexion. The dress and mode of living among all classes of society resemble those of similar rank in England. The farmers are frugal and industrious. Cider, molasses, and spruce-beer are consumed in greater quantities in this than in, perhaps, any other State in the Union. Early marriages are common, and conjugal fidelity is, in general, religiously maintained. Religious sects are numerous. The first settlers were extremely intolerant. In 1644, Anabap-

Modes of living.

CHU-
SETTS.

tists, Jesuits, and Quakers were banished as incendiaries of the Commonwealth; and whoever concealed, imported, or dispersed books advocating the tenets of the Quakers, incurred, on conviction, "a fine of £5 of lawful money, for open contempt of God's word." Nobody is forced to go to church; but those who do go are more respected than those who do not so. The Congregationists have 390 churches; the Baptists 91; the Episcopalians 14; the other sects are Methodists, Universalists, and Quakers. The English is the only Language in use.

Govern-
ment.

The first Charter of Massachusetts Bay was granted by James II., by which the people were invested with the right of electing all their own officers, those of the Admiralty and Customs excepted. A second Charter was granted by William III. with still more extensive privileges. The Republican form of government was published, and had the force of a law, 2d March, 1780. The legislative power consists of a Senate and House of Representatives, which united form the General Assembly, or General Court of Massachusetts. The Senators are forty in number, and are elected annually in districts, by the male inhabitants of twenty-one years of age and upwards, living within the Commonwealth, and possessing a freehold of three pounds of annual income. The Representatives are elected annually by voters, who have the same qualifications as for Senators. The executive power is vested in a Governor, Lieutenant-Governor, and nine Counsellors. The first two functionaries are chosen annually, on the first Monday of April; the Counsellors are likewise chosen annually by the joint ballot of the two Houses, from among the persons returned as Counsellors and Senators. The judiciary officers are appointed by the Governor and Council; they are a District Judge, with a salary of 1000 dollars, an Attorney with a salary of 200 dollars, a Marshal with 200, and a Clerk with fees. The finances of the State arise from a tax upon real and personal estates, and from a capitation tax on all males of sixteen years and upwards. The military force is formed of all the able-bodied white male citizens, from eighteen to forty-five years of age; clergymen, schoolmasters, seamen, and civil and military officers are exempted. The State is divided into townships, each of which has its own legal jurisdiction with regard to the management of its own affairs.

Seminaries
of educa-
tion.

Every town having fifty householders is obliged to provide a school, where the poor of both sexes may be instructed in reading, writing, and arithmetic, at the public expense; and in proportion as the inhabitants of a town increase in numbers, in the same proportion are the schools multiplied, and the branches of knowledge incumbent on them to teach are extended, till Latin, Greek, and Science are included. Harvard College, instituted in 1638, is an extensive establishment with ample funds. The period of study for B. A. is four years. This seminary is attended by about 300 students. William's College, in the Western part of the State, has considerable funds; and the number of students is about 120. Philip's Academy, twenty miles from Boston, in the town of Andover, was endowed by three brothers of the name of Philip, who made liberal provision for the education of indigent young men. It was instituted in 1780, and in 1811 a theological institution was created, and added to the establishment.

The husbandry of Massachusetts is in a forward

state; farms generally consist of from one to two hundred acres; and each is distributed into arable land, weed land, and meadow. Maize, wheat, rye, oats, barley, buck-wheat, potatoes, hemp, flax, hops, and pumpkins, form the staple crops. Maize is planted from two to three feet apart, in a manner resembling a quincunx. This grain yields from thirty to eighty bushels an acre. Wheat is sown in broad cast, and yields about fifteen bushels an acre; it is subject to blight, and is on that account little cultivated. Rye is sown in September, and twelve bushels form the average produce of an acre. Oats are cultivated only as food for horses; they often yield fifty bushels an acre, and barley forty. Beans are planted on dry, lean land, and produce from twelve to eighteen bushels. Five acres of flax have been known to yield three thousand five hundred pounds, cleanly dressed, and fitted only for the rope-walk. The stalks and envelope of the Indian corn are dried in bundles, and are equal to the best hay for cattle and sheep. This grain surpasses all others for fattening cattle, hogs, and poultry. The flour mixed with that of rye, in the proportion of a third, constitutes the common brown bread of four-fifths of the inhabitants. The cattle are large, like those in the North of France; they are housed nine months in the year; and the ox is more used than the horse in the labours of agriculture. The horses, on this account, have been neglected, and have degenerated. Swine are of a large size, and both they and the cattle are often fed on apples. The rearing of sheep is now an object of great interest. Gardening is also much attended to, and every farmer has an orchard containing several hundreds of apple-trees. The orchards are generally kept in grass; and clover and other grasses are raised extensively.

The manufactures of the State are both extensive and various. Upwards of twenty-six millions of bricks are made in it annually; the iron-forges produce a great deal of bar-iron; nearly six thousand tons of nails are furnished by the factories; anchors, guns, edged tools, bells, brass, copper, and pewter articles are made in great variety; manufactured steel, jewellery, tin-plate work, and earthenware employ many hands, and yield a considerable profit. Ship-building is prosecuted with greater ardour in this than in any of the other States.

In 1810, the whole amount of exports was 13,013,048 dollars, 5,761,771 dollars of which were domestic produce. The duties on imports, in the same year, were 2,542,338 dollars. In 1793 the value of exports was only 2,676,412 dollars. The tonnage, in 1807, was 321,032 tons; and in 1821 it was 316,069. Commercial transactions are facilitated by sixteen Bank establishments; and the transfer of goods from one place to another by means of roads, bridges, and canals. The Middlesex Canal extends from the harbour of Boston to the river Merrimac, a distance of twenty-five miles, and opens a communication with the State of New Hampshire. Two other canals extend along the Eastern bank of Connecticut river, called the Montague Canal and the Hadley Canal. The Essex Canal runs along the Patucket Falls of the Merrimac, of which the descent is thirty-four feet. Other canals are in progress. On the Middlesex Canal there is a steam-boat for the conveyance of passengers. The navigation is aided and protected by a number of lighthouses on some of the more conspicuous Islands and headlands.

Boston, the Capital, has been separately described.

Barnstable. *Barnstable*, Capital of the County of the same name, has a population of 3824, employed chiefly in the cod-fisheries and the coasting trade. The mouth of the harbour is obstructed by a bar, which prevents the entrance of vessels of burden, but the small-craft is considerable. Distant 66 miles S. S. E. from Boston.

Cambridge. *Cambridge*, in the County of Middlesex, is in like manner so near to Boston, and so intimately connected with it, as to entitle it, as well as Charlestown, to be considered as one of its suburbs. It stands on the North side of Charles river, about three miles to the North-West of Boston, and amid a country embellished with gentlemen's seats, orchards, gardens, and pleasure grounds. It contains a Court-house, a Gaol, a State Arsenal, a University, and six Churches. The County Courts are held alternately there and at Concord. In this village there is a large glass manufactory, also several places of worship. Population, in 1810, 2323, in 1820, 3295. The town is chiefly remarkable for its University, which is the oldest in the United States. It was incorporated in 1638, and named *Havard College*, in honour of a clergyman of that name, by whom it was liberally endowed. Since then its funds have been greatly increased by public munificence and private bounty. It is regarded as the first literary institution in the Union.

Charles-town. *Charlestown*, though in the County of Middlesex, is only one mile North from Boston, by which it is connected by a fine bridge across Charles River, and may be regarded as a suburb of that Capital. It is situated on a peninsula formed by Charles River on the one side, and the Mystic River on the other, and contains within its precincts Bunker, Brudd, and Cobble, hills celebrated in the American Revolutionary war as the scenes on which battles were fought. Cobble hill now bears the name of Mount Pleasant. This town contains the State Prison, a Lunatic Asylum, and the United States Navy-yard. There is also a bridge across the Mystic River connecting the town with Malden, and another connecting the town with Craigus bridge leading to Cambridge. This town is pleasant and flourishing, and is advantageously situated for manufactures and commerce. Population, in 1813, 4959, in 1820, 6591. It has manufactures of pot and pearl ashes, rum, morocco and other leather, cordage, silver, tin, pewter, and ship-building. It is a port of entry, in conjunction with

Boston, and has considerable trade. The United States Navy-yard covers upwards of sixty acres of land, on which are built a large brick warehouse, several arsenals, magazines for several kinds of stores, a mansion-house for the superintending officer, and a Marine Hospital.

Ipswich is the third town in the County of Essex, and stands on the river of the same name. It is a port of entry with 1571 tons of shipping. It has three Churches, a Court-house, a Gaol, and a stone bridge across the river. Population nearly 3000; and a considerable trade in ship-building. 12 miles N. N. E. from Salem, 12 S. S. W. from Newbury Port, and 27 N. N. E. from Boston.

Nantucket is situated in the Island of the same name. Most of the land is held in common, and the inhabitants employ themselves more in fishing than in the cultivation of the soil; but the Island maintains 300 cows and 14,000 sheep, and together with some smaller Islands in its neighbourhood forms a County. The town stands on the Western side of a basin, on the North-Western side of the Island, formed by Sandy Point and Eel Point, on the former of which a lighthouse is erected. The streets slope towards the shore, and most of the houses are of wood. Population, in 1820, 7266. Whaling is the principal business of the townsmen, who are reckoned the most expert whalers in the world. The whole shipping belonging to this port amounted, in 1820, to 28,512 tons. The shipping suffered greatly during the late war; twenty-two whaling ships out of forty-four having been captured, but by perseverance and enterprise the people have made up the deficiency. To the South-East of Nantucket Island is a shoal known by the same name, 40 miles long and six broad. Distant 123 miles S. S. E. from Boston; North latitude 41° 16', and West longitude 70° 8'.

Newbury Port, the second town in the County of Essex, and the third in the State, is situated on the Southern bank of the river Merrimac, three miles from the sea, and is a port of entry. It has a Court-house, a Gaol, and seven places for public worship. The limits of the town include only 647 acres; but the situation is remarkably fine and pleasant. The town suffered severely by fire in 1811. Population, in 1810, 7634, in 1820, 6852. Its tonnage in 1821 was 20,421. Its trade with the West Indies is considerable. The Labrador fishery, formerly a lucrative business, has of late years been discontinued; but the Bank fishery is prosecuted with success. Ship-building is a leading branch of industry, and vast quantities of lumber are brought down the Merrimac, and applied to that purpose. On the Southern side of the mouth of the harbour, on Plumb Island, are two lights, and this Island is much frequented in the summer season. 24 miles N. from Salem, 24 S. S. W. from Portsmouth, 32 N. N. E. from Boston.

Northampton, the Capital of Hampshire County, is delightfully situated on the Connecticut River, opposite *Hadley*, a thriving village in the same County. It is one of the most pleasant and agreeable towns in the State, in general well built, and standing in a country beautifully romantic and picturesque. The neighbouring mountains of Tom and Holyoke are striking features of the scenery; and fertile fields and extensive meadows, by which it is surrounded, contribute to make it a desirable residence. It contains a Court House, a Gaol, and a large Church. Population, in 1820, 2854, many of whom were employed in mills, in tanneries, and woollen manufactures. Distant 95 miles W. from Boston.

Plymouth.

Salem.

Plymouth, Capital of the County of the same name, is situated at the bottom of a harbour, on the South-Western part of Massachusetts Bay. The harbour is spacious but shallow, so that vessels drawing more than eleven feet water, must lighten their cargoes at a distance from the wharfs. The town is built upon a sloping plain near the shore, and many of the houses are of wood. A stream passes through it, which affords some fish, and good situations for mills. It contains a Court-House, a Gaol, and four Churches. Population, in 1810, 4228, in 1820, 4348. In 1821 the tonnage was 21,069 tons, employed in the fisheries, West India, and European trade. The town has manufactories of iron, cotton, and woollen. Plymouth is the oldest town in New England, and was built by a colony of Puritans from England, consisting of 101, who landed there on the 22d December, 1620, an event which is still celebrated as an anniversary. The rock on which these original English settlers landed, was conveyed in 1774 into the centre of the town. Distant 36 miles S. S. E. from Boston.

Salem, the Capital of the County of Essex, is built chiefly upon a tongue of land, formed by the inlets from the sea called North and South Rivers; over the former of these is a bridge more than 1500 feet long, connecting the town with Beverly; and the latter inlet forms the harbour, which possesses good anchorage, but as it does not admit vessels drawing more than fourteen feet, many are obliged to unload part of their cargoes at a distance from the wharfs. The public buildings and institutions are a Court-House, a Gaol, a Custom-House, a Grammar School, and twelve places for public worship. The situation of the town is low, but pleasant and healthy; the general appearance is irregular, as the streets were originally laid out without regard to symmetry or beauty, and filled up with wooden houses; but those erected within the last five and twenty years are chiefly of brick, and constructed with neatness and convenience. Population, in 1810, 12,613, in 1820, 12,731. The inhabitants are employed chiefly in trade

and navigation. In 1818 the tonnage employed in the East Indian trade was 14,272 tons, and the number of vessels was fifty-three. The entire tonnage belonging to the town in 1821 was 33,046. On a peninsula below the town are two forts, Fort Pickering and Fort Lee. The Indian name of Salem was *Naumking*. It is 14 miles N. N. E. from Boston, and 24 S. from Newbury Port.

Springfield, the Capital of Hampden County, is finely situated on the Eastern bank of the Connecticut, across which is a bridge to West Springfield. This is a pleasant and flourishing town, and contains a population of about 4000 individuals, a Court-House, a Gaol, and two Congregational Churches. The United States have in this town a large establishment for the manufacture of arms. Distant 18 miles S. from Northampton, 48 W. S. W. from Worcester, and 88 W. by S. from Boston.

Taunton, the Capital of Bristol, is a pleasant and a handsome town on the river Taunton, which flows into the Narvaganset Bay. It has a Town-House, a Court-House, a Gaol, and five places of worship. It has considerable trade, and among other branches of industry large quantities of brick are made near it. Population, in 1810, 3907, in 1820, 4520. Distant 33 miles South from Boston.

Worcester, the Capital of the County of the same name, is situated in the interior of the State, 40 miles South-West from Boston; the principal street is more than a mile in length, lined with well-built brick houses, and containing a Court-House, a Gaol, a House of Correction, and three places for public worship. Population, in 1820, 2963.

MA'SSACRE, v. } Fr. *massacrer*; It. *macellar*.
MA'SSACRE, n. } Skinner thinks from the It. *mazzare*, to kill (properly) with the
MA'SSACRER. } stroke or blow of a club or *mace*, It. *mazza*, Fr. *masse*.
See the Quotation from Jortin. Generally,

To slaughter or slay:—it appears to be applied, when no resistance is or can be made, and the carnage or butchery is indiscriminately murderous.

And passing Dee, with hardy enterprise
Shall backe repulse the valiaunt Brockwell twice,
And Bangor with massacred martyrs fill.

Spenser. *Faerie Queene*, book iii. can. 3.

But he was diverted from that determination by a sorrowful message, that the cohort was massacred by the fraude of the Agrippinensis. Savile. *Tacitus*, book iv. ch. xxxiii. fol. 180.

And for her slumber waken'd with alarms,
Riseth to sing of many a massacre.

Drayton. *The Barons' Wars*, book ii.

Slaughter grows murther when it goes too far,
And makes a massacre what was a war.

Dryden. *Conquest of Mexico*, act v. sc. 2.

It [Jacobinism] stands chiefly upon a violation of property, *massacring* by judgments or otherwise those who make any struggle for their old regal government, and their legal hereditary or acquired possessions.

Burke. *On a Regicide Peace*, let. 1.

In Skinner we have the etymologies of the word *massacre*: I think that they are all wrong, and that it comes from *marti sacrum*.
Jortin. *Tracts*, vol. i. p. 439.

MASSONIA, in *Botany*, a genus of the class *Hexandria*, order *Monogynia*, natural order *Asphodeli*. Generic character: corolla, border, six-parted; filaments placed in the neck of the tube; capsules three-winged, three-celled, many-seeded.

A genus of bulbous-rooted plants, natives of the South of Africa.

MAST, } A. S. *mæst*, *mæst-cyp*; D. and Ger.
MA'STED. } *mast*; D. *mast-boom*; Ger. *mast-baum*;
Fr. *mas*; Sp. *mástil*. In A. S., Ger., and D. the word is used in conjunction with *cyp*, a beam, D. *boom*, Ger. *baum*, and may be the adjective *most*; the greatest, the chief, the principal beam or pole. See Junius.

Swine, with the very *mast*, beside the woods?
Baumont and Fletcher. The Beggar's Bush, act ii. sc. 3.

But some from seeds enclos'd in earth arise;
For thus the *mastful* chestnut mates the skies.
Dryden Virgli. Georgics, book ii.]

Her shining hair, uncomb'd, was loosely spread,
A crown of *mastless* oak adorn'd her head.
Id. Ib.

MA'STER, n. } Fr. *maistre*; It. *maestro*; Sp.
MA'STER, v. } *maestro*; Lat. *magister*, which
MA'STERDOM, } (Vossius) is either from *magis*,
MA'STERFULL, } greater, as *minister* from *minus*,
MA'STERLESS, } or rather from the Gr. μέγιστος,
MA'STERLY, adj. } the greatest. See MAGISTRACY.
MA'STERLY, adv. } The word exists in all the
MA'STERSHIP, } Northern Languages. D. *meester*;
MA'ISTRESS, or } Ger. *meister*; Sw. *mestare*; A. S.
MI'STRESS. } *mæster*; and Junius derives it
from A. S. *mæst*; D. *meest*; Ger. *meist*; Sw. *mest*.

A *master*, then, is one who has *most*, sc. power or skill, and consequently,

1. A ruler, governor, commander, manager, conductor, director; owner or possessor; opposed to servants, or those ruled, &c.

2. One possessing *most*, or a greater degree of skill or knowledge, one who excels or is eminent for his skill or knowledge; a doctor or teacher, opposed to scholar, or to those taught.

Masterful is sometimes used to denote an excess; as full, too full of the idea of being *master*; domineering; imperious.

Withouten ielousie, and such debate:
Shall no husbonde saine to me checke mate,
For either they be full of ielousie,
Or *masterfull*, or louen novelrie.
Id. Troilus and Creseide, book ii. p. 243.

But Christ for us that shed his blode,
Bad his priests no *maistership* have,
Ne carke not for clothis ne fode.
The Plowman's Tale, part iii. p. 633. Imputed to Chaucer.

The noblest of the Grekes that ther were
Upon hire shuldres carrieden the bere
With slacke pas, and eyen red and wete
Thurghout the citee, by the *maister-strete*.
Chaucer. The Knightes Tale, v. 2904.

Jason is romed forth to the citee,
That whylome cleped was Jasonicos
That was the *master-toune* of all Colcos.
Id. The Legend of Dido, p. 310.

And som of hem wondred on the mirrour,
That born was up in to the *maister-tour*,
How men mighte in it swich thinges see.
Id. The Squieres Tale, v. 10540.

Wherof the worlde is yet maruailed
Of the *maistries* that he wrought.
Gower. Conf. Am. book v. p. 139.

Anone into *melancolie*,
As though it were a fransie
He fell, as which nothyng couthe
How *maisterfull* loue is in youthe.
Id. Ib. book iii. p. 74.

MASTER. I know one that departed ye court for no other cause the that she would no betray her *mastresse*.

Tyndall. Workes, fol. 368. The Practice of Popish Prelates.

Howbeit if hys *mastershypp* be not fully pacified, let hym more groundly open hys mynde.

Frith. Workes, fol. 50. Answer to Sir Thomas More.

Ne could that painter (had he lived yet)

Which pictur'd Venus with so curious quill,

That all posteritie admyred it,

Have purtray'd this, for all his *maistring* skill.

Spenser. Hymn 4. To Heavenly Beautie.

With cruell chaufe their courages they whet,

The *maysterdome* of each by force to gaine.

Id. Faerie Queene, book v. can. 2.

O, had I now your manner, *maistry*, might,

Your power of handling, shadow, ayre, and spright,

How I would draw, and take hold and delight.

Jonson. The Poet to the Painter.

But she was fallen into great sicknesse

And herd seyne, for not might it ben hid

How *masterfull* a leech he had him kid.

Browne. The Shepheard's Pipe. Eclogue 1.

His silver shield now idle, *maisterlesse*.

Spenser. Faerie Queene, book i. can. 7.

Would you not deeme it breath'd? and that those veins
Did verily beare blood?

POL. *Masterly* done:

The very life seems warme vpon her lippe.

Shakspeare. Winter's Tale, fol. 302.

The kinds of this seignoury, Seneca makes two: the one, *potestas aut imperium*, power or command: the other, *proprietas aut dominium*, propriety or *mastership*: the correlative of the one is the subject, of the other the slave.

Ralegh. History of the World, book i. ch. ix. sec. 1. fol. 101.

What good in parts in many shar'd we see,
From Nature, gracious Heaven, or Fortune flow,
To make a *master-piece* of worth below,
Heaven, Nature, Fortune, gave in gross to thee.

Drummond. On the Death of a Nobleman.

Let us not number, but weigh your texts: the rather, for that I find these as your *master-proofes*, set as challengers in every of your defences.

Hall. Works, vol. i. fol. 532. An Apology against the Brownists.

Yet let me touch one point of this great act,
That famous seige, the *master-work* of all.

Daniel. On the Death of the Erle of Devonshire.

Those *masters* then, but seen, not understood,
With generous emulation fir'd thy blood:
For what in nature's dawn the child admir'd,
The youth endeavour'd, and the man acquir'd.

Dryden. Epistle 14. To Sir Godfrey Kneller

With just bold strokes he dashes here and there,
Showing great *mastery* with little care,
Scorning to varnish his good touches o'er,
To make the fools and women praise the more.

Rochester. An Allusion to the X Satire of the 1 Book of Horace.

One single person has performed in this translation, what I once despair'd to have seen done by the force of several *masterly* hands.

Theobald. Censor, vol. ii. p. 33.

Then to preserve the fame of such a deed,
For Python slain, he Python games decreed,
Where noble youths for *mastership* should strive
To quoit, to run, and steeds and chariots drive.

Dryden. Ovid. Metamorphoses, book i.

Should you no honey vow to taste,
But what the *master-bees* have plac'd
In compass of their cells, how small
A portion to your share will fall.

Waller. To Zelinda.

In her [Dorinda] and in thy picture, we may view
The utmost Nature, or that Art, can do,
Each is a *masterpiece*, design'd so well,
That future times may strive to parallel.

Pomfret. To the Painter, after he had finished Dorinda's Picture.

Some painters will hit the chief lines and *masterstrokes* of a face so truly, that through all the differences of age, the picture shall still bear a resemblance.

Preface to the Second Part of Mr. Waller's Poems.

Beside yon straggling fence that skirts the way
With blossom'd furze, unprofitably gay,
There in his noisy mansion, skill'd to rule,
The village *master* taught his little school.

Goldsmith. The Deserted Village.

Nor are the *masterly* strokes perceived with more exquisite relish and satisfaction, than the negligencies or absurdities with disgust and uneasiness.

Hume. Essay 1. vol. i. p. 4.

His *master-lust*

Falls first before his resolute rebuke,
And seems dethron'd and vanquish'd.

Cowper. The Task, book v.

MA'STICATE, } Fr. *mastication*, *masticoire*;
MASTICA'TION, } It. *masticare*, *masticazione*; Sp.
MA'STICATORY. } *masticar*. Latin of the Lower
Ages *masticare*, i. e. *mandere cibum, dentibus terere, manducare*; Gr. *μασάζειν*. (Voss. de Vit. lib. iv. c. xiii.)
To chew the food, to bruise or crush it with the teeth.

So for instance, the tongue serves not only for tasting, but also to assist the *mastication* of the meat and deglutition, by turning it about and managing it in the mouth.

Ray. Of the Creation, part ii. p. 279.

Remember *masticatories* for the mouth.

Bacon.

But now I eat my meals with pain,
Averse to *masticate* the grain.

Cotton. Fable 6.

The external "grinders" of the food, the teeth, "shall cease, because they are few," and the work of *mastication* shall be imperfectly performed.

Horne. Works, vol. iv. p. 19. dis. 1.

MA'STICK, n. } Fr. *mastic*; It. *mastiche*; Sp.
MA'STICK, adj. } *almastiga*; Lat. *mastiche*; Gr.
μαστίχη; the gum of the lentisk tree; now applied to
Gums of various sorts; to a cement, adhesive as
gum.

Or Gellia wore a velvet *mastick* patch
Upon her temples when no tooth did ach.

Hall. Satire 1. book vi.

Gummy refinous bodies, *mastick*, camphire, and storax.

Sir Thomas Brown. Vulgar Errors, book ii. ch. i. p. 55.

As for the small particles of brick and stone, the least moistness would join them together, and turn them into a kind of *mastich*, which those insects could not divide.

Addison.

And on the structure next he heaps a load
Of sulphur, turpentine, and *mastic* wood.

Garth. The Dispensary, can. 3. l. 90.

MASTIFF, Fr. *mestif*, *mastin*; It. *mastino*; Sp. *mastin*. Skinner derives from *maesten*, *saginare*, to fatten, because it is a dog of a large size, and on that account appears the fatter. Minshew from *maison tenant*, because he keeps or guards the house. Manwood, as in the Quotation from Pennant.

On per first eschel he smot in fulle hastif,
& porgh þam ilka del, als grehound or *mastif*.

R. Brunne, p. 189.

The *mastiffe* dog is voyded well
that barcks or ere he bite.

Turbervile. To Browne of Light Beliefe.

As when an eager *mastiffe* once doth prove
The taste of bloud of some engored beast,
No words may rate, nor rigour him remove
From greedy hold of that his bloudy feast.

Spenser. Faerie Queene, book iv. can. 9.

MASTIFF.

MAS-
TODON.

Two mastiffs gaunt and grim her flight pursu'd,
And oft their fasten'd fangs in blood embu'd,
Oft they came up, and pinch'd her tender side,
"Mercy, O mercy, heav'n," she ran and cry'd.
Dryden. Theodore and Honoria.

The next is the *mastiff* or ban dog, a species of great size and strength, and a very loud barker. Manwood (Forest Law) says, it derives its name from *Mase the thefe*, being supposed to frighten away robbers by its tremendous voice.

Pennant. British Zoology, vol. i. p. 80.

MASTIGUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* nearly filiform, geniculated, the two basal joints very long, the third to the tenth elongate, subequal, the terminal one elongate, ovate; *palpi* long, maxillary ones with the two terminal joints forming an oval mass; *elytra* rigid, united, covering the abdomen; body ovoid, rounded at each extremity; *thorax* subcordate, truncate behind; legs slender; *tarsi* short, pentamerous.

The type is *M. palpalis*, Latreille, *Gen. vol. i. p. 280. pl. viii. fig. 5.* A native of the South of Europe, and probably of England. Three species are known.

MASTLIN. See MESLIN.

MAS-
TIGUS.

MAS-
TODON.

M A S T O D O N.

MASTODON, from the Greek *μαστός*, a teat, and *οδόν*, a tooth, Cuvier. In *Zoology*, an extinct genus of animals belonging to the family *Proboscidea*, order *Pachydermata*, class *Mammalia*.

Generic character. Incisive teeth in form of tusks, their transverse section presenting internal, curvilinear lozenges; molar teeth rectangular, consisting only of bone and enamel, without any cement, their crowns, when unworn by mastication, studded with large points in pairs, varying from six to ten, the hindmost having a posterior stud, but when the points are worn down, presenting lozenges or trefoils in the different species; these teeth successive; lower jaw of greater comparative length than depth; neck short; seventeen pairs of ribs; limbs tall, five-toed.

The animals belonging to this genus are now extinct, at least they have not been met with alive in any part of the world which has been explored up to this time, but only in a fossil state, and till within the last few years, it was believed only in a certain district of North America. The diligent investigations of Cuvier, however, have proved that they are found not only in North America, but among the fossil remains of Europe. Humboldt has obtained specimens of the genus from South America; and very recently, Dr. Buckland and Mr. Clift have shown that they are found in Asia also, several parts of two new species having been brought by Mr. Crawford from the Birman Empire, and subjected to their examination.

First discovery of fossil bones.

At Albany.

The first mention of these bones, which are the largest of all the fossil animals at present known, is made in the XXIXth volume of the *Philosophical Transactions*, 1714, by Dr. Mather, who, in a Letter to Dr. Woodward of the Royal Society, recommends for patronage a large commentary on the Bible, in manuscript, two vols. folio, interspersed with numerous Philosophical remarks, taken out of Natural Historians, and with observations made by himself and others, more particularly as to matters concerning America, but without giving the author's name. He proposes it should be called *Biblia Americana*, and as a specimen of the Work he gives a note on the passage in *Genesis*, ch. vi. ver. 4. relative to Giants; in support of which is stated the then recent discovery of several enormous bones and teeth which had been found in Albany, New England, and were brought to New York in 1705: these consisted of a grinding tooth weighing four pounds and three quarters, and a bone, supposed to be a thigh-bone, seven feet long. He mentions also another tooth found at Cluverach, about thirty miles on this side of Albany,

and another discovered under the bank of the Hudson, about fifty leagues from the sea, at a great distance from the surface, and where the soil was of a very different kind for seventy-five feet long, which they supposed to arise from the decay of the body to which such parts belonged.

No further notice seems to have been taken of them till 1739, when M. Longueil, a French officer, navigating the Ohio, found certain bones, molar teeth and tusks, at the edge of a marsh near the river, some of which, in the subsequent year, he sent to Paris; and these are the first which were seen in Europe. They were examined by Daubenton, who determined that the thigh-bone and the tusk belonged to an Elephant and the molar teeth to a Hippopotamus; but his opinion did not give general satisfaction: they, however, received the name of the animal, Elephant or Mammoth of the Ohio. In 1748, M. Buffon was informed by another French officer, M. Fabri, that in certain districts of Louisiana and Canada these bones were met with and considered by the Indians as belonging to an animal which they called *Père aux bœufs*.

On the Ohio.

Three years after the cession of Canada to the English in 1763, Mr. Croghan found in the State of Kentucky, four miles to the South-East of the Ohio, a large bank on the borders of a salt-marsh,* and about six feet below its surface, but exposed to view, an immense quantity of bones and teeth, which, by the quantity, he supposed could not be less than those of thirty skeletons of this genus. The tusks he concluded without doubt belonged to Elephants; but he mentions as a remarkable fact, that *none of the grinding teeth of Elephants were found with these tusks*, but an immense number of very large pronged teeth of some vast animals which had no resemblance to the molar or grinding teeth of any known animal. He is, however, at a loss to determine how these bones could have come there, as from the severity of the Winter no Elephants could inhabit that Country; and he does not seem to think that the Deluge was sufficient to account for their existence in that district. Mr. Collinson, who had communicated the Paper to the Royal Society in the LVIIth volume of its *Transactions*, whence the preceding account has been taken, added a supplement of his own, and considered the animal to which the remains belonged, either as another species of Elephant, or as a distinct unknown genus; and he thought it probable that the

* The Great Buffalo Lick as it is called by the Indians, from the buffaloes and deer resorting there at particular seasons to lick the earth and water from the salt springs.

MAS-
TODON.

size of the animal, as of the Elephant and Rhinoceros, prevents its pursuit of prey, and that wherever it exists it is supported by browsing on trees, shrubs, and other vegetable substances.

Hunter's
hypothesis.

In the subsequent year Dr. William Hunter read a Paper before the Royal Society, giving an account of an examination of these bones made by himself and his brother Mr. John Hunter; and the result was that they considered the tooth certainly not that of an Elephant, but of some carnivorous animal; and from further comparison, that the supposed American Elephant was an animal of another species, a Pseudo Elephant, or Animal Incognitum, and that the tusks belonged to the same. He also imagined that this animal would prove to be the same as the supposed Elephant of Siberia and other parts of Europe.

Cuvier.

Such were the circumstances which led to the closer examination of these fossil remains; and in the course of the inquiry made by Cuvier, to whom the honour of founding the genus truly belongs, it turned out that a tooth of this genus had been figured so early as 1656, in the *Museo di Moscardi*, where it was stated to be the tooth of a Giant; and subsequently another in 1681, by Grew, in his *Museum Societatis Regalis*, which he named the petrified tooth of a marine animal. Reaumur, in the following century, in his description of the turquoise mines of Simorre, in the Department of Gers in France, mentions another fragment of a tooth similar to Grew's, which he also considered to belong to some marine animal, and a few years after Dargenville added another. In 1767, portions of jaw were found at Monte Follonico, near Monte Pulciano, in the Vale of Arno; and other parts subsequently at Reichenberg in Lower Bavaria, at Montbusard, near Orleans, in Piedmont, in Switzerland, in South America, &c., and in many instances mingled with Elephants' bones.

Though at first all these were considered to belong to the same species, and even to be the same with the Siberian Mammoth, it is now decided that they not only form a distinct genus, but that the genus consists of several species; and from some circumstances observed in one of the masses found in America, that they were, as supposed by Mr. Collinson, browsing animals, and provided with a trunk like the Elephant.

M. Giganteum, Cuv.; *Gigantic Mastodon*. This species measures about ten feet in height and fifteen in length, so that in the latter dimension it is four feet longer than an Elephant of the same height, which never exceeds eleven feet. The most perfect skeleton is that discovered by Mr. Peale, but the greater part of the top of the head is deficient; it seems probable, however, according to Cuvier's observations, that the height of the skull pretty nearly resembles that of the Elephant, but its longitudinal dimensions are rather greater. As no trace of orbit can be seen on the front of the zygomatic arch, the eye must have been placed higher than in the Elephant; the maxillary bones are shallower than in the latter animal, and the molar teeth diverge in front, whilst in the common Elephant they converge, and in the fossil Elephant are nearly parallel; the lower jaw has its condyles similar to those of the Elephant, which, together with the form of the teeth, prove it not to be a carnivorous animal. In this Mastodon, the lower jaw is not so high in proportion to its length, but more swelled out, especially behind, than in the Elephant, the angle, although obtuse, is more defined, and the front of the jaw narrower and longer, which characters

easily distinguish it from the Elephant. As to teeth, the Mastodon is provided, in the adult state, with only four molar, two in each jaw, but in youth there are eight; their form is very remarkable: they consist only of ivory and enamel, the cement, or *crusta petrosa*, found in the grinding teeth of Elephants, not being present in the Mastodon; the form of the crown is rectangular, and divided by grooves or wide valleys into transverse ridges, each of which is divided by another groove into two large obtuse points, irregularly formed into rounded quadrangular pyramids, so that the crown is covered with a double row of large points, but differs from that of a carnivorous animal, which has but a single, principal, longitudinal cutting ridge, divided like the teeth of a saw. Thus, in reality, it would appear that the principal difference in these teeth from those of the Elephant is, that in the latter the ridges are more numerous, more delicate, separated by deeper but narrower grooves, and that these grooves are filled with cement, whilst in the Mastodon they are open; hence it arises that the crown of the Elephant's tooth is sooner worn down, and becomes flat, whilst that of the Mastodon retains for a much longer time the nipple-like appearance, and when the points are worn, they assume at first a lozenge-like form, and subsequently, by their complete wearing away, the whole surface of the crown is united, or even uniformly concave. As then, in these circumstances, the Mastodon resembles the Hippopotamus and the Pig, it must have fed upon soft vegetables, roots, or aquatic plants. The principal difference in the molar teeth consists in the number of their points, and in the relation of their length to their breadth. Cuvier mentions he has seen three kinds: 1st, nearly square, with three pairs of points; 2dly, rectangular, with four pairs; 3dly, others somewhat longer and narrowed behind, with five pairs of points: and both these, and the last mentioned, have an imperfect stud, which is often mistaken for another pair of points; the former are those which have been most used, and are placed in front, whilst the latter are those least used, have their hinder points almost always perfect, and are situated in the back of the jaw. And it further appears that these teeth are not of similar size in both jaws; thus although there are four in each, yet in the upper jaw the two in front have six, and the two behind eight points, whilst in the lower there are two front with six, and two back with ten points. Such is the disposition of the grinders in the adult, but in the young animal, there are found four on each side in each jaw, making in all sixteen. These, however, are not all in the mouth at the same time, never indeed more than four in each jaw, and as in the Elephant, they come from behind forward, so that when the hind tooth is making its way through the gum, the front one is ready to fall out. And thus in the young animal there are four teeth in use in each jaw, whilst in the very old one there are only two.

The tusks of the Mastodon, like those of the Elephant, are implanted in the incisive bones which form the front of the upper jaw; they vary considerably in length, having been found from seven to ten feet six inches long; their curve also varies much, sometimes nearly straight, at other times a little curved; and in a very large tusk found with the skull at Philadelphia, the curve had nearly acquired a semicircle. The concavity is upwards, although in the specimen exhibited in London by Mr. Peale, the concavity was made to look downwards by placing the tusks in an unnatural position, for

MAS-
TODON.

MAS-
TODON.

no other probable reason than to make the skeleton appear more wonderful. Peale also states that there is a distinction between the tusks of the Elephant and of the Mastodon, the former being composed of only one, whilst the latter consists of two substances, an internal ivory, and an external, which is much harder than ivory and produces a thick coating to the tusk; but this is a distinction which does not really exist, as the Elephant's tusk has a similar external coat, which although not so hard as enamel, is still a species of it. Peale's observations on the different figures of transverse sections of the tusks of both animals have no better foundation; for those of the Elephant are often more or less round, whilst those of the Mastodon are more elliptical, which is directly the reverse of his assertion.

From the shortness of the neck which, as in the Elephant, is requisite for the support of so large a head, and the height of the limbs, it seems probable that the Mastodon also must have been provided with a trunk. And indeed the Indians, who found five of these skeletons in 1762, state that one of the heads had also "a long nose, under which the mouth was placed:" this *long nose*, Mr. Barton considers to be the trunk. And among the remains found in the Illinois in Kalm's time, and which were then supposed to belong to an Elephant, he states, that the "form of the beak was still to be recognised, although partially decomposed."

In all other points, it appears, from the examinations made by Cuvier, that the Gigantic Mastodon had great resemblance to the Elephant, that in height it did not exceed that animal, but that it was somewhat longer, with larger limbs, but a smaller belly; and that it fed, like the Hippopotamus and Hog, upon roots, soft vegetables, and aquatic plants, which would induce it to seek for nourishment in marshy districts; but on the contrary that it was not made like the Hippopotamus to live and swim about in the water, but was actually a terrestrial animal. It may also be further observed in support of the Mastodon being herbivorous, that among some bones found in the year 1805, M. Pinchon, Consul General of France in the United States, noticed a mass of half masticated twigs, grass, and leaves, among which was found a species of reed at present common in Virginia, and which seemed enveloped in a kind of sac, which was considered to be the stomach; so that it was not doubted that those substances had been eaten by the animal.

Its bones are found more commonly in North America than elsewhere, and Cuvier is, therefore, disposed to consider it as specially belonging to that continent; and he further remarks that these bones very rarely present appearances of having remained for any length of time in the sea, or of having been borne about by it, and that he never found any trace of shells or marine animals upon those he had examined, and that they never seemed to have been rolled about as almost all other fossil bones do. He therefore concludes that they have remained in the same spot almost ever since the death of the animal; a proof of which seems given by the bones found on the banks of the Great Ossage being always in a vertical position, as if they had sunk down in the mud: which opinion had been held by Dr. R. E. Raspe some years since, as in his reply to some queries put by the Royal Society to him, relative to these animals, he says, "The other question, From what cause have so vast a heap of skeletons and bones been shut up and buried in so small a space of North America?

is soon answered. They lie in a marshy soil abounding with salt, and but slightly covered with earth; not because these animals, attacked by stratagem and cruelty for the sake of the domain and property of these salt-marshes, have fallen by their own courage, in a place unfit for battle, as appeared at the first glance to some of my witty friends, but because being lured by the pleasure of licking the salt in the lake, the marshy soil gave way beneath their feet, and being drawn in, hampered and buried, they paid with death for their luxury and enjoyment." *Phil. Trans.* vol. lxi. Not a very satisfactory reason this, it would seem, for the engulfment of a whole race. But any further inquiry on this point must be left to the Geologists.

It might be expected that the aboriginal inhabitants, who were well acquainted with these remains, would have some mode of accounting for their existence, and some of their hypotheses are mentioned by Winterbottom, in his *History of America*. The tradition held by the Shawanee Indians is the following.

"Ten thousand moons ago, when nought but gloomy forests covered this land of the sleeping sun, long before the pale men, with thunder and fire at their command, rushed on the wings of the wind to ruin this garden of nature; when nought but the untamed wanderers of the woods, and men as unrestrained as they, were the lords of the soil; a race of animals were in being, huge as the frowning precipice, cruel as the bloody panther, swift as the descending eagle, and terrible as the angel of night. The pines crashed beneath their feet, and the lake shrank when they slaked their thirst; the forceful javelin in vain was hurled, and the barbed arrow fell harmless from their side. Forests were laid waste at a meal; the groans of expiring animals were every where heard, and whole villages inhabited by men were destroyed in a moment. The cry of universal distress extended even to the region of peace in the West, and the Good Spirit interposed to save the unhappy. The forked lightning gleamed all around, and loudest thunder rocked the globe. The bolts of heaven were hurled upon the cruel destroyers alone, and the mountains echoed with the bellowings of death. All were killed except one male, the fiercest of the race, and him even the artillery of the skies assailed in vain. He ascended the bluest summit which shades the source of the Monongahela, and roaring aloud, bid defiance to every vengeance. The red lightning scorched the lofty firs, and rived the knotty oaks, but only glanced upon the enraged monster. At length, maddened with fury, he leaped over the waves of the West at a bound, and this moment reigns the uncontrouled monarch of the wilderness, in despite of even Omnipotence itself."

Colonel G. Morgan also mentions that in 1766 he visited the Salt Lick, and there met with a very old Chief of the Iroquois and Wyandot Indians, who, in reply to questions put to him relative to these enormous bones, first gave their account of the creation of Man, and concluded thus: "He increased exceedingly, and was perfectly happy for Ages, but the foolish young people, at length forgetting His (the Deity's) rules, became exceedingly ill tempered and wicked. In consequence of this, the Great Spirit created the great Buffalo, the bones of which you now see before us; these made war upon the human species alone, and destroyed all but a few, who repented and promised the Great Spirit to live according to his laws, if he would restrain the devouring enemy: whereupon he sent lightning and thunder, and

MAS-
TODON.

MAS-
TODON.

destroyed the whole race, in this spot, two excepted, a male and a female, which he shut up in yonder mountains, ready to let loose again, should occasion require."

According to the Delaware tradition, "the whole were slaughtered, except the big bull, who, presenting his forehead to the shafts, shook them off as they fell; but at length missing one, it wounded him in the side; whereupon, springing round, he bounded over the Ohio, the Wabash, and the Illinois, and, finally, over the great lakes, where he is living at this day."

M. Angustidens, Cuv.; *Narrow-toothed Mastodon*. Of this animal there have been found the remains but of few parts in comparison with the last species, but they are met with in various parts of Europe and Peru, and were, till examined by Cuvier, confounded with the Mastodon just described. Like those of the Gigantic Mastodon, the molar teeth of this species are studded with conical points, more or less numerous; but they are distinguished by the cones being more or less deeply grooved, and by their apices being sometimes terminated in numerous little points, and sometimes accompanied with other smaller cones, either on their sides or in the grooves; in consequence of which, by mastication are produced at first several little circles on their crowns, and subsequently trefoils or figures with three lobes, but never lozenge-shaped. This latter circumstance has caused their confusion with the teeth of the Hippopotamus; but these never have more than four trefoils, whilst the Mastodon has commonly six or ten. Further, in comparing these teeth with the Great Mastodon, they are found much narrower in proportion to their length than in that species, and hence is drawn their specific character.

From Cuvier's examinations and comparisons of the several teeth which have come under his notice, it appears that there are three on each side in the upper jaw, the outer edges of which are deeper than the inner. The tooth described by Daubenton in his *Hist. Nat.* xii. No. 1109, which was found in the turquoise mines of Simorre, that in the Museum of M. de Borda at Dax, and one implanted in the palate, and brought by M. Dombey from Peru, the characters of which are very similar, Cuvier considers to be the middle one; it has six points, and a little stud behind the last pair having two delicate and grooved points on it. In the portion of jaw belonging to M. de Borda, there was a tooth, in front of that just mentioned, with two points, and behind it, as also in that from Peru, part of a socket for a third tooth, which was deficient. Among the fragments from Peru was found a part of the lower jaw, which terminated in front, like that of the Elephant and the Gigantic Mastodon, in a kind of beak, and contained two teeth, the hinder of which had five pairs of points and a posterior stud; but that in front was so broken as to be incapable of affording any satisfactory evidence: a tooth, however, from Simorre, and that in the lower jaw from Baldassari, each of which had only three pairs of points, seemed to prove that they were the front teeth. In these the inner edge was the deepest, which was necessary to answer to the form of the upper teeth; and this is a general law with herbivorous animals, that when the two sides of a tooth are different, they are placed in a contrary position in the two jaws. The palate figured by Camper in the *Nov. Act. Petrop.* vol. ii. pl. viii. from a specimen in the British Museum, belongs to this, and not to the preceding species. And it further appears that the remains of the Narrow-toothed Mastodon are

often found embedded with marine bodies, which is never the case with the Great Mastodon.

Cuvier thinks it probable that the Narrow-toothed Mastodon had tusks as wide as the Great species, and in support of this notion he adduces the fact that Daubenton found pieces of ivory among the fossil fragments from the turquoise mines of Simorre, most likely from the same animal as that to which the teeth belonged.

Since Cuvier has directed attention to this species it turns out that they are very common in different parts of Europe and America, and in the latter continent, at a place called the Giant's Camp, near Santa-Fé de Bogota, they are found in large heaps, and impregnated with sea-salt. Of the following species, with the exception of the last, the characteristics are not completely decided, though there seems little doubt of their distinctness, notwithstanding there have been hitherto but few teeth found.

M. Cordillerarum, Cuv.; *Cordilleran Mastodon*. In this the tooth has the tubercles divided, as in the narrow-toothed species, into trefoils; but in its square proportions it resembles the six-pointed tooth of the Ohio specimen; one of these teeth was found by Humboldt near the volcano of Imbaburra, in the Kingdom of Quito, at 1200 toises height; a second between Chichas and Tarija, in the Cordillera of Chiquitos, and a third in the same Province.

M. Humboldtii, Cuv.; *Humboldt's Mastodon*. The single tooth of this species was met with at Conception in Chili; it is square, and not more than one-third of the size of the last species; it has been much used, but is still in good condition. Very near to this is the

M. Minus, Cuv.; *Lesser Mastodon*. Which entirely resembles the Cordilleran, except in not being above a third of its size. It was found in Saxony.

M. Tapiroides, Cuv.; *Tapir-like Mastodon*. One of these teeth was found in a lime-pit at Montbusard, near Orleans, together with lymneæ, planorbes, and also some bones of the Palæotherium: the ridges are not distinctly divided into two points, but merely indented, and seeming to lead to the Tapirs.

In the years 1826 and 1827, Mr. Crawford, whilst passing up the Irawadi on a mission to the Court of Ava, collected several chests of fossil wood and bones; and among the latter, which were found near the town of Wetmasut, on the Eastern bank of the river, the two following new species were found, and have since been described by Mr. Clift in the *Geological Transactions*.

M. Latidens, Clift; *Broad-toothed Mastodon*. The size of this species appears from the observations of Mr. Clift to have equalled, if not exceeded, the largest living Elephant, as "a string passed round the lower jaw, over the anterior part of the grinder, where it was worn, measured two feet four inches, while a string passed round the lower jaw of the largest Asiatic Elephant in the Museum of the College (of Surgeons,) at the same point, gave two feet three inches; and the cranium of this Elephant has always been considered a very large one." Each molar of the lower jaw consists of seven denticles elevated, round, and mamillated, the mamillæ being from three to four in number: in such as have the grinding surface exposed it is larger, especially in breadth, than any Elephant Mr. Clift has seen, and the enamel is thinner than in the Gigantic Mastodon: the denticles are less elevated than in the other Mastodons, the lower jaw less deep and angular than in the Gigantic Mastodon, and approaching the form of that

MAS-
TODON.

MAS-
TODON.
—
MATA-
CHIN.

of the Elephant, but the skull more nearly approaches the latter animal in the exceeding narrowness of the palate. Judging from the general structure of the teeth, and the more compact jaw-bone, Mr. Clift considers the food to have consisted of harder vegetable substances than those on which Elephants feed.

M. Elephantoides, Clift; *Elephant-like Mastodon*. Smaller than the preceding, the molar teeth consisting of ten denticles, each having from five to eight mamillæ; these denticles are closer than in the last species, eight of them occupying the space of five of the *latidens*, and the enamel does not appear so thick: they form a series of mucronated plates rising in the middle, rather than having a central depression, nor is there any apparent commissure. "This tooth," says Mr. Clift, "approaches still more nearly that of the Elephant, and the contour of the jaw is in unison with the appearance of the tooth."

Perhaps we should not be far from the truth, if we were to conclude that the species to which this tooth belongs, formed the passage from the Mastodon to the Elephant. It is not impossible, however, that there may yet be a link wanting, which might be supplied by an animal having a tooth composed of a greater number of denticles increasing in depth, and having the rudiments of crusta petrosa, that necessary ingredient in the tooth of the Elephant, for it is the animal mortar, as it were, by which the plates or denticles are cemented together; the entire absence of which distinguishes the tooth of the Mastodon."

Although I had a check,
To geue the *mate* is hard.
Surrey. To the Ladie that scorned her Louer.

In bashfulnesse, the spirits do a little go and come; but with
bold men, upon like occasion, they stand at a stay; like a stale at
Chesse, where it is no *mate*, but yet the game cannot stirre.

Bacon. Essay 12. p. 63.

MATE, *v.* } A. S. *mac-a*; D. *maet*. Skinner
MATE, *n.* } thinks from A. S. *metan*, to meet:
MATELESS. } *pares enim paribus facile aggregantur*,

birds of a feather fly together. But see *ante*, MAKE, and MATE.

MATCH.
To match, to pair, to couple, to counite, to coequal:
to be, stand, or be placed as coequal, or in equipoise;
to stand up against or withstand, as equal, to oppose.

A *mate*, one of a pair or couple; one coupled or
counited with another or others: an associate or co-
fellow, one whose offices or labours are the same with
those of another, (without reference to rank or authority,
as ship-mate, master's *mate*.)

Pacience and ich weren y putte to be *mettes*
And seten by our selve.
Piers Plouhman. Vision, p. 244.

The turtle to her *mate* hath tolde her tale.
Surrey. Of the Restless State of a Louer.

LUC. Mistressse, what's your opinion of your sister?
BIAN. That being mad herselfe she's madly *mated*.
Shakspeare. Taming of the Shrew, fol. 220.

If I lou'd many words, Lord, I should tell you,
You haue as little honestie, as honor,
That in the way of loyaltie, and truth,
Toward the king, my euer roiall master,
Dare *mate* a sounder man then Surrie can be,
And all that loue his follies.
Id. Henry VIII. fol. 222.

The piece of ignorant dow, he stood up to me
And *mated* my commands.
Beaumont and Fletcher. Rule a Wife, act iii. sc. 1.

I (an old turtle)
Will wing me to some wither'd bough, and there
My *mate* (that's neuer to be found againe)
Lament, till I am lost.
Shakspeare. Winter's Tale, fol. 303.

Mad man, the clouds, and lightnings *matelesse*,
To forge with brasse, and speed of horn-hooft force.
Sandys. Virgil. Æneis, book vi.

The thrush a tenor; of a little space,
Some *mateless* dove doth murmur out the base.
Peacham. Minerv. Britan. (1612.)

From roots hard hazels, and from cyons rise
Tall ash, and taller oak that *mates* the skies.
Dryden. Virgil. Georgics, book ii.

One fatal night this unrelenting crew
Their *mates*, and all the lovely captives, slew.
And every male; lest in the course of time
Should rise some hero to revenge the crime.
Fawkes. Argonautics of Apollonius Rhodius, book ii. l. 800.

MATE, *v.* } See *ante*, to AMATE, and the Commen-
MATE, *adj.* } tators on Shakspeare. From A. S.
mæt-an, *somniare*, to dream.

To be or cause to be insensate; to stupify, to astound
or astonish, to appal.

Gower, in the Quotations from him, applies the word
to the effects of dronkship or drunkenness. It is
written by G. Douglas *mait* and *mate*. See the
Glossary to his Virgil. Ruddiman derives as *mate* in
check-mate, *infra*.

Him thoughte that his herte wolde all to-breke,
When he saw hem so pitous and so *mate*,
That whilom weren of so gret estate.
Chaucer. The Knightes Tule, v. 957.

O Goliath, unmesurable of length,
How mightie David maken thee so *mate*?
Id. The Man of Lawes Tale, v. 5355.

For as the man, which ofte drynketh
The wine, that in his stomake synketh,
Waxeth dronke an witles for a throwe,
Right so my lust is ouerthrowe,
And of mine owne thought so *mate*.
Gower. Conf. Am. book vi. p. 185.

And wexeth anone so feeble and *mate*.
Id. Ib. p. 184.

MATE.
—
MA-
THEMA-
TICKS.

The French men he hath so mated
And their courage abated
That they are but halfe men.

Shelton. Why come ye not to Court.

Which sory words her mightie hart did mate
With mild regard to see his ruefull plight,
That her inburning wrath she gan abate
And him receiv'd againe to former favors state.

Spenser. Faerie Queene, book iv. can. 8.

So good night
My minde she has mated, and amazed my sight,
I thinke, but dare not speak.

Shakspeare. Macbeth, fol. 148.

MATELEA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Apocineæ*. Generic character: calyx five-parted; corolla rotate; anthers joined into a five-angled head; follicle warty, five-angled; seed flat, crenated at the margin.

One species, *M. palustris*, native of Guiana.

MATERIAL. See **MATTER**.

MATERNAL, *F. maternel*; *It. maternale*; *Sp. maternal*; *Lat. maternus*; *Gr. μητρικὸς*.

Of or pertaining to a mother, motherly: appropriate to, or becoming, a mother.

“*Fr. maternité, maternity*, motherhood, the being a mother.” *Cotgrave*.

She, that herself will sliver and disbranch
From her *material* (maternal) sap, perforce must wither
And come to deadly use.

Shakspeare. Lear, act iv. sc. 3.

Her charity was the cause of her *maternity*.

Parthenæ Sacr. (1633.) p. 47.

That part alone of gross *maternal* frame
Fire shall devour; while what from me he drew
Shall live immortal, and its force subdue.

Gay. The Apotheosis of Hercules.

Not with such joy a mother views again
Her darling offspring, deem'd in battle slain,
Who saw the troops without him home return'd,
And long his loss with tears *maternal* mourn'd.

Hoole. Orlando Furioso, book i. l. 378.

MATH, *A. S. maw-eth*, the third person singular of the indicative of *maw-an*, *metere*, to mow. *Tooke. G. Douglas, p. 454. v. 31.* uses the expression “*lattir meith*,” that which one *moweth* later or after the former *math* or mowing.

The first mowing thereof for the king's use, is wont to be sooner than the common *mathe*. *Hall. Hard Texts, Amos vii.*

MATHEMATICKS, *Fr. mathématiques*; *It. matematiche*; *Sp. matematica*; *Lat. mathematica*, *mathesis*; *Gr. μαθηματικά, μαθήσις, μαθήματα, ἀπὸ τοῦ μαθεῖν, discere, docere*, to learn or teach.

See the Quotation from *Horne*, and, for an especial usage, see that from *Grew*.

The third point of theorike,
Whiche cleped is *mathematike*,
Devided is in sondrie wise,
And stant vpon diuers apprise.

Gower. Conf. Am. book vii. p. 203.

But let my masters *mathematical*
Tel you the rest.

Shelton. Why come ye not to Court.

Anon after he set vp a great scole at Cauntorbury of al maner of scyences, as rhetorick, logyck, phylosophy, *mathesy*, astrologi, geometrye, arithmeticke, and musicke.

Bale. English Votaries, part i. p. 44.

A *mathematical* chamber, furnished with all sorts of *mathematical* instruments, being an appendix to a library.

Cowley. Essays. The College.

Mr. Selden, whose volume of natural and national laws proves, not only by great authorities brought together, but by exquisite reasons and theorems, almost *mathematically* demonstrative, that all opinions, yea errors, known, read, and collated, are of main service and assistance toward the speedy attainment of what is truest.

Milton. Works, vol. i. fol. 146. Of Undiscensed Printing.

Mathematicians, among the Romans, were, for some time, specially meant of astrologers, or star prophets; as appears in *Suetonius*, and others, best skill'd in language of their own country.

Grew. Cosmo Sacra, book v. ch. iv. fol. 327.

I have mentioned *mathematicks* as a way to settle in the mind an habit of reasoning closely and in train; not that I think it necessary that all men should be deep *mathematicians*, but that having got the way of reasoning, which that study necessarily brings the mind to, they might be able to transfer it to other parts of knowledge as they have occasion.

Locke. Works, vol. iii. sec. 7. fol. 397. Of the Conduct of the Understanding

In all sorts of reasoning, every single argument should be managed as a *mathematical* demonstration, the connection and dependence of ideas should be follow'd till the mind is brought to the source on which it bottoms, and observes the coherence all along.

Id. Ib.

Mathematicks treat of magnitude and numbers, instructing us how to measure, estimate, and compute the different distances, magnitudes, and motions of bodies, with respect to one another.

Horne. Works, vol. vi. p. 120. State of the Case between Newton and Hutchinson.

Grant the possibility of the three operations described in the postulates, and the correctness of the solution is as *mathematically* certain, as the truth of any property of the triangle, or of the circle.

Stewart. Philosophy of the Human Mind, vol. ii. sec. 3. p. 163.

The *mathematician*, who took no other pleasure in reading *Virgil*, but that of examining *Aeneas's* voyage by the map, might perfectly understand the meaning of every Latin word employed by that divine author.

Hume. Essay 18. vol. i. p. 162.

MATHIOLA, in *Botany*, a genus of the class *Tetradynamia*, order *Siliquosa*, natural order *Cruciferae*. Generic character: calyx erect; pod round or compressed, elongated, two-celled; stigma conniving, two-lobed, lobes thickened at the back; seeds compressed, in one series; cotyledons flat, accumbent.

A genus allied to *Cheiranthus*, containing near thirty species, mostly natives of the South of Europe and the East. *M. tristis*, the night smelling Stock, is a native of the neighbourhood of Madrid.

MATRELLA, in *Botany*, a genus of the class *Triandria*, order *Digynia*, natural order *Gramineæ*. Generic character: calyx none; corolla cartilaginous or indurated, compressed, awnless, two-valved, valves connate.

One species, *M. juncea*, native of Malabar.

MATRICARIA, in *Botany*, a genus of the class *Syngenesia*, order *Superflua*. Generic character: calyx flat, imbricated, margin of the scales scariose; receptacle naked, conical; down none.

Three species, natives of England. *M. chamomilla* has the same smell and medicinal qualities as the common Chamomile.

MA'TRICE, *Fr. matrice*; *It. matrice*; *Sp. madre, madriz, matriz*; *Lat. matrix, i. e. the mother's (sc.) womb.*

The mother's womb; applied, generally, to that in which any thing is formed or moulded.

All that breaketh vp the *matryce* shal be myne, and all that breaketh the *matrice* amonge thy catell, if it be male: whether it be oxe or shepe.

Bible, Anno 1551. Exodus, ch. xxxiv.

The *matrix* (which some have called another animal within us, and which is not subjected unto the law of our will,) after reception of its proper tenant, may yet receive a strange and spurious inmate.

Sir Thomas Brown. Vulgar Errours, book iii. ch. xvii

MATRICULATE, v. } Fr. *matriculer*; It. *ma-*
MATRICULATE, n. } *tricolare*, Sp. *matricular*,
MATRICULATE, adj. } from the Lat. *mater*, a mo-
MATRICULATION. } ther; "for then are young

schollers in an universitie said *matriculated*, when they are sworne and registred into the Societie of their foster-mother of learning the Universitie." Minshew.

Her goodly name
Honourably reported,
Should be set and sorted
To be *matriculate*, with ladies of astate?

Skelton. The Crowne of Laurell.

No my *matriculated* confutant, there will not want in any congregation of this island, that hath not been altogether famish'd, or wholly perverted with prelatish leaven.

Milton. Works, vol. i. fol. 127. *An Apology for Smectymnus.*

Mathew the publican, when he was called from his tole-booth to a discipleship, and was now to be *matriculated* into the family of Christ, entertained his new master with a sumptuous banquet.

Hall. Works, vol. iii. fol. 7. *Christian Moderation.*

His name occurs not in the *matricula*, only that of John Sherley, a Sussex man, and the son of a Gent. *matriculated* as a member of that hall, in 1582, aged 14.

Wood. Athenæ Oxonienses, vol. i. fol. 552.

Because we have no *matriculation* books above the time of Q. Elizab. the memory of many eminent men in the church and state is lost.

Id. Ib. vol. i. fol. 706.

That every scholar be elected by convocation, and at the time of election be unmarried, and a member of some college or hall in the University of Oxford, who shall have been *matriculated* twenty-four calendar months at least.

Blackstone. Commentaries. Introduction, vol. i. sec. 1. p. 29.

That a professorship of the laws of England be established, with a salary of two hundred pounds per annum; the professor to be elected by convocation, and to be, at the time of his election at least, a master of arts, or batchelor of civil law, in the University of Oxford, of ten years' standing from his *matriculation*; and also a barrister at law of four years' standing at the bar.

Id. Ib. vol. i. p. 28.

MATRIMONY, } Fr. *matrimonie*; It. and Sp.
MATRIMONIAL, } *matrimonio*; Lat. *matrimonium*;
MATRIMONIALLY, } from *mater*, a mother. *Monium*
MATRIMONIOUS. } (says Vossius) *est mera produc-*
tio vocis: in which assertion Vossius is most probably wrong. *Matrimony* is

That state (*sc.* of union, or cohabitation) in which women become *mothers*; the nuptial, the conjugal state; marriage, wedlock.

Lawe may declare
Yf *matrimonie* may be. of Mede and of falshe.

Piers Plouhman. Vision, p. 31.

Therefore he that ioyneth his virgyn in *matrymonye* doith wel, and he that ioyneth not doith bettre.

Wiclif. 1 Corynth. ch. vii.

Now shalt thou understonde, that *matrimony* is leful assembling of man and woman, that receuen by virtue of this sacrement the bonde thurgh whiche they may not be departid in all hir lif, that is to say, while they live bothe.

Chaucer. The Persones Tale, p. 166.

The misinterpreting of the scripture directed mainly against the abusers of the law for divorce given by Moses, hath chang'd the blessing of *matrimony* not seldom into a familiar and co-inhabiting mischief; at least into a drooping and disconsolate household captivity, without refuge or redemption.

Milton. Works, vol. i. p. 167. *Doctrine and Discipline of Divorce.*

From whose two loynes thou afterwards did ryse,
Most famous fruites of *matrimoniall* bowre.

Spenser. Faerie Queene, book iii. can. 3.

Yet Moses, as if foreseeing the miserable work that man's ignorance and pusillanimity would make in this *matrimonious* business, and endeavouring his utmost to prevent it, condescends in this place to such a methodical and school-like way of defining, and consequencing, as in no place of the whole law more.

Milton. Works, vol. i. fol. 229. *Of Nullities in Marriage.*

To this sagacious confessor he went,
And told her what a gift the gods had sent:
But told it under *matrimonial* seal,
With strict injunction never to reveal.

Dryden. The Wife of Bath's Tale.

He is so *matrimonially* wedded unto his church, that he cannot quit the same, even on the score of going into a religious house.

Ayliffe. Parergon.

With respect to the main article in *matrimonial* alliances, a total alteration has taken place in the fashion of the world; the wife now brings money to her husband, whereas anciently the husband paid money to the family of the wife; as was the case amongst the Jewish patriarchs, the Greeks, and the old inhabitants of Germany.

Paley. Moral Philosophy, vol. i. book iii. ch. viii. p. 333.

MA'TRON, } Fr. *matrone*; It. and Sp. *ma-*
MA'TRONAGE, } *trona*; Lat. *matrona*, from *mater*.
MA'TRONAL, } (Vossius.) Perhaps *materna*, (*sc. fe-*
MA'TRONLIKE, } *mina*.) a woman, who is a mother;
MA'TRONLY. } Of a motherly character; of a
motherly age; of age or character, befitting, or suited to perform, the duties of a mother.

And whan that this *matron* herde
The maner how this knight answerde,
She saide, ha treson wo the bee,
That haste thus tolde the priuiee,
Which all women most desire.

Gower. Conf. Am. book i. p. 29.

Yet did that auncient *matrone* all she might,
To cherish her with all things choise and rare.

Spenser. Faerie Queene, book vi. can. 12.

And amongst others, he [Maximilian] had herd of the beautie and vertuous behaviour of the young Queen of Naples, the widdow of Ferdinando the younger, being then of *matronall* yeares of seuen and twentie.

Bacon. King Henry VII. fol. 218.

Which doen, she up arose, with seemely grace,
And toward them full *matronely* did pace.

Spenser. Faerie Queene, book i. can. 10.

Mall, once in pleasant company by chance,
I wisht that you for company would dance,
Which you refus'd, and said, your yeares require,
Now, *matron-like*, both manners and attire.

Harrington. Epigram 45. book iv.

For thee the soldier bleeds, the *matron* mourns,
And wasteful war in all its fury burns.

Pope. Homer. Iliad, book vi.

She, wretched *matron*, forc'd in age for bread,
To strip the brook with mantling cresses spread,
To pick her wintry faggot from the thorn,
To seek her nightly shed, and weep till morn;
She only left of all the harmless train,
The sad historian of the pensive plain.

Goldsmith. The Deserted Village.

Let us suppose, then, that our gracious sovereign was sacrilegiously murdered; his exemplary queen, at the head of the *matronage* of this land, murdered in the same manner.

Burke. Works, vol. viii. p. 192. *On a Regicide Peace.*

Safe in the bosom of a sylvan scene,
Amidst projecting shades of varied green,
Like some fair *matron-form* in cypress veil'd,
In solitude sweet Yester lies conceal'd.

Boyse. Retirement.

MATROSSES, a term now obsolete, but once employed in military service for artillery men who assisted in loading, firing, and spunging great guns. They carried muskets, and on a march formed the guard of the store-waggons and guns.

MATRI-
MONY.MATROS-
SES.

MATROSSES. In French *matras* or *materas* is an arrow for a cross-bow, from the Latin *matara*, *mataris*, a Gallic javelin, (Liv. vii. 24. Cæsar, *De Bel. Gal.* i. 26.) and from those words Thomson unhesitatingly deduces our *matross*, which bears a widely different meaning. In Dutch *matrose* and *matroos* signify an able seaman, but the transition, if we refer to that source, is no less violent than in the one above mentioned.

MATTER.

MA'TTER, v. } Fr. *matière*; It. *materia*; Sp. *materia*; Lat. *materies*: *putamus a matre dici materies, quia in corporum ratione se matris instar habet*. Vossius. *Matter* is applied to

MA'TTER, n. } That of which any thing is formed or fashioned, composed, constructed, constituted; that which is subjected or supposed; met. a subject, an object; object in view, pursued or followed, contemplated, considered; considered or deemed, esteemed or valued—as worthy of pursuit, of gaining, acquiring, or possessing; of perceiving, knowing, or understanding. Also applied to the corrupt liquid secreted from a sore or wound.

MA'TTERLESS, }
MA'TTERY, }
MATE'RIAL, }
MATE'RIAL, n. }
MATE'RIALISM, }
MATE'RIALIST, }
MATERIA'LITY, }
MATE'RIALIZE, }
MATE'RIALLY, }
MATE'RIATE, }
MATERIA'TION. }

To *matter*; to form such corrupt secretion. To be met., or be deemed, considered, or esteemed worthy of pursuit, of value or weight, of moment or importance; to import; to estimate or esteem; to value.

Material is used literally, and also met. (thus) pertaining to the *matter* or subject; important, momentous, weighty, substantial, essential.

See the Quotations from Locke, Clarke, Stewart, and Belsham, for certain Philosophical usages.

And if thou canst not tellen me anon,
 Yet wol I yeve thee leave for to gon
 A twelvemonth and a day, to seek and lere
 An answer suffisant in this *matere*.

Chaucer. *The Wif of Bathes Tale*, v. 6492.

"Certis," quod they, "we putten our dede, and all oure *matere*, and cause, al holly in youre good will."

Id. *The Tale of Melibeus*, p. 118.

And we therefore
 Ben taught of that was written tho,
 For thy good is, that we also
 In our time amonge us here
 Do write of newe some *matere*.

Gower. *Conf. Am.* *The Prologue*, p. 7.

Ye say they vnderstonde it in an allegory sense, and perceived well that hee meant not of hys *materiall* body to bee eaten with their teeth.

Tyndall. *Workes*, fol. 460. *Exposition vpon the 6th Ch. of John*.

I meane not his *materiall* crosse that he himself dyed on, but a spirituall crosse, which is aduersitie, tribulation, worldly depression, &c.

Frith. *Workes*, fol. 5. *Preface to the Christian Reader*.

And bring him in *materialities*.

Skelton. *The Boke of Colin Clout*.

For Sosianus and Sagitta were men vile and of no account, neither *mattered* it where they liued.

Savile. *Tacitus*, book iii. ch. xvii. fol. 161.

Well worthie stock from which the branches sprong,

That in late yeares so faire a blossom bare,

As thee, O queene, the *matter* of my song.

Spenser. *Faerie Queene*, book iii. can. 4.

Concerning the *materials* of seditions. It is a thing well to be considered: for the surest way to prevent seditions (if the times do beare it) is to take away the *matter* of them.

Bacon. *Essay* 15. p. 80. *Of Seditions*.

JUL. Away with your *matterie* sentences, Momus; they are too grave, and wise, for this meeting.

Ben Jonson. *Poetaster*. act iv. sc. 4.

Sometimes,
 A poem, of no grace, weight, art, in rimes,
 With specious places, and being humour'd right,
 More strongly takes the people with delight,
 And better stayes them there, then all fine noise
 Of verse meere *matter-lesse*, and tinkling toies.

Ben Jonson. *Horace. The Art of Poetry*.

They religiously, and with invocation, brought with them to it, a ceremonial banquet, *materials* for sacrifice, with two white bulls, filleted on the horns, all which they placed under the oak.

Selden. *Illustrations of Drayton's Poly-olbion*, song 9.

That were too long their infinite contents

Here to record, ne much *materiall*.

Spenser. *Faerie Queene*, book ii. can. 10.

Some men have thought of a seventh way, and explicate our praying in the spirit by a mere volubility of language: which indeed is a direct undervaluing the Spirit of God and of Christ, the spirit of manifestation and intercession; and is to return to the *materiality* and imperfection of the law.

Taylor. *Sermon* 2. part ii. fol. 12.

For certain it is, that it is more difficult to make gold (which is the most ponderous and *materialate* amongst metalles) of other metalles, less ponderous, and less *materialate* than (*vice versâ*) to make silver of lead, or quicksilver.

Bacon. *Natural History*, Cent. iv. sec. 326.

But Bœtius de Boot, physician unto Ridulphus the Second, hath recompensed this defect, and in his tract, *de Lapidibus et Gemmis*, speaks very *materially* hereof.

Sir Thomas Brown. *Vulgar Errours*, book ii. ch. iii. p. 77.

Body stands for a solid extended figured substance, whereof *matter* is but a partial, and more confused conception, it seeming to me to be used for the substance and solidity of body without taking in its extension and figure.

Locke. *On Human Understanding*, book iii. ch. x. sec. 15.

Matter being a divisible substance, consisting always of separable, nay of actually separate and distinct parts, 'tis plain, that unless it were essentially conscious, in which case every particle of *matter* must consist of innumerable, separate, and distinct consciousnesses, no system of it in any possible composition or division, can be any individual conscious being.

Clarke. *Works*, vol. iii. fol. 730. *Letter to Mr. Dodwell*.

The soul, therefore, whose power of thinking is undeniably one individual consciousness, cannot possibly be a *material* substance.

Id. *Ib.*

I looked upon her hand, and finding it all *mattery*, bathed it with a decoction of, &c.

Wiseman. *Surgery*, book i. ch. xvii.

The herpes beneath *mattered* and were dried up with the common epuloticks.

Id. *Ib.*

[Virgil has] with wonderful art and beauty *materialized* (if I may so call it) a scheme of abstracted notions, and clothed the most nice, refined conceptions of philosophy in sensible images and poetical representations.

Tatler, No. 115.

By this means [the invention of letters] we *materialize* our ideas, and make them as lasting as the ink and paper, their vehicles.

Guardian, No. 172.

When we attempt to explain the nature of that principle which feels and thinks and wills, by saying, that it is a *material* substance, or that it is the result of *material* organization, we impose on ourselves by words; forgetting, that *matter* as well as mind is known to us by its qualities and attributes alone, and that we are totally ignorant of the essence of either.

Stewart. *Philosophy of the Human Mind. Introduction*, part i. p. 5.

My aim at ev'ry hour

Is to be well with those in pow'r,

And my *material* point of view,

Whoever's in, to be in too.

Churchill. *The Ghost*, book iv.

By the adversaries of the hypothesis of *materialism* it is urged, in a lofty and triumphant tone, that the known essential properties of *matter* are absolutely inconsistent with perception and activity, the essential attributes of the mind.

Belsham. *Philosophy of the Mind*, ch. xi. sec. 1. p. 334.

The *materialists*, as they are commonly called, though with some impropriety of expression, maintain, that man consists of one uniform substance, the object of the senses; and that perception, with its modes, is the result, necessary or otherwise, of the organization of the brain.

Id. *Ib.*

MATTER.

MATTER.

MAT-
TOCK.

For had not this disorder'd chaos been;
Had not these angels caus'd it by their sin;
Nor had compacted earth, nor rock, nor stone,
Nor gross materiality been known.

Byrom. *An Epistle to a Gentleman in the Temple.*

MATTIA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Boragineæ*. Generic character: calyx five-parted, spreading; corolla tubular, funnel-shaped, with five scales as long as the tube; anthers arrow-shaped, conniving; style longer than the stamens; stigma simple; seeds winged.

Two species, natives of the East of Europe.

MA'TTIN, *adj.* } Fr. *matines*; It. *matinee*; Sp.

MA'TTIN, *n.* } *matines: preces vel horæ matutinæ.*

MA'TUTINE, } Lat. *matutinus*, from *matuta*; a

MA'TUTINAL. } name given to Aurora; and *matuta*, from *mane*, (*optima diei pars*.) See Vossius.

The morning; the break or dawn of day; the beginning or early part of day.

In the Roman Catholic Church, *Matins*, *officium horæ matutinæ*, forms the third Watch of the Monastic day; *sc.* from three till six o'clock A. M.

In chyrche he was deuout y now, vor hym ne ssolde non day abyde,
pat he ne hurde masse & matyns and eueson, & eche tyde.

R. Gloucester, p. 369.

They say that knowe hym: he sayeth none at all, neither *Matins*, *Euensonge*, nor *Masse*, nor commeth at no church, but eyther to gase or talke.

Sir Thomas More. *Workes*, fol. 415. *The Second Part of the Con-
futation of Tyndall.*

And crop-full out of door he flings,
Ere the first cock his *matin* rings.

Milton. *L'Allegro*, l. 114.

Which th' only sound
Of leayes and fuming rills, Aurora's fan,
Lightly dispers'd, and the shrill *matin* song
Of birds on every bough.

Id. *Paradise Lost*, book v. l. 7.

The merry larke her *matins* sings aloft.

Spenser. *Epithalamion*.

Secondly, according as the said stars begin either to shine out or be hidden in the morning before the sun be up, or at evening after the sunne is set, they be said to rise and goe downe, and thereupon are named *matutine* or *vespertine*, orientall or occidentall, according as the one or the other happeneth unto them in the twy-light, morning or evening. Certes, when they are to be seene *matutine* or *vespertine*, it must be at the least three quarters of an houre either before the sunne is up, or after he is downe: for within that space there is no looking after them.

Holland. *Plinie*, book xviii. ch. xxv.

He raised his spouse ere *matin*-bell was rung,
And thus his morning canticle he sung.

Pope. *January and May*.

But first to him,
Spring of all charity, who gave the heart
With kindly sense to glow, his *matin*-song,
Superior duty, thus the sage addrest.

Mallet. *Amyntor and Theodora*, can. 2.

Next morn he wak'd her with a song;
"Behold," he said, "the new-born day,
The lark his *matin*-peal has rung,
Arise, my love, and come away."

Jago. *The Blackbirds. An Elegy*.

Nor scorn'd to mark the sun at *matins* due
Stream through the storied windows' holy hue.

Warton. *On the Birth of the Prince of Wales*.

Another *matutinal* expression in ancient use was—"Give you (*i. e.* God) good day," implying a hope that the day might end as well as it had begun.

Pegge. *Anecdotes of the English Language*, p. 277.

MATTOCK, A. S. *mattuc*, *meoltuc*, *meoltoc*; which

Somner calls a trident, a spade, a shovell, a delving toole, a mattocke. Minshew derives it from D. *met haecke*, with hooke, from *hacken*, to *hack*; ridiculously, says Skinner, who proposes A. S. *meos*, moss, or any low herb, and *tog-en*, to tug or pull, because it (a *mattock*) pulls or tears up.

In the kynges hoost ther were a fine hundred variettes, w^t *mattocks* and axes to make euyn the waies for the caryage to passe.

Lord Berners. *Froissart. Cronycle*, vol. i. ch. 207. p. 244.

For feare of being stifled with the vapour arising from thence, they are forced to giue ouer such fire-workes, and betake themselves oftentimes to great *mattocks* and pickaxes.

Hakewill. *Apologie*, book iv. ch. v. sect. 2. fol. 353.

Who left the *mattock*, and the spade,
And, in the robes of war array'd,
In their rough arms, departing took
Their helpless babes, and with a look
Stern and determin'd, swore to see
Those babes no more, or see them free.

Churchill. *The Duellist*, book ii.

MATTRESS. See MAT.

MATTUSCHKEA, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*. Generic character: calyx four-parted; corolla funnel-shaped, four-cleft; seeds four, naked.

One species, *M. hirsuta*, native of Guiana.

MATU'RE, *v.*

MATU'RE, *adj.*

MATU'RELY,

MATU'RITY,

MATURA'TION,

MA'TURATIVE.

Fr. *mature*; It. *maturo*; Sp. *maduro*; Lat. *maturus* (of uncertain origin.) That is properly said to be *mature*, which is neither too quick or early, nor too slow or late: (Vossius :) and thus,

Ripe, perfect, complete, digested. See IMMATURE.

Maturitie is a mean between two extremities, wherein nothyng lacketh or excedeth, and is in such a state, that it may neither encrease nor minyshe without losinge the denomination of *maturitie*. When they (the actes of man) be doone with suche moderation, that nothing in the doing may be sene superfluous or indigēt, we say, that they be *maturely* doone.

Sir Thomas Elyot. *The Governour*, book i. ch. xxii. p. 81.

The apples covered in the lime and ashes were well *matured*, as appeared both in their yellowness and sweetness.

Bacon. *Natural History*, Cent. iv. sec. 320.

Which images here figur'd in this wise,
I leave unto your more *mature* survey.

Daniel. *Dedication to the Tragedy of Philotas*.

Thy full *maturity*
Of years and wisdom, that discern what shows,
What art and colours may deceive the eye,
Secures our trust.

Id. *A Panegyric to the King*.

The same [linseed] applyed with figs is an excellent *maturative*, and ripeneth all *imposthumes*.

Holland. *Plinie*, book xx. ch. xxii.

Maturation is seen in liquors and fruits; wherein there is not desired, nor pretended, an utter conversion, but onely an alteration to that form, which is most sought, for man's use; as in clarifying drinks, ripening of fruits, &c.

Bacon. *Natural History*, Cent. ix. sec. 838.

As in the body, so in the soul, diseases and tumours must have their due *maturation* ere there can be a perfect cure.

Hall. *Works*, vol. iii. fol. 536. *The Balm of Gilead*.

Your lordship, therefore, may properly be said to have chosen a retreat, and not to have chosen it until you had *maturely* weighed the advantages of rising higher with the hazards of the fall.

Dryden. *Dedication to the Georgics*.

But this I only repeat historically, till further observation shall discover, whether these are diamonds not yet fully ripe, and capable of growing harder by further *maturation*.

Boyle. *Works*, vol. i. p. 453. *Of the Intestine Motions of the Particles of Quiescent Solids*.

MAT-
TOCK.

MATURE.

MATURE. The heat could never be greater than now it is at our 10th of March, or the 11th of September, and therefore not sufficient to bring their fruits and grain to maturity.

Ray. *Of the Creation*, part ii. p. 229.

As rolling years matur'd his age,
He flourish'd bold and sinewy as his sire;
While the mild passions in his breast assuage
The fiercer flames of his maternal fire.

Smollett. *Ode to Independence*.

His deep and piercing eye
Look'd wisdom, and mature sedateness weigh'd
To doubtful counsels.

Hamilton. *Of the Thistle. The Episode*.

MATUTA, in *Zoology*, a genus of *Brachyurous Crustacea*.

Generic character. Shell somewhat rounded, and furnished on each side with an elongate spine; the antennæ short; the posterior legs compressed, all inserted on the same horizontal line, and (except the anterior) terminated by a swimming joint.

The type is *M. victor*, Fabricius. Leach, *Zoological Miscellany*, vol. iii. p. 12. pl. cxxvii. Found in the Indian and New Holland seas. About six species.

MAUDLIN is the name of a plant, *Herba Magdalenæ*, and used as an adjective, is a corruption of *Magdalen*, (which Sir Thomas More writes *Mawdleyne*), who is depicted with eyes wet and swelled with tears: and is applied—when the eyes are watery, and the countenance swollen, with sottishness.

Sir Edmonbury first, in woful wise,
Leads up the show, and milks their maudlin eyes.

Dryden. *Prologue to the Royal Brothers*.

The maudlin hero, like a puling boy
Robb'd of his plaything, on the plains of Troy
Had never blubber'd at Patroclus tomb.

Churchill. *The Times*.

MAUGRE, Fr. *maulgré*, *i. e.* *malgré*; It. *malgrado*; Sp. *mal grado*; *malè gratum*, not at all grateful or agreeable; for *gre* and *grado* (says Skinner) are manifestly from *gratum*. Minshew notices a common expression, In spite of his nose. See the Quotation from Robert of Gloucester.

In spite of their hearts, against their wills, whether they will or no. Cotgrave.

Spenser says, book ii. ch. v. st. 12., *Maulgre* her spight, *i. e.* fortune; by which he appears to mean, (Spight on her spight.)

Ac þoru þe emperour, þat seþþe com, y hote Theodose
Maximian was seþþe y slaw magrei ys nose.

R. Gloucester, p. 94.

Egyne, þat was an abbes, out of hir hous had
Maugre hire will in hordom his life with hir lad.

R. Brunne, p. 58.

That gifte nought to praysen is
That man yeueth *maugre* his.

Chaucer. *The Romant of the Rose*, p. 188.

That *maulgre* where she woll or none,
Myn herte is euermo in one,
So that I can none other chese,
But whether that I winne or lese,
I mote hir loven till I deye.

Gower. *Conf. Am.* book i. p. 27.

It were better nought begonne,
Than take a thyng without leue
Whiche thou must after needes leue,
And yet haue *maugre* forth with all.

Id. *Id.* book v. p. 172.

Rather woulde we most earnestly entreate him, that as oft as we wander a wronge waye from hym, he woulde (draw we neuer so faste backward) by sharpe correccion *magry* our minde bryng vs into the right way again.

Sir Thomas More. *Workes*, fol. 1366. *A Treatyce vppon the Passyon*.

"Then tell," quoth Blandamour, "and feare no blame;
Tell what thou saw'st, *maulgre* whoso it heares."

Spenser. *Faerie Queene*, book iv. can. 1.

Untill that Talus had his pride represt,
And forced him, *maulgre*, it up to rear.

Id. *Id.* book v. can. 1.

He shall (*maugre*) be forced to confesse, that either there were never true Orders in the Church of England (which he dares not say) or else that they are still ours.

Hall. *Works*, vol. i. fol. 707. *The Honour of the Married Clergie*.

MAUKIN. See **MALKIN**.

MAUL. See **MALL**.

MAUND, *n.* } A. S. *mand*; Fr. *mande*, *manne*.

MA'UNDY, *n.* } Open basket or pannier having handles; Dutch *mande*; from the Lat. *manus*; *q. d.* a hand-basket; others from *mandere*, to eat, because eatables were usually carried in it. Skinner prefers the former.

And put them in a *maūde* and brynge them in the *maunde* w^t the oxe and the ii rammes.

Bible, Anno 1551. *Exodus*, ch. xxix.

Take the first of all the frute of the erthe, whiche thou hast brought in oute of the lande that the Lord thy God geueth the, and put it into a *maūde*, and go vnto the place whiche the Lorde thy God shall chose to make his name dwel there.

Id. *Deut.* ch. xxv.

A thousand favours from a *maund* she drew
Of amber, crystal, and of bedded jet,
Which one by one she in a river threw,
Upon whose weeping margent she was set.

Shakspeare. *A Lover's Complaint*

So rides he mounted on the market day,
Upon a straw stufft pannel all the way,
With a *maund* charg'd with household merchandize.

Hall. *Satire* 2. book iv.

MAUND, *v.* } To *maunder*, Skinner says, is to

MA'UNDER, *v.* } murmur, *parum deflexo sensu*, from

MA'UNDER, *n.* } the Fr. *maudire*: (Lat. *male-dicere*:) Serenius from the Sw. *mana*, *ciere*, *provocare*, (*i. e.* the A. S. *man-ian*.) But it is very probably merely a consequential usage of *maund*, a basket, intending,

To bear or carry the basket, the beggar's basket to receive the dole of charity; hence, to beg. And to *maunder*,

To use the speech, or mode of speech, customary with beggars; their whine or mutter, either of solicitation or discontent: hence to whine or mutter, to grumble or complain. Mr. Grose says,

"*Maundy*, abusive, saucy. Hence *maundering*. Glouc."

P. CA. ————— A rogue,

A very canter, I sir, one that *maunds*
Vpon the pad.

Ben Jonson. *The Staple of Newes*, act ii. sc. 5.

HIG. Thou art chosen, venerable Clause,

Our king and sovereign: monarch o' th' *maunders*.

Beaumont and Fletcher. *The Beggar's Bush*, act ii. sc. 1.

DEVET. Beg, Beg, and keep constables walking, wear out stocks and whipcord, *maunder* for butter-milk.

Id. *Thierry and Theodorat*, act v. sc. 1.

The *maunderings* of discontent are like the voyce and behaviour of a swine, who, when he feels it rain, runs grumbling about, and, by that, indeed, discovers his nature, but does not avoid the storm.

South. *Sermons*, vol. vii. p. 304.

MAUGRE.

MAUND

MAUNDY.
—
MAURITANIA.

MAUNDY. This word is applied by our old writers at the time of the Reformation to the *command* which Christ gave to his disciples for the commemoration of his last Supper. Spelman, however, thinks that *Maundy-Thurs*day, on the evening of which day the *command* was given, may be so called from *mande*, a basket, (see *ante*.) baskets being formerly brought on that day to receive the charitable donations of the King.

See the *Miscellaneous* notice under **LENT**.

In his second parte, he treateth the *maundy* of Christ with his apostles vpon the sheare Thursday, wherein our Sauour actually dyd institute the blessed sacrament, and therein verily gaue hys owne verye fleshe and bloude to hys twelue apostles.
Sir Thomas More. Workes, fol. 1038. The Aunsweare to the Poysoned Boke, &c. Preface.

For vnto those wordes he putteth and forthwith ioineth, the rehearsing of his bitter passion, begynning with his *maundy*, and therein his humble wesshyng of his disciples feete.

Id. Ib. fol. 1305. A Treatise vppon the Passyon.

The mynde and exposition of the old douctours vppon the wordes of Christes *maundy*.

Frith. Workes, fol. 125. col. 2. Title of the Chapter.

That is to say he admitted hym (saith S. Austē) vnto the *maundy* wherein he did betake and deliuer vnto the disciples y^e figure of his body and bloud.

Id. Ib. fol. 127. col. 1.

MAURANDIA, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*, natural order *Scrophulariæ*. Generic character: calyx five-parted; corolla bell-shaped, unequal; filaments callous at the base; capsules two, united, compressed, two-celled, one of the cells unequal; seeds muricated.

One species, *M. scandens*, an elegant climbing shrub. Native of Mexico.

Name.

MAURITANIA, or **MAURETANIA**, as it is spelled on most ancient coins and monuments, (Gruter, *Inscript.* p. 402, 482.) was the North-Western portion of ancient Africa, and derived its name from its inhabitants, the *Mauri*, or *Maurusii*: the latter being the appellation given to them by the Greeks, the former that by which they were known to the Romans, and which they assumed themselves.* (Strabo, xvii. 3. 2.)

Boundaries.

Their Country extended from the Atlantic Ocean to the River *Mulucha*, *Molochath*, or *Malva*, still called *Mulúajah* by the Moors. Its Southern boundaries were the river *Sala* (now *Salà*) and Mount Atlas (D'Anville, *Geogr. Anc.* iii. 108.) It therefore nearly coincided with the modern Kingdom of Fez. (Fás.)

Divisions.

Under the Roman Emperors, the limits of Mauritania were extended; and Juba the younger, having in honour of Augustus, from whom he received his Kingdom, given the name of *Cæsarea* to *Iol*, the Eastern part of his territory was called *Mauretania Cæsariensis*, and the Western *Tingitana*, from their respective Capitals, *Cæsarea* and *Tingis*, when Claudius reduced the whole to the condition of a Roman Province. In the Middle Ages *Tingitana* was considered as a Province of Spain, and called *Hispania Transfretana*, while the remainder of *Mauritania* was subdivided into two Districts, *Cæsariensis* and *Sitifensis*.

Tingitana.

Tingitana, or Mauritania Proper, anciently formed

* The Greek word *μαῦρος*, which signifies "obscure, dark, and weak," has been assigned by Grammarians as the origin of this name; but it is more probable that the significant term was borrowed from the proper name; "Maurusius" might, perhaps, be subsequently adopted to avoid the ambiguity occasioned by the use of *Maurus*.

the territories of two independent Princes, Boguses, or Bogus on the West, and Bocchus on the East; (Plin. v. 2.) but they were united, under Juba the younger, by Augustus, together with a large part of Numidia, and though long subject to the Romans, were little known to them or the Greeks beyond the coasts. Hence the extravagant reports of the marvellous objects abounding even on the coast of Libya, (Strabo, xvii. 3.3.) and the vague and unsatisfactory hints respecting the interior given by Pliny and later Roman authors. "The *Maurusii*," says Strabo, (xvii. 3. 4. 7.) "are a numerous and wealthy Libyan people. The greater part of them even to this day lead a wandering life. They pride themselves on their attention to dress; curling their hair, encouraging the growth of their beards, wearing golden ornaments, cleaning their teeth and paring their nails. You seldom see them touch each other when they meet in their walks, lest their head-dress should be deranged. They generally fight with spears on horseback, using ropes for bridles, and riding without saddles; but they have swords also. Their foot soldiers shield themselves with targets made of elephants' hides, and are clad in the skins of lions, panthers, and bears, which also serve them for beds. They and their neighbours, the *Masæsyli*, and, for the most part, all the Libyans in general, are equipped in the same manner, and are alike in other respects, using small but swift and docile horses, manageable even with a switch. Their horses have collars of wood or hair, to which the rein is fastened, on their necks. Some follow like dogs without being led. Their shield is round, small, and made of leather, their lance short and broad; they wear no girdle, and have full tunics; a skin, as was said before, serves them for a cloak and breast-plate. Some," he afterwards observes, "say that the *Maurusii* are Indians, and came hither with Hercules;" whence it is plain that they were not Negroes; (whom the Ancients called Ethiopians;) and it appears from what he says a little above that the *Pharusii* and *Nigretes* were separated from the *Maurusii* by a wide extent of desert. This description, as well as the other circumstances just noticed, shows how little the natives of Mauritania have changed in the lapse of eighteen centuries; and when the account given by Strabo is compared with Dr. Qudney's and Captain Lyon's description of the habits and appearance of the *Tawárik*, who occupy the valleys of Mount Atlas, and the whole of the *Sahrà*, or Great Desert, the identity of the two nations will hardly be doubted, especially when it is added, that almost all the names of places in ancient Africa can easily be traced to the *Shilhah*, or *Ertánah*, spoken by all their Tribes. "This Country," says Pomponius Mela, (i. 5.) "is ignoble, possessed of scarcely any thing illustrious, and more distinguished for its soil than its inhabitants, whose indolence has sunken it into obscurity." The land near the Western coast he describes (iii. 20.) as being so fertile, as in some places to produce grain spontaneously. The productiveness of the whole, its vast forests, excellent timber, and singular plants and animals, are also extolled by Strabo; (xvii. 3. 4.) but his authorities had evidently been deceived by fabulous accounts, and believed that peculiarities, which are found only in the Southern regions, belonged to the whole of Mauritania.

MAURI
TANIA.

Mauri, or
Moors.

Sala (now *Salé*, or *Salà*, in 34° 5' North and 6° 42' *Salà*. 36" West) was the last place on the Western coast known to the Romans, and the frontier town on that side. At

MAURITANIA. some distance to the North-East was the mouth of the *Subur*, still called *Sebrí*, or *Subrí*, the largest river on that coast. *Banasa*, placed by Ptolemy at a distance from the sea, D'Anville, (iii. 108.) on the authority of an ancient Itinerary, supposed to have been on the site of Ma'mórah Bellí, about half-way between Mehediyyah and El-'Aráish (*vulgò* Larache.) The stream, at the mouth of which that town is placed, still bears the name of Lukkos, or Ulkus, apparently a corruption of *Lexus*; El-'Aráish, therefore, must be on or near the site of *Lixus*, (*Lix*, *Linx*, or *Lynx*), which became a Roman Colony under Claudius. (Plin. *Hist. Nat.* v. 1.) It was celebrated in Fabulous History as the residence of Antæus, and the scene of his contest with Hercules. In its neighbourhood, likewise, were the Gardens of the Hesperides, on an island in an estuary of the sea; they consisted in Pliny's time merely of a grove of wild olives adorned with an altar to Hercules. On a bay to the North-East of *Lixus*, was *Zilis*, the name of which is still preserved in Azilá, called by Europeans Arzilla. Further to the North was the promontory which forms the North-Western extremity of Africa, where the coast takes a direction nearly due East at the entrance of the Straits of Hercules. (*Fretum Herculis*.) This promontory was called, from its luxuriant vineyards, *Ampelusia* by the Greeks, and *Cotta*, or *Cotes*, (*Kώττη*, Ptol. *Geogr.* iv. 1. *ai* *Kώτεις*, Strabo xvii. 3. 2.) a name of the same import, by the Africans. (Mela, i. 5.) Its modern name, Cabo de Espartal, is probably derived from the abundance of rushes on its shores. A little to the East of this headland was *Tingis*, near the site of the modern Tanjah, (called by us Tangiers,) which lies Eastward of the ancient town. (D'Anville, iii. 106.) *Cotes*, or *Ampelusia*, is considered by Strabo (xvii. 3.2.) as the Western extremity of Mount Atlas, called Dyrin, or Dyrin, (Daran in Arabic,) by the natives. It traverses Mauritania, he observes, from that promontory to the *Syrtes*, and is inhabited in the heart of the country by the Gætulians, the largest of the Libyan nations. Seven remarkable mountains between *Tingis* and *Abyla*, called the Seven Brothers by the Ancients, appear to be the Jebel Músá of the Arabs. Beyond them is the Promontory of *Abyla*, projecting into the sea as if to meet the opposite and corresponding rock of *Calpe*. (Gibraltar.) These are the well-known Columns of Hercules, whence the Strait received its name. Both are lofty and nearly insulated mountains connected with the main land by an isthmus. On that to the South of *Abyla* was *Septum*, or *Septa*, a fortress erected probably in the Vth or VIth century; its name, pronounced Sebtan by the Arabs, who have no *p* in their language, has been changed into Ceuta by the Spaniards. *Sagath*, now Tetwán, *Tænialonga*, now Tarkah, a remarkable strip of land, and *Parietina*, probably Velez de Gomera, (Ghomárah,) are places noticed by Ptolemy to the West of Cabo de Tres Forcas, the ancient *Rusadir*. The town bearing that name was probably on the site of Melilah: it is placed on a point of land South-East of the promontory, and not far from the entrance of an extensive bay, at the bottom of which the river Mulucha, or Molochath, enters the sea, and forms the Eastern boundary of *Mauretania Tingitana*.

Mauretania Cæsariensis, on the other side of the river, nearly corresponded with the modern State of Algiers, and the Gharb, or Maghrib-el-ausah (the Middle West) of the Arabs. It is more fertile and was better known to the Greeks and Romans than *Tingitana*; Mount

Atlas, however, was, with some rare exceptions, the boundary of their knowledge Southward, and there is no reason to suppose that they ever crossed the Sahrà, or Great Desert. *Calaa*, perhaps the place called Kal'at-el-wád (River Castle) by the Arabs, on the Eastern bank of the Muluyah, is the first place in this Province noticed by the ancient Geographers: *Siga*, the Capital of Syphax before he conquered *Cirta*, appears to have been replaced by the modern Nedrómah. It was at a small distance from a remarkable promontory, Cape Metagonium, (*Μεταγώνιον*, Strabo, xvii. 3. 6. *Μεταγώνις*, Ptolem. iv. 1.) supposed by D'Anville to be the cape called Hone in Shaw's Maps. *Portus Divini* is Marsa-l-kebir, (the Great Port,) near Oran. (Wahrán.) *Portus Magnus* is a bay, at the bottom of which is Arzéú, (*i. e.* Arzáú,) a name bearing some resemblance to *Arsenaria*, a Roman Colony; but that town appears to have been considerably further to the East. *Murustaga*, which probably gave rise to the Arabian name of Mustaghánim, was not far West of the River Chinalaph, the largest stream in that part of Africa. It is now called Shelef. The whole of this coast was occupied by Roman Colonies, of which *Cartenna* (*Καρτίνα*, Ptolem.) and *Cæsarea* were the most considerable. The former is now called Tennes; the former, anciently named *Iol*, was embellished by the younger Juba, who made it his Capital, and called it *Cæsarea* in honour of Augustus. *Icosium* has been replaced by Shershá; Tefesád, on the bend of the Mersa-l amúsh, is the ancient *Tipasa*. Algiers (Al-jezáir, *i. e.* the islands) is a modern town long posterior to the time of the Romans. Rusipisir, a promontory, and Rusazus, a town somewhat to the East of it, seem both to contain the Punic term *rús*, (*rósh* in Hebrew,) a head. The river Zeitún, or Yisser, is probably the *Serbetes*; D'Anville thinks Burj, at the foot of the iron mountains, is the ancient *Tubusuptus* and Tedles *Soldæ*. The mouth of the *Audus*, now Samma, was near Bújáyah; and Jijel, called Gigin by sailors, is, almost unaltered, the ancient *Igil-gilis*, not very far West of the *Ampsaga*, which formed the Eastern boundary of *Mauretania Cæsariensis*.

In the interior the most remarkable town was *Sitifi*, still called Setif, a little to the South-East of Bújáyah, and nearly in latitude 36°. It was once the Capital of a district named from it. The vast salt-marsh, El Shatt, contiguous to the plains of Záb, is evidently the *Salinæ Nubonenses*; and Tubnah, to the North-East of it, is the ancient *Thubuna*. *Malliana* is now called Meliyánah, and *Succubar*, *Zuchabar*, or *Sugabar* is the modern Zukkár. The *Ancorarius Mons*, crossed by Count Theodosius, (Ammianus Marcellinus, xxix. 25.) is the modern Wánsherís. Minoh preserves its ancient name; Tagademt recalls the *Gadaum Castra* of Ammianus, and *Regiæ* (the Palace) is placed by a Roman Itinerary on the site of Tlemsen. (Telemsán.) The expedition of Suetonius Paulinus, which first led the Romans across Mount Atlas, seems to have commenced on the Eastern side of Mauritania, though the place in which it is noticed by Pliny, (*Nat. Hist.* v. 1.) and the apparent resemblance of some modern names to those mentioned by him and Solinus, made D'Anville suppose that the river *Ger* runs at no great distance South-East of Fez.

MAURITIA.

MAURITIUS.

MAURITIA, in Botany, a genus of the class Dioecia, order Octandria, natural order Palmæ. Generic character: male flower, calyx cup-shaped, slightly three-toothed; corolla, petals three: female flower, drupe one-seeded, imbricated.

One species, *M. flexuosa*, a lofty Palm-tree with fan-shaped fronds, native of Surinam.

Volcanic.

MAURITIUS, a small Island in the Indian Ocean, lying between $19^{\circ} 56'$ and $20^{\circ} 30'$ South, and $57^{\circ} 17'$ and $57^{\circ} 47'$ East, to the North-East of the Isle of Bourbon, is nearly elliptical in form, and measures about 12 leagues from North to South, and 10 from East to West; its circumference, exclusive of the sinuosities of the shore, scarcely exceeds 60 miles. Its coasts are, with few exceptions, beset with dangerous reefs; and it has only two good ports, one of which cannot be kept clear without continual labour and expense. The whole Island may be considered as an extinct volcano. Rising in many places abruptly from the sea, in others by an ascent more or less gradual, to the declivities which form the boundary of the central tract, the surface of the country is no where completely level; though some districts on the Northern and Western coasts are called plains, and the high-lands in the centre form a table-land, yet the greater part of the Island is extremely rugged and mountainous. The central plain is conjectured, by M. Bory de St. Vincent, (i. 212.) to have been anciently the crater of a vast volcano, filled up by the falling in of its sides, and altered in its form by earthquakes, the Central peak (*Piton du Milieu de l'Isle*) being the last vent of the expiring fires. This table-land is thickly wooded, although from 200 to 250 toises (1280 to 1600 feet) above the level of the sea, and in the midst of it rises the conical and pointed sugar-loaf hill, which derives its name, just mentioned, from its central position. The abruptness of the descent into this central level, as well as the lakes and morasses with which it abounds, are favourable to M. Bory's hypothesis; but the deep beds of compact and basaltic lava, sometimes retaining their prismatic forms, which appear on the sides of the ravines, leave no doubt as to the former existence of a volcano, whatever may have been the original conformation of the Island. The rugged belt already noticed, forms in some places considerable groups of mountains, particularly on the North-West side, where the peak called *Le Pouce* (Thumb) branches out into several lofty ridges, overlooking North-West and South-East, where a similar cluster of peaks and ridges form the Northern boundary of the *Grand Port*. (Great Harbour.) The *Piton du Quartier du Rempart*, (Rampart Peak,) in the North, and those *de la Rivière Noire*, (Black River,) and *de la Savane*, (Savanna Peak,) in the South, are similar elevations, which with several others present commanding positions, and give rise to some of the many streams by which the valleys beneath them are watered.

Mountains.

Lakes and rivers.

The lakes and morasses, as before observed, are principally in the table-land, and are either traversed by rivers or give rise to them. The *Grand Bassin* is a circular fresh-water basin, about half a mile in diameter, surrounded by steep, rocky banks, in the most elevated part of the central tract. It is the parent of several streams, which flow into the sea. About six miles, and nearly due North of it, is the *Mare aux Vaconas* or *Vacois*, (Vakesà Morass,) named from the *vakwàs*, or *Pandanus utilis*, (Bory, ii. 3.) by which it is surrounded. It is, as its name implies, a vast swamp, (*une véritable*

tourbière, Bory, i. 236.) of some hundred acres, through which several small streams pass, and in the centre of which there is a lake about a mile long, and more than twenty fathoms deep. Its most remarkable productions are crayfish and gigantic eels, sometimes twenty feet long. The principal rivers rise near the foot of the *Piton du Milieu*. Those on the West form a united stream under the name of the Great River, (*la Grande Rivière*), and flow into an arm of the sea by the Sandy plains, (*Plaines aux Sable*), a little to the South-West of Port Louis: those running to the East form the morasses called the Three islands, (*Les trois Ilots*), beyond which they discharge their waters into a bay North-East of the Great Harbour. The Tamarind and Rampart Rivers, (*Rivières du Tamarin et du Rempart*), which flow into the *Baie du Tamarin*, are, as is the case with several other streams in the Island, mere brooks, in the dry and overwhelming torrents in the rainy season, when the first forms a variety of beautiful cascades in its passage over the cliffs and rocky ledges across which it makes its way to the sea.

The heat, which continues from November to April with little intermission, is almost insufferable on the coast, but so much tempered on the upper districts by the elevation of the level and by exposure to the periodical winds, that the thermometer seldom rises there above 80° , (Fahrenheit,) while, below, it exceeds 90° ; and its variations, during the prevalence of the hurricanes, which sometimes occur, are incredibly great. The soil, when not volcanic or calcareous from the depositions of marine insects, is generally a reddish clay producing great luxuriance almost every kind of tropical vegetable; and, as nearly one-third of the whole surface is yet covered by its native forests, the botanist has still a wide scope for his inquiries. The comparative coolness and moisture of the higher regions are favourable to the growth of cryptogamous plants, and several new species of lichens, jungermanniæ, and especially ferns, might doubtless be found in addition to the many enumerated by M. Bory. *Le Pouce*, just above Port North-West, furnished him with *russeas*, *myonymas*, *mussændas*, and *nuxias*, besides many more widely distributed genera. The public Botanic Garden, of which a catalogue has been published, contains a valuable collection of all the most curious and useful tropical plants, and is a nursery from which such as deserve to be cultivated may be procured. It is in the Shaddock District, (*Quartier des Pamplemousses*) four or five miles North-East of Port Louis. (Bory, i. 212—225.) There is a scarcity of fodder for cattle, but the crops of manioc, (*Iatropa*), wheat, maize, sugar-cane, coffee, cotton, cloves, indigo, and tobacco, are so abundant as to yield a clear profit of twenty per cent. The coffee, particularly from beans originally procured from Uddein and Mokha, bids fair to rival the produce of Arabia itself. Of useful or ornamental timber the forests furnish a great variety; as iron-wood, (*Sideroxylon*), ebony, (*Diospyrus ebenus*), stink-wood, (*olax*), colophonium-wood, pines, oaks, cinnamon, (*Laurus*), cabbage-trees, (*Areca*), olives and apples. Of cattle, goats are the most plentiful, and buffaloes thrive more than common oxen; but deer, wild-boars, short-legged hares, many of the monkey tribe, tandrees, or tail-less hedgehogs, (*Erinaceus ecaudatus*), and rats are the principal indigenous quadrupeds. Some eagles, parrots, and loxias, especially the *Loxia cardinalis*, are among the most remarkable birds, of which tribe there is no great variety. Insects, on the

Zoology.

MAURITIUS.

other hand, abound, both innoxious and noxious; and of the latter few are more troublesome than the cockroach, (*Blatta Americana*), called *kakerlet* by the French, from the Dutch *kakkerlak*. It multiplies with the greatest rapidity, and devours leather, paper, candles, provisions, every thing in short, so that but for the *sphealobata*, a beautiful green fly, which is always in quest of it, its ravages could hardly be borne. The surrounding ocean abounds in fish, of which the four-spined sea-chest (*Ostracion quadricornis*) and the purse (*Tetraodon testudinarius*) are the most singular. The latter, by inflating the skin of its belly, becomes nearly spherical, and is then easily taken, as it cannot immediately regain its proper form and action. Sugar, coffee, spices, and ebony are the principal exports; rice, salt-provisions, various manufactured articles, and, till lately, slaves, the staple imports. The population, now estimated at 80,000, has quadrupled in twenty years; and thus affords a fair criterion of the improvement of the colony since it became subject to Great Britain; notwithstanding the abolition of the slave-trade, the dread of which made the colonists (Bory de St. Vincent, i. 168. 172.) jealous of the mother-country. The slaves are to the whites in the proportion of ten to one, and those from the African coast, as being less trustworthy and intelligent than the Malegashes, are treated more like brutes than human beings. Beasts of burden are deemed less cheap and tractable; slaves are, therefore, substituted for them. The mechanics are skilful and industrious; their iron-works and ship-building are considerable in extent and value. The higher classes are hospitable, but much relaxed in their morals, and knowledge is not generally diffused. A Literary and Philosophical Society, however, established in 1805, affords a ready channel of communication to persons engaged in useful inquiries, and the Public Library in Port Louis, which is easy of access, is peculiarly valuable in a colony so remote from Europe.

Trade.

Population.

Country houses.

Port Louis.

History.

Plantations (called *habitations* by the French) consist generally of 160 acres, and are divided into different portions by alleys of trees, such as the *vakwá*, (*Pandanus utilis*), rose-apple (*Eugenia glomerata*), banana, (*Musa sapientum*), &c. The houses of the planters, with the huts of their slaves, are scattered all over the country, and the only town is *Port Louis*, in 20° 9' 45" South, and 57° 28' 39" East of Greenwich, at the bottom of the harbour, in a valley, enclosed by lofty and rugged declivities. It was built principally of wood, and had scarcely any public edifices deserving of notice; but having been almost entirely destroyed by fire in 1816, it has been since rebuilt in a more substantial manner, with wider streets, and under many judicious regulations for the prevention of a similar catastrophe. The public walks are in a large area called the *Champ de Mars*, encircled by the heights of *Le Pouce*, and overshadowed by alleys of black-wood; (*Bois noir*—*Mimosa*, Lebbek;) being an agreeable place of rendezvous, it is much frequented in fine weather. No free negroes or mulattoes are allowed to inhabit the town; the suburb called the *Black Town* being exclusively appropriated to them.

This Island was discovered by the Portuguese early in the XVIth century,* probably soon after they first visited Matatani, in Madagascar. They called it at first

* Perhaps it was the Island on which Ruy Pereira was wrecked in his return from the East coast of Madagascar, in company with Tristan da Cunha, from whom he was separated by a storm in the winter of 1506. (Barros, xi. 1. 2. tom. iii. p. 16.)

Ilha do Cerne, supposing it to be the *Cerne* of Ptolemy, afterwards Diego Rodrigues; (Valentyn, v. 154.) but they do not appear to have ever taken possession of it. The Dutch were the first Europeans by whom it was much frequented, and they gave it the name of Mauritius, from Prince Maurice of Nassau, early in the XVIIth century. Their settlement at Fort Frederic Henry, probably near the mouth of the *Rivière des Créoles*, on the shore of the Great Harbour, and on the South-Eastern side of the Island, was formed before 1639, but Valentyn (*Oost Indien*, v. 154.) could not ascertain the date of its establishment. It seems to have been abandoned in 1644, and resumed in 1650. Lamotius, who was Chief there for fifteen years, and quitted it in 1692, made a complete tour of the Island, and judged its circumference to be about 240 miles; he was twenty-one days on his journey, and sometimes travelled twenty miles in a day. The Island was finally abandoned in 1710. Some of the settlers, who were then obliged to relinquish their plantations, are said to have died of vexation and disappointment, though they had obtained considerable estates at the Cape of Good Hope. The French, who had already, in 1664, established themselves in the neighbouring Island of Mascarenhas, which they called Bourbon, took possession of Mauritius as soon as it was evacuated by the Dutch. In 1723, a Governor and Council were appointed; and in 1734, it was placed under the direction of Mahé de la Bourdonnais, a man of remarkable energy and sagacity, to whose zeal and talents its rapid improvement was entirely owing. It was he who fixed a port North-West as the seat of the Capital, on account of its being on the leeward side of the Island. He was succeeded in 1766 by the celebrated M. Poivre, who, among many other important benefits, enriched the colony with plantations of cloves and nutmegs, in spite of the jealous and oppressive prohibitions of the Dutch. By sending agents into the least frequented Islands of the Eastern Archipelago, he succeeded in finding plants which had escaped the vigilance of those appointed by the Dutch Government to root them up. The Isle of France, as Mauritius was called by the French, was for a long time a source of much mischief to our commerce in the Indian Ocean, as its harbours afforded an asylum from which the French ships of war could easily slip out when a fleet of merchantmen was at hand; but till the year 1810, we had no disposable force sufficient for an attack on so important and well fortified a post. Little resistance, however, was made, when the Island was taken possession of in November of that year, by General Abercrombie; although 200 pieces of ordnance were found upon its batteries. It was finally ceded to Great Britain at the general pacification in 1814, and has since been governed as a British Colony.

Grant, *Account of Mauritius*; Bory de St. Vincent, *Voyage dans les quatre principales Iles des Mers d'Afrique*, à Paris, An. xiii. (1804,) 3 tomes, 8vo. avec un *Atlas de Planches*, 4to.; De Barros, *Decadas da Asia*; Valentyn, *Oost Indien*, v. Deel.

MAUSOLE'UM, } Lat. *mausoleum*; Fr. *mausoleum*; It. and Sp. *mausoleo*. See the Quotation from Pliny.

This *mausoleum* was the renowned tombe or sepulchre of *Mausolus*, a petie king of Carie, which the worthie ladie *Artemisia* (sometime his queene, and now his widow) caused to be erected for the said prince her husband, who died in the second yeere of the hundreth Olympias: and verily so sumptuous a thing it was, and so curiously

wrought, by the artificers especially, that it is reckoned one of those matchlesse monuments which are called the seven wonders of the world.
Holland. Plinie, book xxxvi. ch. v.

MAWK-ING.

The whole chapel called by his [Henry VII.] name, is properly but his *mausoleum*, he building it solely for the burial place of himself and the royal family, and accordingly ordering by his will that no other persons should be interred there.

Dart. Antiquities of Westminster Abbey, vol. i. p. 32.

Some [Great Princes] have amused the dull, sad years of life, (Life spent in indolence, and therefore sad,)

With schemes of monumental fame; and sought

By pyramids and *mausolean* pomp,

Short liv'd themselves, t' immortalize their bones.

Cowper. The Task, book v.

MAUTHER, Ray says, a *modher*, or *modder*, *moth-ther*, a girl or young wench; used all over the Eastern parts of England, viz. Essex, Suffolk, Norfolk, Cambridge; and he quotes the Etymology of the word from the Dan. *moer, virgo, puella*, (see *ante*, MAID, or MAY,) given by Spelman in his *Glossary, in v. Moer*. Norfolk, from its situation, was much exposed to Danish settlers, and Spelman imagines those of Norfolk, who sprang from the Danes, preserved the word, though with a corrupt pronunciation. See Nares, Moor, and Ray.

I know. Away, you talk like a foolish *mautther*.

Ben Jonson. The Alchemist, act iv. sc. 6.

MAVIS, Fr. *mauvis*; It. *malviccio*. The French also call it *La Grive de Vigne*, because it feeds upon the ripe grapes; (Pennant;) and it is said to have received its name *mauvis*, Lat. *malus*, from the mischief it does to the vintage. See Menage.

A name of the Thrush, the *Turdus* of Linnæus, still commonly used in Scotland.

And thrustles, terins, and *mauise*

That songen for to win hem prise,

And eke to surmount in hir song

That other birdes hem emong

By note made faire servise.

There you shall find in every corner a *maumet*; at everye doore a beggar; in every dish a priest.

Hall. Works, vol. i. fol. 258. Epistle 5. dec. i.

And then to haue a wretched puling foole,

A whining *mammet*, in her fortune's tender,

To answer, Ile not wed, I cannot loue.

Shakspeare. Romeo and Juliet. fol. 70.

ST. MAWS, a Borough in the County of Cornwall, which, although not incorporated, has returned two Members to Parliament since 1562. It is a mere hamlet, under a hill fronting the sea, and containing little more than twenty houses inhabited by fishermen. A castle erected by Henry VIII. bears the same name, and stands on the Eastern side of Falmouth harbour, opposite to Pendennis castle; its works are commanded by a hill immediately behind them. Distant 2½ miles N. E. from Falmouth, 10 from Truro, and 258 S. W. from London.

MAXILLARY, Fr. *maxillaire*; It. *mascellare*; Sp. *maxilla*; Lat. *maxillaris*, from *maxilla*; which is

MAWK-ING.

MAXILLARY.

MAXILLARY. formed from *masso*, *maxo*, *maxa*, *maxula*, *maxilla*, (whence *mala*;) the jaw. Scaliger, *De Causis*, L. L. c. 31. *Massare*, to reduce to one mass, to crush.

MAY.

Of, pertaining, or belonging to the jaw.

For there is the skull of one entire bone; there are the teeth; there are *maxillary* bones, there is the hard bone, that is the instrument of hearing, and thence issue the horns.

Bacon. *Natural History*, Cent. viii. sec. 747.

MAXILLARIA, in *Botany*, a genus of the class *Gynandria*, order *Monandria*, natural order *Orchideæ*. Generic character: calyx spreading, lip in front three-lobed, jointed with the unguiform process of the column, lateral leaves united at their bases to the column, masses of pollen two, two-parted, united by their bases to a gland.

Two species, natives of the West Indies and South America.

MAXIM, Fr. *maxime*; It. *massima*; Sp. *maxima*; Low Lat. *maxima*; because it is of the greatest authority, and in greatest estimation. In like manner, *axiom*, from *ἀξιος*, *dignus*. There are certain legal *maxims* unquestioned in our Courts. See Fortescue, ch. viii. and Blackstone, vol. i. p. 68.

It is a *maxime* held of all, knowe plaine,
Thrust nature off with forks, she'll turn again.

Browne. *Britannia's Pastorals*, book i. song 2.

There are a sort of propositions, which under the name of *maxims* and axioms have passed for principles and science; and because they are self-evident, have been suppos'd innate, although nobody (that I know) ever went about to show the reason and foundation of their clearness or cogency.

Locke. *Of Human Understanding*, book iv. ch. vii. sec. 1.

Who means to build his happy reign
On this blest *maxim*, wise and plain—
Though plain, how seldom understood!
That to be great he must be good.

Mallet. *Truth in Rhyme*.

MAY, Goth. and A. S. *mag-an*; Ger. *mogen*; D. *mog-en*; Sw. *mae*, to be able,—*can* (q. v.) is consequentially, to be able; *may*, literally,

To be able; to have power, strength, or ability; to be possible:

To have power, *sc.* given, granted, or conceded; and, thus, to be free, or have freedom or liberty, or permission: to be permitted or suffered.

It is written *moewe*, *moun*, continually in old authors. See MOWE.

Plente me *may* in Engeland of alle gode y se.

R. Gloucester, p. 1.

I *mai* alle thingis in him that coumfortith me.

Wiclif. *Filipensis*, ch. iv.

Now helpe me, lady, sith ye *may* and can.

Chaucer. *The Knightes Tale*, v. 2314.

Wel *may* men knowen, but it be a fool,
That every part deriveth from his hool.

Id. *Ib.* v. 3007.

He *may* not spare, although he were his brother.

Id. *Ib.* v. 739.

Men *maie* recouer losse of good,
But so wise a man yet neuer stood.

Gower. *Conf. Am.* book iv. p. 106.

"How *may* a man," said he, "with idle speech
Be wonne to spoyle the castle of his health?"

Spenser. *Faerie Queene*, book i. can. 9.

Great joy was made that day of young and old,
And solemne feast proclaym'd throughout the land,
That their exceeding merth *may* not be told.

Id. *Ib.* book i. can. 12.

Yes, you despise the man to books confin'd,
Who from his study rails at human-kind;

Though what he learns he speaks, and *may* advance
Some general maxims, or be right by chance.

Pope. *Moral Essays*, epist. 1.

Yet lives there one, whose heedless eye
Shall scorn thy pale shiue glimmering near?
With him, sweet bard, *may* fancy die
And joy desert the blooming year.

Collins. *Ode. On the Death of Mr. Thomson*.

MAY, n. } Fr. *may*; It. *maggio*; Sp. *mayo*;
MA'YING. } Lat. *maius*; for which various etymologies are given. See Vossius and Martinius: the latter prefers a *majoribus*, from the growth of vegetable nature at that period of the year.

Applied (met.) to the spring or early season of life: also to the flower of the hawthorn, then in season, to the whole plant.

Till it felle ones in a morwe of *May*
That Emelie, that fayrer was to sene
Than is the lillie upon his stalke grene,
And fresher than the *May* with flowres newe.

Chaucer. *The Knightes Tale*, v. 1036.

I for the ferde
To walke, as I you tell maie,
And that was in the moneth of *Maie*.

Gower. *Conf. Am.* book i. p. 17.

Many hearynge of his gooyng a *maiyn* were desirous to se hym shote.

Hall. *Henry VIII. The second Yere*.

And sayd, that for that noise and gallant sport
All other mirthes and *maygames* he wold shoon,
His onely ioy was on his pipe to play.

Turbervile. *Agaynst the Jelous Heades, &c.*

The *may-moone* in mine age, I mean the gallant time
When coales of kinde first kindled loue, and plesure was in prime.

Gascoigne. *Weeds. The Complaint of the Greene Knight*.

Some light huswife belike, that was dressed like a *May-lady*,
and as most of our gentlewomen are, was more solicitous of her head tiers, than of her health.

Burton. *Anatomy of Melancholy*, fol. 473.

See, see, O see, who here is come a *maying*!

The master of the ocean;

And his beauteous Orian:

Why left we our playing?

Ben Jonson. *Song* 13.

Now the bright morning star, day's harbinger,
Comes dancing from the East, and leads with her
The flowery *May*, who from her green lap throws
The yellow cowslip and the pale primrose.

Milton. *Ode. On May Morning*.

To gather *may-busquets* and smelling brere;
And home they hasten the postes to dight.

Spenser. *Shepherd's Calendar. May*.

So have I seene
Tom Piper stand upon your village greene,
Backt with the *may-pole*.

Browne. *Britannia's Pastorals*, book ii. song 2.

To greet glad nature, and the god of day,
And flowery Venus, blooming queen of *May*;
The songs of praise their tuneful breasts employ
Charm every ear, and wrap the soul in joy.

Fawkes. *Description of May*.

By this stream and the *may-blossom'd* thorn
That first heard his love-tale and his vows,
My pale ghost shall wander forlorn,
And the willow shall weep o'er my brows.

Mickle. *Song* 4.

Etymologies.

Macrobius has given a plentiful harvest of etymologies for the Roman MAY. Fulvius Nobilior, he says, informs us that Romulus having divided the population of his city into two classes, according to their respective ages, *majores* and *juniores*, set apart the third month in his Calendar in honour of the former. Some think the name is derived from the Tuscan God *Majus*, their Jupiter, so called from *majestas* or *magnitudo*. Cincius

MAY.

ascribes it to Maia, a wife of Vulcan, and rests his assertion upon a sacrifice which the Priest of Vulcan offers to that Goddess in the Kalends of May. Others say that it derives its origin from Maia, the mother of Mercury, to whom, conjointly with her son, merchants make oblations during this month. Maia again is thought to be the *Magna mater*, or *Bona Dea*, or even Medea, (*Saturn. xii. 1.*) Ovid, in the Vth Book of the *Fasti*, notices three of the above derivations, *sc.* from *Majestas*, *Majores*, and *Maia*. The Roman month was under the protection of Apollo, and on account of the celebration of the *Lemuria* during its course, marriages in May were considered ill-omened:

*Hac quoque de causâ, si te proverbia tangunt
Mense malas Maio nubere, vulgus ait.*

Fast. v. 489.

Observ-
ances.

Observances to the morn of May are of great antiquity. Brande, in his *Popular Antiquities*, has collected large notices of them, and for the most part they appear to have consisted in very natural testimonies of pleasure at the return of a season of joyaunce, or as Mr. Borlase well expresses it, "a gratulation of Spring." Blowing horns, (a custom practised, as Hearne states, during his time at Oxford, and which we remember a Century later was much used by the country boys in Cambridge,) walking abroad in the woods and meadows at an early hour, bearing home green boughs and garlands, and bathing the face with dew as an infallible cosmetic, were among the rites with which the happy morn was saluted. In the streets of London, as we learn from Missen, who visited England in the beginning of the last century, the milkmaids neatly dressed, and instead of their pails, carrying on their heads as much plate as they could borrow, decorated with ribbons and flowers, and accompanied by a fiddle, danced before the houses of their customers, from whom, and from the bystanders, they received some trifling gratuity. We believe, however, the silver mugs and tankards were not substituted for the pail, but hung round it as ornaments. In our own days the sooty sweepers have superseded the fairer nymphs of the dairy, and the predecessors of both, as we learn from Strutt, were morris-dancers, who revelled round Maypoles erected in the streets.

Maypoles.

Maypoles were a source of obstinate contention with the sour Puritans during the Great Rebellion. A Warrant of Charles I., dated October 18, 1633, forbade any disturbance, letting, or discouragement of his good people, who after the end of Divine Service indulged in innocent and lawful recreations, among which are specified "the setting up of May Poles, and other sports therewith used." Eleven years afterwards the solemn Hypocrites of the Long Parliament enacted, "because the prophanation of the Lord's day hath been heretofore greatly occasioned by Maypoles, (a heathenish vanity, generally abused to superstition and wickednesse,) the Lords and Commons do further order and ordain, that all and singular Maypoles, that are or shall be erected, shall be taken down and removed by the constables, borsholders, tything-men, petty constables, and churchwardens of the parishes where the same be, and that no Maypole shall be hereafter set up, erected, or suffered within this kingdom of England or dominion of Wales. The said officers to be fined five shillings weekly till the said Maypole be taken down. *Die Sabbathi, 6 April, 1644.*"

Great pains were taken at the same time to connect

these innocent and simple revels with Paganism; the May-pole was the successor of Hermes, Terminus, or the God of Gardens himself, the May-games were the *Floralia*, the May-gad (a peeled willow wand wreathed with cowslips) was the Bacchanalian thyrsus, and where Classical rites and Deities failed, Baalim and the Whore of Babylon were called in to make up the complement of Idolatry. As if even, if these customs could in truth be traced to Heathenism, they had not a yet earlier origin in Human Nature itself. It is difficult in the present day, to view some deserted Maypole, if such things still exist, rearing its tall but now unhonoured and unregarded head on a village green, and to believe that as a trysting place of rural merriment it once called forth anathemas like the following, which we extract entire (Strutt and Brande have given only part) from Stubbes's *Anatomie of Abuses*.

"Against May, Whitsonday or other time, all the yung men and maides, olde men and wiues run gadding ouer night to the woods, groues, hils and mountains where they spend all the night in plesant pastimes, and in the morning they return bringing with them birch and branches of trees to deck their assemblies withall, and no meruaile, for there is a great Lord present amongst them, as superintendent and Lord ouer their pastimes and sportes, namely Sathan prince of hel: But the chiefest jewel they bring from thence is their May-pole, which they bring home with great veneration as thus. They haue twentie or fortie yoke of Oxen, euery Oxe hauing a sweet nose-gay of floures placed on the tip of his hornes; and these Oxen drawe home this May-pole (this stinking Pool rather) which is couered all ouer with floures, and hearbs bound round about with strings from the top to the bottome, and sometime painted with variable colours, with two or three hundred men, women and children following it with great deuotion. And thus hauing reared it up with handkerchiefs and flags houer- ing on the top, they straw the ground rounde about, binde green boughes about it, set up summer haules, bowers and arbors hard by it. And then fall they to daunce like the heathen people at the dedication of the Idols, wherof this is a perfect pattern or rather the thing it self. I haue heard it credily reported (and that *vivâ voce*) by men of great grauitie and reputation, that of fortie, threescore, or a hundred maides going to the wood ouer night, there haue scaresly the third part of them returned home again undefiled. These be the frutes which thees cursed pastimes bring forth. Neither the Jewes, the Turcks, Sarasins, nor Pagans, nor any other nation how wicked or barbarous soeuer, haue euer used such deuilish exercises as these, nay they would haue been ashamed once to haue named them, much lesse to haue used them. Yet wee that would be Christians, think them not amisse. The Lord forgiue vs and remoue them from vs."

On the site of a stone cross which once ornamented the Strand, not far from St. Clement's Church, was erected a Maypole, more than 100 feet in height, which continued to stand there so late as the year 1717. Being ruinous it was then obtained by Sir Isaac Newton, carried to Wanstead, reerected in the grounds of the Rector of that Parish, Mr. Pound, and employed in raising the largest Telescope at that time existing, the present of a French Gentleman to the Royal Society, of which he was a member. (*Stow's Survey of London*, by Strype, vol. ii. book iv. ch. vii. p. 100.) In 1708, the Grand Jury of Middlesex presented as a nuisance a yearly May fair.

MAY.

MAY. riotous and tumultuous assembly in a place called Brookfield in the Parish of St. Martin in the Fields, called May Fair, "in which many and great Riots, Tumults, Breaches of the Peace, open and notorious Lewdness, and Murder itself had been committed, and were like to be committed again, if not prevented by some wise and prudent method. And for that the said Fair being so near her Majesty's Palaces, and might be very dangerous to her Majesty's Royal Person and Government, by seditious and unreasonable men taking thereby occasion to execute their most wicked and treasonable designs. Wherefore," &c. the said Grand Jury prayed for the abolition of this Fair, whose sole memorial in the present day exists in the name of the most fashionable district of the Metropolis.

Maygames. Strutt (*Sports and Pastimes*, book iv. p. 92) has remarked that the festivities of May were not confined to the Calends only but continued throughout the month. On the 30th of May, 1557, in the 4th of Queen Mary, as he shows by an extract from Strype, (*Eccl. Mem.* iii. c. 49. p. 377.) "was a goodly May-game in Fenchurch Street with drums and guns and pikes and with the Nine Worthies, who rode and each of them made his speech, there was also a morrice dance, and an elephant and castle, and the Lord and Lady of the May appearing to make up the shew:" these last-named personages were elected like the Lord of Misrule at Christmas, to preside over the sports. A person in the character of Robin Hood often filled this high station. The following pleasant entertainment, most agreeably described by Stowe, was offered to Henry VIII.

"In the month of May, namely on May-day, in the morning, every man, except impediment, would walk into the sweet meadows and green woods, there to rejoice their spirits with the beauty and savour of sweet flowers and with the noise of birds praising God in their kind. And for more notable example hereof, Edward Hall hath noted that King Henry the Eighth, as in the third of his reign, and divers other years, so namely in the seventh of his reign, on May-day in the morning with Queen Catherine his wife, accompanied with many lords and ladies, rode a Maying from Greenwich to the high ground of Shooter's Hill; where, as they passed by the way, they espied a company of tall yeomen, cloathed all in green, with green hoods, and with bows and arrows, to the number of two hundred. One being their chieftain, was called Robin Hood, who required the King and all his company to stay and see his men shoot; whereunto the King granting, Robin Hood whistled, and all the two hundred archers shot off loosing all at once; and when he whistled again, they likewise shot again; their arrows whistled by craft of the head, so that the noise was strange and loud, which greatly delighted the King, Queen, and their company.

"Moreover this Robin Hood desired the King and Queen, with their retinue, to enter the green wood, where, in arbors made with boughs and decked with flowers, they were set and served plentifully with venison and wine by Robin Hood and his men to their great contentment; and had other pageants and pastimes, as ye may read in my said author.

"I find also that in the month of May, the citizens of London, of all estates, lightly in every parish, or sometimes two or three parishes joined together, had their several Mayings, and did fetch in Maypoles, with divers warlike shews, with good archers, morrice dancers, and other devices for pastime all the day long;

and towards the evening, they had stage-plays, and bonfires in the streets."

Strutt also has printed from a MS., apparently of the date of Henry VII., the order of some sports and exercises performed in the Royal Park at Greenwich, during the last fortnight in May and the first in June, by a number of Gentlemen professing themselves to be servants of the Lady May. The Games consisted of tilting, archery, a sword-fight, wrestling, a fight at the barriers, and casting the bar. (book iv. p. 313.)

MAYENNE, a Department in the North-West division of France, surrounded by those of Manche, Orne, Sarthe, Mayenne and Loire, Loire, and Ille and Vilaine. It formerly constituted a part of the Provinces of Maine and Anjou, and it derives its name from the river Mayenne, by which it is traversed from North to South. This river rises in the Department of Orne, and in its course to join the Loire, passes the towns of Mayenne, Laval, and Chateau-Gontier, to which it is navigable. The other rivers of the Department are the Colmont, the Ernée, the Jouane, the Viccin, the Vaise, and the Oudon. The climate is temperate, but the soil exceedingly various. There are heaths and sandy tracts in it which require to lie fallow from five to six years to prepare them for yielding a crop fitted to remunerate their cultivation. In some places the soil is sufficiently fertile, and yields good crops of wheat, rye, oats, barley, and buck-wheat. Flax and hemp are grown extensively. The high grounds are covered with wood, and the pastures with sheep and horned cattle. The horses are of a small but active breed. The dairy produce, and more especially butter, forms a considerable source of wealth. Sheep are pastured in the swampy ground, the fleeces of which are in high reputation, and are well adapted for the stuff manufactures (*étamines*) carried on in the Department. A great deal of honey and wax are produced in this part of France; both of which are regarded as of superior quality, and consequently find a ready market. Apples, chestnuts, and stone-fruits are raised in large quantities, and the wines derived from the vineyards are in good repute. The Department contains iron mines, quarries of building stones, slates, different sorts of marbles, limestones, marls, and other minerals. The principal manufactures are those of delft-ware, glass, crystal, woollen stuffs, forges, and founderies. The commerce consists in grain, wine, fruits, poultry, eggs, butter, horses, sheep, hemp, flax, thread, linens bleached, wax, leather, wood, and paper. Near Vannes are some remarkable Celtic monuments. Stones, known by the name of the *Pierres de bout de Camac*, arranged in five rows, occupy a space about a mile in extent, and are in number more than four thousand. Population about 340,000.

Laval, the Capital of the Department, is situated in Laval, a valley intersected by the river Mayenne. It has two castles, and is enclosed by an old wall; it has also several Churches, three Hospitals, and a Monastery. Population nearly 15,000. Its manufactures consist in linen, thread, woollen stuffs, bleach-fields, iron forges, and cutting and polishing marble. This town suffered much during the Revolutionary war of La Vendée. The *Arrondissement* of Laval is divided into nine Cantons. Distant 15 miles S. of Mayenne.

Mayenne, standing on the river of the same name, has Mayenne, a population of 9000, and manufactures of linen, thread, and woollens. Distant 165 miles W. by S. of Paris.

Chateau-Gontier is also on the river Mayenne. It Chateau-Gontier is a well-built town, with a population of 5600, and Gontier.

manufactures of woollens and linens, and extensive bleach-yards both for linen and wax.

MAYO, a County of Ireland in the Province of Connaught, bounded on the East by Sligo and Roscommon, on the South by Galway, and on the West and North by the Atlantic Ocean. It is about 54 miles long from North to South, with a breadth in some places of 48 miles. The area of the County was estimated by Dr. Beaufort at 1235 Irish square miles, or 790,600 Irish acres; but the recent and accurate survey of Mr. Bald increases the superficial extent of Mayo to 823,022 acres: of these, 538,262 are green land or mountain, 262,420 flat bog, and 22,339 acres are covered by water, exclusive of Lough Mask, which has a surface of 13,429 acres, but belongs chiefly to the County of Galway. The County of Mayo comprises 68 Parishes, and is divided into 8½ Baronies, viz. Burishoole, Costello, Tyrawley, Gallen, Kilmain, Murrisk, Carra, Clanmorris, and the half-barony of Erris.

Wherever this County is free from mountain, moor, and flat bog, it presents a light, rich, and highly improvable soil. In the Barony of Kilmain, the country is dry and champagne, the soil a rich, dark loam on a limestone bottom, equally well adapted to cattle and tillage. Similar productive tracts occur in Clanmorris and in Tyrawley; especially down the valley of the Laggen to the sea, the soil is of the same warm and fertile character: on the other hand, the district of Erris, in the North-Western part of the County, is covered with wild mountains and bogs; in Winter, when the mountain-passes are converted into dangerous sloughs, it is nearly inaccessible. Erris, properly so called, is the low peninsula to the North of Black Sod Bay, joined to the main land by the narrow, sandy isthmus called the Mullet. About one-fourth of this district is cultivated or covered with sand, which is here so fine and penetrating, as to be exceedingly annoying.

In this rugged County are some of the highest mountain summits in Ireland. Knock na Muitea has an elevation of 2725 feet above the sea. Nephin, the beauty of whose form has been celebrated by Young and other travellers, and which is more conspicuous from its contiguity to the champagne country, rises to the height of 2670 feet. Furmnagar and Croagh Patrick are respectively 2562 and 2530 feet in height. The view from the latter mountain of Newport Bay and the numerous islands scattered over it, is of the most wild and interesting description. The mountain chains in the North-West of the County consist of primitive gneiss, mica slate, and granular quartz; the secondary strata overlaying these on the South are red sandstone and flætz limestone; on the North, the red sandstone is covered by slate clay, which alternates with flætz limestone. Nephin is composed of mica slate, Croagh Patrick of fragments of granite and sandstone. The slate-quarries which occur in the mountains of Clanmore near Westport, and in other places, are of considerable value; the best slates found in them are thought superior to the English. Iron-ore is found in every part of the County, but in the Barony of Murrisk it exists in great quantities. It was formerly smelted in abundance, but from the want of good fuel, this profitable labour has been abandoned. Veins of lead occur in the hills near Westport, and manganese has also been met with.

There are no rivers of importance in this County. The May, which rises in Sligo, falls into the sea at Killala, where it is about 200 yards wide; it is navigable

for boats of fifty tons to Ballina, six miles and a half from the sea. The shores of Mayo afford several good harbours which are at present much neglected or little known. Killeny harbour is superior to the bays of Sligo and Galway, and may be reckoned among the best of those on the Western coast. It is about seven Irish miles in length, by three-quarters of a mile in breadth, and deep enough for first rates. Newport Bay is about four miles long, and contains several good roads. Cleir Island, lying before it, breaks the force of the sea, while above forty little islands scattered over it, almost all inhabited, give it a lively and picturesque appearance. Black Sod, or Cleir Bay, formed by Achill Island on the South, is four miles wide at the entrance, and affords a land-locked harbour for the largest ships. Towards the North, beyond the islands called the Stags, the coast is clear, with high rocky cliffs. Killala Harbour on the North coast has a bar entrance, with ten feet water at neap tides.

Among the numerous lakes of this County, Lough Con is the most conspicuous for its magnitude and beauty. It is about nine miles long by four broad, with several picturesque islands scattered over it. The remains of ancient castles, abbeys, woods, and gentlemen's seats adorn its banks. Lough Carra is five miles long by two in breadth, and from its wooded islands and promontories exhibits much fine scenery. The Lake of Rahins, or Castlebar, is about seven miles long and two broad. Lough Mask, which exceeds any of these in size, is chiefly included in the County of Galway. Lough Baltra, Dawnis, and some others are of inferior note. The temporary lakes called *Turlows*, or *Turlachs*, are likewise frequent in this County on the confines of Galway; in Summer, when dry, they afford fine pasturage, but the suddenness with which they sometimes are filled at the commencement of Winter, often occasions much damage. In the flat country, on the borders of Loughs Mask and Corrib, is a great extent of rocky ground, appearing at a distance like one sheet of white stone, but on a nearer inspection, these singular rocks are found to stand in parallel lines from one to three feet above the surface, like flag-stones hitched on their edges; they are calcareous, and whatever may be their difference of size and shape, they are invariably ranged in the same direction. Fissures of great depth are found in some of the narrowest interstices; but in general the verdure between them affords excellent pasturage for sheep.

Mac Parlen, *Statistical Survey of Mayo*.

MAYOR, } Fr. *maieur*; It. *maggiore*; from
MA'YORALTY, } the Lat. *major*; the greater or prin-
MA'YORESSE. } cipal (man or magistrate, of a city,
town, &c.) In our elder authors it is commonly written *maior*; upon a presumption, no doubt, that we owed the word (as Menage insists) to the Latin; but the more ancient writing was *meyer*, and in Ger. and D. it is *meyer* or *meier*; and in Fr. also *maire*; which Skinner derives (with Verstegan) from the verb to *may*, *posse*. (See MAY.)

"As to *may* (says Verstegan) signifieth to have might or power, so a *mayer* is as much to say, A haver of might, one that hath, and may use authority." *Restitution of Decayed Intelligence*, ch. x.

And nameliche ze maistres, meynes and iuges
That han þe welthe of þis worlde.

Piers Plouhman. Vision, p. 164.

And in their songes *me-thought* they thanked nature much,
That by her licence al that yere to loue their happe was such.
Surrey. Complaint of a Louer that defied Loue, &c.

Me seemeth good, that with some little traine
Forthwith from Ludlow the young prince be set
Hither to London, to be crown'd our king.
Shakspeare. Richard III. fol. 184.

There with my cries importune heaven, that all
The sentence from thy head remov'd may light
On *me*, sole cause to thee of all this woe,
Mee, mee onely just object of his ire.
Milton. Paradise Lost, book x. l. 935.

Some such resemblances *methinks* I find
Of our last evening's talk, in this thy dream,
But with addition strange; yet be not sad.
Id. Ib. book v. l. 114.

Than Nisus dredand for his fallow kynd,
Begouth to cry al wod, and out of mynde;
Me me ze sla: lo I am here, he said,
That did the deid; turne hiddir on *me* goar blaid.
G. Douglas. The Ninth Booke of Eneados, fol. 291.

Than verely in dede dismaide
Did Nisus loudly shryke, not more to lurcke in darknes staide,
Such torments than him toke, he cried amain, with voice affaied,
'Tis I, 'tis I, here I am that did, turne all at *me*.
Phaer. Id.

Then struck with deep despair,
That cruel sight the lover could not bear:
But from his covert rush'd in open view,
And sent his voice before him as he flew:
"Me, me," he cry'd, "turn all your swords alone
On *me*! the fact confest, the fault my own."
Dryden. Virgil. Æneid, book ix.

While thus I stood intent to see and hear
One came, *methought*, and whisper'd in my ear:
"What could thus high thy rash ambition raise?
Art thou, fond youth, a candidate for praise?"
Pope. The Temple of Fame, l. 498.

MEACOCK. Skinner says, uxorious, too subject and
devoted to his wife, also, pusillanimous, delicate, effemi-
nate; either from *mes* (equivalent to *mal*, or to our
English *mis*, Cotgrave) and *coq*; *gallus ignavus, im-
becillus*, a cowardly cock, or *mew-cock*, a cock *mewed*
up in a coop. Mr. Steevens,—a cowardly, dastardly
creature.

NAN. 'Tis your own seeking.
MIR. Yes, to get my freedom;
Were they as I could wish 'em.

LA-CAST. Fools and *meacocks*,
To endure what you think fit to put upon 'em.
Beaumont and Fletcher. The Wild Goose Chase, act v. sc. 1.

I held it better, not to be so faint and peeish a *meacocke*, as to
shrinke and cotch mine head for every mizeling shoure.
*Holinshed. Works, vol. vi. p. 273. Stanihurst to Sir Henric
Sidneie, Knight. Continuation of Chronicles of Ireland.*

O you are nouices—'tis a world to see
How tame when men and women are alone,
A *meacocke* wretch can make the curstest shrew.
Shakspeare. Taming of the Shrew, fol. 217.

MEAD, } From A. S. *maw-an*; D. *maeden*; MEAD.
ME'ADOW. } Ger. *mehen*. Junius from A. S. *mæd*,
(i. e. *maw-ed*), *mowed*, the past participle of *maw-an*,
metere, to mow. Tooke:
That which (land, grass-land which) is *mowed*.

In oþer alf beþ grete wodes, les and *mede* also.
R. Gloucester, p. 187.

In feldes and in *medys* to prene her bachelerye.
Id. p. 192.

Ino toke þe feante, displayed his banere,
& went to þe bataile in fulle faire grene,
þat is vnder Kampedene a *medew* I wene.
R. Brunne, p. 2.

Alle mad he wasteyn, pastur, *medow*, & korn.

Colours ne know I non, withouten drede,
But swiche colours as growen in the *mede*.
Chaucer. The Frankleines Tale, v. 1535.

And there the Danish camp then strongly did abide,
Near to a goodly *mead* which men there call the stide.
Drayton. Poly-olbion, song 12.

But end with th' ages past :
When as the state shall yield more supplements
(B'ing well employ'd) than kings can well exhaust,
This golden *meadow* lying ready still
Than to be mow'd, when their occasions will.
Daniel. A Panegyrick to the King's Majesty.

Thy full and youthful breasts, which in their *meadowy* pride
Are branch'd with rivery veines meander-like that glide.
Drayton. Poly-olbion, song 10.

One way a band select from forage drives
A herd of beeves, faire oxen and faire kine
From a fat *meddow-ground*.
Milton. Paradise Lost, book xi. l. 643.

Nor is the *mead* unworthy of thy foot,
Full of fresh verdure, and unnumbr'd flowers,
The negligence of nature, wide and wild.
Thomson. Spring.

'Twas thus of old,
My warlike sons a gallant train,
Call'd forth their genuine strength and spread
Their banners o'er the tender *mead*.
Whitehead. On His Majesty's Birth-day, June 4, 1778.

MEAD, } A. S. *medo*; D. *meede*; Ger. *met*; Sw.
MEATH. } *mjoed*; Mid. Lat. *medus*. Wachter thinks
the word had its origin in the woods of Poland, where
honey called *miod* abounds. In A. S. *mæthe* is said to
be "wine made of new wine, sod until half be boyled
away." Somner. *Mæthe* and *mead* (Skinner says) are
alike in their excessive sweetness; and Wachter thinks
the former may be from the Gr. *μέθυ*, wine; and see
METHEGLIN, and the *Miscellaneous* notice under HY-
DROMEL.

He sent hire pinnes, *methe*, and spiced ale,
And wafers piping hot out of the glede.
Chaucer. The Milleres Tale, v. 3379.

And being now in hand to write thy glorious praise,
Fill me a bowl of *meath*, my working spirit to raise.
Drayton. Poly-olbion, song 4.

For drink the grape
She crushes, inoffensive moust, and *meathes*,
From many a berrie.
Milton. Paradise Lost, book v. l. 345.

The plenteous horns with pleasant *mead* they crown,
Nor wanted aught besides in honour of the moon.
Dryden. Palamon and Arcite, book iii.

ME'AGER, adj. or } A. S. *mægre*, lean, thin; mæ-
ME'AGRE, v. } geregean, to make lean, to ma-
ME'AGERLY, } cerate; D. *maegher*; Ger. *ma-*
ME'AGERNESS. } ger; Fr. *maigre*; It. *magro*;

MEAGER. Sp. *magro*; from the Lat. *macer*. Skinner. *Macer* from the Gr. μακρὸς, long, and, consequentially, *lean*. See **EMACIATE**. The *Glossary* of Alfric is the only authority cited for the A. S. verb.

Lean, thin, poor, hungry; *emaciate*, without flesh or fleshy substance; insubstantial; without nutriment or fertility; barren.

pat makeþ me so *meagre*.

Piers Plouhman. Vision, p. 92.

And thereto she was lene and *meagre*.

Chaucer. The Romant of the Rose, p. 173.

Thou art so leane and *meagre* waxen late,
That scarce thy legs uphold thy feeble gate.

Spenser. Mother Hubbard's Tale.

O physick's power, which (some say) hath restrain'd
Approach of death, alas! thou helpst *meagerly*.

Sidney. Arcadia, book iv.

Many a burning sun
Has sear'd my body, and boil'd up my blood,
Feebl'd my knees, and stamp't a *meagerness*
Upon my figure, all to find out knowledge.

Beaumont and Fletcher. The Island Princess, act iv. sc. 1.

But Poynings (the better to make compensation of the *meagerness* of his service in the warres, by acts of peace) called a parliament.

Bacon. King Henry VII. fol. 138.

His ceaseless sorrow for th' unhappy maid
Meager'd his look, and on his spirits prey'd.

Dryden. Ovid. Metamorphoses, book xi.

He calls for famine, and the *meagre* fiend
Blows mildew from between his shrivell'd lips,
And taints the golden ear.

Cowper. The Task, book ii.

MEAL, A. S. *mæl*; D. *maal*; Ger. *mal*; Sw. *mael*. The A. S. *mæl*, and English *meal*, is

A part or portion, a measure,—of food or any thing else

Meal-tide or time; the tide or time when each receives his part, portion, or measure of food.

He wole þe lyme *mele*
To drawe and vorsuolwe, perauntre at one *mele*.

R. Gloucester, p. 206.

Here have I eten many a mery *mele*.

Chaucer. The Sompnoures Tale, v. 7357.

The morow came, and nighen gan the time
Of *mealtide*.

Id. Troilus and Creseide, book ii. p. 249.

For thei in hope to asswage
The peine of dethe vpon the rage,
That thei lasse shulden feelee,
Of wyne let fill full a *meete*,
And dronken till so was befall,
That thei her strengthes losen all.

Gower. Conf. Am. book vi. p. 188.

Vnquiet *meales* make ill digestions.

Shakspeare. Comedy of Errours, fol. 97.

As to his *meals*, I should think it best, that as much as it can be conveniently avoided, they should not be kept constantly to an hour.

Locke. Of Education, sec. 15.

Beneath whose shade the lusty steers repose
Their cumbrous limbs, mix'd with the woolly tribes,
And leisurely concoct their grassy *meal*.

Jago. Edge Hill, book iv.

MEAL, Fr. *mesler*; to mix, to mingle; Scotch to *mell*. See **MEDLEY**, and **YMELL**.

Were he *mealed*; were he mixed with; were there intermixed or intermingled in him—that which he corrects, then were he tyrannous.

He doth with holy abstinence subdue
That in himselfe, which he spurres on his powre
To qualifie in others: were he *meal'd* with that
Which he corrects, then were he tirranous,
But this being so, he's iust.

Shakspeare. Measure for Measure, fol. 70.

MEAL, } A. S. *mealewe*; D. *meel*; Ger. *mæl*; **MEAL.**
ME'ALY, } Sw. *meol*; from Goth. *mal-an*, *mol-ere*; **MEAN.**
D. *maelen*; Ger. *malen*, *mulen*; Sw. *mala*; to grind, bruise, or crush, *sc.* to a powder; into fine, small particles.

Corn or grain ground or crushed to a powder.

Mealy; having the qualities or appearances of *meal*, its whiteness, fineness, softness.

Meale-mouthed or faire spoken; whose words are mild and soft, as *meal*. Minshew.

The kyngdom of hevenes is lyk to sour dowgh whiche a woman took and hidde in thre mesuris of *mele*, til it was al soured.

Wiclif. Matthew, ch. xiii.

The kyngdome of heauen is lyke vnto leuen which a womā taketh and hydeth in iii peckes of *meele*, tyl all be leuened.

Bible, Anno 1551.

Thou shalt a cake of half a bushel find,
That was ymaked of thin owne *mele*
Which that I halpe my fader for to stele.

Chaucer. The Reves Tale, v. 4043.

So were more meete for *mealy-mouthed* men.

Gascoigne. The Fruites of Warre, (86.)

MENE. Consider this: he has bin bred i' th' warres
Since a could draw a sword, and is ill-school'd
In boulded language: *meale* and bran together
He throwes without distinction.

Shakspeare. Coriolanus, fol. 17.

Though the regular spots in their wings [the caterpillar] seem but a *mealie* adhesion, and such as may be wiped away, yet since they come in this variety, out of their cases, there must be regular pores in those parts and membranes, defining such exudations.

Sir Thomas Brown. Cyrus Garden, ch. iii. p. 58.

The world's eye bleared with those shameless lyes,
Mask'd in the show of *meal-mouth'd* poesies.

Hall. Satires, book i. Prologue.

A lewd fellow was brought forth, who said, that he himself escaping in a *meal-tub*, had been entreated by those who were in peril of drowning, to desire of the people revenge of their deaths upon the captains.

Raleigh. History of the World, fol. 427. ch. viii. sec. 10.

Some fly with two wings, as birds and many insects, some with four, as all farinaceous or *mealy-winged* animals, as butterflies and moths.

Sir Thomas Brown. Vulgar Errours, book iii. ch. xv. p. 176.

The cameleon had been observed to drink water, and delight to feed on *meal-worms*; and although we have not had the advantage of our own observation, yet have we received the like confirmation from many ocular spectators.

Id. Ib. book iii. ch. xxi.

With shining *meal* o'er all their velvet leaves.

Thomson. Spring.

MEAN, *adj.* } Fr. *moyen*, *moyennant*, from the It.

MEAN, *n.* } *mediante*, and that from the Low Lat. *medianum*; Lat. *medium*. The Scotch write or wrote *moyen*. See in Jamieson.

Mediate; being or lying at equal distance, between the beginning and end; intervening; being or lying at a distance, between the extreme points; and thus distant, removed, restrained or withheld, from extremity, from excess; moderate, temperate.

Mean, n. that which is mediate, or intermediate; that by the intervention, intercession, instrumentality or agency of which any thing is done.

Consider, how justlie he was plagued in his gross bodie, many yeares before his death, with sores and diseases, that grew upon him by *meanes* of drunken surfetts, idlenesse, sloth and vicious trade of life.

R. Brunne, p. 539. Glossary.

For riches and mendicities
Ben cleped two extremities,
The *meane* is cleped sufficiounce,
There lieth of vertue the aboundaunce.

Chaucer. The Romant of the Rose, p. 218.

MEAN.

And that darknesse shal I som what assaye to maken thinne and weake, by lyght and *meaneliche* remedies: (*tenibus mediocribusque fomentis.*) Chaucer. Boecius, book i. p. 6.

Medea in the *meane* while,
Which thought hire father to beguile,
The treasour, whiche hir father had,
With hir all priuely she lad.

Gower. Conf. Am. book v. p. 152.

But we (or euer he come neare) are redy in the *meane* season to kyl him. Bible, Anno 1551. Actes, ch. xxiii.

And in the *meane* tyme betwixte that and daye, Paule besoughte them all to take meate. Id. Ib. ch. xxvii.

For his church is ye wote wel a church of folke, not *menely* good, but of folk so good, so pure, & so cleane, that ther be not among them al so much as either spot or wrinkle.

Sir Thomas More. Workes, fol. 808. The Confutation of Frere Barnes' Church.

Reserve her cause to her eternal doome;
And, in the *meane*, vouchsafe her honorable toombe.
Spenser. Faerie Queene, book ii. can. 1.

And therefore the *mean* is the vertue, and not to go too far in this, as in all other things besides, it is the best.

Sir Thomas North. Plutarch, fol. 116. Camillos.

And you know, his *meanes*
If he improue them, may well stretch so farre
As to annoy vs all: which to preuent,
Let Antony and Cæsar fall together.
Shakspeare. Julius Cæsar, fol. 115.

DUKE. The more degenerate and base art thou
To make such *meanes* for her, as thou hast done,
And leaue her on such slight conditions.
Id. Two Gentlemen of Verona, fol. 38.

For by the *means* of his affinity,
Was lost all that his father conquered;
Ev'n as if France had some Erynnis sent,
T' avenge their wrongs done by the insolent.
Daniel. History of Civil Wars, book v.

God intends repentance to be the *means* to purify the heart from that corruption that renders it utterly unserviceable.
South. Sermons, vol. ix. p. 200.

MEAN, } A. S. *gemæne*; D. *gemeen*; Ger.
ME'ANLY, } *gemein*; Sw. *gemen*; *communis*, *vul-*
ME'ANNESS. } *garis*; A. S. *mæne*; Ger. *mein*; Sw.
men. The A. S. *mæne* is *maneg*; the *many*, q. v.
applied to the *many* or multitude, the rout or rabble,
the low or base. Consequently,

Low or base; abject, degrading, dejected; disgraceful, dishonourable.

All manere of men. *pe mene* & *pe ryche*.
Piers Plouhman. Vision, p. 2.

RICH. The sonne of Clarence haue I pent vp close,
His daughter *meanly* haue I matcht in marriage,
The sonnes of Edward sleepe in Abraham's bosome,
And Anne my wife hath bid this world good night.
Shakspeare. Richard III. fol. 195.

That to be less than gods
Disdain'd, but *meaner* thoughts learned in their flight
Mangl'd with gastly wounds through plate and maille.
Milton. Paradise Lost, book vi. l. 367.

Worship ye sages of the east,
The king of Gods in *meanness* drest.
Hall. Anthemes. For Christmas Day.

Religion and divinity have the ill-luck to be so *meanly* thought of, that every half-witted corporation blockhead thinks himself a competent judge of the deepest points of its doctrine, and the reason of its discipline.
South. Sermons, vol. vi. p. 48.

This wonderful Almighty person, whom the world could not circumscribe, by reason of the divinity and immensity of his being, had not so much in the same world, as where to lay his head, by reason of the *meanness* of his condition.

Id. Ib. vol. iv. p. 425.

Safe under such a wing, the boy shall show
No spots contracted among grooms below,
Nor taint his speech with *meannesses*, design'd
By footman Tom for witty and refin'd.

Cowper. Tirocinium.

MEAN, v. } Goth. *mun-an*, *mun-yan*; A. S.
ME'ANER, } *mun-an*, *mæn-an*; D. *meen-en*; Ger.
ME'ANING. } *meynen*; Sw. *mena*, *significare*, *deno-*
tare, *demonstrare*, to signify, to denote, to show; to be
or cause to be a sign, or mark. See MIND.

To signify; to design; to have, bear, or keep in
mind; in the *mind* or understanding; to purpose, to
intend, to think.

Me troweth he was the lynx al þyng thurlyng, of whiche Merlyne
meneth of. R. Gloucester, p. 522. note.

þan spak Philip, "I wote what þis *menes*."
R. Brunne, p. 155.

þei wist what it *ment*.
Id. p. 8.

And saide meý madame. what may þis be to *mene*.
Piers Plouhman. Vision, p. 13.

In *menynge* þat alle men. myghte þe same
Lýven þorgh leell bý leýve. as oure Lord witnesseth.
Id. Ib. p. 13.

Ther is no soul that fleeth under heven,
That she ne shal wel understand his steven,
And know his *mening* openly and plaine.
Chaucer. The Squires Tale, v. 10474.

Thei wondred, what she wolde *mene*,
And riden after a softe pas.
Gower. Conf. Am. book ii. p. 56.

He should reject
And not peruse the *meaning* of the same.
Turberville. To the Rayling Route of Sycophants.

Each stair mysteriously was *meant*, nor stood
There alwayes, but drawn up to heav'n sometimes
Viewless.
Milton. Paradise Lost, book iii. l. 517.

But say,
What *meant* that caution join'd, if ye be found
Obedient? can we want obedience then
To him, or possibly his love desert.
Id. Ib. book v. l. 513.

This room was built for honest *meaners*, that deliver themselves
hastily and plainly, and are gone.
Beaumont and Fletcher. The Scornful Lady, act i. sc. 1.

But see how much I do myself beguile,
And do mistake thy *meaning* all this while.
Drayton. England's Heroical Epistles. King John to Matilda.

Seis'd of his prey, heavenwards, uplifted light,
On Hermes' nimble wings, he took his flight.
Now thoughtful of his course, he hung in air,
And *meant* through Europe's happy clime to steer.
Rowe. Lucan, book ix.

I *mean*, there never was a date or point of time in our history,
when the government of England was to be set up anew, and when
it was referred to any single person, or assembly, or committee, to
frame a charter for the future government of the country; or when
a constitution, so prepared, and digested, was by common consent
received and established.

Paley. Moral Philosophy, vol. ii. ch. vii. p. 193.

The word is always sufficiently original for me in that language
where its *meaning*, which is the cause of its application, can be
found: and seeking only *meaning*, when I have found it, there I
stop: the rest is a curiosity whose usefulness I cannot discover.

Tooke. Diversions of Purley, vol. ii. p. 204.

ME'ANDER, n. } Lat. *mæander*; Gr. *μαίανδρος*;
ME'ANDER, v. } *quasi* *Μαίονίας ὕδωρ*, the water
ME'ANDRY. } of *Mæonia*, *vel quia per Μαίονίαν*

MEASLE. Selden.

As cranking Manyfold,
The first that lends him force : of whose *meandred* ways
And labyrinth-like turns (as in the moors she strays)
She first received her name.
Drayton. *Poly-olbion*, song 12.

And in *meand' red* gyres doth whirl herself about,
That, this way, here and there, back, forward, in, and out,
And like a wanton girl, oft doubling in her gate,
In labyrinth-like turns, and twinings intricate.
Id. *Ib.* song 22.

Intricate turnings, by a transumptive and metonymical kind of
speech, are called *meanders* : for this river [Meander] did so strangely
path itself, that the foot seemed to touch the head.

Selden. *Illustrations of Drayton's Poly-olbion*, note 2.
Thy full and youthful breasts which in their meadowy pride
And branch'd with rivery veins, *meander-like* that glide.
Id. *Ib.* song 10.

The river Styx, with crooked and *meandry* turnings, encircleth
the palace of the infernal Dis.
Bacon.

Wide, deep, unsullied Thames *meandering* glides
And bears thy wealth on mild majestic tides.
Savage. *London and Bristol Delineated*.

Near fair Avon's silver tide,
Whose waves in soft *meanders* glide,
I read to the delighted swains
Your jocund songs and rural strains.
Somerville. *An Epistle to Allan Ramsay*.

MEANDRINA, in Zoology, a genus of *Polypi*.

Generic character. Fixed, stony, forming a simple,
convex, or hemispherical mass; surface convex, occu-
pied by compartments more or less hollow, sinuous,
and furnished on each side with transverse parallel
plates, which adhere to the elevated crests.

The type is *M. labyrinthica*, Lamarck. Found in
the American seas. Ellis, *Zoophytes*, pl. xlv. fig. 3. 4.

ME'ASLE, } Dutch *maschel*; Ger. *mas*, a spot.
ME'ASLED, } *Massel-sucht*; the spotted sickness,
ME'ASELRY. } the leprosy. *Meazel*, a leper, or per-
son diseased; also, the disease itself.

The trivial name of the *Morbilli* or *Rubeola*.

& to *meselle* houses of pat same lond,
pre þousand marke vnto þer spense he fond.
R. Brunne, p. 136.

For foule *mesetrie* he comond with no man.
Id. p. 140.

Rise ye dede men, clense ye *mesels*.
Wiclif. *Matthew*, ch. x.

For peine is sent by the rightioise sonde of God, and by his
suffrance, be it *mesetrie*, or maim, or maladie.

Chaucer. *The Persones Tale*, p. 159.

Either he repreveth him by som harme of peine, that he hath
upon his bodie, as *mesel*, &c.
Id. *Ib.*

As for my country, I haue shed my blood,
Not fearing outward force : so shall my lungs
Coine words till their decay, against those *meazels*
Which we disdaine should tetter us.
Shakspeare. *Coriolanus*, fol. 15.

He found a youth in tissue brave,
(A daintier man one would not wish to have)
Was courting of a lothsome, *measted* sow.
Drayton. *The Moon-Calf*.

From whence they start up chosen vessels,
Made by contact, as men get *measles*.
Butler. *Hudibras*, part i. can. 3.

Last trotted forth the gentle swine,
To ease her itch against the stump,
And dismally was heard to whine,
All as she scrubb'd her *meazly* rump.
Swift. *On cutting down the Old Thorn at Market Hill*.

The murian shall infect all kine
And *measles* will destroy the swine.
King. *The Art of Love*, part vi.

ME'ASURE, v.

ME'ASURE, n.

ME'ASURABLE,

ME'ASURABLY,

ME'ASURELESS,

ME'ASURELY,

ME'ASUREMENT,

ME'ASURER,

ME'ASURING, n.

Fr. *mesurer*; It. *misurare*; MEA-
Lat. *mensurare*, from *mensus*, SURE.
past participle of *met-iri*, to mete :
metiri dicitur, qui explorat, quæ
alicujus rei sit magnitudo, to
examine what may be the magni-
tude of any thing.

To examine, to calculate, to
ascertain the magnitude or bulk,
the quantity or number; space or distance; to act by or
according to a fixed or stated *measure*; a regular
standard of size or quantity; to observe or keep a
stated *measure*, a sufficient *measure*; to regulate or
govern, to moderate; to apportion, to adjust.

Measure, n. is also applied to a regulated succession of
movements, in dancing; of sounds, in Music and Poetry.

False elnen & *measures* he brogte al clene adoun.

R. Gloucester, p. 429.

And he seide to hem, see ye what ye heren, in what *measure* ye
meten : it shal be meten to you again.

Wiclif. *Mark*, ch. iv.

Take hede what ye heare, wyth what *measure* ye mete, wyth the
same shall it be *measured* vnto you agayne.

Bible, Anno 1551.

And many folke *mesuren* and gessen, that souerayne good be
ioye and gladnesse.
Chaucer. *Boecius*, book iii. p. 423.

She nas to sobre ne to glad,
In all things more *measure*,
Had never I trowe creature.

Id. *The Dreame*, p. 326.

Of his diete *measurable* was he,
For it was of no great superfluitee.

Id. *Prologue to the Canterbury Tales*, v. 437.

She was ful *measurable*, as women be.

Id. *The Squieres Tale*, v. 10675.

He sayth also : The goodes that thou hast ygeten use them by
measure, that is to sayn, spende *mesurably*.

Id. *The Tale of Melibeus*, p. 116.

So as the philosophre techeth
To Alisander, and him betecheth
The lore, howe that he shall *measure*
His bodie, so that no *measure*
Of fleshly lust he shulde excede.

Gower. *Conf. Am.* book vii. p. 239.

Here hath he comfort when he doth *measure*
Measureless mercye to *measureless* faulte.

Wyat. *Psalm* 51.

Each day to be feasted, what husbandry worse,
Each day for to feast, is as ill for the purse;
Yet *measurely* feasting, with neighbours among,
Shall make thee belov'd. and live the more long.

Tusser. *Husbandry. Good Husbandly Lessons*, vol. xxv. ch. x. p. 26.

With that the rolling sea, resounding soft,
In his big base them fitly answered;
And on the rocke the waves breaking aloft
A solemne meane unto them *measured*.

Spenser. *Faerie Queene*, book ii. can. 11.

In all which the king *measured* and valued things amisse, as
afterwards appeared.
Bacon. *King Henry VII.* fol. 45.

I cannot but second and commend that great clerk of Paris,
who (as our witty countryman Bromaird reports) when King Lewis
of France required him to write down the best word that ever he
had learnt, call'd for a faire skin of parchment, and in the midst of
it wrote this word *measure*, and sent it sealed up to the king.

Hall. *Works*, vol. iii. fol. 1. *Christian Moderation*, book i. sec. 1.

But after these, as men more civil grew,
He did more grave and solemne *measures* frame,
With such fair order and proportion true,
And correspondence ev'ry way the same,
That no fault-finding eye did ever blame.

Davies. *On Dancing*.

The World's bright eye, Time's *measurer*, begun
Through wat'ry Capricorn his course to run.

Howell. *Letters*, p. 7. *Apoema*.

MEAS-
SURE.

MEATH.

Although he buy whole harvests in the spring,
And foyst in false strikes to the measuring.
Hall. Satire 6. book iv.

O sovereign lord, O sovereign happiness
To see thee, and thy mercie measurelesse!
Spenser. Virgil. Gnat.

Closing the sense within the measur'd time,
'Tis hard to fit the reason to the rhyme.
Dryden. The Art of Poetry, can. 2.

There may yet be a great inequality; because the *measurer* measures only from some plain piece of ground at the bottom of the hill to the top, whereas it may be, that the country wherein one of these mountains stands, may be exceedingly much higher than that wherein the other is placed.
Boyle. Works, vol. iii. p. 227. New Experiments Physico-Mechanical touching the Spring of the Air.

God is infinite; and an infinite mind, both in its knowledge and purposes, proceeds not according to the methods and measures of a finite understanding.
South. Sermons, vol. viii. p. 90.

But all ye lovers of game and glee,
And feast and frolic, come follow me!
To nature's measureless licence free,
And follow, follow, follow me!

Brookes. Songs from Jack the Giant Killer, air 30.

MEAT, *n.* } Goth. *mats*; A. S. *met, mete, mæte*;
ME'ATED, } whatever is eaten, the past participle of
ME'ATLESS. } the Goth. verb *matyan*, A. S. *metian*,
edere, to eat. Tooke.

That which is *eaten*: usually applied to—
The flesh of animals, to animal food.

þre dawes & þre nyȝt mete les hii wuste hem so,
þat hii nuste hou on take, ne wat vor hunger do.

R. Gloucester, p. 170.

þat þis folc was ney meteles.

Id. p. 251.

In S. Edward tyme þe erle suld with him ete,
A seruitour þer was þat serued at þe mete.

R. Brunne, p. 55.

It neghed nere metesel, þan rose vp alle þe route.

Id. p. 334.

Meteles and moneyles. on Malverne hulles.

Piers Plouhman. Vision, p. 162.

His mete was honey soukis and honey of the wood.

Wiclif. Matthew, ch. iii.

His meate was locusts and wylde hony.

Bible, Anno 1551.

And on his meate borde there shal been borde clothes and tow-
elles many paire.

Chaucer. The Testament of Loue, book ii. p. 482.

But euery lust he shall forbere
Of man, and like an oxe his mete
Of grasse he shall purchase and ete.

Gower. Conf. Am. book i. p. 39.

Is not thys a royall feast to leue these beggers meateles, & the
send mo to dynner to them?

Sir Thomas More. Workes, fol. 302. The Supplication of Soules.

Strong oxen and horses, well shod, and well clad,

Well meted well used, for making thee sad.

Tusser. Husbandry, vol. xii. ch. xvi. p. 12.

As fire converts to fire the things it burns;

As we our meats into our nature change.

Davies. The Immortality of the Soul, sec. 4.

The meat-offering consisted of fine flower, or parched corn, with
oyl, salt, and frankincense.

Grew. Cosmo Sacra, book iv. ch. viii. sec. 124.

Them—their despairing creditors may find

Lurking in shambles; where with borrow'd coin

They buy choice meats and in cheap plenty dine.

Congreve. Juvenal. Satire 11.

MEATH, called also EAST MEATH, in contradistinction to Westmeath, is a maritime County of Ireland in the Province of Leinster. Towards the North it is bounded by the Counties of Louth, Monaghan, and

Cavan, on the West by Westmeath, on the South by the Counties of Kildare and Dublin, and on the East by the Irish Sea. It is about 44 English miles in length from East to West, and 37 in breadth, with a superficial extent of 960 English square miles, or 617,600 acres. Of this extent, not more than a twelfth is bog or waste, the rest is fertile and highly productive. This County Surface is, for the most part, level, or varied in its surface with very moderate undulations; from this circumstance it derived its name, (*Magh* or *Maith*), which in the Irish language signifies level or champaign. Although there are districts in Ireland superior to Meath in richness of soil, yet no tract of equal extent surpasses it in general productiveness; the soil is a light, rich loam, resting on clay, or more frequently on limestone. Though tillage has much increased here of late years, yet it does not at present extend over more than one-third of the County, the rest is pasturage, which is employed in fattening cattle for the Dublin market, and for exportation to England; the pastures in Meath are deemed too rich for the purpose of rearing young stock, but the quantity of fat cattle which issues from them almost surpasses belief. The marshes on the Moynalty River likewise feed great numbers of horses, and the Kilcrew hills are famous for sheep.

The farms in Meath are in general of great size; but the people are still but little acquainted with good husbandry; their tillage is slovenly in the extreme, and they exhaust the ground by a bad course of cropping. Their general condition is as wretched as their agriculture; the stranger is surprised to find, that in a tract of country remarkable for its productiveness, and for the advantages of its situation in respect to markets, the farmers are not only without affluence, but even without comforts; butcher's meat is a luxury almost unknown to them, and it is only by their exemption from want and ragged poverty that they are distinguished from the day labourers. In some parts of the County there is a deficiency of fuel, which is severely felt by the lower classes. Manufactures are but little known; some coarse linens and sacking are made in the districts adjoining Louth; but agriculture is the principal employment of the people. A colony of English at Slane have introduced the art of making cheese, and the produce of their dairies enjoys at present a high reputation.

No minerals of any importance are found in Meath. On the lands of Ardbraccan is the White Quarry, from which is raised a marble of great beauty when first polished, but it has the defect of growing black in the course of time.

The Boyne is the only river of importance in Meath. It enters it from Kildare, flows by Trim and Navan, where it receives the Blackwater, and then continues its course by Slane and Drogheda, below which it falls into the sea. It divides the County into two districts, of which that to the North is called *Kells*, the other *Dunshaughlin*. Small vessels can ascend the river as far as Drogheda, and boats can navigate up to Navan. The scenery along the banks of this river is in general extremely beautiful. The Athboy and Mannoch both fall into the Boyne; the Nanny water alone forming an independent basin falls into the sea. The water of this last-named river is famous, like that of the Bann in the County of Down, for its bleaching quality. Lough Ail, a shallow piece of water, surrounded chiefly by red bog, is the only lake in the County.

MEATH. The portion of sea-coast (only 12 miles in extent) which belongs to this County is a shallow strand unprovided with havens or roadsteads, and consequently does not give rise to any maritime activity; the land near the sea is sandy and barren, forming an extensive rabbit-warren, from which the hatters of Dublin derive their chief supply of skins.

Statistics. Meath is divided into 12 Baronies and 147 Parishes, which form not more than 60 benefices. The Bishopric of Meath took its rise in the XIIth century, from the union of several smaller Sees, and the Bishop for some time usurped the archiepiscopal rank and prerogatives; at present, however, the See is included within the Ecclesiastical Province of Armagh: the Bishop of Meath, nevertheless, still takes precedence of the other Irish Bishops. The See is without a Cathedral, Dean, or Chapter, though these distinctions still remain to Clonmacnois, one of the Bishoprics comprehended in the present Diocese. The Palace is at Ardracran, a village with about 5000 inhabitants.

Trim. Trim, the Capital of the County, is situated on the Boyne, which is rendered navigable to this place by a canal. This town is a Borough, sending a Member to Parliament, and is likewise a military station. Population about 6000. **Navan.** Navan, with about 5000 inhabitants, standing at the confluence of the Boyne and Blackwater, is a place of greater industry. **Kells.** Kells, on the Blackwater, is remarkable for the beauty of its situation and the fertility of its neighbourhood. **Tarah.** Tarah preserves no vestiges of its former greatness, or of the great Palace said to have been built here by the native Kings; it is at present an insignificant village. **Slane.** Slane, on the Boyne, is distinguished for its great corn-mills, and still more by the splendid castle and fine park of the Marquess of Conyngham, which adjoins it.

Thompson, *Statistical Survey of the County of Meath*; Wakefield, *Statistical View of Ireland*; Shaw Mason, *Parochial Survey*, &c.

MECARDONIA, in *Botany*, a genus of the class *Didynamia*. Generic character: calyx seven-leaved; corolla irregular, tube ventricose, superior lip two-cleft; inferior, three-parted; style compressed at the apex, incurved; capsule one-celled, two-valved, receptacle round.

One species, *M. ovata*, native of Peru.

MECHANISM,

MECHANIST,

MECHANICIAN,

MECHANICK, adj.

MECHANICK, n.

MECHANICKS,

MECHANICAL,

MECHANICALLY.

Of hem that ben artificers,
Whiche vsen craftes and misters,
Whose arte is cleped *mechanike*.

Gower. *Conf. Am.* book vii. p. 217.

But (we are to consider) how the *mechanism*, that is, the bulk and figure of the bone and muscles, and the insertion of the muscle into the bone, are more advantageous to some certain motions, in one man, than in another.

Grew. *Cosmo. Sacra*, book ii. ch. vi. fol. 57.

How many chimaeras, antics, golden mountains and castles in the aire doe they build unto themselves? I appeale to painters, *mechanicians*, mathematicians.

Burton. *Anatomy of Melancholy*, fol. 92.

He [a friend] is not accustomed to any sordid way of gaine, for who is any way *mechanicke* will sell his friend upon more profitable termes.

Habington. *Castara*, part ii. *A Friend*.

An art quite lost with our *mechanicks*, a work not to be made out, but like the walls of Thebes, and such an artificer as Amphion.
Sir Thomas Brown. *Vulgar Errours*, book vii. ch. xviii. p. 464.

The poore *mechanicke* porters, crowding in
Their heavy burthens at his narrow gate.

Shakspeare. *Henry V.* fol. 71.

We have also divers *mechanical* arts, which you have not; and stuffs made by them; as papers, linnen, silks, tissues.

Bacon. *New Atlantis*, fol. 28.

A crew of patches, rude *mechanicals*,
That work for bread vpon Athenian stals,
Were met together to rehearse a play,
Intended for great Theseus nuptiall day.

Shakspeare. *Midsummer Night's Dream*, fol. 152.

These *mechanic* philosophers being no way able to give an account thereof [the formation and organization of the bodies of animals] from the necessary motion of matter, unguided by mind for ends, prudently therefore break off their system there, when they should come to animals, and so leave it altogether untouched.

Ray. *Of the Creation*, part i. p. 49.

Tell us, what master, for *mechanics* fam'd,
Has one *machine* so admirably fram'd,
Where you will art in such perfection grant,
As in a living creature or a plant?

Blackmore. *The Creation*, book iii.

The commonwealth of learning would lose too many useful observations and experiments, and the history of nature would make too slow a progress, if it were presumed, that none but geometers and *mechanicians* should employ themselves about writing any part of that history.

Boyle. *Works*, vol. ii. p. 473. *New Thermometrical Experiments*, &c. *The Author's Preface*.

Fourthly, I very well foresee it may be objected that the chick with all its parts is not a *mechanically* contrived engine, but fashioned out of matter by the soul of the bird lodged chiefly in the cicatrix.

Id. *Works*, vol. iii. p. 68. *Considerations*, &c. *touching the Origin of Qualities and Forms*.

There [in the kingdom of God] virtue only gives precedence, and the meanest *mechanic* takes place of the nobles and kings of the earth, if he were a better christian than they were.

Horne. *Works*, vol. iv. p. 171. *Discourse 9*.

If guards, *mechanically* form'd in ranks,
Playing, at beat of drum, their martial pranks,
Should ring and standing as if stuck to stone,
While condescending majesty looks on.

Cowper. *Table Talk*.

Although many authors have spoken of the wonderful *mechanism* of speech, none has hitherto attended to the far more wonderful *mechanism* which it puts into action behind the scene.

Stewart. *Philosophy of the Human Mind*, vol. ii. ch. ii. sec. 2. p. 143.

But Garrick, who prefers a guinea
To all the eloquence of Pliny,
Observing this unlucky railer
Was neither *mechanist* nor tailor.

Cawthorn. *Wit and Learning*.

MECINUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, ten-jointed, the second and third joints obconic, the second longest, the remainder short, transverse, club oval, subsolid, five-jointed; head produced anteriorly into a short rostrum, which is stout, deflexed, and rounded; *thorax* subcylindric, slightly convex, the base and apex truncate, the latter slightly attenuated; *elytra* elongate, subcylindric, covering the abdomen; legs short; *tibiæ* compressed, apex armed with a horizontal hook; *tarsi* tetramerous.

The type is *M. semicylindricus*, Stephens, *Illustrations of British Entomology*; Herbst, *Col.* vol. vi. p. 252. pl. lxxviii. fig. 6. About six species, natives of temperate Europe; four of them found in Britain.

MECK-
LEN-
BURG.
Boundaries,
&c.

MECKLENBURG SCHWERIN, a Grand Duchy of Germany, formerly included in the Circle of Lower Saxony, is bounded on the East by Pomerania, on the South by Brandenburg, on the West by Luneburg, Lauenberg, and Lubeck, and on the North by the Baltic Sea; embracing an extent of about 4925 square miles. The whole of this territory is a level interrupted only by a few small sandy hills which seem to have been formed by the winds; a ridge also, or general elevation, extending from the mountains of Silesia to Holstein, passes through this Country. But the highest point in the Duchy, the summit of the Ruhnenberg, near Marnitz, is only 577 feet above the sea.

Surface.

The slopes of the ridge or central part of Mecklenburg are covered with heath-moor and sandy wastes, through which woods of considerable extent are distributed in narrow belts. Not more than an eighth of the territory is fertile land, well adapted to tillage; the soil in this portion is a stiff clay or loam, mingled more or less with sand, passing on the one hand (towards the Elbe) into marsh, and on the other into sandy desert.

Water.

From the general flatness of the Country, and the want of a sufficient fall for the waters, the rivers spread themselves into considerable lakes before they meet the Elbe on the one hand, or the Baltic Sea on the other. Of these the Lake of Schwerin, 12 miles long and 2 wide; the Lake of Murnitz, 11 miles in length and 6 in breadth; and the Plauersee, about 8 miles long by 2 broad, are the chief: the Lakes of Malchin, Goldberg, Kolpin, and Flesen are of less importance. The River Elde carries the water of four of these lakes into the Elbe. The Sude, Boize, and Dosse also flow into the same grand receptacle. The Warnow, proceeding from a group of small lakes near that of Schwerin, opens itself into a wide estuary near Rostock and falls into the Baltic Sea at Warnemunde. The Recknitz, Prene, and Radegast likewise disembogue themselves into the sea. Of all these rivers the Elbe alone is navigable for vessels of any size, but the others furnish several canals which facilitate the internal communication of the Country.

Produce.

The climate of Mecklenburg is moderate and healthy, although liable to sudden changes in temperature, and although the atmosphere is often loaded with humid fogs. Agriculture is the chief employment of the people, and in no part of Germany is rural labour carried on with such exemplary skill and industry. The system of husbandry prevailing in Mecklenburg is peculiar to the Country, and differs in almost every respect, in the division of the land, in the fences, crops, rural implements, &c. from those of the neighbouring States. The superfluity of grain finds a ready market in England and in Sweden, where there is generally a deficiency. Tobacco is cultivated with success, and notwithstanding the disadvantages of its climate, Mecklenburg supplies the North of Europe with apples and some other fruits. The rich meadows on the banks of the Warnow, Elde, and Sude rear great quantities of cattle. Mecklenburg is one of those German States which has always been distinguished for the excellence of its horses; the domestic race, itself very beautiful, has been still further improved of late years by an intermixture of the English, Arabian, and Neapolitan breeds; great numbers of horses are annually exported. There are no minerals of any importance found in Mecklenburg; there are some salt-pits indeed at Sulze, but the chief supply of this necessary article is drawn from

Luneburg. Distilleries are very numerous in this Country; the manufactures also of coarse woollen and linen cloth, and of tobacco, are productive of considerable revenue. Though the Archduchy is well situated for trade from its position between the Elbe and the Baltic, yet it is so fettered by the commercial restrictions and prohibitions of more powerful States, that its foreign trade is comparatively insignificant.

The population of Mecklenburg Schwerin is about 360,000. The inhabitants are descended for the most part from the Obotrites, a Tribe of Slavonians, or Wends, who have, however, gradually assumed the German habits and character: their Language is a dialect of *plattdeutsch*, or Low German, which prevails in all the Countries near the Baltic. The peasants are with few exceptions serfs, and cannot change their occupation, or marry without the consent of their lords; nor can they be separated from the estate to which they belong, otherwise than by obtaining their freedom. The serf, or vassal, depends solely on the lord of the soil to which he is attached, who is his judge in the first instance, and may inflict corporal punishment on him. He pays no taxes but to the lord, and these are generally commuted for labour; he is allowed to possess property, which he may increase by his industry. The Government and Estates of Mecklenburg have long since resolved on the abolition of vassalage, but the time when the change is to take place has not yet been fixed; meanwhile some liberal proprietors have set the example by liberating the vassals on their own estates. The Lutheran Religion is that of the State, but Roman Catholics, Calvinists, and Jews are all tolerated.

The Grand Duchy of Mecklenburg Schwerin forms a part of the German Confederation, having two voices in the Diet *in plenum*, and holding the fourteenth place in union with Mecklenburg Strelitz. The ruling family in Mecklenburg is descended in a direct line from Pribislav II., the last King of the Obotrites, who died in 1178, and to whom Henry the Lion, Duke of Saxony, restored the greater part of the territories which he had conquered from him. From the division of the Country under two lines there arose in the XVIIth century the two Duchies of Schwerin and Gustrow, which still remain distinct in many particulars. The line of Gustrow having become extinct in 1695, the House of Schwerin again underwent a division into two lines, which continues to the present day. The Constitution of the Country is founded on conventions agreed on in 1572, 1621, and 1755, between the rulers and the Estates. The Grand Dukes share with the latter the rights of legislating and of imposing taxes. The two Houses of Schwerin and Strelitz rule in their respective dominions, independently of each other, by means of Senates or Assemblies, called Land Colleges, yet in respect to taxation, and the Court of Appeal at Parchim, they exist in a sort of union, the terms of which were regulated in the conventions of 1701 and 1755. The General Assemblies also, or *Landstände*, of both Grand Duchies form one body, which is named the *Old Land's Union*. The nobility, or landed proprietors, form the first class, enjoy many privileges and exemptions, and are in general very wealthy; the Deputies of forty-four towns form the second class: the Estates assemble every year alternately at Sternberg and Malchin. Most of the towns have the right of choosing their own magistrates, and Rostock possesses privileges of still greater consequence.

MECK-
LEN-
BURG.

Population.

Political
distribution.

MECK-
LEN-
BURG.

Since 1701, the laws of primogeniture of lineal descent have been followed in the transmission of the Archducal dominions. The heir to the sovereignty attains his majority at eighteen. In consequence of an agreement made in 1442 between the Houses of Brandenburg and Mecklenburg, that in case the latter should become utterly extinct, the former should inherit its estates, the King of Prussia at present bears the title and arms of a Prince of the House of Mecklenburg. The revenues of the Grand Duchy are supposed to be about 2,200,000 florins.

Schwerin.

Schwerin, the Capital of the State, and residence of the Grand Dukes, is situated partly on an island in the Lake of Schwerin, and partly on the banks. It is a neat, well-built town without walls or fortifications, and containing about 10,000 inhabitants. *Parchim* on the Elde, and in the vicinity of a small lake, is the seat of the chief Tribunal of justice for both the States of Schwerin and Strelitz. It has a population of about 4000 souls. *Gustrow*, the chief town in the Circle of the Wends, has about 8000 inhabitants, who are for the most part employed in the distillation of spirits. This is, perhaps, the most industrious town of the whole Archduchy. In size and importance, however, it is much surpassed by *Rostock* on the Warnow, about eight miles from the sea. This town, built in the style of the Middle Ages, and surrounded by mouldering fortifications, contains nearly 15,000 inhabitants. Its trade is considerable, and nearly 150 ships of burden belong to it. Here also is the University of the State, founded in 1419, and liberally endowed. It has a Library of 30,000 volumes, Botanical Gardens, and Cabinets of Natural History, Antiquities, &c. The chief exports from Rostock are corn, cattle, and glass bottles. This is the birthplace of Prince Blucher of Wahlstadt, to whom the town has lately erected a monument.

Parchim.

Gustrow.

Rostock.

MECKLENBURG STRELITZ, a Grand Duchy contiguous to the above State, which bounds it on the West, has an extent of 815 square miles. In the physical character of the Country, the nature of the soil, and the general system of cultivation, it closely resembles the kindred State of Mecklenburg Schwerin. The population, of Slavonian race, but German in language and manners, amounted, in 1817, to 72,000. This State, which was constituted a Grand Duchy by the Congress of Vienna, has one voice in *plenum* in the Germanic Diet. The Archdukes, although in their government independent of those of Mecklenburg Schwerin, are yet closely united to them in interest by the several family compacts alluded to above. All the property is in the hands of the Prince, the Nobility, and the towns, the peasantry being universally in a state of vassalage. The revenues of the State are supposed to amount to 450,000 florins.

New and
Old Stre-
litz.

New Strelitz, the chief town of the State, and residence of the Archduke, is a well-built little town near the Zierker Lake, with a population of about 4600 souls, chiefly dependent on the Court. It has a Public Library, and a very curious collection of Slavonian or Wendish antiquities. *Old Strelitz* has at present hardly 3000 inhabitants. *New Brandenburg*, the largest town in the Grand Duchy, has about 5200 inhabitants, most of whom are engaged in agriculture. Hops and tobacco are cultivated with success in its vicinity, and give rise to a considerable trade. A considerable quantity of corn and other agricultural produce is exported from this Archduchy through Lubeck and Rostock, but the

VOL. XXV.

want of good practicable roads through the country tends much to discourage the trading speculations of the farmers.

J. Ch. Wundemann, *Mecklenburg in Hinsicht auf Kultur, &c.* 1800; Nugent, *Travels through Germany, particularly Mecklenburg.*

MECOCORYNUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* clavate, geniculated, eleven-jointed, the second to the fourth joint elongate, obconic, the three following short, subglobose, the club elongate, with its apex obliquely acuminate; head produced anteriorly into a slightly bent rostrum, which is inserted during repose in a deep groove beneath the *thorax*; the latter narrowed anteriorly, bisinuated at the base; *elytra* subovate, with the shoulders broad, acutely angulated, convex above, and furnished with a tubercle towards the apex; legs elongate, the anterior pair distant at the base; *femora* clavate, unarmed; *tibiæ* straight, with a slightly inflexed hook at the apex; *tarsi* tetramerous.

The type is *C. discoideus* of Olivier; found in South America. One species only known.

MECONOPSIS, in *Botany*, a genus of the class *Polyandria*, order *Monogynia*, natural order *Papaveraceæ*. *Generic character*: calyx two-leaved, pilose; corolla, petals four; germen ovate; style short, persisting; stigmas four to six, radiating, persisting, convex, not sessile on the disk as in *Papaver*.

A genus divided from *Papaver*, containing three species. *M. Cambrica* is *Papaver Cambricum* of English Botanists. Decandolle.

MECOPUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. Head produced anteriorly into a very long, filiform rostrum; the *antennæ* clavate, geniculated, twelve-jointed, inserted towards the apex of the rostrum, the second joint obconic, third elongate, clavate, four following very short, obconic; the club elongate, acuminate, five-jointed, its first joint long, slender at the base; eyes large, nearly united; *thorax* transverse; the male furnished with two acute, stout, porrect spines on the breast, which has an obsolete groove for the reception of the rostrum; *elytra* oblong, quadrate, not broader than the middle of the *thorax*; legs elongate, slender, the anterior pair approximating at the base; *femora* denticulate; *tarsi* tetramerous, the anterior plumate in the male beneath.

The type is *Rhy. bispinosus*, Fabricius, *Eleut.* vol. ii. p. 475. A native of Sumatra, &c.

ME'DAL, } Fr. médaille; It. medaglia; Sp.
ME'DALET, } medalla; from the Lat. metallum; q. d.
MEDA'LLICK, } Metallum, seu numisma solenne. Skin-
MEDA'LLION, } ner and Vossius, quia ex auro, ar-
ME'DALLIST. } gento, ære.

And see the Essay on NUMISMATICS.

When for example, an antique medal half consumed with rust is showed to an unskilful person, though a scholar, he will not by his own endeavours be able to read the whole inscription, whereof we suppose some parts to be obliterated by time or rust, or to discover the meaning of it.

Boyle. *Works*, vol. v. p. 545. *Reflections upon Theological Distinctions.*

But when a knowing medalist becomes his instructor, he may then know some (much defaced) letters, that were illegible to him before; and both understand the sense of the inscription, and approve it as genuine, and suitable to the things whereto it be congruous.

MEDE. See MEED.

MEDEOLA, in *Botany*, a genus of the class *Hexandria*, order *Trigynia*, natural order *Asparagi*. Generic character: calyx none; corolla six-parted, revolute; berry three-seeded.

Three species, natives of North America and Africa.

MEDETERA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrected, triarticulate, with the terminal joint short, subovate, compressed; the dorsal seta two-jointed; eyes not united; abdomen of the male with two appendages; legs elongate, slender; wings incumbent, parallel.

About twenty-five species, of which twelve are natives of Britain. *M. regia*, Fabricius; Panzer, *Fauna*, pl. liv. fig. 16.

MEDIA, the Sovereigns of which once extended their Empire over the whole of Western Asia, was bounded on the North by the Araxes and the Caspian Sea, on the East by Mount Mardoranus and Mount Bagous, and on the South and West by Mount Zagrus. It nearly coincided with the modern Provinces of Azerbâijân and 'Irâk 'Ajemî, (*i. e.* Persian Irâk,) and was, in like manner, divided by the Ancients into Media Atropatene and Media Magna, Atropatian and Great Atropatia. Media. The former, according to Strabo, (xii. 12. 1.) derived its name from Atropates, a military commander,

MEDIA. who, having prevented the Macedonians from taking possession of his Country, was placed on the throne, and succeeded by an uninterrupted line of descendants till the time of that Geographer. Its name, however, has led modern writers to give it a more remote origin, and to conjecture that it bore the same appellation at a very early period; for Aderbádagán, (whence the modern Ader-báiján, or Azer-belján was formed,) Atún-pád-gán, Atro-pate, or Atropatoesh, all have nearly the same signification, and relate to the adoration of Fire; the latter being the ancient names preserved by the Gebrs, or followers of Zoroaster, according to whose traditions, this was the native Country of that Philosopher, and the original seat of his Faith. Procopius, moreover, says, that the most celebrated Fire-temple in all Persia was in this Province, which he calls (*De Bello Persico*, ii. 24.) Ardabigan. (Saint-Martin, *Mém. sur l'Arménie*, i. 128.) The testimony of Strabo, however, is very positive, and probably of much greater antiquity than that of the Pársi Scriptures. The Southern boundaries of Atropatene are not clearly determined by the Ancients: the Province appears, indeed, to have varied in extent at different periods, and comprehended several tracts not belonging to the modern Azerbáiján, such as Moghán, near the mouths of the Cyrus, (Kur,) Tálish or Tálij, Gílán, Díloun or Dílem, Mázenderán, and a part, if not the whole, of Taberistán. The latter, on the shore of the Caspian Sea, occupy a rich and woody, though mountainous tract, separated from the rest of the Province by a chain of lofty mountains, called Parachoathra, (ὁ Παρachoάθρας, Strabo, xi. 13. 1.) and inhabited anciently, as now, by lawless, half-civilized Tribes, the Caspii, Cadusii, Gelæ, Mardi or Amardi, and Tapuri; of which names the last is still preserved in Tabristán, (the land of the Tabrs, or Taburs,) Gelæ in Gílán, and Mard signified in ancient as well as modern Persian, "a man," "a hero." (*vir.*) These Tribes and the Cyrtii (Κύρτιοι, Strabo, xi. 12. 3. xv. 3. i. i. e. Kurds) were robbers, unsettled and scattered over all the mountainous regions on the Northern, Western, and Southern boundaries of Media; and thence arose the discordance of ancient writers respecting their proper localities.

Gaza, or Gazæ, equidistant (450 miles) from Artaxata and Ecbatana, (Plin. *Nat. Hist.* vi. 16.) was the Capital of Atropatia. Its name was changed by the later Greeks into Gazacon and Cantzacón, whence the Armenians called it Kandzag Shahasdan, (*i. e.* the Royal Cantzacum,) or Tavrezh. It is the Tabríz, Tavríz, or Tauríz, (Tauris,) of the modern Persians, celebrated for its frequent destruction by earthquakes. (Saint-Martin, i. 130.) Vera, (Ὀύερα,) another royal residence, on an elevated and naturally fortified site, was taken by Antony in his expedition against the Parthians, according to Strabo; (xi. 12. 3.) but as other writers (Dio Cass. xlix. Appian, *Parthic.* p. 272) name that place Phraata or Phraaspa, (probably the Pharaspa of Ptolemy, vi. 2. p. 148,) there can be little doubt but that the word has been mistranscribed in Strabo, especially as *aspa*, "horse," is a common termination of Persian proper names. Morunda, between the Araxes and Gaza, is the modern Merend-Atropatene, and though mountainous, was not well supplied with water. Its principal streams were those which ran into the Araxes and the Caspian Sea; but the correspondence between their ancient and modern names can only be conjectured, as Persia was little known to the Greeks or Romans, and there is a great discordance in those accounts of it which still

remain. The Cambyses, Mardus, or Amardus, Straton, and Charindas, are the rivers which ran into the Caspian; the last, which was on the confines of Hyrcania, (Gurgán, or Jurján,) is probably the modern Tijín, or the Sujáh-rúd; (Black River;) and the Mardus, as D'Anville supposes, (*Geogr. Anc.* ii. 234.) is the Kizil-ózen, or Sefíd-rúd, the largest stream in this part of Persia. It probably formed the Southern boundary of Atropatene, as it still separates Azerbáiján from 'Iráki 'Ajem. (Jaubert, *Voy.* 197.) Many smaller streams flow into the lake of Urmiyyah, or Tebríz, the Spauta, (Σπαυτα, Strabo, xi. 12. 2.) and perhaps the Mantane (Μαντιανή, xi. 13. 8.) of Strabo, and Margiane of Ptolemy, (p. 147,) for it was in the district so named. It was called Kabúdán (Blue) by the Armenians, whence M. Saint-Martin conjectures that Spauta has been erroneously substituted for Capauta in Strabo, who says that the name of the Lake Mantiane signifies "azure;" (κυανεανή;) the name of the district therefore has, he thinks, been confounded with that of the lake. Its waters, says Strabo, are salt and inflammable, and, according to Abú'l-fedà, it is about 130 miles long and 65 broad, and runs from West to East, with an inclination to the South. (Saint-Martin, i. 56.) This description agrees very well with the observations of modern travellers. (Jaubert, *Voy.* 156. 469. Macdonald Kinneir, *Geograph. Mem. of Persia*, p. 155.) On its Western side is the town of Urmiyyah, (or Urúmiyyah,) supposed by D'Anville (235.) to be the Thebarma of the Byzantine Historians. (Gibbon, *Hist.* viii. 237.)

Media Magna, or Great Media, the Persian Irák of the Moderns, extended from Mount Zagrus to the borders of Parthia, and from Hyrcania to Susiana and Persis. It was more level, but less fertile than Atropatene, being intersected and bordered by those desert plains in which Persia abounds. It suffered from a great dearth of water, having scarcely any considerable streams, except the affluents of the Choaspes, (Kará sú,) in the upper part of its course, before it passes through Mount Zagrus in its way to the Euphrates. Its Capital was Ecbatana, or Agbatana, supposed, on very strong grounds, to be the modern Hamadán, called Ahmadan by the Armenians, and said by the Ancients to have been founded by Dejoces, King of the Medes. (Herod. i. 98.) Placed on an easy declivity, twelve stadii (about a mile and a half) from Mount Orontes, (Elvend, or Erwend,) it was the summer-residence of the Persian Kings, (Strabo, xi. 12. 6.) as Susa was their place of abode in Winter. (Ælian, *Hist. Animal.* x. 6. where the names have evidently been transposed.) Hamadán, says Col. Macdonald Kinneir, (*Geogr. Mem.* 125.) "is nearly equidistant from Susa and Seleucia, is in the direct road from Seleucia to Parthia, and situated in a low plain at the foot of the celebrated Mount Elvend. The Persians themselves say it was the favourite summer-residence of most of their Sovereigns from the days of Darius to those of Jangíz Khán. During eight months in the year the climate is delightful, but in the Winter the cold is excessive. The plain is intersected by innumerable little streams, covered with gardens and villages, and the vegetation is the most luxurious I ever beheld." "Mount Elvend," he adds, "is famed in the East for its mines, waters, and vegetable productions." The only curiosity he observed there was "an inscription upon a rock called Ganj-námah, or the History of the Treasure." It is in the same character as those at Persepolis and on the Babylonian

MEDIA. bricks; and like the extraordinary remains seen by the unfortunate M. Schultz near the Lake of Ván, (*Nouveau Journal Asiatique*, ii. 161.) a monument of very remote antiquity. Rhagæ, or Rhagea, (*Paçai*, or *‘Pāçeia*, Strabo, xi. 12. 6.) was another considerable city of Media, near the confines of Parthia. It was once the largest town in Media, (Isidorus in *Stathmis Parthiæ*, p. 6.) and appears to have been named Europus by Seleucus Nicator, and Arsacia by the Parthians, (Strabo, *loc. cit.*) though those places are marked as distinct from each other by Ptolemy. (vi. 2. p. 149. 151.) Ragan (*Zindavestâ*, i. 2. p. 269.) was changed by the modern Persians into Raï and Râz, and under those names it continued to flourish till sacked and ruined by Jengiz Khân in the XIIth century. The present wrecks of Rhagæ consist of “tumular masses of clay, and fragments of brick-built edifices, extending over the plain near Tehrân, for upwards of eight miles in different directions.” (Sir William Ouseley, *Travels*, iii. 174. 180.) To the South-East of Rhagæ was the celebrated defile called the *CASPIAN Gates*, (Pylæ or Portæ Caspiæ,) 28 or 38 miles long, (Plin. *Nat. Hist.* vi. 14.) of which eight were scarcely wide enough to admit a waggon. This was the passage between Media and Hyrcania, by which Alexander pursued Darius, (Arrian, iii. 20.) and the point from which the ancient Geographers calculated their distances in Persia; it has therefore attracted the notice of travellers, and there is little doubt but that it is the Pass of Khuwâr, (Ser dereh khuwâr, Morier, ii. 366.) ten farsangs (30 miles) from Raï, extending from Mahalleh-bâgh to the town of Fîrûz-kûh, and in some places leaving a passage between towering precipices so narrow as scarcely to allow room for a litter. (D. Pietro della Valle, *Viaggi in Persia, Lettere*, 4to. tom. ii. p. 170.) Its course is nearly due North and South, as may be seen in Sir William Ouseley’s Map, (No. 3. vol. iii.) to whose learned dissertation the reader must be referred for a complete inquiry into this important point of ancient Geography. A few more of the ancient names and positions may be determined with some probability; such as the plains of Nysa, celebrated for their breed of horses, between the modern towns of Kazvîn and Sultâniyyeh. Tabas, mentioned in the march of Alexander, is the modern Sâvah; Cômîs marks the District called Comisene; Seminân is on the site of Semina, and Dâmeghân, its Capital, is evidently the Hecatompylos of the Greeks. The position of Articene and Tabiene are in like manner determined by Ardistân and Tabas. The mountains which separated Media from Persia and Susiana were inhabited by Mardi, Uxii, Elymæans, and Cosæans; the first three apparently on their Southern, and the last on their Northern declivity. They were all, as now, predatory Tribes, who, secured by their fortresses, not only maintained their independence, but even compelled the Persian Kings to pay them a tribute. (Strabo, xi. 12. 6.)

ME'DITANCE, } *meditar*; Lat. *meditari*, quasi *me-*
MEDITA'TION. } *litari*, from the Gr. *μελετᾶν*, from
μέλει, *curæ est*: it is (a matter) of care; and, consequently, of thought, reflection.

To think carefully, studiously; to keep the thoughts carefully or studiously fixed upon; to dwell upon thoughtfully; considerably, contemplatively; to consider, to contemplate.

But nathless this *meditation*
I put it ay under correction
Of clerkes; for I am not textual.

Chaucer. The Persones Prologue, v. 7292.

"Telleth" quod he, "your *meditation*,
But hasteth you, the sonne wol adoun."

Id. Ib. v. 17308.

To sowne of suche prolacion,
That he his *meditation*
Therof maie make.

Gower. Conf. Am. book ii. p. 67.

Herein also thou mayst learne right *meditation* or contemplation, which is nothing els saue y^e calling to minde & a repeatyng in the harte of the glorious and wonderfull deeds of God.

Tyndall. Workes, fol. 21. Prologue to Deuteronomy.

— His life religiously he spent,
And *meditating* Christ, thence to his saviour went.

Drayton. Poly-olbion, song 24.

Alas! what boots it with incessant care
To tend the homely slighted shepherd's trade,
And strictly *meditate* the thankless Muse?

Milton. Lycidas, l. 66.

— What you do quickly,
Is not done rashly, your first thought is more
Than others' laboured *meditation*.

Beaumont and Fletcher. The Two Noble Kinsmen, act i. sc. 1.

That day and night said his devotion:
Ne other worldly busines did apply;
His name was heavenly contemplation;
Of God and goodnes, was his *meditation*.

Spenser. Faerie Queene, book i. can. 10.

He that accustoms himself to *meditate* upon the greatness of God, finds those questions continually rising and stirring in his heart, how shall dust and ashes ever be able to stand before him, how shall weakness and imperfection enjoy that nature that it is at a loss even to think of, and never contemplates upon without amazement?

South. Sermons, vol. x. p. 18.

In a word, he [whose corrupt nature is impatient of any restraint from morality or religion] will not venture his *meditations* upon so unwelcome and so afflicting a subject.

South. Sermons, vol. iv. p. 350.

Oft have I rag'd, when their wide wasting cannon
Lay pointed at our batt'ries yet unform'd,
And broke the *meditated* lines of war.

Johnson. Irene, act ii. sc. 6.

MEDITERRA'NE, } Fr. *mediterranée*, the Me-
MEDITERRA'NEAN, } *diterranéan*, or *Mid-earth*
MEDITERRA'NEOUS. } Sea. Cotgrave. It. *mediter-*
raneo; Sp. *mediterraneo*, from the Lat. *medius*, middle, and *terra*, the land or earth.

In the midst, situated in the midst of, surrounded by, earth or land, within land, inland.

And for our own ships, they went sundry voyages, as well to your streights, which you call the Pillars of Hercules, as to other parts in the Atlantique and *Mediterrane* Seas.

Bacon. New Atlantis, fol. 12.

It is found in mountains and *mediterraneous* parts.

Sir Thomas Brown. Vulgar Errours, book ii. ch. iv. p. 90.

I know there is nothing more undetermined among the learned than the voyage of Ulysses; some confining it to the *Mediterranean*, others extending it to the great Ocean, and others ascribing it to a world of the poet's own making.

Addison. Remarks on Italy, p. 14.

MEDLAR, Fr. *mesple*, *mesle*; It. *nespola*; Sp. *nispola*; Lat. *mespilus*; Gr. *μεσπίλη*, *quia èν τῷ μέσῳ πῖλος*, because in the middle he hath, as it were, a cap or crowne. Minshew. In A. S. it is *mæd*, to which Skinner would give a Greek origin.

The trivial name of the *Mespilus Germanica* of Linnæus.

And many homely trees there were,
That peaches, coines, and apples bere,
Medlars, plumes.

Chaucer. The Romant of the Rose, p. 181.

And as I stood and cast aside mine eie,
I was ware of the fairest *medle* tree
That euer yet in all my life I sie.

Id. The Flower and the Leaf, p. 395.

Thus as I mus'd, I cast aside my eye,
And saw a *medlar-tree* was planted nigh,
The spreading branches made a goodly show,
And full of opening blooms was every bough.

Dryden. The Flower and the Leaf.

Medlars, all of them, except those great ones called *Setania* (which indeed are more like to apples) doe close up the stomacke and bind the belly.

Holland. Plinie, book xxiii. ch. xvii.

MEDUSA, in *Botany*, a genus of the class *Monadelphica*, order *Pentandria*. Generic character: calyx five-leaved; corolla, petals five; capsule one-celled, three-valved, six-seeded.

One species, *M. anguifera*, a tree, native of China.

MEDUSEA, in *Botany*, a genus of the class *Dodecandria*, order *Trigynia*, natural order *Euphorbiæ*. Generic character: calyx four or five parted, segments spreading; corolla, petals five; capsule three-celled, on a foot-stalk.

A genus divided from *Euphorbia*: the species are natives of the South of Africa.

MEED, v. } A. S. *med*; D. *miede*, *miete*; Ger.

MEED, n. } *miete*. Junius derives the A. S. from

ME'EDFULLY. } the Goth. *mizdo*, (z omitted,) and that from the Gr. *μισθός*. Skinner prefers the A. S. *met-an*, *occurrere*, *invenire*, *adipisci*; to meet; *meed* being that which any one *meets* with: deservedly, in return for service done: or rather, perhaps,

That which is *meet* or fitting, as a reward; in return

MEDI-
TATE.
—
MEED.

MEDE for service done, or favour bestowed: and thus, generally, a reward or remuneration; reward deserved; desert; a payment, a donation, a bounty.

MEEK. Mr. Steevens furnishes the instance of the verb from Heywood.

Ich habbe y holde hym in hys londe, & my mede þer of ys.
R. Gloucester, p. 54.

þeruore vnderstond þe wel, & zeld mý mede blýue.
Id. p. 311.

At mýn vnderstandýng he wild tak no mede
þat was ateynt of wikkednes.
R. Brunne, p. 29.

And as muche mede. for a myte þat he offref
Ac þe riche man for al his moneye.
Piers Plouhman. Vision, p. 220.

Joie ye and be ye glade: for your meede is plenteous in hevenes.
Wiclif. Matthew, ch. v.

A wight, without nedeful compulsion ought medefully to be rewarded.

Chaucer. The Testament of Loue, book iii. p. 504.
He maie not failen of his mede,
That hath mercy.

Gower. Conf. Am. book iii. p. 93.

It is mine Anna, God it wot,
The only causer of my paine;
My loue that medeth with disdaine.
Wyat. Of his Loue called Anna.

Brave be her warres and honourable deeds
By which she triumphes over yre and pride
And winnes an olive gylond for her meeds.
Spenser. Faerie Queene, book ii. can. 2.

And yet the body meeds a better grave.
Heywood. Silver Age, 1613.

Plautus the God of gold
Is but his steward: no mede but he repaies
Seuen-fold aboue itself.
Shakspeare. Timon of Athens, fol. 82.

As he pronounces lastly on each deed,
Of so much fame in heav'n expect thy meed.
Milton. Lycidas, l. 84.

MEEK, v. } In Sw. it is *miuk*. Skinner

Like myrth in May is *meetest* for to make,
Or sommer shade, under the cocked hay.

Spenser. *Shepherd's Calendar. November.*

I, ere thou spak'st,
Knew it not good for man to be alone,
And no such company as then thou sawst
Intended thee for tryal onely brought,
To see how thou couldst judge of fit and *meet*.

Milton. *Paradise Lost*, book viii. l. 449.

LEON. 'Faith neece, you taxe signior Benedick too much, but hee'll be *meet* with you, I doubt it not.

Shakspeare. *Much Ado about Nothing*, fol. 101.

In whose person, albeit there was nothing to bee misliked, yet was there (she saide) nothing so excellent but that it mought bee found in diuers other, that were more *meetelie* (quoth she) for your estate.

Stow. *Edward V. Anno* 1482.

In both was found that livelihood and *meetness*

By which affection any way was mov'd:

In him that shape, in her there was that sweetness,
Might make him lik'd, or her to be belov'd.

Drayton. *Moses his Birth and Miracles*, book i.

Apart, to guardian Phœbus next they raise

An altar *meet*, and bid the victims blaze.

Fawkes. *Argonautics of Apollonius Rhodius*, book ii. l. 1159.

MEGACARPÆA, in *Botany*, a genus of the class *Tetradynamia*, order *Siliculosa*, natural order *Crucifera*. Generic character: petals entire; pod two-lobed, sessile; cells compressed; stigma disk-formed, sessile; one seed in each cell, orbicular, compressed.

A genus divided from *Biscutella*, (the sessile seed-vessel making the distinction,) containing one species, *M. laciniata*, native of the North of Europe.

MEGACEPHALA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* setaceous; *palpi* six, two labial, four maxillary, the former considerably longer than the latter: mandibles strongly dentate, curved; *maxillæ* with a curved, articulated hook at the apex; head broad; eyes very large; *thorax* slightly elongate; legs long; *tibiæ* entire; *tarsi* pentamerous.

Cicindela megaloccephala, Fabricius. Olivier, vol. ii. p. 33. pl. xii. fig. 12. About twelve species, natives of tropical climates.

MEGACRONUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* rather long, gradually incrassated from the base to the apex, the terminal joint being large, two or three times as long as the preceding; *palpi* filiform; terminal joint conic; head small; *thorax* transverse; *elytra* abbreviated, the surface smooth; *scutellum* triangular; body elongate, narrow, attenuated to both extremities; legs short; *tarsi* pentamerous.

M. analis, *Staphylinus analis*, Fabricius. Olivier, vol. iii. p. 28. pl. iii. fig. 24. Eight species, found in Britain; inhabit rotten fungi, putrid trees, &c.

MEGALONYX, from μέγας, *great*, and ὄνυξ, *a claw*, Jefferson. In *Zoology*, an extinct genus of animals belonging to the family *Tardigrada*, order *Edentata*, class *Mammalia*.

Generic character. Molar tooth cylindrical, simple, the interior bony, surrounded externally with enamel; claw-joints of the feet resembling those of the Sloth.

Of this genus there is but one species, the

M. Jeffersonii, Harlan. The remains of which were first found in a cavern two or three feet below the surface in the County of Green Briar, in the Western part of Virginia, and first published in the *Transactions of the Philosophical Society of Philadelphia* in 1797, by Mr. Jefferson, subsequently President of the United States. The caverns from which they are derived are of limestone, and similar to those of Germany and Hungary, where the fossil Bears mentioned by Cuvier are found. The bones received by Mr. Jefferson were a small fragment of the thigh or of the upper arm-bone, both bones of the fore-arm, of which the cubit, however, was broken in two, three claws and half a dozen bones of the hand or foot. By comparing it with the Lion he found it about five feet in height; and concluded it was the largest of the Clawed Animals, and that it was probably the enemy of the Mastodon, as the Lion is of the Elephant. Further, from some Indian sketches on the rocks at the opening of the Kanhawa into the Ohio, some of which resembled a Lion, and were noted by the

MEET.

MEGA-
LONYX.

MEGA-LONYX. early American settlers, and from tremendous roaring having been heard during the night, he was led to consider that there was some large unknown species of predaceous beast still existing in the interior.

Dr. Whiston, Professor of Anatomy in the University of Pennsylvania, however, in the same volume of the *Transactions*, clearly showed the futility of Jefferson's opinion, and pointed out that these bones did not belong to the Cat kind, nor even to the Predaceous Order, that they possessed the general form and character of Sloths; that in their variation from these they approximated rather to the Ant-eaters, and that their arrangement amongst the Toothless Order was not arbitrary, but founded on their extreme identity with that division of animals.

Cuvier has more recently given an account of these bones, and also of a tooth belonging to the same animal, of which the following is a digest.

The last phalanx, or claw-joint, remarkably resembles that of the Sloths and Ant-eaters in having a vertical ridge on its articular end, which constrains the lateral motion of the joint, whilst the same process being much more produced above than below, prevents the claw-joint from being raised upon the second beyond the horizontal plane; two circumstances in which it decidedly differs from the Cat kind, in which the joint is loose, and the claw can be elevated vertically on the last but one, which, indeed, is their natural position in walking so as to prevent their points being worn out; whilst in the Megalonyx the convexity of the claw is bent under the rest of the toe in walking, and when not required for grasping: the height of this joint at its back part is not more than a quarter of its whole length, whilst in the Cat kind it is nearly equal to the length. Of the three claw-joints which were found, each varied from the other in length, the largest being seven inches and a half long, the next rather more than six, and the smallest about three and a half: this irregular length approximates more closely the Megalonyx to the Ant-eaters and the Cabassows, whilst it distinguishes it from the Cats and Sloths, in which the claw-joints are of nearly equal length. As to sheaths for the roots of the horny claws, none were found on the largest bone, a partial one only on one side of the second, which arose from the under surface, whilst the third had a partial one also, but originating from the top of the bone; thus are they distinguished from the Sloths, Ant-eaters, and Cabassows, which have the sheath on both sides, but narrow towards the top of the bone, and from the Cats, in which it increases at the same part.

The second joint of the toe also varied from the Cats in such way as to allow the complete flexion of the claw-joint beneath it like the Sloths, but to prevent its vertical elevation upon it as in the Cats. From other circumstances Cuvier concludes that the Megalonyx more nearly resembled the Three-toed Sloth, than either of the other toothless animals, in the length of its claws, but in size, together with other points in the remaining bones, it was similar to the Ant-eaters and Cabassows. The fore-arm was about a sixth longer than that of the common Ox, and it seems probable that the animal equalled in size the great Oxen of Switzerland and Hungary.

The tooth was of an ochrish-yellow colour, and the hollow in the middle of its crown deep brown; its substance was rather decomposed, its interior structure bony, and surrounded by a case of enamel, in which circumstances it resembled the tooth of one of the larger Armadillos; the crown had been hollowed out by use, and

rising edges were left, a disposition entirely different from that of either herbivorous or carnivorous animals.

See Cuvier, *Ossements Fossiles*, vol. v. part i.

MEGALOPA, in *Zoology*, a genus of *Crustacea*.

Generic character. Exterior *antennæ* setaceous, formed of long joints, the intermediate terminated by two bristles, of which the upper is longest; exterior *pedipalpi* with the two first joints compressed, the second notched; anterior legs equal, with didactyle claws; eyes large; shell short, broad, and slightly depressed, with a pointed rostrum before; *abdomen* long, seven-jointed; tail rounded.

M. Montagui, Leach, *Malacostraca Britt.* pl. xvi. fig. 1—6. One species only, found on the coasts of Britain.

MEGALOPUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* short, somewhat serrated; *palpi* equal, filiform; *labium* deeply notched; mandibles strong, acute, entire, crossed at the apex; body depressed; *thorax* short, subquadrate; legs robust; *tarsi* short, tetramerous.

M. nigricornis, Latreille, *Genera*, vol. iii. p. 45. pl. xi. fig. 5. Inhabits South America, where all the species occur.

MEGALOTIS, from the Greek μέγας, great, and οὖς, an ear, Illig.; Fennec, Bruce. In *Zoology*, a genus of animals belonging to the tribe *Digitigrada*, family *Carnivora*, order *Sarcophaga*.

Generic character. Incisive teeth above and below; cuspid teeth very long and sharp pointed; molar teeth six above and seven below on either side; ears very long, oval, and open; fore feet five-toed, hind feet four-toed.

Of the Fennec there is but one known species,

M. Brucei, Desm., and this has been formed into a distinct genus by Illiger, who, however, gives no account of the teeth, of which, indeed, he was ignorant. A specimen has been recently brought by Major Denham to this country, and is now in the Zoological Museum, which verifies Bruce's report of the existence of the animal, although that as well as other of his notices had been doubted. The Fennec was first received by Bruce when Consul General at Algiers, from Biscara, and kept by him for several months, but at last he gave it to the Swedish Consul, Mr. Brander, who described it in some Swedish Transactions. The favourite food of Bruce's Fennec was dates, or any sweet fruit; it was very fond of eggs, but when hungry it would eat bread, especially with honey or sugar. Its attention was firmly fixed by any bird which flew near it, and from which it could with difficulty be diverted. Of a Cat it was much afraid, and always endeavoured to hide itself without making any endeavour at defence. During day it was much inclined to sleep, but at night it was restless and unquiet. It builds its nest in trees, and does not burrow in the earth.

There have been great disputes as to what genus the Fennec belonged. Sparman considered it nearly allied to the *Canis Cerdo*, Brander thought it a Fox, Blumenbach a Weasel; Geoffroy St. Hilaire, thinking Bruce's description incorrect, makes it a Galago. From the examination of one of the specimens now in the Zoological Museum, Mr. Yarrell is convinced that it is a true *Canis*; this was also the opinion of Temminck previously, and stated by him in his *Monographies de Mammalogie*, from the examination of a specimen in the Frankfort Museum.

The length of the Fennec brought by Major Denham

MEGA-LONYX.

MEGA-LOTIS.

MEGALO-
TIS.
—
MEGAPO-
DIUS.

to England is nine and a half inches from the nose to the root of the tail, and of the tail itself six inches; the general colour white, inclining to straw-yellow; along the back it is light rufous-brown, delicately pencilled with fine black lines, from thinly scattered black-tipped hairs; the outside of the thighs light rufous-brown; under parts and insides of thighs cream-coloured. The nose pointed, and black at its tip, covered above with very short whitish hair tinged with rufous, and a small irregular rufous spot behind each eye; whiskers black, short, and scanty; back of the head pale rufous-brown. Ears very large, erect, and pointed, covered externally with short, pale, rufous-brown hair, internally thickly fringed with long greyish-white hair on the margins, especially in front, the other parts of the inside of the ears bare; externally they are folded at the base. Tail very full, cylindrical, rufous-brown, pencilled with black lines, with a small brown spot above, near its junction with the back, under part paler, the tip of the tail black; legs covered to the claws with long yellowish-white hairs, claws light horn, moderately hooked, very much compressed and sharp. The fur is very soft and fine, that of the back, and of the shoulder and hind quarter, has the hair dark-lead at base, white in the middle, and light rufous-brown at the tip.

See Denham and Clapperton, *Travels and Discoveries in Northern and Central Africa*; (*Appendix*;) *Zoological Journal*, vol. iii.

MEGAPODIUS, from the Greek μέγας, great, and ποῦς, a foot. Quoy and Gaimard, Temminck. In *Zoology*, a genus of animals belonging to the family *Macrodactylæ*, order *Grallæ*, class *Aves*.

Generic character. Beak slender, weak, straight, a little bent towards the tip, as high as wide at the base; lower mandible straight, its tip hidden within the elongated edges of the upper; nostrils distant from the base, and very near the tip, ovoid and open; ocular circle bare; neck with but few feathers; wings moderate, the third and fourth remiges longest; tail cuneiform, short, hardly reaching beyond the wings, in one species there is no tail; legs large, strong, set far back on the body; tarsi twice the length of the middle toe, covered with large scales; all the toes straight, the hind one resting its whole length on the ground, the anterior toes of equal length, the inner united at the base, the outer divided; claws very long, slightly curved, trigonal, and depressed.

The founder of this genus is disputed. Temminck asserts that he grounded it on the notice of Pigafetta, given below. Quoy and Gaimard, however, seem to have given the first authentic description of it. It is named from the large size of its legs and feet; it seems to make up the link between the gallinaceous and wading birds; to the former order it was assigned by the founders, to the latter by Cuvier. The form of the toes and nails resembles those of the *Menuræ*, and according to Temminck, its natural place should be between *Cryptonyx* and *Tinamus*, the latter of which he thinks it represents in the New World.

The Megapodes are found in the Moluccas, the Papou, Marianna, and Philippine Isles; in the latter they are called *Tavon*, which in the Tagal language signifies to bury, because they deposit their eggs in the mud, and, covering them with mud and leaves, leave them like the Ostrich to be hatched in the heat of the sun. In these holes more than one egg is never found, and as soon as the young escapes from it, it runs and takes

care of itself. They live on the edge of the large forests bordering the sea-shore, and at the least alarm betake themselves to cover, running with an unsteady pace, and their flight is little more than fluttering along the ground. There does not seem to be any difference between the appearance of sexes.

M. Freycinetus, Quoy and Gaimard; *Blevine* of the Guebes; *Mankirio* of the Papous. About fourteen inches long; the whole body is blackish-brown, becoming lighter on the belly and wings; the feathers on the head narrow, slender, and capable of elevation into a kind of crest; the skin of the neck nearly naked, brownish, and spotted with some little tufts of short feathers. The great alar quills meet upon a little oval tail, not exceeding an inch in length; the back slightly convex, the feathers covering it long and broad; the head small, the beak about ten lines in length, brownish, with a white tip, and surrounded by a black skin at its base, which, as well as the ocular circle, has a few scattered feathers upon it. The tarsi stout, and rather more than two and a half inches long, covered by deep brown scales; of the three front toes, the middle is the longest, measures two inches, is united to the inner by a broad, and to the outer by a narrow membrane, the hind toe rests on the ground throughout its whole length; the nails black. This bird is found in the Papou Isles, and in that of Vaigion; it is said by the inhabitants of Guebe to be common with them, and that it lays very large eggs in proportion to its size. At Vaigion and Boni, they live among the marshes in a state of semi-domestication.

It seems probable that this was the Tavon mentioned by Pigafetta as having been found by him in the Philippines, in 1521. He says, "We found here also some birds of a black colour, and the size of a fowl, which laid eggs as large as those of geese, and very good to eat. They told us that the female laid her eggs in the mud, and that the heat of the sun was sufficient to hatch them." Gemelli Carreri in his *Giro del Mondo*, after having mentioned these circumstances, observes, that they "lay in March, April, and May, at which period the sea is most tranquil, and where the waves do not advance so far on the beach. The sailors anxiously sought for the nests along the shore, and where they found the earth disturbed, they turned it up with a stick, and took out the eggs and young ones, which were esteemed equally good for food."

M. Peyrousi, Quoy and Gaimard; *Sasségniat* of the natives of the Marianna Archipelago. About ten inches in length; the feathers on the back of the head are slender, and erectile like a crest, of a light brown colour; those of the back and wings brown, irregularly interspersed with rust towards their tips; which rusty colour becomes lighter on the upper and under surface of the tail, on the chest and the belly; the remarkable specific character consists in the naked skin of the neck being yellow inclined to red; the tarsi are yellowish and tolerably strong, less upright than in the last species; the tips of the toes and the claws black; the beak is blackish at its base, but the remainder horn colour; the upper mandible more curved and pointed than in the preceding species. This bird was formerly kept in a state of domestication, but has become scarce, and is not now found in Guam and Rolla, the two principal islands; it is met with, however, at Tinian, but even there is rare.

M. Rubripes, Tem. About thirteen inches in length;

THE- brown feathers; the throat and neck more sparingly,
RIUM. between which the skin is seen more or less red at
different parts; the beak brown, the legs vermillion,
claws black, and very nearly straight. Native of the
Islands of Celebes and Amboina.

M. Duperreyi, Lesson. This bird is not quite the size of a Partridge; the neck, chest, belly, and sides are greyish-slate; the back and wing-coverts wide, and of a bright, brownish, rusty yellow; the great alar quills, which extend beyond the tail, yellow without, brown within, their stems brown; the rump, upper part of the tail, and anal feathers reddish-ochre; the neck is better covered with feathers in this than the preceding species, the top of the head has a tuft of brownish-yellow feathers; the beak yellow; legs greyish, and feathered to the tarsi; claws brown. Native of the forests of New Guinea; it runs quickly among the brushwood as Partridges do in the corn.

Cuvier adds to this genus also Lesson's *Alecthelia*, consisting of but a single species, the principal variation of which is in the absence of a tail.

See Temminck, *Planches Coloriées*; Quoy and Gaimard, *Zoologie du Voyage autour du Monde*.

MEGASPILUS, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* geniculated, eleven-jointed, longest in the male and attenuated, the basal joint most robust, second minute, third longest, the remainder slightly decreasing in length to the last; in the female subclavate; the basal joint longest, the second as long as the fourth, the third elongate, the rest decreasing in length to the last, which is longer than the second, elongate, oval; mandibles bifid; maxillary *palpi* exerted, five-jointed, two last joints slender; labial clavate, triarticulate; head suborbicular; eyes remote; wings pubescent; anterior with a thickened costal nerve terminated by a large stigma, producing a curved branch; *tarsi* five-jointed.

Ceraphron dux, Curtis. About thirty species, found in Britain, mostly nondescripts.

MEGASTACHYA, in *Botany*, a genus of the class *Triandria*, order *Digynia*, natural order *Gramineæ*. *Generic character*: spikelets elongated, the florets imbricated in two rows; glume five to twenty-flowered; valves shorter than the florets, lower palea emarginate; bearded, with a point between the divisions; the upper two-toothed, seed loose.

Three species, natives of Europe and the East Indies.

MEGATHERIUM, from the Greek μέγας, great, and θηρίον, a beast, Cuv. In *Zoology*, an extinct genus of animals belonging to the family *Tardigrada*, order *Edentata*, class *Mammalia*.

Generic character. No cuspid teeth; four molars in each jaw: feet three-toed both in front and behind, the toes of unequal size, and formed to support great claws; tail if any very short.

This is the largest of any fossil remains which have been recently discovered, and at present there is but one species known.

M. Cuvieri, Desmarest. The first specimen was found in September 1789, in the excavations on the banks of the river Luxan, near the town of that name,

about three leagues from Buenos Ayres, and at an elevation but little more than nine feet above the level of the stream; it was sent by the Marquis Loretto to Madrid, where it is still preserved in the Royal Collection. A second was sent from Lima to the same Museum in 1795, and a third is mentioned to have been brought from Paraguay. Of the former, a detailed account with Plates was given by Bru, the Demonstrator at the Madrid Museum, soon after it was there deposited; and from an inspection of those Plates in 1796, Cuvier drew up a paper for the French Institute, in which he explained the relations of this animal with the Sloths and other Toothless Animals, and placed it in his *Tableau Élémentaire de l'Histoire des Animaux* immediately after, and in the same family with the Sloths. And in the same year, and without communication with Cuvier, Professor Abildgaard of Copenhagen published a Paper, in which he assigned to the animal the same station as that given to it by the former author. These observations, however, did not meet with universal concurrence. Lichtenstein of Helmstaedt thought the bones were those of several animals of various sizes, and considered they ought rather to be esteemed the bones of a fifth Elephant, peculiar to South America. More recently, (in 1821,) Messrs. Pander and D'Alton, the one a Livonian and the other a German, published at Bonn an account of this specimen, under the title of *Bradypus Giganteus*, having journeyed into Spain for the purpose of inspecting it, and making faithful drawings. But Cuvier objects to the station which they allotted it among the Sloth kind, on account of the difference of proportion in its limbs, and the structure of its hands.

The general form of the head resembles that of the Sloths, especially in the long descending process at the front of the face of the zygomatic arch, which arch is perfect, and not incomplete as in the Sloths; and also in the oblique, ascending process, which rising from the arch in the Megatherium joins the temporal bone, which it does not do in the Sloths. The bones of the nose are very short, but each sends out a little projection from its external angle, and thus between them and the pinched-up intermaxillary bones there is left on either side of the opening of the nose a little hollow, which, as in the Tapir, might perhaps lodge the muscles of a small proboscis; this, however, if it existed, must have been very short on account of the length of the neck. The molar teeth are four on each side in either jaw, of a prismatic form, their crown crossed by a groove, and their roots divided into two fangs, in which respect they differ from the Sloths, as well also as in having only eight instead of ten teeth in the upper jaw, the structure, however, of the teeth shows that the animal was a vegetable feeder. The vertebræ of the neck are seven in number, in which the animal differs from the Three-toed Sloth which has nine; they are all large, but the second, or axis, is remarkable for being shorter than the others, whilst in most animals it is the longest; there are sixteen vertebræ to the back, and of course as many pairs of ribs, which are narrower than those of the Ant-eaters, but resemble those of the Pangolins; there are three vertebræ to the loins.

The extremities differ from those of the Sloth in being of about equal length, instead of the anterior being enormously long; the blade-bone is similar to that of the Sloths, and like them has a portion of the acromion running forward to join with the coracoid process; the collar-bone is S shaped as in Man, and in the Madrid

RIUM.

MEGA-
THE-
RIUM.
—
MEGA-
TOMA.

specimen is made to articulate with the first rib, which Cuvier thinks is most probably misplaced; the existence of the collar-bone distinctly distinguishes the genus from all the other large animals with which it might be confounded on account of size, as neither the Elephant, Rhinoceros, nor any of the large Ruminant Animals possess one. The upper arm-bone is remarkably broad towards the elbow-joint, on account of the great developement of the lateral crests; at this part its width measures half the length of the bone, in which it resembles the Long-tailed Pangolin, and proves that the muscles moving the hand and fingers must be very strong; of the two condyles the outer is much greater than the inner, as in the Two-toed Ant-eater; the bones of the fore-arm are large, and the radius turns freely upon the cubit, and is remarkable for a large process on its anterior edge, which indicates the strength of the muscles of pronation and supination; the whole hand touches the ground in walking, owing to the shortness of the metacarpus; of toes there are five, three only, however, are visible externally, as the inner and outer are enveloped in the skin; the last or claw-joints of the toes have sheaths or grooves at their root to receive the horny claws, and these sheaths are of very great size, and hence, probably, we may imagine that the claws were larger than in any of the Toothless Animals we are acquainted with, and admirably adapted for burrowing and scratching up the earth.

In the hinder extremities the iliac portions of the pelvis are very large, and their plane vertical to the spine; this form indicates the existence of a large belly, and would induce us to believe it was a vegetable feeder; but the opening into the true pelvis is remarkably narrow. The thigh-bone is of enormous size; it is a little longer than the upper arm-bone, and flattened from before to behind; it is distinguished from those animals which it resembles in size, by having only two instead of three trochanters: the two bones of the leg are consolidated as in the Ant-eaters, and thus produce a very wide surface; of toes there are five, three of them only, however, viz., the outer three, are developed, and of those only the third is provided with a claw, which, from the appearance of the joint, was probably larger than those of the fore extremities.

From these observations, then, it appears that the Megatherium resembles the Sloths in the head and shoulder, and the Ant-eaters and Armadillos in the singular commixture of the characters of the legs and feet, and is therefore properly placed in the *Edentate* Order, and occupying an intermediate station between the Sloths and Armadillos.

See Cuvier, *Ossemens Fossiles*, vol. v. part i.

MEGATOMA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* shorter than the *thorax*; the basal joint very stout, oval, the second less robust, subglobose, the four following very slender, subovate, the seventh and eighth rather larger, cup-shaped, the remainder forming a triarticulate, pubescent club, having the terminal joint elongate, ovate, and twice as long as the others in the males, subconic and rarely elongated in the females; the penultimate joint transverse in both sexes; *palpi* maxillary, robust, the basal joint minute, the two following short, broad, nearly equal in length, the terminal large, ovate, truncate; head small, depressed; *thorax* slightly trilobate, the central lobe nearly obsolete; *antepectus* produced over the mouth like a neckcloth;

body narrow, oval; legs short, slender; *tibiæ* linear, simple; *tarsi* pentamerous, the three intermediate joints shortest.

Dermestes undatus, Linnæus; Panzer, *Fauna*, pl. lxxv, fig. 13. One species only, found in Europe and in Britain; feeds on dried, decaying, animal matter.

MEGRIMS, Fr. *migraine*; It. *migrana*; Lat. *hemigranium*, from the Gr. *ἡμικράνια*, *dolor circa medium caput*: *ἡμικράνιον*, *dimidiata capitis pars*, *ἡμισὺν*, half, and *κράνιον*, the head. Minshew calls it "a disease that paineth one half of the braine."

It is also applied met. to morbid fancies or whims.

The same also being laid unto the head warme, doth mitigate the paine called the *migraine*, when as one half of the head doth ake. Holland. *Phisie*, book xxv. ch. xi.

*Meagrim*s and giddiness are rather when we rise, after long sitting, than while we sit.

Bacon. *Natural History*, Cent. viii. sec. 734.

MELALEUCA, in *Botany*, a genus of the class *Icosandria*, order *Monogynia*, natural order *Myrti*. Generic character: calyx five-parted, half-superior; corolla, petals five; stamens connected into five bundles, or branched; capsule inferior, three-celled, unripe seeds linear, ripe seeds often winged.

Twelve species, mostly natives of the East Indies and New South Wales; several are large trees. *M. leucadendron* produces the oil of Cajeput.

MELAMPODIUM, in *Botany*, a genus of the class *Syngenesia*, order *Necessaria*. Generic character: calyx five-leaved; receptacle chaffy, conical; down one-leaved.

Four species, natives of the West Indies.

MELAMPYRUM, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*, natural order *Pedicularales*. Generic character: calyx four-cleft; upper lip of the corolla compressed, turned back at the margin; capsule two-celled, oblique, bursting at one edge, seeds two, gibbous.

Seven species, herbaceous plants, native of Europe. *M. cristatum*, *arvense*, *pratense*, and *sylvaticum* are natives of England.

MELANANTHERA, in *Botany*, a genus of the class *Syngenesia*, order *Æqualis*. Generic character: calyx imbricated with ovate scales; receptacle chaffy, chaff membranaceous, keeled; seeds top-shaped, slightly four-angled; down with four or five unequal bristles.

Two species, natives of the West Indies.

ME'LANCHOLY n. } Fr. *melancholier*, *melan-*
ME'LANCHOLY, adj. } *cholie*; It. *malinconia*; Sp.

CHOLY.MELAN-
DRYA.

And he whiche is *melancolien*
Of pacience hath not lien,
Whereof he maie his wrath restraine.

Gower. *Conf. Am.* book iii. p. 74.

The name [*melancholy*] is imposed from the matter, and disease denominated from the material cause: as Bruel observes, *Μελαγχολία*, quasi *Μελαίναχολη*, from blacke choler. Fracastorius, in his second booke Of Intellect, calls those *melancholy*, whom abundance of that same depraved humour of blacke choler hath so misaffected, that they become mad thence, and dote in most things, or in all, belonging to election, will, or other manifest operations of the understanding.

Burton. *Anatomy of Melancholy*, fol. 31.

But hail thou Goddess sage, and holy,
Hail divinest *Melancholy*,
Whose saintly visage is too bright
To hit the sense of human sight,
And therefore to our weaker view
O'erlaid with black, staid Wisdom's hue.

Milton. *Il Penseroso*, l. 12.

When the *melancholist* was afraid to sit down for fear of being broken, supposing himself of glass, it had been to little purpose to have declared to him the ridiculousness of his fears.

Glanvil. *Essay* 4. p. 15.

They cannot I say goe about their more necessary business, stave off or extricate themselves, but are ever musing, *melancholizing*; and carryed along, as he (they say) that is led round about an heath with a Puck in the night.

Burton. *Anatomy of Melancholy*, fol. 88.

So as she thus *melancholicke* did ride,
Chawing the cud of grieve and inward paine,
She chaunst to meete toward the even-tide
A knight, that softly paced on the plaine.

Spenser. *Faerie Queene*, book v. can. 6.

On a pedestal—is set the statue of this young lady, reposing herself in a curious wrought osier chair, all of polished alabaster; *melancholily* inclining her cheek to the right hand.

Keepe. *Monuments of Westminster*, (1683.) p. 62.

When a boy, he was playsome enough: but withall he had then a contemplative *melancholiness*.

Aubrey. *Account of Hobbes, Anecd.* ii. p. 600.

[When as the mind] though it be found never so deficient and unable to perform the best duty of marriage in a cheerful and agreeable conversation, shall be thought good enough, however flat and *melancholious* it be.

Milton. *Works*, vol. i. fol. 171. *Doctrine and Discipline of Divorce*, ch. iii.

— In every breeze the power
Of philosophic *Melancholy* comes!
His near approach the sudden-starting tear,
The glowing cheek, the mild dejected air,
The soften'd feature, and the beating heart,
Pierc'd deep with many a virtuous pang, declare.

Thomson. *Autumn*.

Despair seldom breeds but in the *melancholy* tempers, that inclines men to be thoughtful and suspicious; or in such breasts, as have been forced into a præternatural *melancholy*, by conversing with unskilful spiritual guides, of an indiscreet severity, and pinning their faith upon ill managed discourses about prædestination.

South. *Sermons*, p. 245.

When the mind is very deeply impressed with a sense of calamity, for a continuance, and the attention cannot by any means be diverted from it, the subject is in a state of *melancholy*. This affection manifests itself by dejection of spirits, debility of mind and body, obstinate and insuperable love of solitude, universal apathy, and a confirmed listlessness, which emaciate the corporeal system, and not unfrequently trouble the brain.

Cogan. *On the Passions*, vol. i. p. 97.

MELANDRYA, in Zoology, a genus of Coleopterous insects.

Generic character. *Antennæ* filiform, eleven-jointed, the length of the head and *thorax*, the second joint smallest, the terminal oval; *labrum* membranaceous, obscurely notched, rounded laterally; mandibles short, horny, acute; *palpi* four, maxillary four-jointed, the

terminal joint dolabriform, longer than the labial, which are two-jointed; *thorax* as broad as the *elytra*; body oval; penultimate joint of the *tarsi* bilobed.

Chrysomela caraboides, Linnæus, *M. caraboides*, Panzer, *Fauna*, pl. ix. fig. 4. Inhabits temperate Europe, beneath the bark of trees: about five species known.

MELANIA, in Zoology, a genus of *Trachelipodous Mollusca*.

Generic character. Shell fluviatile, operculate, turreted; aperture entire, oval or oblong, widened at the base, pillar smooth, arched within; *operculum* horny; animal respiring only water by protruding branchiæ; phytiphagous, with two *tentacula*; its hinder extremity spirally convolute, enveloped in the shell.

M. amanella, Lamarck, Runphius, *Mus.* pl. xxxv. fig. d d. All the species are exotic.

MELANIPPE, in Zoology, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* slender, simple in both sexes, faintly pubescent within in the males; *palpi* remote, short, slightly projecting beyond the forehead, slender, acute, triarticulate; head small; forehead slightly prominent; eyes small; *thorax* slender; wings ample, entire, rounded, partially expanded during repose, all terminated by a broad, dark, interrupted band; *abdomen* short, slender, and subclavate in the males, with a very small anal tuft, more robust and obtuse, and acuminate in the females; annulated in both sexes; *larvæ* with ten legs, not tuberculated, with lateral, flexuous lines.

Type of the genus *M. hastata*, Linnæus. Donovan, *Brit. Ins.* vol. iv. pl. 129. fig. 123. Several species, of which the type inhabits Britain.

MELANOLEUCA, in Zoology, a genus of *Lepidopterous* insects.

Generic character. *Palpi* elongate, recurved, slender, acute, divaricating; *maxillæ* stout, rather long; head globose, dusky, clothed with imbricated scales, slightly ovate above; *thorax* slender; wings convoluted during repose, anterior elongate, narrow, obliquely sub-truncate behind, generally white with black markings; posterior elongate, ovate, of uniform pale colour; *abdomen* slender, tufted in the male at the apex; legs moderate, posterior *tibiæ* elongate, stout, with five rather long spines.

Tinea echiella, pl. xv. fig. 105. Four species, natives of Europe and Britain, but very rare in this Country.

MELANOPHORA, in Zoology, a genus of *Dipterous* insects.

Generic character. *Antennæ* deflexed, triarticulate, with the third joint truncate beneath, and having a naked, uniarticulate bristle at its base; mouth very pilose; eyes naked; wings divaricating, black, with the fourth nervure throwing off a recurved twig at the apex which unites to the third within their hinder margin; halteres concealed beneath a large scale.

Musca roralis, Linnæus, *Mu. grossificationis*, Donovan, vol. xii. pl. 419. Inhabits Europe and Britain: found in gardens.

MELANOPSIS, in Zoology, a genus of *Trachelipodous Mollusca*.

Generic character. Shell fluviatile, operculate, turreted; aperture entire, oval or oblong; pillar with a callus above, truncated at the base, and separated from the right margin by a sinus; *operculum* horny; animal furnished with protruding branchiæ, respiring only water, with two *tentacula*; its hinder extremity spirally convolute, enveloped in the shell; phytiphagous.

MELAN-
DRYA.MELA-
NOPSIS.

MELANOPSIS.

MELEAGRIS.

M. costata, Lamarck, vol. ii. p. 168. Inhabits fresh waters in Syria.

MELANOSTICTA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Leguminosæ*. Generic character: calyx five-leaved, glandular on the outside, forming a short, persisting tube; corolla, petals five, elliptic, attenuated at the base, the length of the calyx; stamens hirsute at the base, hair branched; pod compressed, ovate, oblong, hirsute, four-celled.

One species, *M. Burchellii*, native of the South of Africa.

MELANTHIUM, in *Botany*, a genus of the class *Hexandria*, order *Trigynia*, natural order *Melanthaceæ*. Generic character: calyx none; corolla wheel-shaped, six-parted, the segments with two glands at the base; filaments fixed to the elongated claws of the corolla; capsule ovate, the apex three-cleft, three-celled; seeds numerous, membranaceously winged.

Sixteen species, natives of South America and the South of Africa.

MELANTHO, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* similar in both sexes, setaceous, pubescent within and squamous; *maxillæ* rather longer than the head; maxillary *palpi* triarticulate, basal joint small, globose, second larger, third very large, subovate, conic; labial curved upwards, thickly squamous, triarticulate, basal joint robust, second rather slighter, cylindric, truncate obliquely, terminal larger, spoon-shaped, hollow, ciliated on one side, and terminated by a bifid claw; head small; wings convoluted during repose, anterior elongate, narrow, obtuse, posterior ample.

Tinea sociella, Fabricius, *Tinea tribunella*, Hübner, *Sch. Tin.* pl. iv. fig. 22. Two species, natives of Europe and of Britain. The term *Melia* has been applied to this genus, but that name being preoccupied by Linnæus for a genus of plants, we have preferred the above.

MELASIS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* pectinated in the males, serrated in the females, the basal joint in the male long and slender, the second minute, globose, third short, subovate, the remainder pectinated; in the female the basal joint long and bent, the second and third of equal

length, subcylindric, the remainder produced internally; *labrum* minute, slightly marginate; *palpi* maxillary, pilose, with the terminal joint large, dilated in the middle, and slightly pilose; labial with the terminal joint large, truncated, pilose; *labium* bifid; head broad, deeply immersed in the *thorax*, which is emarginate anteriorly, and produced at the posterior angles on each side into an acute spine; *scutellum* elongate; body cylindric; legs short; *tibiæ* broad, flat; *tarsi* compressed, pentamerous, entire.

Elater buprestoides, Linnæus, *M. buprestoides*, Curtis, vol. ii. pl. lv. Two species, one of which is found in Britain; they inhabit old decayed trees.

MELASPHÆRULA, in *Botany*, a genus of the class *Triandria*, order *Monogynia*, natural order *Irideæ*. Generic character: spathe two-valved; corolla, deeply six-cleft, segments acute; stigmas recurved; capsule three-lobed.

Two species, natives of the South of Africa.

MELASTOMA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Melastomaceæ*. Generic character: calyx five-cleft, bell-shaped; corolla, petals five, inserted into the calyx; anthers long, arched; berry three-celled, (stamens sometimes eight to thirteen.)

Near two hundred species of this beautiful genus of small trees and shrubs have been discovered, natives of the tropical climates; the leaves are elegantly nerved.

MELEAGRINA, in *Zoology*, a genus of *Acephalous Mollusca*.

Generic character. Shell foliaceous, subequivalve, rounded, scaly without; with a sinus at the posterior base of the valves for the passage of the byssus, the left valve being notched and narrow at this place; hinge linear, without teeth; ligament marginal, elongated, exterior, dilated in the middle.

The type is *Mytilus margaritifera*, Linnæus, *D'Argin.* pl. xx. fig. A, which inhabits the Indian Seas. The genus is not numerous in species; the typical species is nacreous and very thick and brilliant; and the extravasation of the fluid, distilled for the interior augmentation of the shell, in certain states of the animal, gives rise to isolated depositions of the beautiful substances known by the name of *pearls*, and the shell itself, when deprived of its outer covering, is called *mother-of-pearl*.

MELEAGRIS.

MELEAGRIS, Lin.; *Turkey*, Ray, Will., Pen. In *Zoology*, a genus of animals belonging to the family *Phasianidæ*, order *Gallinaceæ*, class *Aves*.

Generic character. Beak short, thickish, and strong; upper mandible extending beyond the lower, curved, convex, and arched, its root covered with a naked skin or cire, and elongated in front of the forehead into a conical, loose caruncle, capable of erection; nostrils situated in the cire; the head and neck covered with bare, wrinkled skin studded with caruncles, and a loose skin depending from beneath the throat, the middle of which has in the male a tuft of stiff hairs; tail consisting of eighteen quills which are capable of expansion, and then assume the form of part of a circle; the first three alar quills tapering, the fourth the longest; legs strong, tarsi long, armed with a weak, blunt spur, hind

toe but half the length of the internal, and only touching the ground by its tips; claws ovate and obtuse.

There has been much difference of opinion as to the region from whence *Turkeys* were first brought into Europe; the earlier Ornithologists, as Belon, Ray, and Willughby, consider them to have been derived from Asia; but subsequently Buffon and others have denied their existence as indigenous to Asia, and have affirmed that they were imported by the Spaniards from America. This notion was again opposed by Mr. Daines Barrington, in an Essay on the question, "Whether the Turkey was known before the discovery of America?" in which he rather conceives that the bird was never indigenous in the neighbourhood of Mexico, though he allows that it was found in a wild state in Virginia when first discovered. Hitherto, however, no *Turkeys* in a wild

MELASIS.
MELEAGRIS.

MELEA-
GRIS.

state have been found in any other country than America, and it is the now generally received opinion that they are derived from that continent. The principal difficulty in settling this dispute has arisen from the vast rapidity with which they were spread over the Old World, and from the confusion of the generic term *Meleagris* assigned to them with the *Meleagrides* of the Ancients, which are satisfactorily proved to be the same birds which we call *Peintados*, or Guinea Fowls.

The earliest mention of the Turkey is made by Oviedo in his summary of the *History of the Indies*, drawn up in 1525 for the Emperor Charles V. In his time they were inhabitants of the greater West Indian Islands as well as of the Main Land. He calls them Peacocks; but Peacocks evidently they could not have been, and Turkeys certainly they were, from part of his description of them given in Purchas's *Pilgrims*: "but," says he, "the neck is bare of feathers, but covered with a skin which they change after their phantasie into divers colours. They have a horn, as it were, on their front, and haires on the breast." In North America they were discovered by René de Laudonniere, the protégé of Admiral Coligny, in 1564, near the place where Charlestown now stands. It is probable that they were sent into Spain early in the XVIth century, and thence were brought into England, with which Country there was then a very free communication, so early as 1524, between the 10th and 15th of Henry VIII., as say the old lines which are assigned to this period:

Turkies, Carps, hops, pickarel, and beere
Came into England in one yeare.

This doggrel, however, is wrong as respects Carp, which are mentioned in the *Boke of St. Albans* several years before; but perhaps is right as to Turkeys, as these are not mentioned either in the feast given by Archbishop Neville to Edward IV., or in the Earl of Northumberland's Household Book so late as 1512. From whatever place they may have come, it appears that they throve in our Country, for Barrington mentions Turkey "chickens or powts" as having formed part of a Sergeant's feast in 1555; and about 1585 they must have been tolerably common, even in the farm-yards, as Tusser, in his *Five Hundred Points of Good Husbandrie*, recites them among the Christmas fare:

Beefe, Mutton, and Porke, shred pies of the best,
Pig, Veale, Goose, and Capon, and *Turkie* well drest,
Cheese, Apples, and Nuts, jolie carols to heare,
As then in the countrie, is counted good cheare.

According to Blumenbach, they were introduced into Germany about six years after the period of their arrival in England. From some accidental circumstance they do not appear to have either found their way into France so early, or to have been so successfully managed, as the first which were there eaten were at the marriage feast of Charles IX. in 1570. On their origin the reader may consult Beckmann, *Hist. of Inventions*, ii. 350.

Of Turkeys there are known but two species, both of which, in their wild state, are natives of America, and the first to be described seems the stock of our domestic bird.

M. Gallopavo, Lin.; *le Dindon*. Buff.; *Turkey*, Pen. The male wild Turkey is nearly four feet long; the head, which is very small in proportion to the body, and half the neck are covered by a naked, bluish skin, on which are a number of red, wart-like elevations on the upper, and white ones on the lower part, intermingled with a few scattered, black, bristly hairs and small feathers, less nu-

merous on the neck; the naked skin extends further down in front, where it is flaccid and membranous, forming an undulating appendage, on the lower part of which are cavernous elevations or wattles. A wrinkled, fleshy, conic, extensible caruncle, hairy and penicillated at the tip, rises from the bill at its junction with the forehead; when the bird is quiet, this is not more than an inch and a half long, but when excited by love or rage, it becomes elongated, so as to cover the bill entirely, and depend two or three inches below it. The neck is moderately long and thick, having, below, a pendent bundle of black, stiff hairs, about nine inches long. The body is thick, somewhat elongated and covered with long, truncated feathers, which are divided into very light fuliginous down at their base, beyond which they are dusky; to this dusky part succeeds a broad, effulgent, metallic band, changing now to copper colour, or bronze gold, then to violet or purple, according to the glancing of the light, and at tip is a terminal, narrow, velvet-black band, which does not exist in the feathers of the neck and breast; the lower part of the back and upper of the rump are much darker, with less brilliant, golden, violaceous reflexions; the feathers of the lower part of the rump have several concealed, narrow, ferruginous transverse lines, then a black band before the broad, metallic space, which is effulgent coppery; beyond the terminal, narrow, black band is an unpolished bright bay fringe. The upper tail-coverts are of a bright bay colour, with numerous, narrow, shining, greenish bars; all these coverts are devoid of the metallic band and the greater number have not the subterminal black one; the vent and thighs are brownish-cinereous intermingled with paler; the under tail-coverts blackish, glossed with coppery towards the tip, which itself is bright bay. The smaller and middle wing-coverts are like the feathers of the body, the greater coppery, violaceous, having a black band near the whitish tip; in old birds the exterior web is much worn among the bushes. The spacious wing, primary coverts, and primaries are plain blackish banded with white, the secondaries have the white part so large that they may be described as white banded with blackish, and are, moreover, tinged with ferruginous yellow; this gradually encroaches on the white, and then on the blackish, in proportion as the feathers approach the body, so that the tertials are almost entirely of that colour being only sprinkled with blackish, and having metallic reflections on their inner web; the anterior under wing-coverts brownish-black, posterior grey. The tail is above fifteen inches long, rounded and composed of eighteen broad feathers of a ferruginous colour, mottled with black, and crossed by numerous, narrow, undulating, black lines; near the tip a broad black band, beyond which a mottling, and the tip widely edged with ferruginous yellow. Feet strong, legs covered with alternate pentagonal plates, with an obtuse spur behind; legs and feet red; the whole plates covering the toes, the scales, and nails blackish.

The female is much smaller than the male, not being more than three feet and a quarter long; bill and feet similar to the male, but she has no spur: head and neck more covered with dirty-greyish, small, decomposed feathers, those on the back of the neck tipped with ferruginous feathers forming a longitudinal band; the caruncle on the forehead very small, throat-wattle deficient. General plumage dusky-grey; the black and subterminal band wanting on the feathers of the neck and underpart of the body, but the latter and the lower

MELEA-
GRIS.

MELEA-
GRIS.

part of the back, rump, and flanks have their feathers tipped with yellowish-ferruginous. The vent and thighs dirty yellowish grey without reflections; upper tail-coverts duller than in the male, and tipped with a broad, whitish-ferruginous fringe; tail itself as in male. Wings duller, each covert being tipped with grey; there is less white on the primaries, the bands being narrower, and the secondaries are entirely destitute of them.

The young of both sexes resemble each other so as to be hardly distinguishable; when a few days old the female is the larger and utters a piping note; but the male stands higher on the legs and soon shows spurs. Towards the first winter the young males show the bundle of hairs on the breast, in the second year these become three inches long, and in the third year the bird may be considered adult, though it continues to increase for some years longer in size and beauty. Females at four years have acquired their full size and colour, and possess the bundle of hairs on the chest four or five inches long, but thinner than in the male. If not barren, they put out a little of it at two years, but if barren it does not appear for many years, and is less frequent when the bird is domesticated than in the wild state.

The domestication of the Turkey has produced several varieties; the most rare is the Tufted Turkey, of which the crest is sometimes white, at other times black. Sometimes the whole plumage is entirely black, sometimes white, at other times speckled, and these varieties are continued by breeding, but a white or speckled Turkey is never met with in the wild state. Cross breeds between the domestic and wild Turkey often occur in those districts where the birds are common, and such are preferred for the table as combining the fat of the former with the flavour of the latter.

The general colour of our domestic Turkey is dark grey, inclining to black, with a little white towards the tips of the feathers; some are quite white, others black and white; it has also the bare, red, carunculated head and neck, the fleshy appendage on the head hanging over the bill, and the short spur at the back of the leg.

Wild Turkeys are not very particular in their food, they eat maize, berries, fruits, grasses, beetles, and even tadpoles, young frogs, and lizards, but where it is to be had they prefer the pecan nut, and more especially the acorn, on which they fatten rapidly. When the crop of acorns is very great in a particular district, they are attracted to it from their usual haunts in great number. About the beginning of October they assemble in large flocks on the Ohio and Mississippi, and hence this is called by the Indians the *Turkey Month*.

The Males, or *Gobblers*, as they are commonly termed, collect in parties of from ten to a hundred and feed apart from the females, which either roam about on foot, as they rarely fly except when pursued by dogs, singly with their own brood, or several of them move about together, in troops of seventy or eighty, taking care to avoid the old males, which endeavour to destroy the poults by striking them on the skull. All, however, travel in the same direction, and if their march be impeded by a large river, they seek the highest eminence, and remain for a day or two, as it were in consultation, and the males gobble violently. At last, having mounted the high trees, on a signal given, they launch off to the opposite shore, the old and fat ones cross without difficulty, but the weak and young often fall into the stream, from which, however, many escape by swimming, closing their wings to the body, spread-

ing the tail, and violently and quickly striking out with their feet; the weaker, however, which are not able to stem the stream, are lost.

Having, at last, about the middle of November, reached the resting place which is to provide them with food, they separate into small flocks of all ages and sexes, in search of the mast, which they completely destroy as they proceed, and becoming more familiar during their long journey they often enter the plantations and even stables in search of food. Thus the Autumn and Winter are passed, during which time large numbers are taken, and being frozen are sent to distant markets. In March they begin to pair, but shortly prior to this time the female shuns the male, who, however, assiduously seeks after her, uttering his gobbling note. The sexes roost apart, but at no great distance, so that when the female calls she is answered by every male within hearing, rolling note after note most rapidly, in a tone similar to that of the tame Turkey when he hears an unusual or frequently repeated noise. This wooing is continued for an hour, and at sunrise they descend from their perches, and the males begin to strut. If the calls be given from the ground, the males fly towards the sound, and whether they see the hen or not, erect and spread their tails, throw the head back, distend the comb and wattles, strut pompously, rustle their feathers, and at the same time eject a puff of air from the lungs, occasionally stopping to look out for the female. Frequent battles among the males in their necessary rencontres take place, and death or flight alone concludes them. Having paired, one or more hens follow their favourite, and roost either in the same tree with him or close by, till they begin to lay, when the female shuns him in order to conceal her eggs, which the cock invariably breaks when he has the opportunity. The male now becomes heavy and careless, and his pugnacious disposition ceases, he is much emaciated, leaves off gobbling, and hides himself in the secluded parts of the forest, or in a cane brake. The extraordinary leanness of the male bird at this period (April) has given rise to an Indian proverb for extreme poverty, "I am as poor as a Turkey in Summer." About the middle of April the hen begins to lay in a simple nest, composed of a few dry leaves, and placed either on a dry ridge, in the fallen top of a dead leafy tree, or against a log; the number of eggs usually is about twenty; these she covers carefully with dry leaves, so that it is almost impossible to find the nest. Whilst sitting, the hen is not easily driven from her place, but couches low, and endeavours to hide herself. Sometimes several hens congregate together for mutual protection; Audubon mentions having met with three which sat upon forty-two eggs; the nest is then always guarded by one, so that no Crow, Raven, nor Polecat will approach it. The process of hatching was witnessed by the same author, (Audubon,) who says, "I have laid flat within a very few feet, and seen the mother gently rise from the eggs, look anxiously towards them, cluck with a sound peculiar to her on such an occasion, remove carefully each half empty shell, and with her bill caress and dry the younglings that already stand tottering and attempting to force their way out of the nest. When the hatching is completed, the hen shakes herself violently, picks and adjusts the feathers on her belly, and stretching forth her neck in every direction peers about to discover any bird of prey or other enemies in the neighbourhood, and partially expanding her wings clucks softly to keep her poults

MELEA-
GRIS.

MELEA-
GRIS.

about her. At first she leads them to dry, elevated stations, as being aware that moisture is very fatal to them, for in rainy seasons if once thoroughly wetted they rarely recover. After a fortnight the young leave the ground, and, following the parent bird into some low tree, nestle under her wings. Subsequently, she leads them to the meadow-land in search of strawberries, dewberries, and blackberries, thus providing them at once with food, and subjecting them to the warmth of the sun. They frequently dust themselves in the shallow cavities of the soil or ant-hills, for the purpose of getting rid of the loose skin of the growing feathers, and the ticks with which they are infested. In August, several broods have flocked together and are led by the mothers into the forest, having acquired sufficient strength to avoid their enemies the Lynxes, Foxes, Wolves, and even Cougars, by rising quickly from the ground and ascending the highest trees. Amongst their greatest enemies are the birds of prey and the Lynx, (*Felis Rufa*), which sucks their eggs, and is very dexterous at catching both old and young; following them for some distance to ascertain their course, and then making a rapid circular movement, he places himself in ambush in front, till they get within his spring. When a Hawk or Eagle is espied, the discoverer gives a note of alarm and all crouch to the ground. As they roost in flocks on the decayed trees, they are easily observed by the large Owls which sail round to select their prey; notwithstanding, however, their almost noiseless flight, the quick ear of the Turkey catches the noise, and wakes the whole party by a *chuck*, and thus alarmed they raise themselves on their legs, and watch their antagonist, who, darting at the one he has singled out, would inevitably seize it did not the Turkey suddenly drop its head, squat, and turn up its tail; the Owl passes over, the Turkey falls to the ground and escapes injury.

When at all disturbed the Turkeys run into the grass or shrubs, and thus easily elude their pursuer, and during the day they cannot be found except by a dog trained to the purpose. They must be shot very close, as, if only wounded, they speedily disappear, in a kind of half run half flight. Running down Turkeys as Hares is a mere fable: a Turkey hound will lead his master many miles before he can a second time flush the same bird, and even after following on horseback for many hours it is often extremely difficult to put a bird up. During a fall of melting snow they have a long straddling manner of running, very easy to themselves, but which few animals can equal. In the breeding season they are often decoyed by forcibly drawing air through a wing-bone, producing a sound very similar to the female cry at that period. Also by imitating the cry of the Barred Owl, *Strix Nebulosa*, their roosts may be discovered, as they reply by a gobble to every repetition of this sound. When the roost is found, the hunter may secure nearly the whole flock if he begin by shooting those on the lower branches, as neither himself nor the noise of his gun intimidates them, although a single Owl would alarm the whole; when one falls, they only notice it by a buzzing noise more expressive of astonishment than danger. "This fancied security," states M. Buonaparte, "or heedlessness of danger whilst at roost, is characteristic of all the gallinaceous birds of America."

Turkeys, however, are more commonly taken by means of *pens* formed of logs covered at top, with a passage under the earth large enough to admit a

Turkey stooping. The ground generally chosen is sloping, the passage cut on the lower side and widening outwards. Indian corn is strewed about at some distance and leading to the passage, and thence into the enclosure, where sufficient is deposited to occupy the leader till the rest have entered. When they find they are prisoners, all their efforts are directed to the sides and top of the pen, not having sagacity to stoop sufficiently low to pass out by the way they entered. The Indians highly value the Turkey for food, and call it the "White Man's Dish," and present it as the best they can offer to strangers. They make use of their tails for fans, and the women weave the feathers with birch bark so as to keep the down on the inside, and the brilliant surface outward.

Although generally considered stupid, the Turkey is susceptible of very lively emotions. If the male be attracted by any new or remarkable object, he relinquishes his peaceful aspect, raises himself, his head and neck swell, and the wattles become vividly red, he bristles up the feathers of the neck and back, raises his tail vertically and expands it like a fan, and at the same time depresses his wings till they touch the ground: he utters a low, humming sound, advances with a grave, haughty step, which he occasionally quickens, and at the same time rubs the primaries violently against the earth. Now and then he utters a harsh, broken, dissonant note expressive of anger, and sounding like *rooh, ooroooh, ooroooh*, which is repeated if any noise be made sufficient to attract the bird's attention. His antipathy to red is very well known, and his rage excites him to demolish whatever object is clad in that detested colour.

In one of his letters, Dr. Franklin makes the following amusing observation in comparing the Bald Eagle, the representative of the United States, with the Turkey. "Others," says he, "object to the Bald Eagle as looking too much like a Dindon or Turkey. For my own part, I wish the Bald Eagle had not been chosen as the representative of our Country; he is a bird of bad moral character, &c. . . . I am on this account not displeased that the figure is not known as a Bald Eagle, but looks more like a Turkey. For in truth the Turkey is, in comparison, a much more respectable bird, and withal a true original native of America. Eagles have been found in all Countries, but the Turkey was peculiar to ours. He is, besides, (though a little vain and silly, 'tis true, but not the worse emblem for that,) a bird of courage, and would not hesitate to attack a grenadier of the British guards, who should presume to invade his farm-yard with a red coat on."

Turkeys in the domestic state are polygamous, one male being sufficient for twelve or fifteen females; the hens of two or three years old are the most careful of their brood. The hen Turkey lays about twenty-eight eggs, twice a year, *viz.* in February and August, where the temperature is mild, but in colder districts only once a year, in March or April. The eggs are laid every other day, and when the hen has ceased she begins to sit; those which had been previously taken from the nest are then to be returned to it; but sixteen, or at most eighteen, are as many as she can manage, and care should be taken that the first two which have been laid should not be included among these as they are generally unfruitful. She sits twenty-seven or twenty-eight days, and during that time food should be placed by her, or she will be liable to starve herself, from her indisposition to leave the nest. The sitting room

MELEA-
GRIS.

MELEA-
GRIS.

should be dark, and opened only once a day for feeding; and on the twenty-sixth or twenty-seventh day, the eggs should be examined, and if the greater number indicate the near bursting of the shell, the hen should not be taken off the nest as previously at feeding time, but should be left till the young are hatched; as when they first break the shell they are always more or less damp, but the warmth of the parent bird soon dries them, and cold at that period destroys them; they should not therefore be removed from the nest till twenty-four hours after hatching. The Turkey poults require great attention; warmth, shade, proper food, and clear water, are the principal points; rain, cold, dew, and too frequent exposure to the sun's rays are pernicious. They should be fed for the first few days with egg boiled hard and chopped, after which boiled peas and onions cut in pieces may be added; after eight days, if the weather be fine, the hen and her brood may be placed in a field, of which the grass is short, and should be fed three times a day with boiled peas, chopped nettles, and sometimes with oats or barley boiled in milk; at eighteen days boiled graves mixed with barley meal into a kind of paste should be given at least twice a day; but when graves cannot be procured, linseed cake may be used; it has, however, the objection of imparting its own flavour to the bird's flesh. During this time the poults have the opportunity of picking up worms, slugs, insects, and such vegetable substances as they may find in the place where they are confined. But care must be taken to house them if a storm of rain, wind, or lightning should come on. At a month old they may be turned out to find their own food in the fields.

When first hatched, the Turkey poults are covered with a kind of down, have neither caruncle nor beard, and these do not begin to appear till six weeks or two months after hatching, and this is to them a critical period. We rarely caponize Turkeys as they fatten well without.

Turkey poults are very tender and very difficult to rear; when very young they are subject to a disease which is announced by symptoms of great weakness, the tips of the black wing and tail feathers become white, the whole plumage becomes rough, they have a languid appearance and are said to be feverish; on closer examination two or three of the feathers on the rump are found to have their quills filled with blood, pulling these out restores the bird to health. Sometimes they are very costive, at other times very loose; at this time they are observed to be dull, and go along dragging their wings; they must then be taken from the hen, placed before the fire, and have a few grains of pepper administered. Subsequently they are occasionally affected with stoppage in the head, which is to be relieved by facilitating the flow from the nostrils, and rubbing them with fresh butter. Sometimes the head is covered with button-like tumours, for this a decoction of onions and pepper in vinegar may be employed; occasionally they die of this disease. When full grown they are now and then attacked with a very dangerous disease, which has by some been considered analogous to small-pox, and by others to the scab in sheep, but the most careful observation has proved this not to be the case; the disease shows itself in pustules, either about, or on the inside of the beak, and even in the throat, or on a part of the body least covered by feathers,

as the insides of the wings and thighs, or upon the warts of the neck. Turkeys thus attacked are generally destroyed by the farmers, but they may be cured by the following means. So soon as the disease appears, the sick must be separated from the healthy birds; to prevent it spreading, the pustules, if external, are to be seared with a hot iron, and if internal to be washed with vinegar in which a little vitriol should be mixed, at the same time giving some wine as a tonic. The disease called the pip consists in a morbid change of the skin of the tongue, and is easily relieved by removing the cuticle with a pin.

M. Ocellata, Tem. Cuv.; *Ocellated Turkey*, Buonap. About the size of the Common Turkey, but the tail not so wide, and with similar beak and caruncle. The head and upper two-thirds of the neck bare, and from the stuffed specimen examined by Temminck seemingly blue and red; on each eyebrow a row of six or eight fleshy tubercles, and on the middle of the skull a group of five others; on each side of the neck six or seven similar tubercles ranged regularly above each other and at pretty equal distances, but there are none on the front of the neck, nor any pendulous, fleshy wattle at the bottom of the neck as in the last species, neither was there in the specimen any vestige of the tuft of hair. All the feathers on the upper and under part of the trunk truncated as in the last species; the lower part of the neck, the upper part of the back, the scapulars, and all the under parts of the body greenish-bronze, each feather edged with two lines, the inner black, the outer slightly gilded-bronze; the middle and lower part of the back coloured in the same way, but towards the rump, the greenish-bronze gradually changes to sapphire-blue, which by reflection of the light changes to emerald-green, and the golden-bronze edging, increasing in breadth, becomes effulgent on the upper part of the back, and towards the lower part, as well as the rump, it also increases, but assumes a reddish-copper colour, which, under peculiar positions, resembles the neck of the Ruby Topaz Humming Bird. The hidden part of the plumage on the rump is ashy-grey dotted with blackish-brown, which increases in extent upon the hindmost feathers as well as on the upper coverts and quills of the tail; so that the blue and green, completely surrounded by a black circlet, and edged at the tip by a broad band of most beautiful golden-colour changing to copper, represents eyes, tolerably analogous in their disposition to those of the *Pavo Bicalcaratus*, but much larger and more lustrous, and disposed in four transverse rows. The sides of the body and under parts of the tail are similar to those on the tip of the rump but of a deeper green and redder gold colour. The lower wing-coverts are emerald-green, with a narrow velvet-black edging. The great secondary coverts are of a beautiful metallic-copper with golden reflexions, the covered part emerald-green near the web, and dotted with grey and white along the covered edge. The bastard wing and primary coverts blackish-brown marked with narrow, transverse, and oblique stripes. The colour of the alar quills similar, but the outer edge of the last primaries and of all the secondaries white, producing, when the wing is closed, a broad, longitudinal stripe on the middle of the wing; those of the secondaries nearest the back are tinged with golden-green. All the under part of the wing is edged across with white and brownish-grey. The tail has only fourteen quills, and its extremity rounded; they are blackish beneath and slightly dotted with white; thigh

MELEA-
GRIS.

MELEA-GRIS. black; the legs are a little taller and stronger than the Common Turkey, and have much stronger spurs.

MELEA-GRIS.
MELES.

MELECTA, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* filiform, thirteen-jointed in the males, twelve-jointed in the females, the basal joint elongated, the second minute; mandibles folding over the proboscis, acute, with a single tooth on the internal edge, pilose externally; *maxillæ* long, coriaceous, terminal lobe lanceolate, acute, inflected; *palpi* five-jointed; labial *palpi* four-jointed, basal joint very long, second a little shorter, two others minute; tongue membranous, as long as the two first joints of the *palpi*, slender, slightly attenuated, lobes setaceous; body hairy; head as broad as the *thorax*; *ocelli* three; *scutellum* bidentate; *abdomen* ovate, conic; anterior wings with one marginal and three submarginal areolets; stigma minute; claws deeply bifid.

The type of the genus is *M. punctata*, Fabricius; Donovan, *Britt. Ins.* vol. xi. pl. cclxxvi. fig. 4.

But little is known of the economy of the insects of this genus, but they are supposed to be parasitic; one species inhabits Britain, others are found in Europe.

MELES, Briss., Storr; *Badger*, Ray. In *Zoology*, a genus of animals belonging to the tribe *Plantigrada*; family *Carnivora*; order *Sarcophaga*; class *Mammalia*.

Generic character. Incisive teeth six, both above and below; cuspid longer than those, conical and sharp; molar five above, the first very small and deciduous, second and third single pointed, fourth subtricuspid, fifth square, tubercular, and largest of all; six below, first small, deciduous, second, third, and fourth single pointed, fifth largest, with two large and one small point on its outer, and two tubercles on its inner edge, sixth small and tubercular; nose prominent and obtuse; ears small and rounded; body hairy; tail short; feet five-toed, cleft; soles naked; claws falcular, those of the fore-feet longest and strongest.

The individuals belonging to this genus were included by Linnæus among the Bears, from which, however, they are especially distinguished by the form of the molar teeth, the three hindmost of which in the Bears are all tubercular.

M. Vulgaris, Desm.; *Le Blaireau d'Europe*, Buff.; *Badger*, Pen. The Badger is about two feet six inches in length, and the tail six inches more; it stands low on the legs; the body clumsy, thick, and covered with long, coarse hairs like bristles, which have generally a greyish appearance from the mixture of the hairs, each being yellowish-white at the root, black in the middle, and grey at the tip; throat, chest, and belly black, as also the legs and feet; nose, chin, lower part of the cheeks, and forehead white, with a black stripe passing through the eye and ear on each side; hair on the tail very long.

The Badger is a harmless and inoffensive animal, spending the greater part of its time in sleep; it burrows under ground, and forms several cells, with, however, but a single entrance; here in the Summer the female brings forth her young, depositing them on a bed of grass and moss. It is not decided whether they are carnivorous, or whether, like the Bears, they only feed on animal food, when roots, fruit, and grass, believed to be their common sustenance, is not to be found. In their motions they are slow, but when attacked fight

furiously and bite severely, which the peculiar structure of the joint of their jaws admirably adapts them for, as it is such that when all the soft parts are removed, the lower jaw still remains fast locked in its socket, and cannot be removed without great violence, and even by fracture.

Some authors formerly distinguished Badgers into two kinds, the Dog Badger and the Swine Badger, from the supposed resemblance of the heads of different individuals to those animals, but no such distinction really exists.

The Badger is found principally in Europe, but it is also met with in the Northern parts of Asia, though not in hotter climates. The skin of the Badger is commonly used for pistol furniture, and among the Highlanders of Scotland for pouches; the hairs are also employed for making that kind of brush used in painting for softening down, which are called sweetening tools. In China they are commonly used for food.

Badger-hunting was formerly esteemed good sport, and among other contrivances to induce them to leave their holes, it was recommended to draw a piece of pork, of which they were said to be very fond, over the entrance. The mode, however, commonly employed to take them is, upon a moonlight night to stop the earths, except one or two holes, whilst they are out to feed, and in the open burrows to place sacks with a draw-string, having done which two or three couples of hounds are thrown off at some little distance, and the Badger alarmed, soon betakes itself to its hole and is bagged. Another mode is, by making pitfalls in the animal's track, about five feet deep and four feet long, narrow at the bottom, and broad in the middle, on the top of which light branches with their leaves on are to be placed, so that when it runs over these, its own weight sends it through. Digging a Badger out of his hole is another mode of catching him, but without very good terriers, to be kept constantly at him, this is of very little use, as if the soil be light or sandy, he will burrow much more quickly than the digger can follow him, and so escape. Badger-baiting is now scarcely heard of, though formerly a very fashionable employment.

M. Labradorius, Sabine; *American Badger*. Is of less size than the preceding and of lighter make, and the head though as long is not so sharp at the nose; its fur is very fine, about three and a half inches long on the back, purplish-brown, varied with narrow, black rings near to its tip which is white, giving the animal a hoary appearance; the upper part of the head is darker, but divided by a narrow white line extending from the nose to the nape of the neck; this stripe is bounded by dark fur which fades gradually into grey and white as it approaches the ears; from the tip of the nose a greyish-brown patch runs through the eye; the cheeks, (excepting a brownish patch before the ears,) the under jaw, and throat are white, as is also the belly, of which, however, the hairs are coarser; legs blackish-brown; tail dirty brown; the head flattish; the ears very short and round; the claws are long, strong, and of a pale horn colour. The French Naturalists have asserted that there is but a single species of Badger, but from the observations

MELES.
—
MELI-
COPE.

of Mr. Sabine and Dr. Richardson it seems pretty certain that this is a second species, and not a variety. The American Badger frequents the sandy plains skirting the rocky mountains as far as the banks of Peace River and the source of the River of the Mountains, and is very common in the plains of the Missouri, as also near Carlton House, on the banks of the Saskatchewan and Red River flowing into Lake Winnipeg.

Whilst snow is on the ground the animal rarely or never comes out of his hole, and is probably torpid. It is slow and timid, and when alarmed takes to its first earth, where it burrows with great rapidity. "The strength of its fore feet and claws is so great," says Dr. Richardson, "that one which had insinuated only its head and shoulders into a hole, resisted the utmost efforts of two young men who endeavoured to drag it out by the hind legs and tail, until one of them fired the contents of his fowling-piece into its body." In Spring they are taken by pouring water into the hole, which as the ground is frozen, cannot escape, and soon compels them to come out. Perhaps they are more carnivorous than our common species, as Dr. Richardson states that he found a small Marmot and some field Mice in the stomach of one which he killed.

See Linnæi *Systema Naturæ* à Gmelin; Cuvier, *Règne Animal*; Richardson, *Fauna Boreali Americana*.

MELHANIA, in *Botany*, a genus of the class *Monadelphica*, order *Pentandria*, natural order *Byttneriaceæ*. Generic character: calyx five-parted, persisting, with a three-leaved involucre on one side; corolla, petals five; stamens ten, alternately sterile.

Two species, natives of Arabia.

MELIA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Meliæ*. Generic character: calyx five-toothed; corolla, petals five; nectary cylindrical, toothed, bearing the anthers; drupe with a five-celled nut.

Four species, natives of the East and West Indies.

MELIANTHUS, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*. Generic character: calyx five-leaved, the inferior leaves gibbous; corolla, petals four; nectary beneath the petals; capsule four-celled.

Three species, natives of the South of Africa.

M. major, frequently cultivated in collections, produces honey so plenteously that on a warm day it drops in quick succession from the flowers.

MELICA, in *Botany*, a genus of the class *Triandria*, order *Digynia*, natural order *Gramineæ*. Generic character: panicle, spike, or raceme; calyx coloured, two-valved, two-flowered; glume obtuse, membranaceous, unequal; corolla two-valved, ventricose, small.

Sixteen species of grasses, natives of both hemispheres; several species are natives of England.

MELICOCCA, in *Botany*, a genus of the class *Octandria*, order *Monogynia*, natural order *Sapindi*. Generic character: calyx three-parted; corolla, petals four, reflexed below the calyx; stigma slightly peltate; drupe corticose.

One species, *M. bijuga*, an elegant tree with eatable nuts, native of the West Indies.

MELICOPE, in *Botany*, a genus of the class *Octandria*, order *Monogynia*, natural order *Rutaceæ*. Generic character: calyx four-parted; corolla, petals four; nectaries four, in pairs, encircling the germen; capsules four, one-seeded.

One species, *M. ternata*, native of New Zealand.

MELICYTUS, in *Botany*, a genus of the class *Dioecia*, order *Pentandria*. Generic character: male flower, calyx five-toothed; corolla, petals five; nectary composed of cup-shaped scales; female flower, nectary of triangular scales; capsule a one-celled berry, four or five valved, four or five seeded.

One species, *M. ramiflorus*, native of New Zealand.

MELIGETHES, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* as long as the *thorax*; the basal joint large, robust, the second short, less robust, subquadrate, the third as long as the first, subclavate, the two following united about the length of the third, the two next very short, transverse, the eighth still shorter, broad, the three terminal ones forming an abrupt, compressed club; *palpi* short, filiform; head small, angulated; *thorax* rather large, convex, the sides not depressed, rounded, slightly margined; *elytra* broad, ovate, convex, the apex sometimes a little truncate, the sides slightly margined; body subquadrate; *tibiæ* sometimes spiculose.

The type is *Silpha rufipes*, Linnæus; *Nitidula atrata*, Olivier, *Ent.* vol. ii. pl. iv. fig. 31.

The species are generally of dark metallic colours, and usually reside in flowers; about eighteen are known, of which thirteen inhabit Britain.

MELILOTUS, in *Botany*, a genus of the class *Dia-
delphia*, order *Decandria*, natural order *Leguminosæ*. Generic character: flowers racemose; calyx tubular, five-toothed; keel simple, shorter than the wings and standard; pod longer than the calyx, rugose.

A genus divided from *Trifolium*, containing fourteen species, natives of the Northern hemisphere.

M. officinalis, the common *Melilot*, is a native of England; the flowers have no smell while fresh, when dried they have the smell of new hay, which they retain for several years.

MELIORATE, } Fr. *meliorer*; It. *migliorare*;
MELIORATION, } Sp. *mejorar*; Lat. *melior*; *me-
MELIORITY.* } *lius*, which (Vossius) is *magis-
velis, mavelis, melius*, that which is more willed, more wished for or desired.

To be or cause to be, to make, more desirable; to better, to mend, to improve.

Sound is likewise *meliorated* by the mingling of open air with pent air. Bacon. *Natural History*, Cent. iii. sec. 232.

Digging yearly about the roots of trees, which is a great means both to the acceleration and *melioration* of fruits, is practised in nothing but in vines. Id. *Ib.* Cent. v. sec. 433.

So that this colour of *meliority* and preeminence is a signe of enervation and weakness.

Id. *A Table of the Colours of Good and Evil*.

The more comprehensive a trade is, the more likely it is that it will be capable of being *meliorated* by natural philosophy.

Boyle. *Works*, vol. iii. p. 408. *The Usefulness of Experimental Philosophy*.

By an insight into chymistry one may be enabled to make some *meliorations* (I speak not of transmutations) of mineral and metal-line bodies.

Id. *Ib.* vol. i. p. 354. *Preface to a Physico-Chemical Essay*.

Thine is the praise to cultivate the soil;

To bare the inmost strata to the sun;

To break and *meliorate* the stiffen'd clay.

Jago. *Edge Hill*, book v.

MELIPHAGA, from the Greek μέλι, *honey*, and φάγω, *I eat*. Lewin, Tem.; *Honey Eater*. In *Zoology*, a genus of animals belonging to the family *Dentirostres*, order *Passeres*, class *Aves*.

Generic character. Beak of moderate strength, as

MELI-
CYTUS.
—
MELI-
PHAGA.

MELI-PHAGA. long or not quite so long as the head, slightly convex above, bent and pointed at the tip where it is slightly notched; edges of the mandibles inclined upwards; ridge of the upper mandible flattened at its base; nostrils lateral, sometimes occupying nearly half the length of the bill, distant from the base, ovoid, very often perforated from side to side, partially covered with a naked, vaulted membrane; tongue long, slightly extensible, its tip covered with a bundle of cartilaginous filaments; tail long and rounded; legs tolerably strong; the tarsus as long as the middle toe; outer toe united to the second, and inner to the first joint only; hind toe long and very strong, and its claw very powerful.

The birds composing this genus are found only in the South Sea Islands, and the most distant parts of India, and in the former seem to occupy the place of the Humming Birds and the genus *Cinnyris*. They are distinguished from the former by the shortness and roundness of the wings, the first four quill-feathers exceeding each other in length whilst the remainder gradually decrease; the tarsi and feet are strong, and the hind toe is especially developed, which together with their extensible tongue approximate them to the Creepers. The genus was first formed by Lewin, and includes many individuals from among the *Promerops*, *Merops*, *Eulabes*, *Certhia*, *Turdus*, and *Cinnyris*, of Gmelin and Latham; but as additions are continually making to it by more recent importations, it is probable that as it becomes better known, it will be found necessary to divide it further.

M. Maculata, Tem.; *Spotted Honey Eater*. About five inches and a half in length. General colour of the upper parts, wings, and tail yellowish-green; the lore, ocular circlet, and chin deep grey; a white stripe from the angle of the beak passes under the eyes; on the ears a very brilliant golden-yellow spot; the under parts marked with little ashy-brown spots on a yellowish-green ground, which latter colour edges all the feathers of those parts; beak black with a reddish tip; feet ashy. The female has the top of the head ash, the nape and back ashy-brown; the under parts nearly white varied on the chest with little ashy spots.

M. Reticulata, Tem.; *Reticulated Honey Eater*. About six inches long; head, neck, and back olive-ash; wings and tail of a light greenish tinge; the quills of these parts ashy in the middle with green edges; a pale yellow stripe surrounds the posterior edge of each ear; of which the aperture is covered by little ashy feathers having a whitish streak along their stem; throat and belly white, the other inferior parts ashy, and each feather marked with a little longitudinal white streak; beak and feet blackish.

M. Atricapilla, Tem.; *Certhia Atricap.* Lath.; *Blackheaded Honey Eater*. About five inches long; head and cheeks black, marked on the back of the head with a transverse white stripe; upper part of the body olive-green, lower parts white, tinged more or less on the sides of the chest with tawny or ash; beak black; legs brown.

M. Mystacalis, Tem.; *Moustached Honey Eater*. Nearly six inches long; the feathers on the top of the head, nape, and upper part of the back streaked longitudinally in the middle with white and edged with black: a deep black band covering the lore extends below the eyes on to the neck where it becomes broader; the wings, lower part of back, and tail deep ash, inclining to blackish on the inner webs of the secondaries and

the whole of the primaries; the feathers of the back furnished with white stems; those of the sides and belly edged longitudinally with black on a white ground, and all the under parts pure white; beak and legs black. From the Isle of Luçon, in the neighbourhood of Manilla.

M. Novæ Hollandiæ, Vig. and Horsf.; *Certhia Nov. Holl.* Lath.; *Heorotaire tacheté*, Vieill.; *Spotted Honey Eater*. Black above, white beneath, streaked with black; a white streak over each eye, and a similar spot on the ears; primary quills edged with yellow on the middle of their outer margin; tail-quills yellow externally at the base, dotted with white internally at the tip. Frequent in the scrubs about Paramatta.

M. Chrysotis, Lewin; *Certhia Chrys.* Lath.; *Yellow-eared Honey Eater*. Olive-green above, paler beneath; the head greyish, cheek marked with an oval yellow spot, ocular circlet blackish.

M. Auricomis, Vig. and Horsf.; *Heorotaire a oreilles jaunes*, Vieill.; *Tufted-eared Honey Eater*, Lath. General colour olive-green; top of the head, under part of the body, and spot on the cheek yellow; stripe about the eye black. Frequent about the upper part of Duck River.

M. Chrysops, Vig. and Horsf.; *Sylvia Chrys.* Lath.; *Black-cheeked Honey Eater*. Dusky olive above, paler beneath; ocular band yellow, edged above and below with black.

M. Lunulata, Vig. and Horsf.; *Certhia Lun.* Shaw; *Le Fuscalben*, Vieill.; *Red-eyed Honey Eater*, Lath. General colour olive-green, head and cheeks black; the orbits naked and red; back of the head marked with a white, semilunar band; under part of the body white. It is called by the settlers *Golden Eye*. Found about Port Jackson.

M. Indistincta, Vig. and Horsf.; *Indistinct Honey Eater*. Dusky olive above, dull white beneath, the primaries yellowish. From King George's Sound on the Southern coast of New Holland.

M. Brevirostris, Vig. and Horsf.; *Short-beaked Honey Eater*. The beak very short, general colour dusky brown inclining to green on the back; white beneath; behind the eye a white streak. Not an uncommon bird, and called by the natives *Cung'leer*.

M. Cardinalis, Vig. and Horsf.; *Certhia Card.* Gmel.; *Cardinal Honey Eater*. General colour black; head, middle of the back, rump, throat, chest, and sides of the belly scarlet; edges of the coverts, lower part of the belly, and vent white. Called by the settlers the *Little Soldier*.

M. Tenuirostris, Vig. and Horsf.; *Certhia Tenuir.* Lath.; *Le Caphou*, Vieill.; *Slender-billed Honey Eater*. Cinereous above; belly and vent ferruginous; upper part of the back and spot on the throat brownish; head, sides of the chest, and tail-quills black, the tips of the outer two quills, the chin, and throat white. Found at Sidney and Paramatta.

M. Australasiana, Vig. and Horsf.; *Certhia Aust.* Lath.; *Black and White Honey Eater*. General colour blackish; superciliary stripe, belly, and throat white, the latter slightly marked with dusky; external webs of the quills of the wings and tail yellow in the middle.

M. Fulvifrons, Vig. and Horsf.; *Fulvous-fronted Honey Eater*. General colour pale dusky brown, superciliary stripe, throat, chest, middle of the belly, and vent white; forehead fulvous; a brown streak through the eyes; sides of the chest brownish; beak and legs black.

MELI-
PHAGA.

MELI-
THREP-
TUS.

M. Dumerilii, Less.; *Dumeril's Honey Eater*. General colour olive-green, the sides of the body golden-yellow; face violet. From New Zealand.

See Cuvier, *Règne Animal*; Lewin, *Birds of New Holland*; Vigors and Horsfield, *Linnæan Trans.* vol. xv.; Temminck, *Planches Coloriées*.

MELIPONA, in Zoology, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* broken, filiform, composed of thirteen joints in the males, twelve in the females; mandibles without any process, spoon-shaped in the females; *labium* hirsute at the apex; *ocelli* placed in a transverse line; anterior wings with two complete submarginal areolets, the hinder one linear; hinder *tibiæ* unarmed, slightly pilose; hinder *tarsi* with their basal joint obtrigonal, narrow at the base; claws simple; *abdomen* short, not larger than the trunk.

The type of the genus is *Apis favosa*, Fabricius, Coqueb. *Illust.* dec. 3. pl. xxii. fol. 3. All the species inhabit South America, where they occupy the station of the Honey Bee.

MELISSA, in Botany, a genus of the class *Didynamia*, order *Gymnospermia*, natural order *Labiata*. *Generic character*: calyx arid, flattened at the top; corolla, superior lip arched, two-cleft, the middle lobe of the inferior lip cordate.

Nine species, natives of Europe and North America. Several of the species have been arranged with the genera *Melittis* and *Thymus*. *M. calamintha*, the common Calamint, and *M. nepeta*, are natives of England.

MELITÆA, in Zoology, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* with a short, abrupt, compressed club; *palpi* ascending, long, divaricating, very hairy, three-jointed; basal joint moderate, a little bent, second elongate, cylindric, or subfusiform, terminal acicular, half the length of the preceding, or short and minute, sometimes ovate; anterior wings elongate, triangular; posterior orbicular; anterior legs imperfect in the male, short in the female; *tarsi* with double nails, or rather claws, furnished with an unguiform appendage interiorly; *larvæ* pubescent, with fleshy tubercles or spines; *pupa* slightly angulated, head case obtuse.

The type of the genus is *Papilio Athalia*, Stephens, *Illustrations of Britt. Ent.* pl. iv.* fig. 1, 2. About twenty species, twelve of which inhabit Europe, and nine are found in Britain; they frequent the borders of, and open places in, woods and thickets.

MELITHREPTUS, from the Greek μέλι, honey, and τρέφω, I feed; Vieill. *Heorotaire*. In Zoology, a genus of animals belonging to the family *Tenuirostres*, order *Passeres*, class *Aves*.

Generic character. Beak very long, much exceeding the length of the head, sickle-shaped, very much pointed and large, and triangular at the base; the upper longer than the lower mandible, and not notched; tongue short, cartilaginous, and cleft or ciliated at the tip; nostrils basal, lateral, and half closed above; the third, fourth, and fifth alar quills the longest; the tarsus twice as long as the middle toe; the lateral toes equal, the outer connected.

This genus was formed by Vieillot from the *Certhiæ* to include the *Honey Suckers* of the South Seas, and is the same as Temminck's *Drepanis*. They live on honey, on the honeyed juices of plants, and on insects.

M. Pacificus, Vieill.; *Certhia Pacif.* Gmel.; *Great-hook-billed Creeper*, Lath.; *Black Heorotaire*. About

eight inches long; general colour black above, dusky beneath; shoulders, lower part of the back, rump, and vent yellow; under wing-coverts snowy; beak dusky, paler at the base; legs nearly black. Native of the Friendly Isles.

M. Obscurus, Vieill.; *Certh. Obscur.* Gmel.; *Green Hook-billed Creeper*, Lath. *Dusky Heorotaire*. Seven inches long, general colour olive above, inclining to yellow beneath, forehead marked with a dusky streak; remiges and rectrices dusky, edged with green; beak nearly black; legs dusky, with white knees; the claw of the hinder toe very long. Native of the Sandwich Islands. Its feathers are used by the natives in manufacturing their garments.

M. Falcatus, Vieill.; *Certh. Falcatus*. Gmel.; *Sickle-billed Creeper*, Lath.; *Green Heorotaire*. Five inches and a half long; general colour green above, head, under parts, and tail violaceous; lower part of the belly and rump pale-dusky, as are also the greater wing-coverts and legs.

M. Vestiarius, Vieill.; *Certh. Vestiaria*, Lath.; *Scarlet Heorotaire*. About five inches long; nape and upper part of the neck buff in the young birds, but scarlet in the old, of which the head, back, throat, chest, and belly are of the same colour; alar and caudal quills deep black; beak and legs whitish. It is called *Heorotaire* in the Island of Atooi, and *Eee-eee* in the Friendly Islands. It is much esteemed by the Sandwich Islanders for manufacturing their cloaks.

See Vieillot, *Oiseaux D'orés*; Temminck, *Manuel d'Ornithologie*; Latham, *General History of Birds*.

MELITTIS, in Botany, a genus of the class *Didynamia*, order *Gymnospermia*, natural order *Labiata*. *Generic character*: calyx smooth, bell-shaped, obtuse, orifice oblique; corolla, superior, lip flat, inferior lip crenated; anthers in the form of a cross.

Three species, natives of Europe and Japan. *M. melissophyllum* and *grandiflora* are natives of England. *Eng. Bot.*

SUGA.

Gresset's clear pipe, distinct behind,
Symphoniously combines in one
Each former bard's mellifluous tone.
Cooper. *The Apology of Aristippus*, epist. 3.

Fair daughters of the sun, the sacred Nine!
Here wake to ecstasy their harps divine,
Or bid the Paphian lute mellifluous play,
Or tune to plaintive love the liquid lay.

Falconer. *The Shipwreck*, can. 3.

He [Wotton] was rather struck with the pastoral mellifluousness of its lyric measures, which he styles a certain Doric delicacy in the songs and odes.

Warton. *Preface to Milton's Poems*, p. 4.

MELLINUS, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* filiform, inserted beneath the middle of the face, composed of thirteen joints in the males, twelve in the females; mandibles bidentate in the males, tridentate in the females, the last tooth longest; head large; *clypeus* transverse, nearly straight; eyes entire; *ocelli* three in number, approximating, placed in a triangle; body elongate, smooth; *abdomen* ovate, distinctly pedunculated, the peduncle obpyriform, or nodose behind; anterior wings with three complete submarginal areolets all sessile; *tibiæ* smooth; *tarsi* elongate with the terminal joint thick, furnished with a large pulvillus.

The type of the genus is *M. ruficornis*, Fabricius; Panzer, *Fauna*, fas. 77. pl. xvii. Several species, natives of Europe, of which seven or eight occur in England.

MELLISUGA, from the Latin *mel*, honey, and *sugo*, I suck, Vieill.; *Souimanga*. In *Zoology*, a genus of animals belonging to the family *Tenuirostres*, order *Passeres*, class *Aves*.

Generic character. Beak about the length of the head, weak, awl-shaped, more or less curved, broad, and flattened at the base, trigonal, compressed, and delicate pointed; mandibles equal, the edges of the lower inclined inwards, and partly hidden by the upper; tongue long, extensible, bifid, tubular; nostrils lateral, nearly basal, partly closed by a naked membrane; legs tolerably strong, the tarsus longer or of the same length as the middle toe; the lateral united at the base; first alar quill very short, the second longer, the third and fourth the longest.

This genus is the same as the *Nectarinia* of Illiger and Temminck, and the *Cinnyris* of Cuvier.

The *Souimangas* are so called by the natives of Madagascar from their eating sugar; according to Commerson, *Blomsuyger*, or Flower suckers by the Dutch; and by the Portuguese they are confounded with the Humming Birds, and called *Chupaflores*. They are remarkable for the shining metallic lustre of their plumage, which varies according to their age and sex; that of the male during pairing time being remarkably brilliant, whilst the female is very sombre, and it is only at breeding time that the former assume so bright colours, which they very speedily moult for a more quiet hue; the moult occurs twice a year. The *Souimangas* are very lively and quick in their motions; they feed on the honey-like exudations of many plants in the hot districts of Asia and Africa. Some of them have been already described as a subgenus, *Cinnyris*, in the genus *Certhia*, but there are an immense number beside.

See Illiger, *Prodromus Mammalium et Avium*; Lesson, *Dictionnaire des Sciences Naturelles*.

MELLITURGA, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* compressed, distinctly obconic, clavate; mandibles without a lateral tooth; maxillary *palpi* six-jointed; labial filiform, four-jointed; body pilose; anterior wings with three submarginal areolets, the two last receiving a recurrent nervure.

The type of the genus is *M. clavicornis*, Latreille; *Genera Crust. et Insect.* tom. i. pl. xiv. fig. 16. One species only, found in France, and, it is said, also in the West of England.

ME'LLOW, v.

ME'LLOW, adj.

ME'LLOWNESS,

ME'LLOWY.

Skinner thinks from the A. S. *mearuwa*, soft: Junius that it is something similar to *mealy-mouthed*. It probably is a consequential usage of the A. S. *melewe*, *melu*, from the softness of *meal*.

To be or become soft, through ripeness or maturity; to ripen, to mature; to free from harshness or asperity, to soften.

Your chekes enbolned like a mellow costard.

Another Ballade imputed to Chaucer.

My riper mellowed yeeres beginne to follow on as fast.

Gascoigne. *A gloze vpon a Text*.

Those sunnes do mellowe men so fast,

As most that trauayle come home very ripe.

Id. *Hearbes. Councill to Master Withipoll*.

Fling him i' th' hay-mow, let him lye a mellowing.

Beaumont and Fletcher. *The Pilgrim*, act ii. sc. 1.

Fat pasture, mellow glebe, and of that kind what can

Give nourishment to beast, or benefit to man.

Drayton. *Poly-olbion*.

Then was I as a tree

Whose boughs did bend with fruit. But in one night,

A storm, or robbery, (call it what you will,)

Shooke downe my mellow hangings.

Shakspeare. *Cymbeline*, fol. 382.

So age a mature mellowness doth set

On the green promises of youthful heat.

Denham. *Of Old Age*, part iv.

Thy plump and swelling womb, whose mellowy glebe doth bear
The yellow ripened sheaf, that bendeth with the ear.

Drayton. *Poly-olbion*, song 10.

Thy generous fruits, though gather'd ere their prime,

Still show'd a quickness; and maturing time

But mellow what we write, to dull the sweets of rhyme.

Dryden. *To the Memory of Mr. Oldham*, epitaph 1.

The mellow-tasted Burgundy; and quick,

As is the wit it gives, the gay Champagne.

Thomson. *Spring*.

Hark! the mighty queen of sound,

Wakes each instrument around,

The merry pipe, the mellow-breathing flute,

The warbling lyre, the love-lamenting lute.

Fawkes. *An Epithalamic Ode*

MELOCHIA, in *Botany*, a genus of the class *Monadelphia*, order *Pentandria*, natural order *Malvaceæ*. *Generic character*: calyx nearly double; corolla, petals five, spreading; filaments thread-like; capsule five-celled, one-seeded.

Fifteen species, natives of the East and West Indies and South America.

MELODINUS, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Apocynæ*. *Generic character*: flower contorted, calyx five-toothed; corolla salver-shaped, five-cleft, lacerated; stigmas two;

MELLI-
TURGA.

MELO-DINUS. berry fleshy, two-celled, many-seeded, large; seeds compressed.

MELOE. One species, *M. scandens*, a climbing shrub, native of New Caledonia.

ME'LODY, } Fr. *melodie*; It. *melodia*; Sp. *melodia*; Lat. *melodia*; Gr. *μελωδία*, from *μελι*, honey, and *ωδη*, song or tune; sweet song or sound.

Sweet sound; a succession of sweet sounds. Chaucer uses it metaphorically.

And thus with alle blisse and *melodie*
Hath Palamon ywedded Emelie.
Chaucer. *The Knightes Tale*, v. 2999.

On which he made on nightes *melodie*.
Id. *The Milleres Tale*, v. 3215.

And ouer this of suche nature
Thei ben, that with so sweete a steuen,
Like to the *melodie* of heuen,
In women's voice thei singe.
Gower. *Conf. Am.* book i. p. 20.

Men did hym [Pan] worshyp eke therefore,
That the fyrst in thilke londe
Was, whiche the *melodie* fonde
Of reedes.
Id. *Ib.* book v. p. 131.

Orpheus, the Tracian, harped *melodiously*,
With Amphion, and other musis of Archady.
Skelton. *The Crowne of Laurell*.

These delicacies,
I mean of tast, sight, smell, herbs, fruits, and flours,
Walks, and the *melodie* of birds.
Milton. *Paradise Lost*, book viii. l. 518.

To whom the nymphs upon their lyres
Tune many a curious lay,
And with their most *melodious* quires
Make short the longest day.
Drayton. *The Muses' Elysium*. *Nymphal* 1.

He must not flote upon his watry bier,
Unwept, and welter to the parching wind,
Without the meed of some *melodious* tear.
Milton. *Lycidas*, l. 14.

She touch'd him with her harp, and rais'd him from the ground;
The shaken strings *melodiously* resound.
Cowley. *The Complaint*.

Chiron mollify'd his cruel mind
With art, and taught his warlike hands to wind
The silver strings of his *melodious* lyre.
Dryden. *Ovid. Art of Love*, book i.

The feathered songsters on the trees above,
Attune their voices to the notes of love:
Notes so *melodiously* distinct and clear,
They charm my soul, and make it heav'n to hear.
Fawkes. *Bramham Park*.

O goddess of the crystal bow,
That dwell'st the golden meads among,
Whose streams still fair in memory flow,
Whose murmurs *melodise* my song!
Langhorn. *Ode to the River Eden*.

MELOE, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* somewhat moniliform, eleven-jointed, straight, the second joint least; *palpi* four, unequal, subclavate; *elytra* rounded at the apex, much shorter than the abdomen, with the suture curved outwards; wings none; legs elongate, compressed; *tarsi* anterior and intermediate, five-jointed, posterior four-jointed; body oblong, glabrous; head broad, inflexed, gibbous; mandibles straight; *labium* emargi-

nate; eyes lateral, oblong; *thorax* subquadrate, generally narrower than the head, juncate; *abdomen* oblong, soft, composed of eight joints.

The type of the genus, *M. scabrosus*, Marsham. *M. variegatus*, Leach, in *Linnaean Transactions*, vol. xi. p. 37. pl. vi. fig. 1, 2. The insects of this genus inhabit temperate regions; about twenty species are known, and of that number four occur in Britain; other insects have been included in this genus, but they have been recently divided under the name *PROSCARABÆUS*, which see.

MELOLONTHA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* ten-jointed; the basal joint elongate, clavate, pilose, robust; the second slender, also clavate, and shorter than the third, which is of similar form, the remainder in the male forming a bent, elongate, lamellated capitulum; the joint preceding which, or the fourth from the base, is short, transverse, with a denticulation within; *palpi* with the last joint oval, rather thickened and slightly acuminate; *clypeus* entire, slightly reflexed; *thorax* convex, with the sides rounded, the angles acute; *scutellum* rounded; body stout, convex, squamose; *elytra* shorter than the abdomen, the apex within submucronate; legs slender; *tarsi* five-jointed, moderate, claws simple, with a tooth at the base.

Type of the genus, *Scarabæus melolontha*, Linnæus. Donovan, *Britt. Ins.* vol. viii. pl. cclxiv. fig. 2.

The insects of this genus, which is rather extensive, though two only are indigenous, are very injurious to the agriculturist and gardener, both in their *larva* and perfect states; in the former condition they devour the tender roots of plants, bushes, and trees, for a period of three or four years before they become *pupæ*, passing the intermediate winters in a state of inaction; in districts where they abound, whole acres of arable land are sometimes destroyed, the turf rising up as if cut with a turfing knife, and the soil underneath turned into a soft mould; in this they lay in a curved position on their backs, their head and tail being uppermost, the rest of the body buried in the mould; and when about to change they spin a smooth case in which they become *pupæ*, in which state they continue till the following spring, when the imago is produced, but does not quit its retreat for a month or two; when its destructive propensities again develope themselves, but now the leaves and tender branches of trees are attacked. Hitherto all attempts to destroy these insects have failed, though several expedients have been tried.

MELON, Fr. *melon*; It. *melone*; Sp. *melon*; Lat. *melo*; Gr. *μήλον*; an apple. A kind of pompion or cucumber so called because they come up in *forme of a quince*, *mali cotonei* effigie, Plin. book xix. ch. v.

The trivial name of the *Cucumis Melo* of Linnæus.

We remembre the fyshe whiche we shulde eate in Egypt for noughte and of the cucumbers & *melouns*, lekes, onyouns and garleke.
Bible, Anno 1551. *Numeri*, ch. xi.

Take cucumbers, or pumpions, and set them (here and there) amongst musk *melons*, and see whether the *melons* will not be more winy and better tasted.

Bacon. *Natural History*, Cent. v. sec. 486.

The muse might tell what culture will entice
The ripen'd *melon*, to perfume each mouth.

Grainger. *The Sugar Cape*, book iv. l. 497.

MELONIS, in *Zoology*, a genus of fossil *Cephalopodous Mollusca*.

MELOE.
—
MELO-
NIS.

MELO-
NIS. with a central spire; whorls contiguous, enveloping,
tuniciform; cells narrow, numerous; septa imperforate.
MELOS. Type of the genus, *Nautilus pompiloides*, Fichtel,
Test. Microp. pl. ii. fig. a—c. Found in a fossil state
in Tuscany.

MELOPHAGUS, in *Zoology*, a genus of *Homalop-*
terous insects.

Generic character. *Antennæ* very short, setigerous,
placed in a cavity before the eyes; *labrum* long and
slender, incurved, receiving the tongue, which is as
long as the labrum and slender; eyes small, lateral,
linear; *ocelli* wanting; wings none; legs short, robust;
tarsi five-jointed, with recurved, short, unidactile claws.

Type of the genus, *Hippobosca ovina*, Linnæus.
Leach, *Wernerian Transactions* for 1817, pl. xxvi.
fig. 14, 15. One species only, which lives on the com-
mon sheep, and occurs in Britain.

MELOTHRIA, in *Botany*, a genus of the class
Monoecia, order *Monadelphia*, natural order *Cucurbi-*
taceæ. Generic character: male flower, calyx five-
toothed; corolla bell-shaped; filaments three: female
flower, one style; stigmas three; berry three-celled,
many-seeded.

Two species, *M. pendula*, native of North America,
and *M. fœtida*, native of Guinea.

MELO-
PHAGUS.
—
MELOS.

M E L O S.

Milo. MELOS, (ἡ Μῆλος, Strabo, x. 5. 1.) an Island of the
Cretan Sea, improperly included by some writers in the
number of the Cyclades, is distant, says Strabo, from
the Scyllæan Promontory (the Eastern extremity of
Peloponnesus) 700 stadii, (about 87 miles,) and almost
as many from the Dictynnæum, (near the Northern-
most headland in Crete.) It was also called Byblis,
Zephyria, Mimallis, Siphis, and Acytus, (Plin. iv. 23.)
and considered as one of the Sporades, a term which
comprehended all the South-Eastern Islands not within
the compass of the Cyclades. It is the first Island
usually reached by ships on entering the Archipelago,
and its inhabitants are much employed as pilots. It is
about 60 miles in circumference, and its position, as
accurately determined by Captain Gaultier, (*Connaiss-*
sance des Tens, 1822, 1823,) is as follows: entrance of
the harbour, 36° 42' 30" North, 24° 13' 41" East of
Greenwich. Mount St. Elias, the highest point in the
Island, 36° 40' 27" North, 24° 23' 23" East. Among
the Greeks it still retains its ancient name, *Milo* being
merely the Italian mode of spelling Melos, as now pro-
nounced, the final consonant being generally dropped.
The Turks call it Degirmen-lik Adâ-sî, *i. e.* Mill-island,
having been told by ignorant Greeks that its name is
Mylo, (μύλος,) a mill, or millstone. Its most remark-
able minerals, alum, sulphur, saponaceous earth, as well
as its peculiar form, did not escape the notice of the
Ancients. (Plinii *Nat. Hist.* xxxv. 52. 50. 19.) Pliny
observes (iv. 23.) that it is the roundest of all the
Islands. It has, in fact, the shape of an irregular crescent
embracing a large and excellent harbour, near to the
entrance of which there is an islet called Anti-Milo,
(ἡ Ἀντίμηλος, Melet. iii. 24.) formed by a single rock,
the summit of which is in 36° 47' 42" North, 23° 56'
42" East. This islet, which is inhabited only by
shepherds and their flocks, and does not appear to have
been noticed by the Ancients, appeared to M. Olivier to
be volcanic, and may possibly at some very remote
period have formed one of the peaks of a large volcano,
of which the sunken crater is now the harbour already
mentioned; for not only the minerals named above,
but almost all the other fossils of Melos, mark its vol-
canic origin, and the identity of its structure with that
of the adjacent isles of Polyægos, (ἡ Πολύαιγος,) now
called Pelagusa, (Πελαγοῦσα, Melet.* iii. 23.) and

Cimōlus, (Argentiera,) is favourable to the supposition
that they were all originally parts of the same mountain,
rent asunder by the action of subterraneous fires, and
the irruption of the Black Sea, through the Bosphorus.

Various kinds of lava and pumice-stone are found in
many parts of the Island, especially in the low lands
near its centre, which form a kind of isthmus uniting
the South-Eastern and North-Western divisions, which
are rugged and mountainous. The district opposite to
Cimolis is called Poloni, (Pollona, a town according to
Buondelmonti, *Insulæ Archipel.* xxiii. p. 83.) perhaps
from Apolloneum, (Ἀπολλώνειον,) a Temple of Apollo;
and in going thence to the town of Melos, every
thing which we saw, says M. Olivier, (*Voy.* ii. 9.) was
volcanic. Decomposed porphyry, white earth, like that
of Cimolis, grey ponderous lava, fine-grained iron-ore,
and ponderous spar mixed with red earth, were the soils
and minerals of most frequent occurrence. Near the
declivity of Mount St. Elias, on the South-Western
part of the Island, fine gypsum is extracted from a
stratum of vegetable earth mixed with volcanic ashes,
pumice-stone, and puzzolana. Mount Kálamos, about
five miles South-South-West of the town, has a conical
summit, a little below which there is a rent extending
for about 100 paces, in a flat rock of heavy, ferruginous
lava. The surface is here covered with a saline crust,
and is so soft that those who venture upon it often
sink mid-leg deep. Very fetid smoke issues from
various crevices, and, on digging, the heat at a foot in
depth is not bearable. On removing the outer crust,
sulphur is found sublimated in delicate yellow spiculæ.
Other vents are cased with a hard, white substance,
similar to Cimolian earth impregnated with alum. The
smoke from these orifices is so strongly charged with
sulphur as to be insupportable, and the soil near them
is so soft and yielding as to render venturing upon it
hazardous. Messrs. Olivier and Bruguière both sunk at
once, and thought themselves lost; unfortunately, the
former has not mentioned the depth to which they sunk;
nor, indeed, has he marked the degree of heat expe-
rienced in the openings, their distance from the sum-
mit, or from the culturable land below, with many
other circumstances worth recording. The summit of
the hill, which is of no great height, consists of a
schistose stratum of about a toise (6.4 feet) in thick-
ness, which has not been subjected to the action of fire.
The soil near the spiracles is, at the depth of a few
inches, warm, moist, and plastic, like the Cimolian
earth, exhibiting, like it, trapp still separate from

Sulphu-
reous
crevices.

* Meletius does not mention Polino, the name in most Maps. The
confusion in the older Maps respecting the names and position of
the smaller Islands of the Archipelago, is such as to exceed all belief.
Of this fact, Dapper's Map, by no means the worst, affords the most
disgraceful evidence.

MELOS. felspar, and, when analyzed by Vauquelin, it was found to contain in 100 parts: silice 66, alumine 20, oxide of iron 1, lime 4, muriate of soda 2, water 6. The strata a little lower seem to indicate that the latest eruptions took place at a very remote period; and the lavas have already been long in a state of decomposition. The road from the town of Milo to Castro, a village on the summit of a conical hill at the entrance of the harbour, at the North-Western extremity of the Island, passes over rocks of basalt, which seem on the point of breaking off in fragments. A light, white stone, somewhat similar to pumice, and partially vitrified, occurs to the South-South-West of Castro, and near the entrance of the harbour there are some rocks of basalt. The plumose alum and warm baths, celebrated by the Ancients, did not escape their notice. At the distance of about three-quarters of a mile East of the Town of Milo, there are large banks of whitish earth, in which excavations have been frequently made for the purpose of extracting alum. At the foot of a steep declivity there is an opening of about two feet square, on the sides of which there are crystals of laminated gypsum. A slope, down which it is necessary to slide, leads to the grotto, the heat of which is suffocating, though it gradually becomes more spacious and lofty. The sides consist of a white, friable, and strongly aluminous earth, incrustated with crystals of acicular gypsum, eight or nine lines long, and saline laminae, which appear like threads of finely carded cotton glued to the walls, much resembling asbestos, and containing small spiculæ of alum disposed in various directions, which appear under the microscope. This saline crust easily breaks into fragments of loose filaments, from one to fifteen lines in length; and this is what the Ancients called *plumose alum*. The taste of these filaments, when applied to the tongue, is a sufficient test to distinguish them from the crystals of gypsum. The travellers remained only five minutes in the grotto on account of the heat, which rose to 30° (doubtless of Reaumur, *i. e.* 99½ of Fahrenheit.) The whole tract East and South of the town is hot at a certain depth, and abounds in caverns, from some of which smoke issues, and others contain pools of a very salt and acrid fluid; alum, moreover, is found every where, sulphur only occasionally. The Lutrà, (Λουτρά,) or warm baths, are at the foot of a rising ground near the high road leading from the harbour to the town, and not a furlong from the beach. Two narrow, obstructed passages lead to a large chamber, in which there is a hot bath, strongly impregnated with alum and sea-salt, with crystals of which combined the walls are incrustated. This bath was formerly much frequented on account of its medical virtues, though it appears from Pliny (xxx. 32.) that it was not esteemed in his time. It has of late years been neglected, on account of the unhealthiness of the Island.

Melos has likewise some remarkable memorials of its ancient prosperity. At about a mile and a half nearly North of the Lutrà or ancient baths, there are the remains of a staircase, leading down into a vestibule hewn out of a grey, porous, half-vitrified rock, in the sides of which there are square cavities lined with cement. A passage from five to six feet high, and three feet wide, having excavated rooms from eight to ten feet square on each side, terminates in a large chamber communicating by a door with another of the same size, one of which appears to have been destined for the habitation of men, and the other for their cattle. In

descending from the village of Castro to the harbour, there are extensive ruins called Clima (Klimaka, *i. e.* the ladder?) by the present Meliotes, which are evidently the remains of the ancient Capital of the Island. Fragments of the walls, ruins of Temples, and an enclosure of high, dry walls, so substantially built as to be in good preservation, and, therefore, probably of *Cyclopean* architecture, mark the extent, splendour, and antiquity of this city; and on a natural eminence in the centre, there is a church, the walls of which contain fragments of ancient columns, sculpture, &c. In a hill of white, porous, vitrified stone, separated by a deep ravine from the site of these ruins, are the catacombs of their former inhabitants. They are like those of Alexandria, though on a smaller scale; but it is on the declivity of the opposite hill, and especially on its summit, in a place called Trypeti, (Τρυπητή, *i. e.* perforated,) that the number, proximity, and convenience of these catacombs is most observable. The hill itself being wholly unproductive, was peculiarly fitted for such a purpose. The chambers are usually nearly thirty feet long, and contain seven sarcophagi. Greek inscriptions, which the French Naturalists could not decipher, were in some places visible; and some of the chambers had been converted into cisterns for purposes of irrigation. Vases, lamps, and other remains of antiquity are often found in these sepulchres, and in those of Cimolus.

During some very extensive excavations made by Baron von Haller in 1812, the remains of a Theatre were traced, from the area of which was dug up a Statue of Venus, now in the *Musée Royale d'Antiquités* at Paris. The arms are wanting, but Mr. Millingen, who has given a plate of it, says, that it is an admirable imitation of Nature, distinguished by grandeur of form and dignity of expression. (Millingen, *Ancient unedited Monuments*, London, 1826; Quatremere de Quincy, *Sur une Statue Antique de Venus*, Paris, 1821; M. le Comte de Clarac, *Id.* Paris, 1821.)

History confirms the conjectures suggested by these monuments respecting the former wealth and populousness of the Island. It was colonized at a very early period by the Phœnicians, (Steph. Byzant. Μηλός,) one of the most civilized of the ancient nations. Those colonists were either driven out or subdued by a part of the exiles from Amyclæ, (Conon. Narrat. xxxvi. in Gale, *Hist. Poet. Script.*) who had themselves been expelled by the Heraclidæ, about B. C. 1116; but the descendants of those Laconians were themselves, seven hundred years afterwards, (Thucyd. v. 112.) subjugated by the overwhelming force of the Athenians; who, to avenge themselves for their want of success in a previous attack, put all the males to death, enslaved the women and children, and established 500 of their own Countrymen in the Island. (B. C. 416.) The Melians, however, were restored by Lysander, at the close of the Peloponnesian war. (Plutarch in *Vita Lysandri*.) In subsequent times this Island experienced the same fate as the rest of the Archipelago, and formed successively a part of the Macedonian, Roman, and Greek Empires. In the beginning of the XIIIth century, it was united to the Duchy of Naxia by Marco Sanudo, first Duke of the Archipelago, and as a part of that Principality, was made tributary to the Othman Empire, by Khaim-din Barba-rossa in 1537. (Hammer, *Gesch. des Osm. Reichs*. iii. 192.) The fertility of its soil, its excellent wine and fruits, and its incomparable kids, (Jul. Pollux, *Onomast.* vi. 10.) are celebrated by the Ancients, and

History.

MELOS. among the Moderns, M. Olivier warmly commends the good fare of the hospitable Monks in the Convent of Sta. Marina; (ii. 9.) but great part of the Island is now nearly a desert, as all the lower tracts are so unhealthy, that on entering the town of Milo the stranger is astonished by the bloated and cadaverous appearance of its inhabitants. The mountainous districts, on the contrary, are perfectly healthy, as was manifested by the ruddy faces of the Caloyers (Καλόγεροι) of Sta. Marina, and the many octogenarians of Castro, where the French travellers saw one hale, hearty veteran 102 years old.

Unhealthi-
ness.

Town of
Milo.

Present
state.

The town of Milo is in a fertile plain, about two miles wide, and lying between the Eastern hills and the harbour. In Tournefort's time it appeared well-built, and contained nearly 5000 inhabitants, but the incredible filth of its streets, (*Voy. i. 147.*) the want of good water, the adjoining salt-pans and marshes, and the pestilential, sulphureous vapours, so common in that part of the Island, had already rendered it very insalubrious. When Olivier was there, in 1794, it was almost reduced to a heap of ruins; and nothing but the bare walls, with some shreds of the plaster, remained to mark "the pretty Church of French Capuchins," which had been rebuilt a short time before Tournefort visited the Island in 1700. The Meliotes were then, as of late years, treated with lenience by the Turks; the Kádí was the only resident Musulman, and the local government was in the hands of a Vaivódah, usually a Greek, and three Epitropí, (Ἐπίτροποι,) chosen annually, and styled Primate, (Πριμάτοι,) or Vecchiardi when out of office. The duties and customs collected by these officers, then amounted to 5000 crowns, (piastres,) and the capitation-tax paid to the Kapudán Páshá, produced the same sum. The whole, therefore, amounted to 10,000 piastres, (£1375,) besides presents, avanías, &c. There were then eighteen Parishes, forming the Diocese of the Greek Bishop, and thirteen Monasteries, of which Sta. Marina (Ἁγία Μαρίνη) was then, as now, the finest in the Island. Its excellent wine, clear and copious stream of water, groves of oranges, lemons, and citrons, and neighbouring heights, clothed with lentiscs and arbutuses, are praised by Tournefort as well as by Olivier. Cotton is one of the principal productions of Melos, and it is said to have large veins of iron-ore near the harbour of Iron St. John, (ὁ ἄγιος Σιδηρογιάννης,) to the South of Mount St. Elias. Of the rare plants which Tournefort found in Melos, none struck him more than the *Stavídha* (Στοιβήδα, or Στοιβήδι) of the Greeks, *i. e.* the thorny *Poterium* of Linnæus, so common a shrub on the shores and islands of Asia Minor, where it still preserves the name (Στοιβή) under which it is noticed by Dioscorides (iv. 12.) and Galen. (*De Antid. i. p. 426.*) It is burned like the dry grass in the American prairies, for the purpose of manuring the soil. Among the luxuries of Melos, especially by those who are condemned to keep a rigid Lent, its excellent shell-fish will not be overlooked. Its oysters and sea-urchins (*echini*) are praised by Tournefort; but its red oysters, (Γαῖδαποπόδα, *i. e.* ass foot,) he adds, are salt and leathery; its limpets, (*Œil de Bouc, i. e. Patelle seu Lepas,*) on the contrary, are delicious and larger than those of Provence. (p. 169.) The village of Castro, called Sifours by the Provençal seamen, from a similar town in their own country, is like an eagle's nest perched on the summit of a basaltic mountain, remarkable chiefly for the steepness and filth of its stair-like street.

Of the rocks and rocky islets in the neighbourhood

of Melos are the two called Acraria, (Ἀκραριες,) at the entrance of the harbour; Antímelos, or Remómilo, (Ἐρημόμηλος,) North-West of it, mentioned above; the Prasonésia, (Πρασονήσια, Green Islands,) a little to the West of the S. Petinús, (Πετεινούς, Fowl Island,) to the South-East; Annanía, or Annaníes, (Ἀννανία,) at a much greater distance to the South-West. (Melet. iii. 24.) Immediately to the North-East of Melos are the Islands of Cimolus and Polyægos, considerably larger than the islets last named. The former, (Κίμολος,) called Argentiera by the Genoese and Venetians, but still retaining its ancient name among the Greeks, has a good harbour for small-craft in 36° 49' 20" North, 24° 33' 32" East, opposite to the latter, called Polino, or Burnt Island, in modern Maps. It is about 18 miles in circumference, and has always been considered as a dependency on Melos. A rock of red porphyry appears to form the basis of the whole Island; near the town on its Southern side, there are masses of softer porphyry of different shades of green; and the same rock, of a white or reddish colour, is found a little further on. The general aspect of the whole country is extremely arid and barren. The Northern and Western tracts bear evident marks of violent volcanic action, and disjointed fragments of rock, mixed with large pumice-stone and volcanic ashes, occur every where. The Southern and Eastern parts have been changed only by a gradual and imperceptible agency of subterraneous fires. There the same rock appears in large masses, even where visible to a considerable depth. When entire it is hard, and takes a fine polish, and has generally a beautiful red colour. It can easily be traced in every state of decomposition till it forms the Cimolian earth so much extolled by the Ancients, and still much used, instead of soap, by the natives and the Levantine sailors. That which is extracted from the bottom of the harbour is more free from extraneous substances, and therefore dissolves in water more readily. It is white and chalky,* the purplish kind, mentioned by Pliny, (*Nat. Hist. xxxv. 57.*) not being now found. (Tournefort, *Voy. i. 144.*) Its solution is often greyish, probably from occasional spiculæ of black schorl not decomposed. (Olivier, ii. 8.) According to Vauquelin's analysis its component parts are silex 79, alumine 5, lime 4, muriate of soda 2, water 10. That extracted from the bottom of the harbour contained 68 parts of silex, 20 of alumine, 5 of muriate of soda, and 7 of water, without any lime; so that it may be considered as a compound of flint and alumine.† The site of the ancient Capital can still be traced on the Western side of the Island. It is principally indicated by deep trenches and ancient catacombs similar to those of Melos, but less extensive. Artificial caverns, channels cut through the lava for the passage of boats, and innumerable fragments of brick and pottery, are evidences of the ancient industry and prosperity of the islanders. Their numbers are estimated by M. Olivier at only 200 souls, and it is with difficulty they can pay the *kharáj* (capitation tax) and *zekát* (tithe) demanded by the Turks, which amounted in 1794 to only 1600 piastres. (£133.) In 1700 (Tournefort, i. 143.) the Kimoliotes paid 1000 piastres on account of those charges, (κεφάλαιον, κεφαλαιάτικον, or more commonly χαράτζι and δεκάται, or δεκαταίαι,) and 400 as gratuities to the officers of the Kapudán Páshá; but 1450 piastres

were then worth upwards of £190. At that time they enjoyed the privilege of bells in their churches, an indulgence rarely granted by the Turks. In the earlier part and middle of the XVIIth century, the Archipelago was filled with Christian corsairs, for the most part French, (Tournefort, i. 141, 142, 149, 151.) who made this and the adjacent Islands their ordinary rendezvous. Though their plunder contributed to enrich the islanders whom they protected against the Turks, their dissolute habits occasioned that almost universal licentiousness among the women, for which they are still notorious. The principal silver mines, from which the name of Argentiera is derived, were opposite to Polóni, (Ἀπολλωνεῖον?) on the coast of Melos; remains of the forges and workshops were still visible in 1700; but in 1794 the inhabitants either did not know, or would not point out the spot. (Olivier, i. 8.) Cimolus, or Cimolis, (Κίμωλός,) was also called Echinussa, which Tournefort (i. 142.) translates *L'isle aux Vipères*,

but none, he adds, are now to be found there: the neighbouring Island of Polino, (anciently Polyægus,) in 36° 46' 10" North and 24° 39' 6" East, is, however, said by the Kimoliotas to abound with them, so much so as to render it dangerous to pasture flocks there. Yet they allow that the wild goats set these venomous reptiles at defiance. M. Olivier, who seems to have been acquainted with the ancient name of the Island, went all over it in quest of those animals, but could get only a distant sight of a few, which he conjectured to be the Argali, (*Ovis Ammon*;) the Musmon or Musimon of the Ancients, (Plin. *Nat. Hist.* viii. 75.) and he found a new species of serpent, (*Boa Turcica*;) but saw no vipers.

Of mutual *membership* doth them invite
To careful tenderness, and free compassion;
With such confederate zeal, and stout delight
Would help their bretheren up the heav'nly hill
As these contrive to plunge them deep in hell!*Beaumont. Psyche*, can. 10. st. 278.Faint sweats all down their mighty *members* run;
Vast bulks, which little souls but ill supply.*Dryden. Annus Mirabilis*.No advantages from external church *membership*, or profession of the true religion, can of themselves give a man confidence towards God.*South. Sermons*, vol. ii. p. 402.The representative is so far dependent upon the constituent, and political importance upon public favour, that a *member* of parliament cannot more effectually recommend himself to eminence and advancement in the state, than by contriving and patronizing laws of public utility.*Paley. Moral Philosophy*, vol. ii. ch. vii. p. 203.MEMBRANE, } Fr. *membrane*; Lat., It., and
MEMBRANA'CEOUS, } Sp. *membrana*; so named be-
MEMBRA'NEOUS, } cause it covers the *members*. Cot-
ME'MBRANOUS. } grave calls it

The upmost thin skin of any thing; also the pill or pilling between the bark and the tree.

The skin is a *membrane* of all the rest the most large and thick, formed of the mixture of seed and blood; the covering and ornament of parts that are under it.*P. Fletcher. The Purple Island*, can. 2. note 13.22. The heart, stomach, guts, sanguineous, and other *membranaceous* vessels, are now, all acknowledge to be muscular.*Greiv. Cosmo Sacra*, book i. ch. v. sec. 22. fol. 20.Consider its variety, suited to various foods, some *membranaceous*, agreeable to the frugivorous or carnivorous kind.*Derham. Physico-Theology*, book vii. ch. ii.They easily, by their saline pungency, offend the tender ureters and *membranous* bladders of those, that are troubled with the stone or strangury.*Boyle. Works*, vol. ii. p. 192. *The Usefulness of Natural Philosophy*.MEMBRASIS, in *Zoology*, a genus of *Homopterous* insects.*Generic character.* *Antennæ* with the two basal joints thickened, subequal, cylindric, the terminal one long, ovate, conic at the base, gradually terminating in a slender, elongate seta; forehead produced into an obtuse rostrum or dilated horn, abruptly distinct from the lower base of the clypeus, and forming with it an acute angle; body not depressed, generally higher than broad, compressed on the sides, with the back elevated or gibbous; head trigonal, somewhat nutant; *thorax* gibbous, produced behind into a subulated scutellum,anteriorly, and sometimes on both sides, dilated; *elytra* *MEMBRASIS*.
nervose, generally semihyaline; *tibiæ* compressed, the angles or carinæ denticulated.Type of the genus *Cent. cornutus*, Fabricius; *Panzer, Fauna Germ.* fas. 50. fig. 19. Many species, several of them remarkable for their grotesque forms; chiefly natives of warm climates: one found in Britain.MEMECYLON, in *Botany*, a genus of the class *Octandria*, order *Monogynia*, natural order *Onagræ*. Generic character: calyx superior, deeply striated, margin entire; corolla of one petal; anthers inserted in the side of the apex of the filament; berry crowned with the cylindrical calyx.

Four species, natives of the East Indies.

ME'MORY,

MEMO'IR,

ME'MORABLE,

ME'MORATIVE,

MEMO'RIAL, *adj.*MEMO'RIAL, *n.*

MEMO'RIALIST,

ME'MORIZE,

MEMORA'NDUM,

MEME'NTO.

Fr. *memoire*; Lat., It., and Sp. *memoria*; *Memor*, from *memini*, pret. of the obsolete *me-neo*, or *meno*; and *meno* from the Gr. μένω; *maneo*, to stay or remain. The contract μένω, from the idea of *staying* or *remaining*, is excellently well transferred (says Lennep) to the faculty of the mind, hence called *memory*; in which things *remain* securely preserved; and Locke calls *memory*, The store-house of our ideas. It would perhaps be more proper and discriminating to call the mind itself (met.) the store-house of ideas received into it; that in which such ideas remain: and *memory*, that faculty which brings forward or recalls such ideas as *remain* so stored or preserved. It is also applied, generally, to

The keeping, preserving, retaining in mind; recollection, remembrance.

Also (as in Spenser) acts or ceremonies in *remembrance* of.And haddest mercy on that man for *memento* sake.*Piers Ploughman. Vision*, p. 103.For knightly pite and *memoriell*Of faire Crescide, a girdel gan he take,
A purse of gold and many a gaie iewell.*Chaucer. The Complaint of Crescide*.O Salomon, richest of all riches,
Fulfilled of sapience and worldly glorie,
Ful worthy ben thy wordes to *memorie*
To every wight that wit and reason can.*Id. The Marchantes Talc*, v. 10117.Sometime I drew into *memoire*,
Howe sorowe maie not euer last.*Gower. Conf. Am.* book vi. p. 192.As I fynde in a boke compiled
To this matere an olde historie,
The whiche comth nowe to my *memoire*.*Id. Ib.* book vi. p. 194.His bodye might well be three,
But as of thought and *memorie*
His herte was in purgatorie.*Id. Ib.* book i. p. 30.And so recorde I my lesson
And write in my *memoriall*,
What I to hir telle shall
Right all the matter of my tale.*Id. Ib.* book iv. p. 99.Then that it is onelye a sygne *memoriall*, and token of Christes death and passion.*Sir Thomas More. Workes*, fol. 526. *The Second Part of the Confutation of Tyndall*.

BARD. Why Sir John, my face does you no harme.

FALS. No Ile be sworne: I make as good vse of it, as many a man doth of a death's head, or a *memento mori*.*Shakspeare. Henry IV. First Part*, fol. 64.

MEMORY.

MENACE.

Their diriges, their trentals, and their shrifts,
Their *memories*, their singings and their gifts.

Spenser. *Mother Hubbard's Tale*.

Memory, the Great Keeper or Master of the Rolles of the soule, a power that can make amendes for the speed of time, in causing him to leave behinde him those things, which else he would so carry away, as if they had not beene.

Hall. *Works*, vol. i. fol. 677. *The Righteous Mammon*.

Use the *memory* of thy predecessour fairly and tenderly; for if thou dost not, it is a debt will sure be payd when thou art gone.

Bacon. *Essay* 2. p. 60. *Of Great Place*.

— They living cared not to cherishe
No gentle wits, through pride or covetize,
Which might their names for ever memorise.

Spenser. *The Ruines of Time*.

Which to succeeding times shall *memorize* your stories,
To either Country's praise, as both your endless glories.

Drayton. *Poly-olbion*, song 5.

Though of their names in hev'nly records now
Be no *memorial*, blotted out and rais'd,
By their rebellion, from the books of life.

Milton. *Paradise Lost*, book i. l. 367.

The same thoughts do commonly meet us in the same places, as if we had left them there till our returne. For that the mind doth secretly frame to itselfe *memorative* heads, whereby it recalls easily the same conceits.

Hall. *Works*, vol. i. fol. 138. *Holy Observations*, No. 87.

Yet registers of *memorable* things

Would helpe (great prince) to make thy judgement sound

Which to the eye a perfect mirrour brings,

Where all should glasse themselves who would be crown'd.

Stirling. *To Prince Henry*.

And ouer against this *memorandum* (of the king's own hand)
"Otherwise satisfied."

Bacon. *King Henry VII*. fol. 212.

Thus in the soul while *memory* prevails,
The solid power of understanding fails;
Where beams of warm imagination play,
The *memory's* soft figures melt away.

Pope. *Essay on Criticism*, l. 59.

This laying up of our ideas in the repository of the *memory*, signifies no more but this, that the mind has a power in many cases to revive perceptions, which it has once had, with this additional perception annex'd to them, that it has had them before.

Locke. *Of Human Understanding*, book ii. ch. x. sec. 2.

That man who has tears to spend at the *memorial* of a lost friend, but none to shed at the thoughts of a lost innocence, a wasted conscience, and a provoked God, has but too much cause to suspect the truth of his sorrow, and the goodness of his heart.

South. *Sermons*, vol. ix. p. 19.

With *memorandum-book* for every town
And ev'ry post, and where the chaise broke down.

Cowper. *The Progress of Error*.

At length she found herself decay,
Death sent *mementos* every day.

Cotton. *Fable* 5.

ME'NACE, v. } Also anciently written *manace*.
ME'NACE, n. } Fr. *menacer*; It. *minacciare*; Sp.
ME'NACER, } *amenazar*; Lat. *minaciæ*, from *mi-*
ME'NACING, } *nari*, to threaten.
ME'NACINGLY. } To threaten; to denounce evil or punishment.

Tostus wild not leue, bot held on his *menace*.

R. Brunne, p. 64.

And gretly he *manasside* hem that thei schulden not make him knownen.

Wiclif. *Mark*, ch. iii.

And ghe Lordis do the same thingis to hem forghyunge *manassis*.

Id. *Effesis*, ch. v.

And though your grene youthe floure as yet,
In creepeth age alway as still as ston,
And deth *manaseth* every age, and smit
In eche estat, for thir escapeth non.

Chaucer. *The Clerkes Tale*, v. 7988.

And will dispise the sea, *menasyng* with floudes.

Chaucer. *Boecius*, book ii. p. 417.

Now cometh *manace*, that is an open folie; for he that oft *manaceth*, he threteth more than he may performe ful oft time.

Id. *The Persones Tale*.

Whiche is that mortall enemy,
That thou *menacest* to be dede.

Gower. *Conf. Am.* book iii. p. 84.

Suche wordes and *manasshes* abasshed greatly ye cardynals, for they hadde rather a dyed confessours than martyrs.

Lord Berners. *Froissart. Cronycle*, vol. i. ch. 327. p. 511.

They shewed howe the erle gretly *manasshed* the, and send the worde how they shulde neuer haue peace with hym.

Id. *Ib.* ch. 351.

With whose reproach, and odious *menace*,
The knight emboying in his aughtie hart,
Knitt all his forces, and gan soon unbrace
His grasping hold.

Spenser. *Faerie Queene*, book ii. can. 4.

— Though he and his curs'd crew
Fierce sign of battel make, and *menace* high,
Or like the sons of Vulcan vomit smoke,
Yet will they soon retire if he but shrink.

Milton. *Comus*, l. 654.

Setting vpon Verginius *manacingly* they besought him, sometime to take the empire himselfe, sometime to be their spokesman to Caecina and Valens.

Savile. *Tacitus*, book ii. ch. xvii. fol. 78.

— The Trojan threats

The realm with ruin and their ancient seats

To lay in ashes, if they dare supply,

With arms or aid, his vanquish'd enemy:

Thus *menacing* he still pursues the course

With vigour, though diminish'd of his force.

Dryden. *Virgil. Æneid*, book xii.

Is it not experience which renders a dog apprehensive of pain, when you *menace* him or lift up the whip to beat him?

Hume. *On Human Understanding*, sec. 9.

With awful grace superior Godfrey smil'd,
And thus rejoin'd more *menacingly* mild.

Brookes. *Jerusalem Delivered*, book ii.

MENA'GE, v. } i. e. to manage, q. v. The noun
MENA'GE, n. } (also written *manege*) is particularly
MENA'GERY, } applied to—
MENA'GING. } A *menage* for horses, in which

horses are rendered *manageable*, or tractable to the rider or driver; the motion or action or succession of motions to which a horse is *managed* or trained. And see HORSEMANSHIP.

Menage or *menagery* for animals; the place where animals are kept under *management*, the collection of animals so kept.

I find writte in Babio,
Whiche had a loue at his *menage*
There was no fayrer of hir age.

Gower. *Conf. Am.* book v. p. 159.

— The knight, that aye with foe
In fayre defence and goodly *menaging*
Of armes was wont to fight.

Spenser. *Faerie Queene*, book ii. can. 4.

There is a double kinde of *menage*, (as I have heard,) one for service, the other for pleasure.

Hall. *Works*, vol. i. fol. 647. *Quo Vadis*, sec. 13.

He, the rightful owner of that steede,
He well could *menage* and subdue his pride.

Spenser. *Faerie Queene*, book ii. can. 4.

Some people have imagined that the hint of rising pillars in the *manege* was taken from a contrivance of which Eumenes was the author.

Berenger. *Of Horsemanship*, vol. ii. p. 165.

In directing this *manege* the horseman must take care that his aids be perfectly just and exact.

Id. *Ib.* p. 171.

I saw here [at Inspruck] the largest *manege* that I have met with any where else.

Addison. *Remarks on Italy*, p. 296.

MENACE.

MENAGE.

MENAGE. I can look at him [a national tiger] with an easy curiosity, as prisoner within bars, in the *menagerie* of the tower.
Burke. Works, vol. viii. p. 200. On a Regicide Peace.

MENAIS, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*. Generic character: calyx three-leaved; corolla, salver-shaped; berry four-celled; seeds solitary.

One species, native of North America.

MEND, *v.* } Fr. *amender*; It. *amendare*, *emen-*
ME'NDABLE, } *dare*; Sp. *emendar*; Lat. *emendare*,
ME'NDER, } to *amend*, *g. v.*; the Lat. preposition *e*
ME'NDING, *n.* } has been first changed into *a*, and
ME'NDMENT. } then the *a* itself dropped.

To free from deficiency, fault, or blemish; to repair, to correct, to improve, to reform.

By thynking that suche castell werk was nat semyng to religion, in a *mendement* of that trespas, he maked so many minstres of religion, and endowed hem with londes and rentes.

R. Gloucester, p. 451. note.

A man I salte þe make, richely for to lyue,
 Or my Chefe Justice, þe lawes to *mend* and right.

R. Brunne, p. 69.

And is redy to vnderfonge þe to mercy, ȝif þou wilt come to *mendement*.

Id. p. 651. Glos.

Now blessid be God of *mendement* of hele and eke of cure!

The Pardoner and Tapstere. Imputed to Chaucer.

And the workmē wrought, and the worcke *mended* thorow theyr handes.

Bible, Anno 1551. 2 Chronicles, ch. xxiv.

Diligently refourme & *amende* in such as are *mendable*, & those whose corrupte canker no cure can heale cut off in season for corrupting further.

Sir Thomas More. Workes, fol. 925. The Apology.

And the preastes cōsēted to receaue no more moneye of the people: But it shoulde go to the *mendynge* of the temple.

Bible, Anno 1551. 4 Kynges, ch. xii.

Zealous hee was, and would haue all things *mended*,
 But by that *mendment* nothing else he meant
 But to be king, to that mark was he bent.

Mirroure for Magistrates, fol. 355.

But death comes not at call, justice diuine
Mends not her lowest pace for prayers or cries.

Milton. Paradise Lost, book x. l. 859.

Els, be ye sure, dearely shall abyde,
 Or make you good *amendment* for the same:
 All wrongs haue *mendes*, but no *amends* of shame.

Spenser. Faerie Queene, book ii. can. 1.

PAN. Faith, Ile not meddle in't; let her be as she is, if she be faire, 'tis the better for her: and she be not, she has the *mends* in her own hands.

Shakspeare. Troylus and Cressida, fol. 78.

COB. A trade, sir, that I hope I may vse with a safe conscience, which is, indeed, sir, a *mender* of bad souls.

Id. Julius Cæsar, fol. 109.

Salt earth and bitter are not fit to sow,
 Nor will be tam'd and *mended* by the plough.

Dryden. Virgil. Georgics, book ii.

For there can be no retreat for him then, no *mending* of his choice in the other world, no after-game to be play'd in hell.

South. Sermons, vol. ii. p. 21.

MENDA'CIOUS, } Fr. *menteux*; Sp. *mendoso*;
MENDA'CITY. } Lat. *mendar*, lying; from *men-*
dum or *menda*; a fault, an error, or mistake; and, consequently, a falsehood.

Lying; telling or declaring to be true that which is not so; which the teller knows is not so; false.

And that we shall not deny, if we call to mind the *mendacity* of Greece, from whom we have received most relations, and that a considerable part of ancient times, was by the Greeks themselves termed *μύθος*, that is, made up or stuffed out with fables.

Sir Thomas Brown. Vulgar Errours, book i. ch. vi. p. 23.

They are called *mendacious*, lying, because many of them shall be counterfeit.

Sheldon. Mirror of Antichrist, (1616,) p. 63.

In that sense it must have the operation of *mendacity*; there must be a lie told in it.

State Trials, 12 Charles II. John Cook.

ME'NDICANT, *adj.* } Fr. *mendier*, *mendiant*,
ME'NDICANT, *n.* } *mendience*, *mendicité*; It.
ME'NDICANCY, } *mendicare*, *mendicante*, *men-*
MENDICA'TION, } *dicanza*, *mendicità*; Sp.
MENDI'CITY. } *mendigiar*, *mendigante*, *men-*
dicidad; Lat. *mendicare*, from *menda*, a deficiency, a want; and thus, literally, to want, to tell his wants. See Vossius and Martinus.

One who begs, asks, or seeks what he wants or needs; who craves or entreats aid, assistance, or relief from want; who begs or asks alms.

For riches and *mendicities*

Ben cleped two extremities.

Chaucer. The Romant of the Rose, p. 219.

And for there hath ben great discord,
 As many a wight may beare record,
 Upon the estate of *mendicience*,
 I woll shortely in your presence,
 Tell how a man may begge at need,
 That hath not wherewith him to feed.

Id. Ib. p. 220.

Therefore we *mendians*, we sely freres,
 Ben wedded to pouertie and continence.

Id. The Sompnoures Tale, v. 7494.

And but for that, whatever he may vaunt,
 Who knows a monk had been *mendicant*.

Hall. Satire 1. book v.

Suidas is silent herein, Sedrenus and Zonaras, two grave and punctual authors, delivering only the confiscation of his goods, omit the history of his [Belisarius] *mendication*.

Sir Thomas Brown. Vulgar Errours, book vii. ch. xvii. p. 457.

Fast by, a meagre *mendicant* we find,
 Whose russet rags hang fluttering in the wind:
 Years bow his back, a staff supports his tread,
 And soft, white hairs shade thin his palsy'd head.

Savage. The Wanderer, can. 5.

What is station high?
 'Tis a proud *mendicant*; it boasts and begs;
 It begs an alms of homage from the throng,
 And oft the throng denies its charity.

Young. The Complaint. Night.

MENDOZIA, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*. Generic character: calyx of two broad leaves; corolla irregular, tube gibbous, throat closed; nectary double, annular; drupe one seeded.

Two species, natives of Peru.

MENIAL. See **MANY**.

MENIOCUS, in *Botany*, a genus of the class *Tetradynamia*, order *Siliculosa*, natural order *Cruciferae*. Generic character: calyx equal; petals entire; the longer stamens one-toothed; pod elliptic, obovate, compressed; seeds six to eight in each cell, in two series, compressed, emarginate.

A genus allied to *Alyssum*, (from which it differs in the number of seeds,) containing one species, *M. linifolius*, native of Mount Caucasus. Decandolle.

MENISCIUM, in *Botany*, a genus of the class *Cryptogamia*, natural order *Filices*. Generic character: capsules in crescent shape, reticulated lines, nearly parallel to the veins of the fronds; indusium none.

Three species of ferns, natives of the East Indies.

MENISPERMUM, in *Botany*, a genus of the class *Dioecia*, order *Dodecandria*, natural order *Menispermæ*.

MENDA-
CIOUS.

MENI-
SPER-
MUM.

MENI-
SPER-
MUM.
—
MENTAL.

Generic character: male flower, calyx two-leaved; corolla, petals four or six exterior, eight interior; stamens sixteen: female flower, corolla as the male; eight sterile stamens, germens two or three; berry double, one-seeded.

Twenty-four species, mostly natives of the East Indies.

MENONVILLEA, in *Botany*, a genus of the class *Tetradynamia*, order *Siliculosa*, natural order *Cruciferae*. Generic character: leaves of the calyx erect, two of them slightly bagged at the base; petals linear, entire; pod very short, stipitate; style furrowed; seeds ovate, compressed, emarginate.

One species, *M. linearis*, native of Peru.

MENOPON, in *Zoology*, a genus of *Apterous* insects.

Generic character. *Antennæ* four-jointed, mostly concealed, with the capitulum generally subclavate; head broad, depressed, horizontal, semilunar, or trapezoid; mouth beneath; mandibles bidentate, firm, short; maxillary *palpi* rather long, filiform, four-jointed; labial very short, biarticulate; eyes placed on the lateral margin of the head behind the *antennæ*, frequently inconspicuous; *thorax* apterous; *mesothorax* slightly distinct, minute; *abdomen* ten-jointed; *tarsi* straight, formed for running, biarticulate, furnished at the extremity with two nearly straight, divaricating claws, slightly curved at the apex.

The type of the genus is *Pediculus Caponis*, Linnaeus; *P. Gallinæ*, Panza, *Fauna Germ.* fasc. 51. fig. 21. Parasitic upon birds; many species are known, of which six, at least, have been found in England.

ME'NSTRUAL, } Fr. *menstrual*; It. *mensuale*;
ME'NSTRUOUS, } Sp. *mensual*; Lat. *menstrualis*,
ME'NSTRUE. } *menstruus*, monthly, of or pertaining to a month (*mensis*.)

Menstruum, as in the citation from Brown, is used by Chemical Writers for any liquor which is a dissolvent, because its action was, for the most part, as we are told, assisted by a moderate fire during a *month*.

Our vniuersall ryghteousnesses are afore God as clothes stayned with *menstrue*. *Bale. Apology*, fol. 57. col. 2.

The wylde beastes shall go their way, and the *menstruous* wemen shal beare monsters. *Bible, Anno 1551. Esdras*, ch. v.

Note; that the dissents of the *menstrual* or strong waters may hinder the incorporation as well as the dissents of the metals themselves.

Bacon. Works, vol. i. p. 412. *Physiological Remains*.

That women are *menstruant*, and men pubescent at the year of twice seven, is accounted a punctual truth.

Sir Thomas Brown. Vulgar Errors, book iv. ch. xii. p. 262.

Briefly, it consisteth of parts so far from an icie dissolution, that powerful *menstruums* are made for its emollition.

Id. Ib. book ii. ch. i. p. 57.

MENSURA'TION, } From Lat. *mensura*. See
MENSURABI'LITY. } **MEASURE**, *ante*.

Measurement; calculation of bulk or quantity.

The *measure* which he would have others *mete* out to himself, is the standard whereby he desires to be tried in his *mensurations* to all other.

Hall. Works, vol. iii. sec. 2. fol. 628. *The Christian*.

In other words, the common quality which characterizes all of them is their *mensurability*.

Dr. Reid. Essay on Quantity.

MENTAL, } Fr. *mental*; It. *mentale*; Sp. *men-*
ME'NTALLY. } *tal*, from the Lat. *mens*, the mind, *q. v.* *Mental* is one of those adjectived signs which we have borrowed from the Latin, without borrowing the unad-

jectived sign. *Mens* is from Gr. μένος, *impetus*, sc. **MENTAL**. *animi*, and hence, *animus*. Μένος, from μέν-ειν, *manere*, to remain. See Vossius and Lennep. See also **MEMORY**, *ante*.

Of or pertaining to the *mind*.

Without all *mental* representations, conceive of your God purely, simply, spiritually; as of an absolute being, without forme, without matter, without composition; yea an infinite, without all limit of thoughts.

Hall. Works, vol. i. fol. 317. *Epist.* 7. dec. 4.

So deep the power of these ingredients pierc'd,
Even to the inmost seat of *mental* sight,
That Adam now enforc't to close his eyes,
Sunk down and all his spirits became intransit.

Milton. Paradise Lost, book xi. l. 418.

The continuation of these two motions of the earth, the annual and diurnal, upon axes not parallel, is resolvable into nothing but a final and *mental* cause, or the τὸ βίλλιστον, —, because it was best it should be so; the variety of the seasons of the year depending thereupon.

Ray. Of the Creation, part i. p. 49.

I pretended not to determine, whether or no body or matter be so perpetually divisible, that there is no assignable portion of matter so minute that it may not at least, *mentally*, (to borrow a school-term) be further divided into still lesser and lesser parts.

Boyle. Works, vol. i. part ii. p. 401. *The History of Fluidity*, &c.

Motion upwards, on the other hand, and perhaps still more, whatever is able to oppose an adequate resistance to a superincumbent weight, or to a descending shock, furnishes, for reasons hereafter to be explained, the most appropriate images subservient to that modification of the sublime, which arises from a strong expression of *mental* energy.

Stewart. Philosophical Essays, essay 2. ch. iii. p. 397. *On the Sublime*.

MENTHA, in *Botany*, a genus of the class *Didynamia*, order *Gymnospermia*, natural order *Labiatae*. Generic character: calyx five-cleft; corolla nearly regular, four-cleft, the broadest segment emarginate; stamens erect, distant.

More than twenty species, natives of the Northern hemisphere; twelve are natives of England. The most remarkable are, *M. pulegium*, the Penny-royal, *M. odorata*, the Bergamot Mint, and *M. piperata*, the Pepper-mint. *Eng. Bot.*

ME'NTION, *v.* } Fr. *mentioner*; It. *mentionare*;
ME'NTION, *n.* } Sp. *mentar*; from the Lat. *mentio*, from *mentum*, the supine of the obsolete *meno*, whose preterite is *memini*. See Vossius (*in v. Commentum*) and Martinius.

To place before the *mind*; to name or nominate; in speech or writing.

David makeþ *mention*.

Piers Plouhman. Vision, p. 198.

I say he bade, they shulden contrefete
The pope's bulles, making *mention*
That he hath leve his firste wif to lete.

Chaucer. The Clerkes Tale, v. 8620.

Of Jupiter and of Juno, Ouide
Maketh in his boke *mention*,
Howe thei felle at dissencion.

Gower. Conf. Am. book iii. p. 78.

Ye do, & I, agree, y^t such thinges as ar *mencioned* in the gospel spokē by Christ vnto Saint Peter & other apostles & disciples, wer not only sayde to thesēlf, nor only for thesēlf, but to the for their successours in Christ's flocke, & by the to vs al, y^t is to wit euery mā as shal apperteine to his part.

Sir Thomas More. Workes, fol. 141. *A Dialogue concerning Heresies*.

Yea, begge a haire of him for memory,
And dying, *mention* it within their willes,
Bequeathing it as a rich legacie
Vnto their issue.

Shakspeare. Julius Cæsar, fol. 112.

—
MEN-
TION.

MEN-
TION

MENTZ.

O ancient Powers of air and this wide world,
For much more willingly I *mention* air,
This our old conquest, than remember hell,
Our hated habitation.

Milton. Paradise Regained, book i. l. 45.

And wheresoever my fortunes shall conduct me,
So worthy *mentions* I shall render of you,
So vertuous and so fair.

Beaumont and Fletcher. The Custom of the Country, act i. sc. 1.

'Tis true, I have been a rascal, as you are,
A fellow of no *mention*, nor no mark.

Id. The Prophetess, act v. sc. 3.

Let them, I say, be made almost from their very cradle to hate it,
[Rebellion,] name and thing; so that their blood may rise, and
their heart may swell at the very *mention* of it.

South. Sermons, vol. v. p. 22.

Now, the *mention* [of God's name] is vain, when it is useless;
and it is useless, when it is neither likely nor intended to serve any
good purpose.

Paley. Moral Philosophy, vol. ii. book iv. ch. ix. p. 97.

MENTZ, MAYENCE, or, as the Germans write it, MAINZ, is at present the Capital of the Grand Duchy of HESSE Darmstadt, but it was formerly the seat of an Archbishop, who was also Grand Chancellor of the Empire, and the first of the three Ecclesiastical Electors. The seal of the Empire and its archives were in his custody, and he was the President, or rather the Director of the Electoral College. The last who enjoyed these titles and prerogatives was Karl von Dalberg, created Archbishop of Mentz in 1802. The political stability, however, of the Archbishops had suffered severely in the preceding year from the Peace of Luneville, which gave up their territories on the left bank of the Rhine to the French. The changes which subsequently took place in Germany abolished the dignity of Elector and the other high offices connected with the ancient Constitution of the Empire. The Archiepiscopal See was transferred from Mentz to Ratisbon, stripped however of the revenues, rights, and ample dominions, which it formerly possessed. The territories of the Ecclesiastical Elector were distributed among the neighbouring Powers, the ancient estates of the See being divided between Bavaria, Hesse Darmstadt, and Nassau, while the other territories were seized by Hesse Cassel, Prussia, and Hanover.

Mentz is situated on the left bank of the Rhine a little below its junction with the Maine, in one of the most beautiful and fertile districts of all Germany. A bridge 2100 feet in length, formed by forty-seven boats, several of which are furnished with mills, crosses the river to Castel, or CASSEL, which is united to Mentz as a fortified outpost. The city itself is one of the strongest fortifications in Europe, and one of the four reserved by the Confederation. It is consequently garrisoned by Austrian and Prussian troops. But the authority of the Governor and Commandant is confined to the fortifications and the barracks; the city being under the sole dominion of Hesse Darmstadt. The skill of the engineer has been exhausted in fortifying Mentz, and the circuit of the works, including the great bastions, which defend a city of 27,000 inhabitants, is not much less than seven miles. But within, the city is far from being regular or well constructed. The houses, built of reddish sandstone, give it a sombre appearance; the streets are narrow and winding, only two or three, among which is the *Grosse Bleiche*, having an air of elegance. Of its twenty-seven Squares, the *Place Verte*, a fine parade planted with trees in the citadel, alone deserves notice. The Cathedral is remarkable for its size and antiquity; it was injured in the siege of 1793, and the towers are

VOL. XXV.

still in ruins. The treasures and the fine library it contained have been long since dispersed, and many of the monuments within it have been destroyed. The Church of St. Ignatius, with a ceiling painted by eminent artists, is esteemed a model of architectural beauty. The Hotel, of the Teutonic Order, is remarkable as having been for some time the residence of Napoleon. But the building which deserves most attention is that which contains the three Cabinets of medals, the Museum of Natural History, and a Library of 80,000 volumes. The Museum of Roman antiquities, consisting of monuments found for the most part in the neighbourhood of Mentz, is said to be the richest on this side of the Alps. On the site of the modern city the Roman General Drusus built the Fort of *Maguntiacum*, thirteen years before Christ. The monument called the *Eichelstein*, on the citadel, is supposed by Historians to have been raised to the founder of the place. A Roman aqueduct, the remains of which with fifty-nine pillars may be seen not far from the adjoining village of Zahlbach, is ascribed to the same Drusus. Napoleon formed here a free haven, with a handsome quay erected at a considerable expense. The trade of the place was reduced very low by the last war, but is now beginning to revive. The annual exportations fall very little short of two millions of quintals of merchandise, and the quantity imported is nearly equal. Two annual fairs are also held here, each of them lasting fourteen days. The commerce in wine alone is supposed to bring in 2,700,000 florins annually. The celebrated vineyards of Hockheim are at a very little distance from the town; all the hills surrounding the basin in which Mentz is situated, are covered with vineyards of uncommon luxuriance; these form the limits of an extensive plain clothed with an exuberant vegetation; the river, 1500 feet wide, flows Northward with a rapid current, and on its borders stands the city, with its dark buildings, citadel, ramparts, bastions, and ancient towers. Beyond the vineyards, to the North and South, mountains rise in the distance, and complete the rich and interesting picture.

Mentz, from its great antiquity and the importance of its situation as a frontier town, holds a conspicuous place in German History. From the irruptions of the Vandals in the beginning of the Vth century till the year 1797, when it surrendered to the French, it has been peculiarly exposed to the calamities of every war in which the Empire was engaged. It is also the birthplace of Guttenberg, to whom is attributed the discovery of the Art of Printing; and the house in which he was born is still shown among the curiosities of the place. But that Art, which indubitably holds the first rank among all that contribute to the improvement of the human race, has been cultivated with little fruit in the place which gave it birth, and Mentz cannot boast of the learning or genius of her sons. The Archbishopric of Mentz was founded, according to some authors, at the commencement of the IIId century of the Christian Era; its spiritual authority at one time extended over Bohemia. Mentz is still the seat of a Bishop, whose rights and extent of prerogative are not as yet, we believe, finally determined. Latitude 49° 59' N. Longitude 8° 10' E.

MENTZELIA, in *Botany*, a genus of the class *Polyandria*, order *Monogynia*, natural order *Onagra*. Generic character: calyx five-leaved; corolla, petals five; capsule inferior, cylindrical, many-seeded.

Two species, natives of South America.

MENTZ.

MENT
ZELIA.

MENURA. **MENURA**, Shaw, Tem. In *Zoology*, a genus of animals belonging to the family *Dentirostres*, order *Passeres*, class *Aves*.

Generic character. Beak more wide than high at its root, straight, inclined at the point, which is notched, ridge distinct; nasal pit large and extending far forward; nostrils in middle of the beak, oval, large, and covered with membrane; legs slender, tarsus twice as long as the middle toe, which together with the other two toes are nearly of equal length, the outer united to the first joint, the inner cleft; claws as long as the toes, broad, convex above, and blunt; wings short and concave, the first five quills graduated, the next four the longest, but of equal length with each other; tail-quills very long and of different forms.

The place assigned to this genus varies according to different authors; some have placed it among the Gallinaceous order, next the *Megapodii*; by Vieillot it is made to precede the genus *Opisthocomus*, but Cuvier considers it to belong to the Passerine birds, notwithstanding its size, from its toes being completely divided except the first joint of the outer and middle toe, and from its near approximation to the Thrushes in its triangular beak. It is very remarkable on account of the form of the tail presenting the appearance of a lyre, in consequence of the curvature, like the letter S, of the two outer rétrices. There is but a single species known.

M. Superba, Lath. *Superb Menura*. About the size of a hen Pheasant; the head of the male somewhat crested; general colour, above brown, the greater part of the wings inclining to rufous, as does also the front of the neck from the chin to the breast, but the other under parts brownish-ash, becoming paler towards the vent; the tail consists of sixteen feathers, the webs of which are loose and resemble those of the greater Bird of Paradise, (*Paridisæa Major*), but the vanes are placed at a quarter of an inch distant each, these are twelve in number and more than two feet long; besides there are two slender feathers rising from the centre of the tail above, which reach considerably beyond the others and curve at their extremities, are fully webbed on the outer side, but on the inner furnished only with short vanes an eighth of an inch long; the outer feather on each side is somewhat shorter than the others, but the webs are fully connected, at the base about an inch wide, gradually increasing from that point to the extremity where they are full two inches broad and considerably curved; the outer web pale brown and narrow; the inner wing very broad inclining to grey, but from the middle to the edge fine rufous, marked with sixteen seemingly darker curved lines, but which, when closely inspected, are perfectly transparent; the ends of the feathers dusky black fringed all round with white; thighs feathered to the knees; legs scaly and rough, furnished with strong claws curved much like those of a fowl or turkey; beak and legs glossy black. The female not at all crested; tail cuneiform, the longest feathers nineteen, the outer eleven inches long, and webbed like birds in general; colour of the plumage deep brown; belly inclining to ash; quills and tail darker than the rest. It is a native of the Blue Mountains in New Holland, and is known among the English colonists at Port Jackson by the name of the *Wood Pheasant*. It prefers retired districts and remains perched on the trees during the day, leaving them only morning and evening to feed.

See Latham, *General History of Birds*; Cuvier, *Règne Animal*.

MENYANTHES, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*. Generic character: corolla hirsute; stigma two-cleft; capsule one-celled.

Five species, natives of Europe, the East Indies, and North America. *M. nymphoides* is a beautiful aquatic, native of England.

MENZIESIA, in *Botany*, a genus of the class *Octandria*, order *Monogynia*, natural order *Rhododendræ*. Generic character: calyx one-leaved; corolla of one petal, ovate; filaments inserted into the receptacle; capsule superior, four-celled, seeds numerous, oblong.

Three species, natives of Europe and North America. *M. polifolia* is the *Erica Daboecia* of Eng. Bot.

MEPHITIS, Cuv.; *Skunk*, Pen. In *Zoology*, a genus of animals belonging to the tribe *Digitigrada*, family *Carnivora*, order *Sarcophaga*, class *Mammalia*.

Generic character. Incisive teeth six above and the same number below, of the latter the second on each side placed rather behind the others; cuspid long, conical, and apart; molar, four above, the first two or false molar conical and compressed, the third or carnivorous tooth widened on its inner edge by a tubercle, the fourth, or tubercular, square, and having four tubercles on its crown; five below, the first three conical and compressed, the fourth, or carnivorous, increased on the inner edge by two tubercles, the fifth small; snout shorter than the skull; ears small and rounded; body covered with long fur; tail long or short; feet five-toed; soles hairy; falcular claws, those of the fore feet the longest, and fit for digging.

The animals forming this genus have a general resemblance to the *Putorii*, except that they carry the body higher; their false molar teeth are similar to that genus, and their carnivorous to the genus *Meles*. They are remarkable for ejecting a most intolerably fetid odour, which is their best safeguard against the attacks of other animals. They are predaceous and live in burrows.

M. Putorius, Cuv.; *Viverra Put.*, Gmel.; *Striated Weasel*, Pen.; *Striated Skunk*. About the size of the European Polecat; it has small rounded ears; the general colour is black, marked on the back and sides with five parallel, longitudinal, white lines, one of which extends along the ridge of the back to the tail, and of the others, two run along each side, the higher of which runs a little upon the tail, which is black, long, and very bushy towards its extremity which is tipped with white. They are found from Pennsylvania to Louisiana, and are there known indifferently by the name of Polecat or Skunk. They climb with great ease, feed on fruits, insects, birds, and their eggs, and are great destroyers of poultry. From the horrible stench which they emit, the French call them *Enfans du diable*, and *Bêtes puantes*, as the Swedes name them *Fiskatta*. They are stated not to emit this smell except when pursued or terrified, and it is so excessive that it renders the animal almost impregnable, as few others, except dogs bred for the purpose, dare encounter it.

M. Chincha, Cuv.; *Viverra Mephitis*, Gmel.; *le Chinche*, Buff.; *Skunk*, Pen.; *White-tailed Skunk*. General colour brown more or less deep, marked on the shoulders and belly with two little white spots; forehead streaked longitudinally with white; on each side of the back a broad and longitudinal white band; tail white, but sometimes black. Is found from Hudson's Bay to Peru, where it is called *Chinche*, and in Peru, *Conepatl*, or Boy's little Fox.

—
MERCE-
NARY.

M. Javanensis, Desmar. ; *le Telagon*, F. Cuv. ; *Teledu* of the Javanese. This animal forms Horsfield's genus *Mydaus*, but it differs from the *Mephites* only in the shortness of its tail ; it is about fourteen inches long ; the fur consists of long, delicate hairs silky at their base, and closely set, so as to produce great warmth ; the colour blackish-brown, varying in intensity on different parts of the body, except a white streak tinged with yellow extending from the top of the head along the back and tail ; the tail is not above half an inch long, but the hairs on it are of an inch length. The *Teledu* is a native of Java, and confined exclusively to the mountains, the elevation of which is more than 7000 feet above the sea, being unknown in the lower districts. It burrows in the ground with its nose, like a Pig, leaving small ridges of mould. It forms its dwelling at a slight distance below the surface in the black mould, of a globular form, several feet in diameter, which it makes perfectly smooth and regular, the approach to it is by a subterranean avenue six feet in length, the entrance to which it covers with twigs and leaves. During day, it remains like the Badger in its hole, but at night proceeds in search of insects and their larvæ, and of earthworms, of which it is especially fond.

See Linnæi *Systema Naturæ* a Gmelin ; Pennant, *History of Quadrupeds* ; Horsfield, *Zoological Illustrations of Java*.

ME'RCANTILE, } Fr. *mercantil*, merchantly,
MERCANT'NTE. } merchantlike. Cot. See MER-
CHANT. *Marcantant* ; It. *mercantile*. The latter (the It.) is frequent in old plays for *merchant*. Steevens.

And O! how this (deare prince) the people charmes,

Who flock about thee oft in ravish'd bands,

To see thee yong, yet manage so thine armes,

Have a *mercuriall* mince and martiall hands.

Stirling. *A Parænesis to Prince Henry*.

Mercurialists are solitary, much in contemplation, subtle, poets,
philosophers, and musing much about such matters.

Burton. *Anatomy of Melancholy*, p. 190.

It cannot be said, as in the former cases (wherein a part only
of the metal is *mercurified*) it may be, that the obtained quicksilver
consists of the more solid and ponderous parts of the metal.

Boyle. *Works*, vol. i. p. 641. *The Producibleness of Mercury*.

It remains, that I perform the promise I made, of adding the
ways of *mercurification* (as chymists speak) above referred to, as
delivered by Paracelsus, Helmont, and Lully.

Id. *Ib.* vol. i. p. 643.

But his mind being more martial than *mercurial*, he applied
himself to sea-service.

Wood. *Athenæ Oxonienses*, vol. i. fol. 336.

Pigott being a more forward and *mercurial* man got glory of it
among most scholars.

Wood. *Fasti Oxonienses*, vol. ii. fol. 209.

Thus tickling, lying evasion, with several other such like car-
dinal virtues, are a sort of properties pertaining to the practice of
the law, as well as to the *mercurial* profession.

P. Whitehead. *The Gymnasiad*, book i. note v. 37.

But if *mercurial* scribblers pant for fame,

Those I inspire, and Nonsense is my name.

Blacklock. *The Genealogy of Nonsense*.

MERCURIUS, as Festus says, *de mercibus*; whence
the Romans called all those who throve in business
Viri Mercuriales. Hesiod has contented himself with Hesiod.
mentioning the parentage of this God, and the appoint-
ment which he held in Olympus:

Ζηνι δ' αὖ Ἀτλαντὶς Μαίη τέκευ κύδιμον Ἑρμῆν
Κήρυκα θανάτων. Theog. 938.

To this, in his *Opera et Dies*, he adds, that on the forma-
tion of Pandora, Jupiter required that Mercury should
endow that anomalous birth with the mind of a Trull and
the manners of a Pickpocket:

Ἐν δὲ θύμῳ κυνίων τε νόον καὶ ἐπίκλοπον ἦθος
Ἑρμείην ἦναι διὰ κροτοῦ Λαγρίφοντον. 67.

Homer, on the contrary, in his *Hymn to Mercury*, one
of the most agreeable pieces transmitted to us from
antiquity, has entered largely into the first occurrence
of Mercury's infancy. Jupiter, it seems from this
account, lodged Maia in a cave, and used to visit her
nightly while Juno was asleep, till she gave birth to a
boy whose feats were soon to be the astonishment of the
Immortals. He was born at daybreak, at noon he
played on the lyre, and before night he committed a
forray on some cattle in the neighbourhood. Jumping
out of his cradle almost so soon as he was placed within
it, he determined to go in quest of Apollo's oxen, but
as he quitted the cave for that purpose he picked up a
tortoise which was feeding quietly before its mouth.

Homer's
Hymn.

MER-
CURY.MER
CURY

Smiling at this harmless animal, he assured it that it would be far more useful if dead than if alive; and in order to put his assertion to a sure test, he carried the tortoise back into the cave, killed it, and very artificially manufactured its shell into a musical instrument by the help of some split reeds and sheep's tendons; and then practising a tune or two, chanted to its accompaniment an extempore song, (*ἐξ αὐτοσχέδιος*), about the loves of his father and mother, his own birth, the Nymphs, the tripods, and the kettles which he observed about his cavern. Then placing the lyre in his cradle, and feeling very hungry, he resumed his first intention, and went to look about him for food towards dusk, like an experienced sheep-stealer, *οἷά τε φῶτες Φηληταὶ διέπουσιν*. The herds of Apollo were tended on one of the mountains of Pieria, and hence the little Thief carried off fifty head, practising a stratagem which Cacus employed afterwards with like success; namely, driving the beasts tail foremost, and himself walking backward after them; a trick which must have been most tedious in execution, and the detection of which, it may be thought, could scarcely require much sagacity, for the owner might be supposed likely in the first instance to track the retrograde footmarks. As another precaution, however, the tiny robber threw away his shoes, and made himself a kind of sandals with green boughs, which left a very perplexing mark by trailing along the sand.

An old hedger in the neighbourhood was the only person who observed these proceedings, and the Godling advised him to be both deaf and blind in regard to them;

Καὶ τε ἰδὼν, μὴ ἰδὼν εἶναι, καὶ κωφὸς ἀκούσας.

Before dawn he had gained the Alpheus with his ill-gotten booty, and having allowed the cows a good feed off the pleasant pastures on the lotus-bearing banks of that river, he stalled them in its neighbourhood. Two were destined for the spit, and for that purpose the boy having lighted a fire in a great hole, killed, skinned, quartered, and roasted his beef with the dexterity of a veteran buccaneer. He then hastened back to Cyllene, and regained his cave without encountering God, Man, or Dog, just at sunrise; lifted the latch softly, crept on tiptoes to his cradle, wrapped himself up in his baby-linen, and with an air of the most infantine simplicity began to play with the bed-clothes with one hand, and his tortoise-shell with the other. His mother, however, taxed him with his roguery, and placed before him in strong colours the probable vengeance of Apollo. To this remonstrance he answered that he was not to be addressed like a Baby, nor to be frightened at a Mamma's scolding; that it was little worth while for them to sit starving in a cave apart from all the other Gods, without attempting to better themselves; and that for his own part he was ambitious of honour, and resolved to be a captain of Robbers. As for Apollo, if he should think proper to come after him, he would give him something worse to think of, for he would make his way to the great Temple at Python, and carry off with him all its wardrobe, furniture, and treasure, while his mother, if she so pleased, might look on.

Apollo, in the morning, having discovered the abduction, first told his mishap to the hedger. The Cows, he said, were all gone, and what was very odd, (*ὁ δὲ περὶ θαῦμα τέτυκται*), a bull who pastured alone, and four watchdogs, who ought to have been better guardians, were left behind. The old man answered cautiously

enough, that it was not easy to recount distinctly every thing which one might happen to see; that there were many travellers in those parts, some good and some bad; so that it was difficult to recognise every individual who went by; that he had been working the day before till sundown, and certainly had seen a boy, but he could not rightly tell who the boy was, who had a stick in his hand with which he was tending some cows, and who walked backwards, and not altogether in a straight line. Apollo did not gain much information from this statement, and he was yet more puzzled, when, soon afterwards, he observed the tracks of his oxen, and the strange marks which had been left by Mercury's very oddly constructed sandals; they resembled, as he said, no slot, nor footing with which he was acquainted, neither man's, nor woman's, nor wolf's, nor bear's, nor lion's, nor bull's. Still he went on his way till he came to Cyllene, and descended into Maia's cave. The little Mercury, who was just washed, tired with his night expedition, and preparing for a nap, suspected Apollo's errand so soon as he saw him, shrank under his clothes, and drew up head, hands, and feet into as narrow a compass as possible. The visitor, however, detected him, and having first, with a very ill-bred curiosity, ransacked the cave, and unlocked, opened, and pryed into three closets which he found filled with nectar and ambrosia, gold and silver, blue and white gowns, (*φοινικόεντα καὶ ἄργυρα εἴματα*), and other such property as usually belongs to Goddesses, he began a very angry speech.

"Little boy in the cradle, tell me where my cows are, or I shall not go away quietly. If you don't tell me, I shall certainly kick you to Tartarus, where you shall stay in the dark without Papa or Mamma, and with very little company." Mercury's answer was quite in character. "Son of Latona, why have you spoken so sharply, and why do you come here to seek your cows? I have never seen, nor heard, nor can tell you any thing about them. A pretty sort of cattle-stealer I should make; I have other things to do, to sleep and suck, and be washed and swaddled. What nonsense it is to think that such a baby as I am could run abroad after cows! I was born only yesterday, and my feet are much too tender for the rough, hard roads. If this does not satisfy you, I will swear a big oath by my Father's head, that I have neither stolen your cows, nor know of any body who has done so—whatever, indeed, cows may be, for as yet I have only heard of such things by name." He finished with a sly wink and a long knowing whistle, implying (in modern parlance) that it was all *gammon*.

Μάκρ' ἀποσυρίζων ἄλλον ὥς μῦθον ἀκούων.

Apollo laughed heartily, prognosticated that the boy by and by would be King of the Pickpockets, caught him up in his arms and carried him out of the cave, but was glad enough to get quickly rid of a burden which the Baby well knew how to make sufficiently disagreeable to the bearer. In the end they agreed to appeal to the decision of Jupiter, and the two Gods accordingly stood in full conclave to plead before the Olympic throne. Apollo first told his story, and the Boy replied with many protestations of truth, sincerity, and innocence, much in the same strain as he had excused himself before; and spoke of his elder brother's threats, of his own incompetence to the fact charged against him, of his affection for his father, and of his confidence that

MERCURY.

such a parent would not allow the strong to trample unjustly upon the weak. Jupiter was highly amused at this ingenious defence, reconciled the contending parties, and ordered Mercury to restore the Cows. Mercury accordingly led Apollo to Alpheus, and there by exhibiting his skill on the lyre, so far delighted the God of day that he obtained the remaining Cows in willing exchange for his new musical discovery. The Poem concludes with a vow of eternal friendship between the two Deities, Apollo having first received an assurance from the Baby thief that his property of all kinds should for the future be considered inviolate.

Ovid.

This story is told with the happiest playfulness, and if it be from the pen of Homer, a question which this is not the place to moot, it exhibits the Father of Epopee, as no less skilful in light and graceful humour, than in the more sustained majesty of the *Iliad*. Ovid has slightly treated the leading circumstances of this tale in order to introduce the transformation of Battus into a Touchstone. Battus is the name given to the old man who witnessed the theft, who was bribed to silence by the present of a Cow, and broke his promise when tempted by a Bull. But Mercury outwitted him, for mistrusting his honesty the God himself returned in another shape, verified his suspicions, and punished the traitor accordingly. (*Metam.* ii. 687.) Apollodorus (*Bibl.* iii. 10.) writes much to the same purpose as Homer, excepting that he makes the tortoise be found *after* the plunder of Apollo's cows, whose sinews are employed in stringing it; Apollo purchases not only the lyre thus invented, but a flute also, for which he barter his golden rod, and the power of divination by dice, (the art of *cogging*), henceforward peculiar to Mercury and his votaries.

Apollodorus.

Lucian.

Lucian has borrowed Homer's leading thought and expanded it with his own characteristic humour. In one of the *Dialogues of the Gods*, Vulcan asks Apollo if he has yet seen Maia's new born baby, a pretty smiling child whose face already gives promise of future excellence. "Excellence indeed," replies the God of day! "can any good be expected from a Baby already more cunning than Iapetus; who has stolen Neptune's trident, and the sword of Mars, to say nothing of my own bow and arrows? Look well to your own tackle Master Vulcan, and see whether there be not something missing." Vulcan accordingly discovers that he has lost his pincers, which he is assured he will find somewhere in the cradle of the little thief, who must have planned some of his larcenies while yet in the womb. Then adds Apollo, he chatters plentifully already; yesterday he tripped up Cupid, and gave him a fall in wrestling, and stole her cestus from Venus while she was kissing him. Moreover he smuggled away Jove's sceptre, and would have got clear off with his thunderbolt also, if it had not been a little too heavy and fiery. Maia says, that he gets out of Heaven by night, and goes down to the Shades below to see if any booty is to be picked up there. All this is very playfully told, but Lucian in another place, his *Dialogue on Dancing*, sinks into a frigid and heavy allegory when he explains the golden rod with which Homer has invested Mercury, to close in slumber, or to awaken mortal eyes, to be no other than Dancing. "Ὁρχήσεις, τὰ ὄμματα θέλγουσα καὶ ἐξηγορέναι ποιοῦσα καὶ ἐπεγείρουσα τὴν διάνοιαν πρὸς ἕκαστα τῶν ὄρωμένων." It is in a much more agreeable vein that in another *Dialogue* between Mercury and Maia, Lucian introduces the God complaining of the egregious hardships

of his condition. "First," he says, "I must rise sometimes to put the celestial banqueting-rooms in order; then I have to arrange the council-chamber, and to stand by Jove awaiting his orders, which I am carrying up and down all day long; and when at last I come back hot, dusty, and tired, it is my business to put his ambrosia upon table; nay till he got his new minion cupbearer, I had also to hand nectar round. Then even by night I get no rest, but I must convey Souls to Pluto and assist at their sentences; as if my daily toils, wrestling, playing the town-crier, and prompting orators in their speeches, were not quite enough. Why, Leda's twins are allowed alternate repose, and the lazy bastards of those two mere women, Semele and Alcmena, loll at their pleasure at Jove's feasts, while I, sprung from Maia, the daughter of Atlas, am forced to wait upon them. Here I am just returned from carrying a billet-doux to Cadmus's daughter at Sidon, and forthwith without a moment's breath, I am sent off to Argos to look after Danae, and to touch by the way in Bœotia to see what Antiope is about. Faith, but I have a great inclination to refuse." "Away with you, my son," replies Maia prudently, "both to Argos and Bœotia, do all that your father bids while you have health and strength, and do it quickly, lest you encounter a good cudgelling; for lovers now and then are somewhat irritable."

MERCURY.

There is a curious passage relating to Mercury in Callimachus the *Hymn of Callimachus to Diana*, explanatory of chus. the nursery discipline of Olympus. Whenever any of the little celestial Girls are naughty, their mothers call the Cyclopes to come and eat them; but the abode of those dirty semi-deities not being in Heaven, Mercury steps out of a corner with his face blacked, and frightens the children into good behaviour. The Oceanides, says the Poet, cannot look at the smithies in Sicily and Corsica with their grim attendants without terror, nor is this a matter of wonder:

οὐκ ἴμισις κίνης δὲ καὶ αἱ μάλα μνηστέοντες
αὐδίσσας ἀφρικτὶ μακάρων ὀρώσι θυγατέρας,
ἀλλ' ὅτι κουράων τις ἀπειθήα μητρί τινος,
μήτηρ μὲν Κύκλωπας ἦν ἐπὶ παιδὶ καλίστρῳ,
"Ἀργὴν ἢ Στίροπην" ὃ δὲ δάματος ἐκ μυχάτοιο
ἔρχεται Ἑρμῆος σποδῇ κεχρημένος αἰδῇ.
αὐτίκα τὴν κούρην μορμύσσεται ἢ δὲ τιτύσῃς
δύνη ἔσσι κόλπους, θιμῆν ἑπὶ φάσι χεῖρας.

64.

This picture, as we need not say, is exquisitely drawn. It must be admitted, however, that the reading *Ἑρμῆος* is not unreasonably doubted, and if, as has been suggested, *ἔξείης* be substituted, Mercury is altogether out of the question, and one of the Cyclopes who is invoked is himself the bugbear. Spanheim, in commenting upon the above passage, remarks that Mercury is seldom represented by the Ancients with any but a smiling and graceful countenance. Æschylus, indeed, Æschylus, in an obscure passage, calls him *νύχιος*, (*Choeph.* 716.) but the epithet appears to apply not to the general attributes of the God, but to the dreadful occasion on which his assistance is required by Orestes. In the same Drama the Scholiast tells us that the Poet has employed Mercury to personify Death itself, (612.) but it rather seems that he is introduced in his more common character, ὁ πομπαῖος, as the guide of departed Souls to the Infernal regions. Lycophron gives him three heads, and Plutarch speaks of elderly Mercuries Plutarch. without hands and feet, and wrapped in stiff bandages; these, however, he admits to be no more than allegories, implying that old men ought to abstain from Politics. (*An seni sit gerenda Respublica, ad fin.*)

MERCURY.

The same writer in a different Tract, (*Conjugalia Præcepta*), explaining another allegory of the Ancients, reinvests the God with the bloom of youth, and places him next to Venus, because, as he says, the happiness of Matrimony is much increased by pleasant and confidential conversation. On the whole, the agreeable representations of Mercury are not only most consistent with his general character, but most authorized both by Poets and Artists.

Cicero.

Cicero (*de Nat. Deor.* iii. 22.) has sufficiently admitted the inconsistency and confusion of Pagan Mythology in his *historiette* of Mercury. There are, he says, five Deities of that name. 1. The son of Cœlum and Dies, who is sculptured with little regard to decency, on account of a passion which he once cherished for Proserpine. Those ithyphallic statues of *Ερμῆς Δολιχὸς*, are said by Herodotus (ii. 51.) not to have been borrowed from Egypt, but to have been adopted by the Athenians from the Pelasgi, and through the former People to have become common in Greece. 2. The son of Valens and Phoronis; this is a subterraneous Deity, (*χθόνιος*), and he is known also as Trophonius. Of this Parentage we may remark that Valens is plainly the same as *Κράτος*, and as *Κράτος* and *Βία* are the two ministers of Jove's vengeance, whom Æschylus introduces to fasten Prometheus to Caucasus, so Mercury and Vulcan are employed by Lucian for the same purpose. 3. The son of Jove and Maia, who begot Pan on Penelope by violence, under the form of a Goat; an adventure which he had so utterly forgotten by the time his son had grown up, that it required a close narrative of the fact by the Demigod, to establish his claim to filiation, Mercury irreverently styling him *υἱὸς τράγος τινὸς μοιχεύσαντος*; and even when in the end he admitted his own paternity, feeling so ashamed of the horns, tail, and cloven feet of his progeny, that he begged him as an especial favour never to call him "Father" in the hearing of a third person. (Lucian, *Dial. Deor.*) 4. The son of Nilus, whom the Egyptians think it profane to name. 5. The Thoth of the Egyptians, who gives his name to the first month of that People, who fled to Egypt from the Pheneatæ because he had killed Argus, and who taught the Court in which he took refuge Laws and Letters. Of this Thoth, or Theuth, Plato speaks in his *Phædrus*. The Ibis was consecrated to him, and he was the inventor of numbers, Arithmetic, and Astronomy. Anubis also seems to have shared the attributes of Mercury among the Egyptians. (See Jablonski, *Pantheon Ægyptiacum*.)

Diodorus Siculus.

To the Egyptian Hermes, Diodorus Siculus (i. 16.) ascribes the invention of articulate speech, of nomenclature, of Letters, and of Religion. He was the first who distributed the stars systematically, and observed the nature and harmonious relations of sounds. He invented wrestling and dancing in time, and a Lyre with three chords, symbolizing by their tones the three seasons of the year, the acute for Summer, the grave for Winter, the mean for Spring. The Greeks named him *Ερμῆς*, because he taught them *ἐρμηνεύειν*. Osiris employed him as Hierogrammatist; and to him, not to Minerva as the Greeks fable, is mankind indebted for the olive.

MERCURY.

The same writer, speaking afterwards of the Mythology of Crete, (v. 75.) states that those Islanders attribute to Mercury the origin of Heralds and their customary badge, the Caduceus, (*κηρύκειον*), and that from their utility to both parties in negotiations of Peace, Mercury is named *common*. (*κοινὸς*, *communis*.) Weights and measures, the method of increasing commercial gains, not always quite honestly, wrestling, and the lyre, are among this God's inventions. His name is derived as above, not however because he first taught speech, since he only corrected, improved, and refined it, but because from his clearness of exposition he was selected as Herald, messenger, and interpreter of the Gods.

The common attributes of Mercury are 1. the *Pelasmus*, or winged cap, which sometimes, in the most ancient Works, has only two feathers stuck in it, and occasionally is without either wings or feathers; 2. the *Talaria*, or feet-wings, which in like manner can be removed at pleasure; and which in a pretty group in the Justiniani Gallery at Rome, engraved by Montfaucon, (vol. i. pl. lxxviii. fig. 4.) are being fastened on by a little Cupid; 3. the CADUCEUS. Sometimes he carries the *Harpè*, (*ἄρπη*), a curved sword, with a straight spike continued from the point at which the curve begins, with which he slew Argus, and which he also lent to Perseus on great occasions. Not unfrequently also he has a purse in his hand.

The cubical blocks which the Greeks and Romans placed on their high roads and elsewhere, were most frequently terminated by a bust of Mercury, and therefore were called *Ἑρμαῖ*; they bore also an appendage, to which we have before alluded, and which, says Mr. Gifford, "though those good old times saw nothing extraordinary in it, might perhaps be thought a little singular at present." We have already mentioned the God as sometimes represented without legs and arms, and Servius recounts an explanatory legend, that certain shepherds one day finding him asleep, amputated those limbs in retaliation for some wrong which he had committed. These *Ἑρμαῖ*, if crowned with the bust of any other God, received a compound name, and hence we read of *Hermathenè*, *Hermapollon*, *Hermeros*, *Hermacles*, *Hermharpocrates*, *Hermanubis*, &c. and now and then a Hermes was terminated by the bust of some illustrious man, many of which still exist. It was the mutilation of these Statues (if they may be so called) of Mercury which brought so much obloquy on Alcibiades. (Thucyd. vi. 27, &c.) In Rome they were indifferently named *Hermes* and *Termini*, or *Termiles*, (whence the modern *Termes*.) which although of distinct origin appear in the end to have been confounded with them.

Hermes, or Termes.

Nil nisi Cecropides truncoque simillimus Herma

exclaims Juvenal, (viii. 52.) with nobly indignant spirit when speaking of a degenerate Patrician; and Mr. Gifford's paraphrase will explain the purpose of the figure:—

While thou in mean inglorious pleasure lost
With "Cecrops! Cecrops!" all thou hast to boast,
Art a full brother to the crossway stone
Which clowns have chipped a head of Hermes on.

MERCY.

ME'RCILESS,

ME'RCILESSLY,

ME'RCILESSNESS,

ME'RCIFY.

See *ante* AMERCE, and the Quotation from Rastall. Fr. *mercie*; It. *merce*; contracted from *misericordia*, or from *miseresce*, say different Etymologists, or adds Skinner, it is from the Lat. *merx*. And from the Lat. *merx* it has no doubt proceeded through the Low Lat. *merciare*, *amerciare*. Nor. Fr. *amercier*, to *amerce*, *merce*, or *mercy*, to impose or

exact a recompense, to impose a fine: and, as fines were accepted in commutation for life forfeited to the law, or over which power had been obtained in battle; to *mercy*, to grant *mercy*, that is, to grant that *mercy* or *fine* should be imposed and received as a ransom for life forfeited, was benefit or beneficence to the party to whom the punishment of death was remitted; and was ascribed to benevolence or willingness to spare and save, to clemency, kindness, compassion, pity. See Caseneuve in Menage. Further, to *cry mercy*, in our old Chronicles, is to *cry ransom*; which was acceded to or not "according as it fortune to fall in the hands of them that were cruel or courtesse." Courtesy, aided by covetousness, commonly prevailed, for *mercy* paid in ransom was an important portion of the booty in the constant predatory *scrimysshes*, recorded (by Froissart especially;) there was nothing gained by slaughter. Thus to *cry mercy*, was (consequently) to beg for life; and to grant *mercy*, was to spare life; and, as this forbearance was attributed wholly to courtesy, and covetousness allowed no share in it,—hence the general application of *mercy*, to

A willingness to spare and save, to pardon and forgive; to kindness, clemency, compassion, sympathy, pity.

Minshew produces from an old Statute of Henry VI. the expression, "to be in *grievous mercie* of the king, i. e. to be in hazard of a great penaltie." And yet by our Law Writers *mercie* is retranslated into the Lat. *misericordia*.

Haue *merci* of hym ich bidde.

R. Gloucester, p. 58.

And all dismayd through *merciellesse* despaire
Him wretched thrall unto his dongeon brought,
Where he remaines of all unsuccour'd and unsought.

Spenser. Faerie Queene, book iv. can. 8.

MERCY.

MERCY. [Thou shalt be gathered to me] out of the company of infidels, of
 — cruell and bloody persecutors, who like lions and leopards have
 MERE. tyrannized over thee and *mercilessly* torne thee in peeces.
Hall. Works, vol. i. fol. 234. *Salomon's Song of Songs Paraphrased*.

(Though a poore oppressor (as he is unkindly) so he is a monster
 of *mercilessness*.)

Id. Ib. vol. ii. fol. 315. *Sermon Preacht at Westminster, April 5, 1628.*

As deliverance out of temptation is undoubtedly one of the
 greatest *mercies* that God vouchsafes his people in this world, so
 there is nothing that more enhances and sets off the greatness of
 the *mercy*, than the critical time of God's vouchsafing it.

South. Sermons, vol. vi. p. 227.

But whether bread or fame be their end, it must be allowed, our
 author, by and in this poem, has *mercifully* given them a little of
 both.

Pope. Letter to the Publishers.

We shall still find, that such as are most *merciless* to dying sin-
 ners, in stopping up the passages of repentance and salvation
 against them, do yet relax this rigour, and walk by another rule
 themselves; unless, perhaps it may more properly be said, that
 they walk by no rule at all.

South. Sermons, vol. ix. p. 212.

And the said William Kent being solemnly called doth not
 come, nor hath prosecuted his writ aforesaid. Therefore it is con-
 sidered, that the same William and his pledges of prosecuting, to
 wit, John Doe and Richard Roe, be in *mercy* for his false complaint.

The mislaier of a *meere* stone is to blame. But it is the unjust
 judge, that is the capitall remover of land-markes, when he defineth
 amisse of lands and property.

Bacon. Essay 56. p. 316.

The descendants of the brave nobility of Holland had, more
 than all the canals, *meeres*, and inundations of their country, pro-
 tected their independence.

Burke. Works, vol. viii. p. 69. *A Letter to a Noble Lord.*

MERE, } Fr. *mere*; It. and Sp. *mero*; Lat.
 ME'RELY. } *merus*, which, Vossius thinks, is either from
 VOL. XXV.

μερος, *solus*, or from *μείρειν*, to divide or separate:
 for *merum* is that which is divided or separated from
 every thing else, and therefore, alone.

Sole, alone, pure, unmixed: simple, absolute.

Lo one whom later age hath brought to light,
 Matchable to the greatest of those great,
 Great both by name, and great in power and might,
 And meriting a *mere* triumphant seate.

Spenser. Sonnet 3.

Who is apparently troublesome and contentious, and without
 reasonable cause, upon a *meer* will and stomach doth vex and
 molest his brother, and trouble the country.

Hooker. Ecclesiasticall Politic. Preface, p. 80.

But now our joys are *mere* and unmixed; for that we may do our
 duty and have our reward at once.

Taylor. Ductor Dubitantium. Epis. Ded. sig. A.

— Those that *meerely* talke, and never thinke,
 That live in the wild anarchie of drinke,
 Subject to quarrell only.

Ben Jonson. To one that asked to be sealed of the Tribe of Ben.

Fie on't? O fie, fie, 'tis an unweeded garden
 That grows to seed: things rank and grosse in nature
 Possesse it *meerely*.

Shakspeare. Macbeth, fol. 154.

And [the ant] is reported by some to bite off the germen of
 them, least they should sprout by the moisture of the earth, which
 I look upon as a *meer* fiction.

Ray. Of the Creation, part i. p. 156.

As for the rest of the planets, their particular uses are to us un-
 known or *meerly* conjectural.

Id. Ib. p. 76.

Their [the heathen] religion being *meerely* ceremonial and poli-
 tical, never pretended to reach the heart, or to inspire it with any
 sincerity or warmth of affection towards the Deity.

Porteus. Sermon 1. vol. i. p. 1.

MERENDERA, in *Botany*, a genus of the class
Hexandria, order *Trigynia*. Generic character: flower
 enclosed in a spathe; corolla bell-shaped, six-parted;
 anthers straight, arrow-shaped; capsules three, con-
 nected at the base.

One species, *M. bulbocodium*, native of Barbary.

MERETRICIOUS, Lat. *meretricius*, from *meretrix*,
 a harlot, and that from *merere*, to deserve or acquire by
 service. See HARLOT.

As a harlot,—viciously alluring or enticing; viciously
 adorned or decked.

And therefore thei thinke it impossible to be any knauerye or
 errours in so holy fathers with their *meretrik* mother.

Joye. Expositio of Daniel, ch. xii.

The depraved custom of change, and the delight in *meretricious*
 embracements, (where sinne is turned into art) maketh mariage a
 dull thing, and a kind of imposition, or tax.

Bacon. New Atlantis, p. 23.

She shall return to her wonted trading and shall exercise her
 deceitful and *meretricious* traffick with all the nations of the world.

Hall. Hard Texts. Isaiah, ch. xxiii. ver. 17.

On sure foundations let your fabric rise,
 And with attractive majesty surprise,
 Not by affected *meretricious* arts,
 But strict harmonious symmetry of parts.

Roscommon. An Essay on Verse.

If Nature on your cheek bestows
 A bloom, that emulates the rose,
 Or from some heav'nly image drew
 A form Apelles never knew,
 Your ill-judg'd aid will you impart
 And spoil by *meretricious* art.

More. Fable 7. The Goose and the Swan.

MERGE, } Lat *mergere*, to sink in the sea,
 ME'RGER, } (*mare*).
 ME'RSION. } To sink, to plunge, to overwhelm, to
 swallow up.

MERGE. The *mersion* also in water, and the *emersion* thence, doth figure our death to the former, and receiving to a new life.

MERGUS.

Barrow. Works, vol. i. fol. 545. Of Baptism.

Whenever a greater estate and a less coincide and meet in one and the same person, without any intermediate estate, the less is immediately annihilated; or in the law phrase is said to be *merged*, that is, sunk or drowned in the greater. But they must come to one and the same person in one and the same right; else, if the freehold be in his own right, and he has a term in right of another (*en autre droit*) there is no merger.

Blackstone. Commentaries, book ii. ch. xi.

Their object is to *merge* all natural and all social sentiment in inordinate vanity.

Burke. Letter to a Member of the National Assembly.

MERGUS, from the Latin *mergo*, I dive, Lin, Tem.; *Goosander*, Pen. In *Zoology*, a genus of animals belonging to the family *Lamellirostres*, order *Palmipedes*, class *Aves*.

Generic character. Beak of moderate length, slender, straight, roundish, with the base thicker, and the cere covered; tip of the upper mandible much curved and hook-like; lower mandible smaller than the upper; edges of both mandibles toothed like a saw, and the teeth inclined backward; nostrils lateral, elliptical, longitudinal, covered by a common membrane, and perforated through and through; legs short, strong, turned out, retracted towards the belly; tarsus a third shorter than the middle toe; three toes in front completely webbed, the outer the longest, hind toe free, about the length of one joint of the others, and resting on its tip; wings moderately large, the first two quills nearly of the same length, the second rather the longer.

The Goosanders bear great resemblance to the Geese, from which, however, they are distinguished by the narrowness and hooking of the bill; they live upon the water, and swim with their bodies deeply sunk and their heads only above the surface; they dive and swim under water with great ease, and employ their wings as oars; their gait is unsteady on account of their legs being set so far back, but they fly with great quickness and for a long time. They feed on fish and amphibious animals. They live in the cold regions, and are noticed in the more temperate climes only during Winter, when they appear in great numbers. They moult only once a year, the old males in Autumn, and the females in Spring: the young males before their first or second moult resemble the females.

M. Merganser, Lin.; *le Harle*, Buff.; *Goosander*, Pen. About two feet four inches long, and three feet two inches wide; the head and upper part of the back black, glossed with green; the lower part of the neck, chest, belly, wing-coverts, and outer scapulars, white tinged with yellowish-rose colour, (which tinge, however, is soon lost after the bird has been stuffed and set up;) the inner scapulars and upper part of the back black, the lower part and tail ash; primaries black, great coverts edged with black; beak deep red, its hooked extremity black; iris reddish-brown or red; legs deep orange; the male has also a short, large, black tuft on the back of the head. The female is known commonly as the *Dun Diver*, or *Sparling Fowl*, and differs from the male in having the tuft long and slender, the head and upper part of the neck ferruginous, the throat white, the lower part of the neck, back, wing-coverts, chest, sides, and thighs whitish-ash; belly yellowish-white; beak dull red; feet yellowish-red; the membranes ashy. The first year's male birds hardly differ from the female, but after the first moult some blackish spots are seen on the throat, the red on the neck be-

comes tinged with a deeper colour, black feathers appear on the head, and white upon the wing-coverts. The Goosander builds among loose stones on the banks of rivers, among bushes, and in hollow trees, and lays twelve or fourteen white eggs, pointed at both ends. It is native of the Arctic regions, but during Winter migrates Southward, and is common in England, Holland, France, and Germany.

M. Serrator, Lin.; *le Harle Huppé*, Buff.; *Red-breasted Merganser*, Pen. About one foot nine inches long, and two feet seven inches wide; the head and upper part of the neck changeable to greenish black, below which a broad, white collar encircles the neck; chest reddish-brown, marked with black spots; belly white; at the junction of the wings with the body there are five or six broad, white spots, edged with black; the escutcheon on the wing white, and divided by two transverse, black stripes; upper part of the back and scapulars deep black, lower part of the back, rump, and thighs marked with zigzag, ashy lines; irides and beak red; legs orange. The male has the crest very long and slender. The female has the head, crest, and neck reddish-brown, the throat white, front of the neck and chest varied with grey and white, upper parts and sides deep ash; the white escutcheon on the wing marked by only one transverse, ashy band. Though mostly native of the Arctic regions, they build also in Scotland.

M. Albellus, Lin.; *le Petit Harle Huppé, ou la Piette*, Buff.; *Smew*, Pen. About eighteen inches long and twenty-six wide; on the head is a long crest, white above, black beneath; on each side of the beak a large, oval, greenish-black spot extending nearly to the eyes, and another similar longitudinal one on the nape; head, neck, and all the under parts pure white, crossed at the lower part by two semilunar, black lines, curving forward; inner wing-coverts, those along the ridge of the wing, the greater quill-feathers, scapulars, and back black; sides and thighs zigzagged with ash; beak and legs bluish-ash, webs black. The female, usually known as the *Lough Diver*, is less than the male; the top of the head, cheeks, and nape reddish-brown; throat, upper part of the neck, and belly white; lower part of the neck, chest, sides, and rump light ash; upper parts and tail very deep ash; wings varied with white ash and black. The first year's birds resemble the female; after the first moult, the black spot on the side of the beak is seen, the head and nape are varied with some whitish and white feathers, the upper part of the back with black and ash, and the black bars begin to appear: it is then the *Minute* or *Red-headed Smew* of authors. Found in the same districts as the preceding.

M. Cucullatus, Lin.; *le Harle Huppé de Carolina*; *Hooded Merganser*, Pen. About sixteen inches long; the head ornamented with a large, upright, circular crest, commencing at the base of the bill and ending on the nape, white, and edged with black, and above the eyes streaked with some shorter black feathers; forehead, cheeks, neck, back, and tail black; under parts white, sides rusty-yellow, crossed by dusky lines. In the female the crest is short and rust-coloured, the head and neck ash, mottled with black; back, tail, and wings dusky, the latter crossed with a white streak; under parts white. Plentiful about Hudson's Bay; appears in the Northern parts of America, as low as Virginia and Carolina, in November, and retires in March.

M. Brasiliensis, Vieill.; *Brasilian Merganser*. The feathers forming the crest are, in this species, two inches

MERGUS

MERGUS. long, narrow, and with decomposed webs, like those of the Night Heron they are placed on the back of the head, but are vertical and immovable; upper parts of the body brownish, under parts white, spotted on the sides; beak and legs blackish. Native of Brazil.

See Linnæi *Systema Naturæ* a Gmelin; Cuvier, *Règne Animal*; Temminck, *Manuel d'Ornithologie*; Vieillot, *Galerie des Oiseaux*.

MERIA, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* with the basal joint long, nearly cylindric, in the males thirteen-jointed, in the females twelve-jointed, and shorter than the head and *thorax* united; the first segment of the latter or collar transverse, quadrate, the hinder margin straight; anterior wings not folded longitudinally, with the submarginal areolets detached from the apex; legs short, the posterior strongly ciliated; maxillary *palpi* short, articulations subequal; mandibles entire, not dentate.

Type of the genus, *Bethylus Latreillii*, Fabricius; *Tiphia tripunctata*, Panzer, *Faun. Germ. fasc. 47. fig. 20.* Two species, natives of Europe.

MERIANA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*. *Generic character:* calyx five-cleft, bell shaped; corolla, petals five, inserted into the calyx; stamens declining; capsule five-celled, many-seeded.

Two species, natives of Jamaica.

MERIDIAN, *adj.* } Fr. *meridien*; It. and Sp. *meridiano*; Lat. *meridianus*,
MERIDIAN, *n.* }
MERIDIONAL, } from *meridies*, i. e. *medidies*,
MERIDIONALLY. } mid-day. *Ipsium meridiem, cur non meridiem? Credo quod erat insuavius.* Cicero, *Orator. c. 47.* See the Quotation from Brown.

Mid-day; when the sun is the highest; hence highest or supreme point;—when the sun to those on this side the Equator is in the South; hence, Southern.

And tables as well for the government of the clocke, as for to finde the altitude *meridian*.

Chaucer. *The Astrolabe*, p. 454.

Phebus hath left the angle *meridional*.

Id. *The Squieres Tale*, v. 10577.

For of *meridians* and parallels,

Man hath weav'd out a net, and this net thrown
 Upon the heav'ns; and now they are his own.

Donne. *Funeral Elegies. An Anatomy of the World. The first Anniversary.*

The true *meridian* is a major circle passing through the poles of the world, and the zenith or vertex of any place, exactly dividing the east from the west.

Sir Thomas Brown. *Vulgar Errors*, book ii. ch. ii. p. 68.

His grieved look he fixes sad,
 Sometimes towards heav'n and the full-blazing sun,
 Which now set high in his *meridian* towre.

Milton. *Paradise Lost*, book iv. l. 30.

In this gate none pass
 The vigilance here plac'd, but such as come
 Well known from heav'n; and since *meridian* hour
 No creature thence.

Id. *Ib.* book iv. l. 581.

In the circinations and spherical rounds of onyons, the circles of the orbes are oftentimes larger, and the *meridional* lines stand wider upon one side than the other.

Sir Thomas Brown. *Cyrus' Garden*, ch. iv. p. 62.

Who [the Jewes] reverentially declining the situation of their Temple, nor willing to lye as that stood; doe place their beds from north to south, and delight to sleep *meridionally*.

Id. *Vulgar Errors*, book ii. ch. iii. p. 76.

Christ here discover'd himself after his rising, not to all his apostles at once, nor to any of them with the same evidence at first,

but by several ascending instances and arguments; till in the end he shone out in his full *meridian*, and made the proof of his resurrection complete in his ascension.

South. *Sermons*, vol. v. p. 158.

The *meridional* (which they of the Ocean call south, and those of the Mediterranean Sea, *Zeppo Giorno*) commonly is rainy, and boisterous, and in the same city whereof I speak, it is wholesome and pleasant.

Boyle. *Works*, vol. ii. p. 611. *Experimental History of Cold*, tit. xviii.

MERIONES, from the Greek *μηρός*, a thigh, Illig. *Hereen*. In *Zoology*, a genus of animals belonging to the family *Claviculata*, order *Rodentia*, class *Mammalia*.

Generic character. Incisive teeth two in each jaw; the front of the upper marked with a longitudinal groove; no cuspid; molar tritorial; nose sharp; lip cleft; ears not half so long as the head; tail moderate size, slightly ringed, covered with close hair; fore legs short, four-toed, hind legs three times as long as the fore, five-toed; claws moderate, fit for digging.

This genus, established by Illiger, and taken from the *Dipi*, is the same as Desmarest's *Gerbillus*, and is found in the sandy and hot Countries of the Old World.

M. Indicus, Illig.; *Dipus Indicus*, Hardwich; *Bay Hereen*. About the size of the common house Rat, head large in proportion to the body, with rounded nose and fine long whiskers; eyes large and shining; general colour bright bay, mixed on the upper with streaks of a darker tint; head and cheeks lighter, under parts white. Are very numerous on the plains in Hindustan, in dry stations, and at a distance from any water; very destructive to the grain, of which they lay up stores in their neighbouring burrows. They come out at night, never by day, and run fast, but oftener leap, making bounds of four or five yards assisted by their tail. When eating they sit up like the Squirrel, and hold their food in the fore paws. A tribe of Hindûs called Kunjers plunder the Heeren's hoards, and often within the space of twenty yards find nearly a bushel of grain.

M. Tamaricinus, Illig.; *Mus. Tam.* Pallas; *Tamarisk Hereen*. About six inches long; space round the nose, eyes, and behind the ears white; sides of head and neck hoary; back and sides yellowish-grey, under parts white; tail cinereous, and ringed with brown. Found in the lower salt-marshes about Saritschikofka, on the Lower Yack or Ural, where they form deep burrows beneath the tamarisk bushes, having two entrances. They feed principally on succulent, maritime plants.

M. Meridianus, Illig.; *Dipus Merid.* Gmel. Rather less than the Bay Hereen; greyish above, white beneath, with a longitudinal reddish-brown line extending along the belly; limbs white; tail nearly as long as the body, greyish-fawn colour. Found in the hot and sandy deserts bordering the Caspian Sea.

M. Pyramidum, Illig.; *Gerbillus Ægyptius*, Desmar. *Egyptian Hereen*. About the size of a Mouse; upper part of the body light yellow, under pure white; tail, rather longer than the body, brown, and terminated with long hairs. Found in burrows in the neighbourhood of the Pyramids and of Memphis.

Three other species also are given belonging to this genus, one from Senegal, another from the Cape of Good Hope, and a third from Nubia.

See Illiger, *Prodromus Mammalium*; Linnæi *Systema Naturæ* a Gmelin; Hardwich, *Linnæan Transactions*, vol. viii.; Cuvier, *Règne Animal*; Pennant, *History of Quadrupeds*.

MERIO-
NETH-
SHIRE.Boundaries,
&c.

MERIONETHSHIRE, a County of North Wales, 43 miles long, and 38 broad, is bounded on the North by Caernarvonshire and Denbighshire, on the East by Montgomeryshire, on the South by Cardiganshire, and on the West by Cardigan Bay. It is called *Meironydd* by the Welsh; a name derived, it is said, from Meirion, the grandson of Cunedda, a noble British Chieftain, who came into Wales in the Vth century, for the purpose of setting it free from the bands of piratical Irish, by whom the country had been overrun in quest of plunder; and who afterwards obtained this and other parts of it, as a reward due for his services. The shore is in some places bold and rocky, and in others flat and sandy; but is everywhere so violently beaten against by the waves of the Irish Sea, which the West wind drives furiously into Cardigan Bay, that according to British Historians a whole *cantery*, or hundred, called *Cantr'r Gwaelod*, twelve miles in length, and about five in breadth, has been swallowed up and lost. Similar submersions are known to have taken place on the coasts of Cornwall and other exposed maritime districts. The general aspect of the County is wild and mountainous, exhibiting lofty peaks, rugged precipices, romantic vales, lakes, streams, and cataracts.

Mountains.

CADER IDRIS, which we have separately described, is the most noted mountain of this County. The Arrans, Fowddy and Benllyn, the Arrenig, Moelwyn, and Manod, with a profusion of inferior hills, intersected by vales, interspersed with woods, and traversed by streams, all belong to this County. By a recent trigonometrical survey, Arran Fowddy was found to be 2965 feet above the level of the sea, while Cader Idris is only 2914. By the same survey the highest Arrenig was found to be 2809 feet, and Cader Ferwyn 2563 feet. These mountains belong to the primitive formation, and consist chiefly of slate, porphyry in mass, interspersed by veins of quartz, granite, felspar, mica, and the rocks usually associated with them. The lower range is composed of slaty rocks, and may be distinguished from those of the primitive formation by the evenness and almost squareness of the individual hills, and by the flowing outline of the chains. This County is not productive of coal, and possesses only one limestone bed, at Gwerclas near Corwen, where 50,000 bushels are burned annually. It has no iron-ores, and though there is no want of lead and copper veins, they have not been found in general profitable to the miner. The copper mines at Buddugre and Clogian are those only which are wrought with spirit and profit.

Rivers.

The Dee, the principal river of this County, is formed by the union of two streams, which have their sources in Arran-ben-Llyn. It enters the lake which the Welsh call Llyn Tegid, the English Pimble Meer, passes Bala, and flowing through Denbighshire, reaches Chester, and discharges itself into the sea by a wide estuary, about fifteen miles below that city. In its course through Merionethshire, the Dee forms some fine waterfalls; that especially called Rhaiadrhu, or the Black Cataract, from the colour of its waters, is a double fall of forty feet in height, over a series of rugged, black rocks, covered in many places with white lichens. The Maw, or Mawddach, rises about the centre of the County, and flowing due South to Dolgellen, receives the Eden, and afterwards turning Westward, falls into the Irish Sea at Abermaw, or Barmouth as it is called by the English. The Dovey, or Dyfi, rises at the feet of a ridge, through which is the celebrated pass of *Bwlch y Groes*; after-

wards it forms the boundary line between this County and that of Cardigan, and then falls into the sea below Aberdovey. The Glaslyn and the Dwy'rid unite their streams, and flow to the sea by the Traeth mawr, and Traeth bychan. Many other torrents and rivulets issue from the heights, and water the valleys. Besides the Llyn Tegid, near the town of Bala, and the Tabyllyn at the foot of Cader Idris, there are Llyn Elider, Llyn Tecwyn, Ucha, and Ista, Llyn y Cwm bychan, Llyn Arrenig, and several other lakes and pools.

MERIO-
NETH-
SHIRE.

Lakes.

Davies, in his agricultural survey of North Wales, says that the County contains 430,000 acres, of which only 146,000 are enclosed. Many of the unstratified rocks are entirely destitute of a covering of vegetable earth; on the surface of the inferior hills the soil is extremely thin and poor, and in some places so steep as not to admit of being cultivated. A large portion of the valleys also consists of peat earth forming bogs and turbaries. Very considerable improvements have been made, however, at different times, by draining and embanking, to improve particular tracts of the County. Extensive plantations have likewise been made of late years by the great proprietors. The cultivated lands occur chiefly on the sea-coast, and on the extremities of the County. The rearing of cattle, sheep, and goats, and the produce of the dairy, are the principal objects of attention in turning the district to a profitable account. Woollens from the native sheep form the manu-

Soil.

Improve-
ments.Manufac-
tures.

Population.

By the census of 1801, the population was 29,506 individuals; in 1811, it was 30,924; and in 1821, 31,382. The County is divided into the Hundreds of *Ardudwy*, *Edernion*, *Estimaner*, *Penllyn*, and *Tal-y-Bent* and *Mowddwy*, and contains thirty-seven parishes, seven market towns, and several villages.

BALA has been separately described.

Barmouth, at the mouth of the river Mawddach or Maw, is built partly on a sandy bottom, but chiefly upon the sloping side of a lofty rock, so that rows of houses stand on shelves or terraces above one another. The lower part of the town is almost choked up with sand, which fills every passage, and in wet weather it is extremely dirty and unpleasant. The harbour is at Ynis Brawd, an island in the Maw. Fishing is the staple employment of the inhabitants, who amount to 1600 persons. A number of small vessels belong to the port, and woollen goods are manufactured in the town, which is much frequented as a bathing place. Distant 8 miles from Dolgellen, and 222 from London.

Towns.

Barmouth.

Corwen, on the Southern bank of the Dee, was successively the retreat of Owen Gwynedd and of Owen Glendour. This is a small town, but is a great resort of anglers. Its white-washed church is singularly situated under a rock at the feet of the Ferwyn mountains. Population 1169. Distant 10 miles from Llan-gellen, and 202 from London.

Corwen.

Dolgellen, or Dolgelly, is built at the base of Cader Idris. Though small it is in some respects the principal town of the County; owing to the Summer Sessions being held at it, to its being a resort of strangers, and to its being the centre of the woollen manufacturing interest of the district. It is situated in a fertile vale, between the rivers Arran and Mawddach, and surrounded by high mountains, in many parts clothed with wood. The streets are irregular, and the houses in general ill built. The Church is a handsome structure, and, like many other Welsh churches, it has

Dolgellen.

MERIONETH-SHIRE. no pews; the County Gaol, a substantial prison, is built at some distance from the town: Population 3064. Distant 46 miles from Caernarvon, and 212 from London.

MERIONETH-SHIRE. *Harlech*, on the North-Western coast of Cardigan Bay, was once a place of some importance, but has now become a small village, filled with wretched and meanly built houses, with a population of 500 individuals. It is in the parish of Llanfair, and is, with its Castle, built upon a cliff which overhangs a marsh on the sea-coast. The Castle is a square building, each side measuring about 120 feet; and has at every corner a round tower. It was defended on the East by a deep fosse; and its situation on an almost perpendicular rock, rendered it impregnable in every other part. The ancient name of this fortress was Twr Bronwen, so called from Bronwen, the *white-necked* sister of Bren, Duke of Cornwall, and afterwards King of Britain. It was afterwards called Caer Collwyn, from the name of one of the fifteen Tribes of North Wales. It is said to have been built about the year 330, by Maelgwn Gwynedd, Prince of North Wales; and it is generally believed that Edward I. founded the present fortress upon the ruins of the old British Castle. Edward I. made the town a free borough, and confirmed to it several grants of land and other emoluments. The Assizes of the County, which used to be held here, are now transferred to Bala and Dolgellen alternately. Distant 24 miles from Caernarvon, and 230 from London.

Festiniog. *Festiniog* is remarkable on account of the beauty of the vale in which it stands. The hills which bound it are well wooded, and it is watered by a multitude of small streams which discharge themselves into a beautiful river, which at the bottom of the valley receives the tide, and forms the estuary called Traeth Bychan. The famous pass of Tan-y-bwlch enters into this vale. Population 1168.

Towyn. *Towyn* is built upon a sandy beach of a coarse schistose stone found in the neighbourhood, and is much frequented during the bathing season. Population 1941.

Carlisle, *Topographical Dictionary*; Pennant, *Tour in Wales*, 1784; Aikin, *Journal of a Tour through Wales*, 1797; Rev. W. Bingley, *Tour round North Wales*, 1800; *Beauties of England and Wales*, vol. xvii.

MERIONUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* broken, twelve-jointed, moderate, slightly attenuated, the scape clavate reaching to the eyes, the basal joints of the funiculus rather long, obconic, the remainder short, somewhat nodose, the club oblong, ovate; head produced anteriorly into a rostrum, which is deflexed, rather short, thickened, a little rounded, and somewhat stouter at the apex; eyes rounded, depressed; *thorax* somewhat transverse, truncate anteriorly and posteriorly, with the sides rounded, channelled beneath; *scutellum* minute; *elytra* obovate, emarginate at the base within, the shoulders prominent anteriorly, the suture towards the apex, carinate-elevated; body oblong, apterous; legs moderate, stout, equal; *femora* clavate, unarmed; *tibiae* rounded, anterior sinuated within, the apex armed with a minute hook; *tarsi* slightly dilated, five-jointed, the penultimate joint bifid, biunguiculated.

Type of the genus *Cur. obscurus*, Fabricius; *C. murinus*, Bonndorf, *Curculiones*, vol. ii. p. 37. pl. i. fig. 31. Three species, of which two are indigenous.

MERIT, *v.*

MERIT, *n.*

MERITABLE,

MERITEDLY,

MERITORY,

MERITORIOUS,

MERITORIOUSLY,

MERITORIOUSNESS,

MERIT-MONGER.

Fr. *meriter, merite*; It. *MERIT. meritare, merito*; Sp. *meritar, merito*; Lat. *meritum*, past participle of *merere*, from Gr. *μερίρ-ειν, dividere*, whence *μέρος*, a part or share; *meritum ferè partium est, sive labor, sive pretium spectetur. Vos-*

Merit, the part or share, *sc.* deserved, *i. e.* earned, gained, by service. Hence to *merit* generally is,

To deserve or earn, gain, or acquire by service; to possess or obtain a right or claim to by service, or in return for service; for any thing done or performed, good or ill. And *merit*,

Desert; *sc.* for good or ill done, for good or ill qualities attained or possessed.

For if thou yeuest it in lening,
I hold it but wretched thing:
Therefore yeue it whole and quite,
And thou shalt haue the more *merite*.

Chaucer. *The Romant of the Rose*, p. 188.

Ayenst glotonie the remedie is abstinence, as sayth Galien: but that I holde not *meritorie*, if he do it only for the hele of his body.

Id. *The Persones Tale*, p. 164.

Wherof the perfite of her lawe
Fro then forth hem was withdrawe,
So that thei stonde in no *merite*.

Gower. *Conf. Am.* book v. p. 136.

How *meritory* is thilke dede
Of charitee to clothe and fede
The poore folke.

Id. *Ib. Prologue*, p. 11.

And yet he bode the do it, and they were boude to obay, and *meryted* and deserued by their obedience.

Sir Thomas More. *Workes*, fol. 496. *The Second Part of the Confutation of Tyndall*.

They bring argumentes to proue that it is more *meritorious* to eate fish then flesh.

Tyndall. *Workes*, fol. 171. *The Obedience of a Christian Man*.

Here ye perceiue good readers, that to belieue *meritoriously*, so as it shal be rewarded with saluaciõ, may not be fayth alone, but fayth with woorking loue.

Sir Thomas More. *Workes*, fol. 1050. *Aunswere to the Poysoned Boke*, &c.

Like as these *meritemongers* doe which esteeme themselves after their *merits*, think themselves perfect in so much that their workes shall not onely helpe themselves but others.

Latimer. *Sermon 3. Upon the Lord's Prayer*.

Extol not riches then, the toil of fools,
The wise man's cumbrance if not snare, more apt
To slacken vertue, and abate her edge,
Than prompt her to do ought may *merit* praise.

Milton. *Paradise Regained*, book ii. l. 456.

— All power
I give thee, reign for ever, and assume
Thy *merits*.

Id. *Paradise Lost*, book iii. l. 319.

VAL. Ay, ever, ever; and the people generally are very acceptive, and apt to applaud any *meritable* work.

Ben Jonson. *The Case is Altered*, act ii. sc. 4.

The other half shall be employ'd in prayers,
That *meritorious* charge I'll be at also
Yet to confirm you christian.

Beaumont and Fletcher. *The Woman's Prize*, act iv. sc. 4.

Fear not the anger of the wise to raise;
Those best can bear reproof, who *merit* praise.

Pope. *Essay on Criticism*, l. 583.

There Philaretus had the curiosity to visit the place on which stood Piur, a pleasant little town once esteemed for its deliciousness, but now much more and more *meritedly* famous for its ruin.

Boyle. *Works*, vol. i. *The Life*, p. xxiii.

MERIT.

Merit is an unpardonable piece of popery, with respect to men as well as to God, and to the rewards of this world, as well as of the next.

South. Sermons, vol. v. p. 387.

MER-MAID.

They were not only egregious hypocrites, and gross violators of the law, but they also faced down the world, that they did well and *meritoriously* in those very things, in which their hypocrisy and violation of the law did consist.

Id. Ib. vol. iv. p. 122.

Our Saviour himself told his disciples, that men should kill them, and think that in so doing, they did God service. So that here (we see) was a full opinion and persuasion, and a very zealous one too, of the high *meritoriousness* of what they did.

South. Sermons, vol. ii. p. 447.

Had they no ground for hope, but *merit*, that is to say, could they look for nothing more than what they should strictly deserve, their prospect would be very uncomfortable.

Paley. Sermon 19. p. 285.

MERLE, Fr. *meurle*; It. *merla*; Sp. *murla*; Lat. *merula*. The Blackbird. *Merula* quod *mera*, id est, sola volitat. Var. de Ling. Lat. book iv.

Where thou were wont full merily in May
To walke, and take the dewe by it was day
And heare the *merle* and mavis many one.

Chaucer. The Complaint of Creseide, p. 297.

The *merl* upon her myrtle perch
There to the mavis sings,
Who from the top of some curl'd birch
Those notes redoubled rings.

Drayton. The Description of Elysum.

ME'RMAID, } *q. Marina puella*, a *marine maid*,
ME'RMAN. } or *maid of the sea. Mereman, marinus homo.*

But it was wonder like to bee
Song of *mermaidens* of the see,
That for hir singen is so clere:
Though we *mermaidens* clepe hem here,
In English, as is our vsaunce,
Men clepe hem *sereins* in France.

Chaucer. The Romant of the Rose, p. 176.

When downe the weedy Trophies, and herselfe,
Fell in the weeping brooke, her cloaths spread wide,
And *mermaid-like*, awhile they bore her vp.

Shakspeare. Hamlet, fol. 276.

And as for the *mermaidens* called Nereides, it is no fabulous tale that goeth of them: for looke how painters draw them, so they are indeed: only their bodie is rough and skaled all over, even in those parts wherein they resemble a woman. I am able to bring forth for mine authors divers knights of Rome right worshipfull persons and of good credite, who testifie that in the coast of the Spanish Ocean neare unto Gades, they haue seene a *mereman* (*marinum hominem*) in every respect resembling a man as perfectly in all parts of the bodie as might bee.

Holland. Plinie, book ix. ch. v.

Pliny.

Pliny speaks somewhat more largely than in the extract above of those beings which the Moderns term MERMAIDS. "In the time that Tiberius was Emperour, there came unto him an Ambassador from Ulyssipon, sent of purpose to make relation that upon their sea-coast there was discovered within a certain hole a certain sea-goblin called Triton, sounding a shell like a trumpet or cornet, and that he was in forme and shape like those that are commonly painted for Tritons." Then continuing as above, about the Mermaidens called Nereides, (we need not say that all mention of *Mermaidens* belongs exclusively to the excellent Philemon Holland,) he adds, "that such a Mermaid was seene and beheld plainly upon the same coast neere to the shore, and the inhabitants dwelling neer heard it afar of when it was a dying to make piteous noise, crying and chattering very heavily. Moreover, a Lieutenant or Governour under Augustus Cæsar in Gaule advertised him by his letters,

that many of these Nereides or Mermaidens were seene cast upon the sands and lying dead." Of the Mereman also who is avouched by the Knights and worshipful persons, "they report moreover, that in the night season he would come out of the sea about their ships, but look, upon what part soever he settled, he waied the same down, and if he rested and continued there any long time he would sinke it cleane."

Ælian, after stating many wonders concerning the Island Taprobane, adds, that sea-satyrs and sea-women are found in the neighbouring seas, καὶ τὸ ἐν θαύμα, Σατύρων μορφὰς κήτη ἐστίν, ἃ περιφέρει καὶ γυναικῶν ὄψιν ἔχουσιν, αἷσπερ ἀντὶ πλοκάμων ἀκανθαὶ προσήρτηνται. (De Nat. Anim. xvi. 18.) Pausanias tells us that in a Temple of Bacchus at Tanagra was to be seen an admirable statue of a Triton, (which is no other than a classical Merman,) from whose amatory pursuit some of the noblest women of the Town were preserved by the special interference of Bacchus. The Monster made his attack while the Ladies were swimming, preparatory to Dionysiac initiation. Another Legend which Pausanias admits to be more credible, although less noble, affirms that the Merman was in the habit of seizing cattle and small craft, instead of mistresses; that the Tanagræans having placed a huge cup of wine on the shore, enticed the plunderer by its odour; and that he drank till he fell asleep and rolled from the cliff, after which one of the natives cut off his head. The statue, which was headless, confirmed the story, and the Triton's drunkenness explained the belief that he was conquered by Bacchus. But Pausanias had seen another Triton, (probably a statue, although he does not expressly say so,) exhibited in a solemn spectacle at Rome. It was smaller than that at Tanagra, and is thus figured; his hair resembles smallage, (βατραχία,) both in colour and in being so matted that no single hair can be separated from the rest; the remainder of his body is covered with scales, small, but hard and impenetrable as those of the Skate, (ρίνη,) he has gills below the ears, human nostrils, a widely gaping mouth, the teeth of a panther, sea-green (γλαυκά) eyes, hands, fingers, and nails like the upper shells of cockles, (κοχλῶν,) and fins like a dolphin under the belly and breast, instead of feet. (ix. 21.)

Julius Cæsar Scaliger was a staunch believer in Mermen, and almost follows Pliny's words, *Nereides et Tritones humanam speciem præ se ferunt, neque fabula est.* (In Arist. de Animal. ii. p. 232.) Demonstratus, he says, pickled one in Tanagra, perhaps the salacious Merman of Pausanias; and created a great stench by throwing a small piece of its skin into the fire. Sebastiano Gadaro, an Epirote, who served under old Scaliger, once told Julius Cæsar, (who being a youth, and at that time unwise, laughed at the story,) that he had seen a Merman near Durazzo. Constantine Palæocapus also informed him that his father had seen one off Negropont. Scaliger has many other stories much to the same purpose; and his credulity is readily accounted for, since it was encouraged by Hieronymus Dominus, the Tutor by whom he was taught Greek. Scaliger often heard that learned man relating to the Emperor Maximilian, that as he was conveying a reinforcement to Rhodes during its siege, he saw a Merman swarming up the cable of his ship. (de Subtilitate. Ex. 226. 12.)

Alexander ab Alexandro has a marvellous Chapter on Mermen and Mermaidens. (*Miracula Tritonum et Nereidum quæ variis in locis tempestate nostrâ compertæ*

Alexander
ab Alexandro.

MER-MAID.

MER-
MAID.

fuere.) It seems that Theodore Gaza, a profound Grecian and a sage Philosopher, who was much in the habit of visiting Pontanus and other friends of Alexander, used to state that once while he was in the Morea, in the depth of Winter, after a heavy storm, a live Mermaid was cast on shore, *vultu haud absimili humano, facie quoque decorâ neque invenustâ specie, corpore squamis hirto ad pubem usque, nisi quod cætera in locustæ caudam desinebant.* A great crowd very naturally gathered round her, by whose presence, as the expression of her countenance evinced, she was much distressed and terrified, till at length she burst into tears. Gaza, who was a tender-hearted man, begged the spectators to draw a little on one side; which they had no sooner done, than the Mermaid scrambled back to the sea as well as she could on fins, arms, and tail, plunged in right joyfully, and disappeared in a moment. The appearance of a Merman in Epirus during the lifetime of Alexander, was, as he assures us, recorded in the public Register. The gallantries of this man-fish were so frequent among the neighbouring ladies, that a special edict was issued forbidding any woman from walking alone near his haunts. In the end he was caught and confined, but pining away *squalore et tedio*, he refused all sustenance, and died.

Rondelet.
Monk-Mer-
man.

Rondelet, a Physician of Montpellier, who published XVI Books *de Piscibus* in 1554, has given two plates of singular Mermen. One was said to have been caught at Diezunt, on the coast of Norway, near the town of Denelopoch, in a stormy sea. The face was human, but coarse and clownish, the head smooth and without hair, a sort of hood resembling that of a Monk covered the shoulders, two long fins resembled arms, the middle of the body was much the broadest, as if clad in a military cloak, and the lower parts ended in a spreading tail. The fishermen immediately named it the Monk-Fish. A Nobleman, who affirmed that he had seen this monster caught, gave drawings of it to the Emperor Charles V. and to Margaret Queen of Navarre, who presented her copy to Rondelet. Another drawing of the same monster, which he had seen in the possession of a German Physician, and which also professed to come from Norway, differed from his own in many particulars; he had, therefore, little doubt that one, if not both, of the artists had indulged his imagination.

Bishop-
Merman.

Rondelet's second Merman was yet more wonderful, being clad by nature in the garb of a Bishop. It was seen in Poland in 1531, and carried to the King, to whom it notified by signs a strong wish to return to the sea, with which desire the Prince humanely complied. A drawing of this Episcopal fish was shown by the above-mentioned German Doctor to Rondelet, who was far from being over credulous. It is but just, indeed, to his memory to subjoin his very rational comment. *Sciens omitto plura quæ de hoc Monstro mihi narrata sunt, quia fabulosa esse arbitror. Ea est enim hominum vanitas ut rei per se satis mirabili præter verum plura affingant. Ego qualem Monstri iconem accepi talem omnino exhibeo. Vera ea sit an non nec affirmo nec refello.* (Lib. xvi. c. 20. 1.)

Aldrovandus.

This *Piscis Episcopi habitu* is figured by Aldrovandus also, a writer of easier faith than Rondelet. (*Monstrorum Hist.* p. 358.) The Monk is given by him in the same Work, (p. 26.) where he has collected a few *authentic* narratives of Mermen. Among them is the most formidable animal of its kind, a Merdevil, *Monstrum Marinum Dæmoniforme*, seen alive at Antwerp, and represented

Devil-
Merman

most terrifically. (p. 357.) It had the face of a Fury, two horns, prominent ears, arms like those of a man, and in all other particulars was a fish. It was caught on the shore of Illyria while endeavouring to carry off a boy who was bathing, and was stoned to death by the fishermen. Ludovicus Vives mentions a Merman captured in Holland, who after two years' silence began to talk, but having been twice infected with the Plague, he was turned out again to sea. (*de Veritate fidei Christ.* ii. p. 216.) Gillius, while he was at Venice, heard from some Dalmatians, *spectatæ fidei viris*, that a Merman had shown himself at Spalato, to the great terror of the natives; he likewise heard from certain mariners accustomed to the navigation of the Red Sea, that Mermen were plentiful in those parts, and were very frequently taken; moreover, that their hides were so tough, as to furnish shoes which lasted fifteen years.

The Scandinavian seas, as may naturally be supposed from their dreariness and remoteness, were believed to be tenanted by numerous monsters, which the superstitious imagination of sailors readily accredited and exaggerated. Olaus Magnus (Englished by J. S. in 1658) writes as below, evidently without any misgiving of the truth of his narrative. "There are also monsters in the sea, almost like to men, that sing mournfully as the sea Nymphs; (*Nereides*;) also Sea-men that have a full likeness of body; and these in the night will seem to go up into the ships, and it is proved that where they approach there is some danger coming; and if they stay long the ships are drowned;" (*qui ascendere navigia nocturnis temporibus videntur, statimque degravari quas insederunt partes compertum est, et si diutius permanent etiam ipsæ naves merguntur.* Unless the Archbishop is here borrowing directly from Pliny, the coincidence is remarkable.) "Also I shall add, from the assertion of the faithful Fishers of Norway, that if they take such, and do not presently let them go, such a cruel tempest will arise, and such a horrid lamentation of that sort of men comes with it, and of some other Monsters joyning with them, that you would think the Skie would fall, and the Fishermen with all their labour can scarce save their own lives, much less can they catch Fish. Wherefore in such case, it is provided and observed by the Law of Fishing that when such monstrous Fish are drawn up as their form is various, so they must be presently let go, cutting away the hooks and lines." (Book xxi. Preface.)

Captain Richard Whitbourne, "of Exmouth in the County of Devon," who took much pains in the year 1622 to encourage settlements in Newfoundland, relates the appearance of a Mermaid in his *Conclusion to the Reader*, appended to *The Discovery of Newfoundland, shewing the commodities thereof*. "Now also I will not omit to relate something of a strange creature that I first saw there in the yeere 1610, in a morning early as I was standing by the water side in the harbour of St. John's, which I espyed very swiftly to come swimming towards me, looking cheerefully as it had been a woman, by the face, eyes, nose, mouth, chin, eares, necke, and forehead. It seemed to be so beautifull, and in these parts so well proportioned, having round about upon the head all blew strekes resembling hayre, downe to the necke, but certainly it was not haire: for I beheld it long, and another of my company also, yet living, that was not then farre from me; and seeing the same comming so swiftly towards me, I stept backe, for

MER-
MAID.Olaus Mag-
nus.Captain
Whit-
bourne.Newfound-
land Mer-
maid.

MER-
MAID.

it was come within the length of a long pike. Which when this strange creature saw that I went from it, it presently thereupon dived a little under water, and did swim towards the place where before I landed; whereby I beheld the shoulders and backe downe to the middle to be as square, white, and smooth as the backe of a man, and from the middle to the hinder part poynting in proportion like a broad hooked arrow; how it was proportioned in the forepart from the necke to the shoulders I know not; but the same came shortly after unto a boate, wherein one William Hawkrige, then my servant, was, that hath bin since a Captaine in a ship to the East Indies, and is lately there imployed againe by Sir Thomas Smith in the like voyage; and the same creature did put both its hands upon the side of the boate, and did strive to come in to him and others then in the said boate: whereat they were afraid, and one of them strocke it a full blow on the head, whereby it fell off from them, and afterwards it came to two other boats in the said harbour, the men in them for feare fled to land. This I suppose was a Maremaid. Now because divers have written much of Maremaids I have presumed to relate what is most certaine of such a strange creature that was seene at Newfoundland, whether it were a Maremaid or no, I know not: I leave it for others to judge."

Isle of Man.

Of the Mermaids in the *Isle of MAN* we have already spoken.

Mermaid of
St. Ger-
mains.

In 1758, a Mermaid, or Syren as the French called it, was exhibited at the Fair of St. Germain, and drawn and described by Gautier, from whose account the following notice accompanies a Plate in the *Gentleman's Magazine* (not the most veracious authority in Zoological matters) for December 1759. It was about two feet long, alive and very active, sporting about in the vessel of water in which it was kept with great seeming delight and agility. It was fed with bread and small fishes; it looked earnestly at the spectator, but it was evidently the attention of mere instinct. Its position when at rest was always erect. It was a female, and the features were hideously ugly, as the Plate sufficiently attests. The skin was harsh, the ears were very large, and the back parts and tail were covered with scales. Two other animals of the same kind are said to have been shown about four years before, but they were dead and dried.

Of La
Vendée.

The *Mercure de France* of April 1762, relates, that in the preceding June, two girls of the Island of Noirmoutier, off the coast of La Vendée, seeking shells in the crevices of the rocks, discovered in a kind of natural grotto, an animal of a human form, leaning on its hands. One of the girls having a long knife, stuck it into the animal, which upon being wounded groaned like a human person. The two girls cut off its hands, which had fingers and nails quite formed, with webs between the fingers. The surgeon of the Island, who went to see it, says it was as big as the largest man, that its skin was white, resembling that of a drowned person, that it had the breasts of a full-chested woman, a flat nose, a large mouth, the chin adorned with a kind of beard formed of fine shells, and over the whole body tufts of similar shells. It had the tail of a fish, and at the extremity of it a kind of feet.

Imposture
in London.

In 1775 a Mermaid was exhibited in London, said to have been taken the year before in the Gulf of Sanchio in the Archipelago. It was about three feet in length, and resembled in the face a handsome young

woman, the head was without hair, but ornamented by a pyramidal fin. Among its other marvels it was said to possess an enchanting voice, which it never exerted except before a storm. Edmund Burke was among its visitors and believers; nevertheless, it was afterwards proved to be manufactured chiefly out of the skin of the Angle Shark, and the exhibitor, after making a considerable sum of money, was punished as a rogue and vagabond. We know not whether the like destiny befell the proprietor of a similar imposture but a few years since, whose monster was fabricated from the lower part of a kipper salmon and the heads of two apes.

The shores of Caithness were haunted during the year 1809 by a Mermaid, which attracted the attention of the Glasgow Philosophical Society. It was attested by the Schoolmaster of Thurso, and believed by the Minister of Reay. The Dugong and the Manatee, (see *MANATUS*,) however, says Sir Humphry Davy in his exquisite little volume *Salmonia*, are the only animals combining the functions of the *Mammalia* with some of the characters of fishes, that can be imagined even as a link in this part of the order of nature. "The Mermaid of Caithness was certainly a gentleman who happened to be travelling on that wild shore, and who was seen bathing by some young ladies at so great a distance that not only *genus* but gender was mistaken. I am acquainted with him, (we believe that it was to Sir Humphry Davy himself that the amusing adventure happened,) and have had the story from his own mouth. He is a young man, fond of geological pursuits, and one day in the middle of August, having fatigued and heated himself by climbing a rock to examine a particular appearance of granite, gave his clothes to his Highland guide who was taking care of his pony, and descended to the sea. The sun was just setting, and he amused himself for some time by swimming from rock to rock, and having unclipped hair, and no cap, he sometimes threw aside his locks, and wrung the water from them on the rocks. He happened the year afterwards to be at Harrowgate, and was sitting at table with two young Ladies from Caithness, who were relating to a wondering audience the story of the Mermaid they had seen, which had already been published in the Newspapers: they described her as she usually is described by Poets, as a beautiful animal, with remarkably fair skin and long, green hair. The young gentleman took the liberty, as most of the rest of the company did, to put a few questions to the elder of the two Ladies, such as on what day, and precisely where, this singular phenomenon appeared. She had noted down not merely the day, but the hour and minute, and produced a map of the place. Our bather referred to his Journal, and showed that a human animal was swimming in the very spot at that very time, who had some of the characters ascribed to the Mermaid, but who laid no claim to others, particularly the green hair and fish's tail; but being rather sallow in the face, was glad to have such testimony to the colour of his body beneath his garments." (p. 246.)

Still the Scotch do not appear to have surrendered the existence of this Mermaid without great reluctance. "Sir Joseph Banks," said one of the most earnest avouchers of the real, original Caithness Maid of the Sea, to Sir Humphry Davy, whose key to Mermaids in general we have just given, "was an excellent man, but he had his prejudices." "What were they?" was asked in reply. "Why he did not believe in the Mermaid!" That the great

MER-
MAID.Mermaid of
Caithness.Proved to
be Sir Hum-
phry Davy.

MER-
MAID.

MEROPS.

Mermaids
impossible
animals.

Naturalist's prejudice in this matter was justly founded may be learned from Sir Humphry Davy's words, with which we may conclude. "A human head, human hands, and human mammæ, are wholly inconsistent with a Fish's tail. The human head is adapted for an erect posture, and in such a posture an animal with a Fish's tail could not swim; and a creature with lungs must be on the surface several times in the day, and the sea is an inconvenient breathing place; and hands are instruments of manufacture, and the depths of the Ocean are little fitted for fabricating that mirror which our old prints give to the Mermaid. Such an animal, if created, could not long exist; and with scarce any locomotive powers, would be the prey of other Fishes formed in a manner more suited to their element."

MERODON, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrect, nutant, pubescent, triarticulate, the basal joint cup-shaped, pilose at the extremity, second very pilose, dilated internally, third large, oblong, or elliptic, compressed, its base with a naked, three-jointed seta; lip retractile, fleshy, terminated by two large lobes; *hypostoma* smooth, villose; head vertical, broad; *thorax* somewhat globose; wings incumbent, parallel; halteres small, concealed; posterior *femora* incrassated, with a tooth at the apex beneath.

Type of the genus *M. spinipes*, Fabricius; Meigen, *Diptera*, vol. iii. p. 349: pl. xxxi. fig. 15—23. A numerous genus, of which twenty-seven inhabit Europe, and one Britain.

MEROPS, Lin., Tem.; *Bee Eater*, Lath. In *Zoology*, a genus of animals belonging to the family *Syndactyli*, order *Passeres*, class *Aves*.

Generic character. Beak moderate sized, slenderish, tetragonal, and compressed, pointed, cutting, slightly arched, and without any tooth; ridge elevated; nostrils basal, lateral, roundish, open, but hidden in hairs projecting forward; tarsi short, four-toed, the outer joined to the middle by membrane as far as the second joint, and that with the inner to the first joint, hind toe having a broad base, its claw the smallest; the first primary very short, the second longest of all.

The Bee Eaters have a great resemblance to the Swallows, in the length of their body, their wide throat, and long wings; and like them they are continually flying about in search of food, occasionally perching on dead branches, but rarely upon the ground, for which the shortness of their legs ill adapts them. Like the Kingfishers and many Swallows, they burrow in banks, and at the bottom of their hole make a nest of moss. They feed on Bees, Wasps, and other insects. The account given by Ælian of the Bee Eaters flying backwards is thus explained by Le Vaillant: when the insect pursued is near being caught, it rises or drops vertically, for the purpose of getting behind its enemy; the Bee Eater is then compelled, in order to seize it, to spring more or less obliquely backwards, so as to cut into its course, and thus appears to the spectator to fly backwards for an instant. If not teased, they are easily approached, but are readily frightened by gun-shot; if any one come near their nests they plunge into them, uttering at the same time shrill cries, and if the disturbance be repeated they leave them: as they are fat and fleshy they afford good food, but on account of the toughness of their skin must be previously flayed. The females and young have the same colours as the male, but they are less vivid. They are confined to the hot climates of

VOL. XXV.

the Old World, and visit some of the Southern Countries periodically as birds of passage.

The tail-feathers give an opportunity of classing them into subgenera; when young these are in all the species generally equal, but as the bird acquires its full plumage, the two middle feathers, in very many instances, attain greater length than the others.

a. Tail arrow-shaped.

M. Apiaster, Lin.; *le Guépier*, Buff; *Common Bee Eater*, Lath. About eleven inches long and seventeen in breadth; the forehead whitish tinged with green; back of the head, nape, and top of the back chestnut, the remainder of the back yellowish-red; middle of the wings deep rust; their quills and those of the tail greenish-olive, the middle two of the latter being an inch longer than the others; from the angle of the gape a black line passes through the eye and upon the ear; the throat light golden-yellow, and bounded below by a semicircular black collar; under parts bluish-green; beak black; iris red; legs brown. The colours of the female more dull. This bird is occasionally found in the South of Germany, Switzerland, and France, where it is more common; rarely in England; frequently in the South of Europe; and in Autumn it migrates towards Egypt. It has also been met with in China and other parts of Asia, and, according to Le Vaillant, differs there only in size and brightness of colour, that found in Africa being larger and brighter, and that in China smaller than those elsewhere. It feeds on Bees, Wasps, Drones, Grasshoppers, Chafers, Gnats, and other insects, builds in deep holes pierced in the banks of rivers, and lays five or seven purely white eggs. The cry of the Bee Eater is described by some Naturalists as consisting of the syllables *grulgrururural*, by others as *crou, crou, crou*, accompanied, as Sonnini states, with a cracking of the beak. As Grasshoppers are favourite food of the Bee Eaters, the children in the Isle of Candia make use of them as a bait, fastening them on a crooked pin to which a string is attached, and thus as it were fish for the bird.

M. Nubicus, Gmel.; *le Guépier de Numidie*, Buff; *Blue-headed Bee Eater*, Shaw. Forehead and vertex blue tinged with green, extending behind the eyes and on the throat; back of the head, neck, shoulders, upper wing and tail coverts red brick colour; from the throat to the lower part of the belly deep rose colour; the lower part of the belly, rump, the upper and lower tail coverts blue; the middle tail-quills are double the length of the others, but shorter in the female; beak and claws bright black; irides reddish; legs reddish-brown. Native of Africa.

M. Viridis, Linn.; *le Guépier à gorge bleue, ou Lamarck*, Le Vaill.; *Green Bee Eater*. Top of the head and back of the neck reddish-green, inclining to bluish on the forehead and about the mouth; a black stripe passes from the nostrils below the eyes to the ears; the upper parts green, more or less glossed with blue or red according to the light; alar quills edged with green and tipped with black; throat turquoise-blue, marked with a reversed, semicircular, black collar; chest and under parts bluish-green; sides and under parts of the wings reddish; the two middle caudal quills are very slender and nearly as long as the lateral quills; beak black; legs brown. From the East Indies, and from the African coast. Le Vaillant now considers the spe

Q

MEROPS.

MEROPS. cies he described as *M. Citrinus* to be the young of this species.

M. Superciliosus, Lin.; *le Guêpier de Madagascar*, Buff.; *Supercilious Bee Eater*. Three varieties according to Le Vaillant appear to belong to this species. That from Ægypt, *M. Ægyptius* of Forskael, has one band of white on the forehead followed by another of blue which extends on each side upon the eyes; another black band passes from the corners of the nose to the ears; the top of the head, neck, and back bright green; the alar quills mostly green, edged with blue and tipped with black; tail of the same colour; throat chestnut; under parts bluish-green; sides reddish; beak black; legs reddish. Those specimens brought from Persia and Egypt have the wings reaching to the extremity of the lateral caudal quills, in which they differ from those of the higher districts of Africa. Those from Madagascar are smaller, have no blue in their plumage, and the forehead is beryl-green. The largest specimens are from Senegal and Malembo, in which the beak is longer and more slender than the Persian and Egyptian; there is no mixture of blue with the green plumage; the middle caudal quills, which exceed the lateral by half their length, have that part blackish.

M. Badius, Lin.; *le Guêpier marron et bleue*, Dum.; *Chestnut Bee Eater*. General colour chestnut and blue.

M. Bicolor, Daud.; *le Guêpier gris rose*, Dum.; *Malembre Bee Eater*, Shaw. About ten inches long, of which the tail has seven inches and a half; forehead, top of the head, back of the neck, shoulders, the whole of the wings, the rump, and upper part of the tail slaty-grey tinged with red; a black band passes from the corners of the mouth to behind the eyes, and beneath it a white one; under parts glossy deep rose colour; beak and legs black. From the coast of Angola, and visits Malembo for about three months in the year.

M. Albicollis, Vieill.; *le Guêpier à gorge blanche*, ou *Cuvier*, Le Vaill.; *White-throated Bee Eater*. Ten inches long; forehead, sides of the head, and throat white; eyes crossed with black, and top of the head same colour; under parts of the body light green, becoming paler on the lowest parts; upper parts and sides of the neck, back, and wing-coverts green with shades of red; scapulars, upper and lower tail-coverts pale blue; alar quills light red, tipped with black; beak black; legs brown. From Senegal.

M. Ruficapillus, Vieill.; *le Guêpier rousse tête*, ou *Bonelli*, Le Vaill.; *Red-headed Bee Eater*. About the size of the Common Bee Eater, but more slender; head and neck red, except the black stripe through the eyes, which is enclosed in a white band. From Africa.

M. Superbus, Lath. Is considered by Dr. Shaw to be the same species as the red and blue Bee Eater.

M. Javanicus, Horsf.; *Javanese Bee Eater*. About eleven inches long; general colour olive-green tinged with bronze; stripe through the eye black; upper part of the front of the neck sulphurous, lower chestnut; middle of the belly dirty sea-blue, sides fulvous; rump and vent sea-blue. From Java, where it is called *Kachangan*.

M. Urica, Horsf.; *Flaming Bee Eater*. Eight inches long; bright olive-green; belly and rump light sea-green; top of the head and nape, neck, and shoulders chestnut; throat and neck yellow; ocular bar and semilunar band on the chest black; under part of the

tail fuliginous. From Java, and called by the natives *Pirik*. MEROPS.

M. Ornatus, Lath.; *Beautiful Bee Eater*. Top of the head orange; a black stripe through the eyes; chest and throat yellow, on the middle of which is a triangular black spot; under parts bluish-white; upper part of the neck pure green inclining to brown on the back; rump and upper tail-coverts blue; wing-coverts yellow, primaries green, secondaries edged with yellow; middle tail-quills blue, and the elongated part reddish-brown. From New South Wales, where it is called *Dee-weed gang*.

M. Melanurus, Vig. and Horsf.; *Black-tailed Bee Eater*. Fifteen inches long; the streak crossing the eyes, crescent on the chest, tips of the remiges, and edge of the tail black; eyebrows and rump azure; scape and remiges chestnut; throat yellow; the other parts green; beak black. This is considered by Latham to be the female of the preceding, but the specimen described by Messrs. Vigors and Horsfield is stated to be a male. From Paramatta. It is a question whether the two last species should be included in this genus.

β. *With square tails.*

M. Philippinus, Linn.; *le Guêpier à queue d'azur*, ou *Daudin*, Buff.; *Philippine Bee Eater*. About nine inches long; a black streak passes above the eyes; the other parts of the head, the upper part of the body, very bright shining green, except the tail, which is azure, and the tips of the alar quills, which are black; under parts very bright yellow on the throat and chest, but afterwards tinged greenish and reddish. From the Philippines.

M. Ruficollis, Le Vaill.; *le Guêpier rousse gorge*, Buff.; *Red-necked Bee Eater*. Rather larger than the common species; forehead reddish; a black band passing from the gape to the ears; upper part of the head and body pale green glazed grey with some bluish tinge; tips of the alar quills brownish-black; throat yellow; other under parts pale green, exhibiting bluish shades according to the light; beak black; legs brown.

M. Variegatus, Le Vaill.; *le Guêpier à collier gros bleu*, ou *Sonnini*, Buff.; *Variegated Bee Eater*. About six inches long; head and upper parts deep green; the black streak crossing the eyes descends lower than in the other species; throat jonquil-yellow; the indigo-blue collar surrounding the neck separated by a white line; chest and sides chestnut; under parts reddish-green; alar quills red internally, and tipped with black, as also are the caudal, of which the top is light rust; beak and legs black. From Malemba.

M. Erythropterus, Gmel.; *le Guêpier rouge et vert du Sénégal*, Buff.; *le Minule*, Le Vaill.; *Red-winged Bee Eater*, Lath. The smallest bird of the genus, has all the upper parts and the two middle caudal quills light green shaded with yellow and blue; the streak through the eye black; below the yellow throat is a large badge of purple-chestnut deeper above than below; under parts pale green; lateral alar quills and caudal light red marked with black, and near their tips, which are yellow, as are also the under parts of the wings, sides, and thighs; beak black; legs brown. From Southern Africa.

M. Leschenaulte, Le Vaill.; *Leschenault's Bee Eater*. Forehead and top of the head dusky green, occasionally assuming a chestnut tinge; black stripe through the

MEROPS. eye; throat citron-yellow, below which is a narrow blackish-green collar; scapulars, upper wing-coverts, and the external edges of the alar quills green; primaries and secondaries tipped with brownish-black; rump blue; caudal quills greenish-blue above; chest and under parts yellowish-green; beak black; legs deep brown. From Java.

M. Quinticolor, Le Vaill.; *Five-coloured Bee Eater*. This species closely resembles the preceding, except in not having the black ocular stripe, and the top of the head, the neck, and shoulders being bright chestnut.

M. Amictus, Tem.; *Ruffed Bee Eater*. Eleven inches in length; forehead light purple with violet reflexions; above the nostrils a light green spot; throat and front of the neck covered with very long vermilion feathers with decomposed webs; nape, sides, and hind part of the neck, back, wings, and upper part of the tail grass-green; belly light green; under part of the tail yellowish at the base and black at the tip. Native of Sumatra.

M. Gularis, Shaw; *le Guêpier à gorge rouge*, Dumer.; *Red-throated Bee Eater*. Forehead and rump blue; upper part of the body black; throat fiery red; wings marked with a large ferruginous spot; belly marked with blue and black; edges of the alar and caudal quills blue. From Sierra Leone.

M. Bullocki, Le Vaill. Is considered by M. Dumeril to be probably only a young specimen of the preceding species.

M. Cayennensis. Although arranged in this genus by Cuvier, is according to Le Vaillant a Thrush and not a Bee Eater.

γ. Tail forked.

M. Hirundinaceus, Vieill.; *le Guêpier Tawa*, Le Vaill.; *Tawa Bee Eater*. The upper part of the head, the back of the neck, scapulars, and upper wing-coverts yellowish-green, and, according to the light, lustrous; alar quills bright green without, reddish within, and tipped with black; the eyes crossed by a black streak; throat yellow at the upper part succeeded by a broad colour of ultramarine blue; rump and upper part of the tail same colour; chest and under parts light green; the tail is very long, and cleft at the tip like the common hawk; beak black; legs brown. Native of the Cape of Good Hope on the banks of the Orange River, where it builds in the rocks or in the holes of hollow trees.

See Linnæi *Systema Naturæ* a Gmelin; Cuvier, *Règne Animal*; Vieillot, *Galerie des Oiseaux*; Le Vaillant, *Histoire Naturelle des Oiseaux d'Afrique*; Horsfield and Vigors, in *Linnæan Transactions*, vol. xiii. and xv.; Latham, *General History of Birds*.

ME'RRY,	} A. S. <i>myrig</i> , <i>mirige</i> , <i>hilaris</i> , <i>jucundus</i> , <i>lætus</i> ; A. S. <i>myrth</i> , <i>hilaritas</i> , <i>jucunditas</i> , <i>lætitia</i> . Skinner derives from the Ger. <i>mehren</i> , <i>augere</i> , to magnify or dilate. Junius from the Gr. <i>μυρί-ζωω</i> , to anoint, because the Ancients anointed themselves at public festivities. Tooke de- rives from the Goth. <i>mer-yan</i> ; A. S. <i>merran</i> , <i>mirran</i> , <i>myrran</i> , to dissipate, to disperse, to spread abroad, to scatter; and of this verb, he affirms <i>mirth</i> to be the third person, and to mean,
ME'RRILY,	
ME'RRIMENT,	
ME'RRINESS,	
ME'RRIMAKE, v.	
ME'RRIMAKE, n.	
MIRTH, v.	
MIRTH, n.	
MIRTHFUL,	
MIRTHFULLY,	
MIRTHLESS.	

"That which dissipateth, viz. care, sorrow, melancholy." See to MAR. It is now consequentially applied to Lightness, airiness, hilarity of spirit; formerly, also, to a calmer feeling of pleasure or pleasantness, cheeriness, or cheerfulness. And *merry*,

Pleasing, agreeable, cheerful; gay, jovial, laughing; loving or inclined to laughter, laughable.

þo me barnde grete townes & courtes day & nygt,
And þogte yt was *mury* joie, to se so fair alygt.

R. Gloucester, p. 69.

So þat joye and *murpe* y now among hem was þere.

Id. p. 50.

With joy and *myrth*, i now moche heighe
folke of the londe sone to him drow.

Id. p. 466.

& þer oure Inglis men resceyued fulle *miry*.

R. Brunne, p. 308.

And somme *murpes* to make. as mynstrals conneþ.

Piers Plouhman. Vision, p. 3.

And men enabitynge the erthe schulen haue ioie on hem, and
thei shulen make *myrie*.

Wiclif. Apocalips, ch. xi.

Ioie we and make we *myrthe* and ghiue glorie to him.

Id. lb. ch. xix.

Blysse of my ioie, that ofte me *murthed*, is turned into galle, to
thynke on thing that may not at my wil in armes me hent.

Chaucer. The Testament of Loue, book i. p. 467.

The nightingale with so *merry* a note

Answered hem, that all the wood runge.

Id. The Flower and the Leaf.

And in that garden gan I go,

Playing along full *merely*.

Id. The Romant of the Rose, p. 181.

And wife and children men desyren, for cause of delyte and
merynesse.

Id. Boecius, book iii. p. 423.

Full faire was *mirth* full long and high,

A fairer man I never sigh:

As round as apple was his face,

Full roddie and white in every place.

Id. The Romant of the Rose, p. 177.

Daunceth he *merry* that is *mirthlesse*?

Id. The Assembly of Fowls.

Thei were *merie*, and faire enough,

Echone with other plaide and lough

And fallin into tales newe.

Gower. Conf. Am. book i. p. 33.

And thus the daie, shortly to telle,

With many *myrthes* thei dispent,

Till night was come, and tho thei went.

Id. lb. book v. p. 149.

And was saluted at the entering into the towne of a *mery* fellow,
which sayd, *Salve rex regis tui, atque regni sui*: Hayle both king
of thy king, and also of his realme.

Tyndall. Workes, fol. 370. The Practice of Popish Prelates.

But whiles I doo these *mirthless* meeters vse,

This rashe conceits doth reue me from delight.

Gascoigne. Dun Bartholmew of Bathe.

If anye of you be eueyll vexed, let hym praye, If anye of you
bee *mery*, let him sing psalmes.

Bible, Anno 1551. James, ch. v.

There eke my feeble barke awhile may stay,

Till *mery* wynd and weather call her thence away.

Spenser. Faerie Queene, book i. can. 12.

But when he saw her, toy, and gibe, and geare,

And pass the bonds of modest *merimake*,

Her dalliaunce he despis'd, and follies did forsake.

Id. lb. book ii. can. 6.

That rownd about him dissolute did play

Their wanton follies, and light *meriment*.

Id. lb.

BERR. Well, sir, be it as the stile shall give vs cause to clime in
the *merrinesse*.

Shakspeare. Love's Labour Lost, fol. 123.

MERRY.

MESEM-
BRINA.

I'm wondrous merry-hearted, I could laugh now,
Beaumont and Fletcher. The Two Noble Kinsmen, act ii. sc. 1.

Great ioy was made that day of young and old,
And solemne feast proclaymd throughout the land,
That their exceeding merrth may not be told.
Spenser. Faerie Queene, book i. can. 12.

— The rest
Of our young ladies in their wanton blood,
Tell mirthful tales in course that fill the room
With laughter.
Beaumont and Fletcher. The Maid's Tragedy, act i. sc. 1.

This nephta is an oily or fat liquid substance, in colour not unlike soft white clay; of quality hot and dry, so as it is apt to inflame with the sunbeams, or heat that issues from fire; as was mirthfully experimented upon one of Alexander's pages, who, being annointed, with much ado escaped burning.

Sir T. Herbert. Travels, p. 182.

Whilst his gamesome cut-tail'd cur
With his mirthless master plays.
Drayton. The Shepherd's Sirena.

Th' Italian merry-andrews took their place,
And quite debauch'd the Stage with lewd grimace.
Dryden. Epilogue 23.

That any man should be merry, because another has offended
God, or undone himself, is certainly a thing very unnatural.
South. Sermons, vol. vii. p. 151.

For if these [great crimes and great miseries] be made the matter
of our mirth, what can be the argument of our sorrow?
Id. Ib.

I said: the feast was serv'd, the bowl was crown'd;
To the king's pleasure went the mirthful round.
Prior. Solomon, book ii. Pleasure.

Conscious of her approach, the wanton birds,
Instinctive, carol forth, in livelier lays,
And merrier melody, their grateful hymn.
Thompson. Sickness, book iv.

Steep'd grain, and curdled milk with dulcet cream
Soft temper'd, in full merriment they quaff,
And cast about their gibes.
Dyer. The Fleece, book ii.

Nor doth his skilful hand refuse
Acquaintance with the tuneful muse,
When round the mirthful board the harp is borne.
West. Olympic Odes of Pindar, ode i.

This self-pleas'd king of emptiness permit
At the dear toilette harmlessly to sit;
As mirthless infants, idling out the day,
With wooden swords, or toothless puppies play.
Warton. Fashion, a Satire.

MERSION. See MERGE.

MERYX, in Zoology, a genus of Coleopterous insects.
Generic character. Antennæ eleven-jointed, as long as the thorax; the articulations generally somewhat obconic, the three terminal ones rather thickened, the ninth and tenth subtrubinated, the eleventh ovate; mandibles not exerted, with the apex bifid; palpi clavate, with the terminal joint somewhat obtriangular, large; maxillæ with two processes, the exterior obtriangular, interior dentiform; labium coriaceous, cordate, quadrate; mentum broader than the labium, transverse, quadrate; body oblong, narrow; eyes slightly prominent; thorax rather narrower than the elytra, cordate, quadrate, or subquadrate, with the sides anteriorly rounded and dilated; abdomen elongate, quadrate; tarsi tetramerous.

Type of the genus, *M. rugosa*, Latreille, *Gen. Ins.* vol. i. pl. xi. fig. 1; vol. iii. p. 17. One species, found in the East Indies.

MESEMBRINA, in Zoology, a genus of Dipterous insects.

Generic character. Antennæ incumbent, triarticulate, the basal joint short, second longer, subglobose,

terminal oblong, prismatic, with a plumose seta at the base; lip retractile, fleshy, with two lobes at the apex; body hairy; thorax stout; wings divaricating, the apex with a transverse nerve; halteres concealed beneath a large scale.

Type of the genus, *M. meridiana*, Linnæus; Meigen, *Diptera*, vol. v. p. 10. pl. xlii. fig. 18—26. Two species only, natives of Europe, one of which is found in Britain, frequenting the trunks of large trees.

MESEMBRYANTHEMUM, in Botany, a genus of the class *Icosandria*, order *Pentagynia*, natural order *Ficoideæ*. *Generic character*: calyx five-cleft; corolla, petals numerous, linear, cohering at the base; capsule top-shaped, fleshy, many-seeded (styles vary from four to ten.)

Of this very remarkable genus more than three hundred species have been imported into England and described; the leaves are very succulent, and vary exceedingly in their forms; the flowers of all the species open and shut periodically, the greater number are open in the day and close at night, some open only in the evening and soon close again, others are closed during the day and open during the night. *M. glaciale* is the well-known Ice plant; it is a native of the Canary Islands, where it is gathered in considerable quantity and burnt; the ashes contain the vegetable alkali, and is the barilla of commerce. *M. noctiflorum* has no smell during the day, but is highly fragrant at night. All the species are described in Haworth's *Syn. Plant. Succ.*

ME'SENTERY, } Fr. *mesentere*; It. *mesenterio*;
MESERA'ICK. } Sp. *mesenterio*; Lat. *mesenterium*;
Gr. *μεσεντέριον*, from *μέσος*, middle, and *έντερον*, the intestine. See the Quotation from Fletcher.

Meseraick, Gr. *μεσάριον*, *μέσος*, and *άρια*, *venter*.

So that it (medicamentally) entreth not the veins with those electuaries wherein it is mixed: but taketh leave of the permeant parts, at the mouthes of the meseraicks, and accompanieth the inconvertible portion into the seige.

Sir Thomas Brown. Vulgar Errours, book ii. ch. v. p. 94.

The mesenterium, (or midst amongst the entrails,) whence it takes the name, ties and knits the entrails together.

P. Fletcher. The Purple Island, can. 2. note 46.

But [pepper] being in greater quantity, dissipateth the wind; and itself getteth to the mesentery veines.

Bacon. Natural History, Cent. i. sec. 44.

MESH, v. } Fr. *maches*, *maile*; It. *maglia*; Lat.
MESH, n. } *macula*; the hole of a net between
ME'SHY. } thread and thread; applied to the entire net.

To take or catch in a net or snare, to ensnare, to entangle.

How smal a net may take and meash a hart of gentle kinde.

Surrey. Description of the Fickle Affections, &c.

Meashed in the breers, that erst was onely torne.

Wyat. The Louer that fled Loue, &c.

The flies by chance mesht in the hair,
By the bright radiance thrown
From her clear eyes, rich jewels were,
They so like diamonds shone.

Drayton. The Shepherd's Sirena.

— This but sweats thee

Like a mesh-nag.

Beaumont and Fletcher. Bonduca, act iv. sc. 1.

Or spreads his subtle nets from sight
With twinkling glasses, to betray
The larks that in the meshes light,
Or makes the fearful hare his prey.

Dryden. Horace. The second Epode.

MESEM-
BRINA.
—
MESH.

MESH.

MESOPOTAMIA.

Now with barb'd hook, or *meshy* net, they try
From quiet floods to drag the scaly fry.
Hoole. Orlando Furioso, book vii. l. 205.

And in his hand, of slightest texture, bore
A curious net, whose *meshes*, light and rare,
Scarce shone distinguish'd from th' unbodied air.
Cambridge. The Scribleriad, book vi.

MESLINE. This word is variously written *maslin*, *maslline*, *mesline*, and by Bacon *misselane*, and his authority has suggested *miscellane*, Lat. *miscellaneus*, to be the true word. Hall writes *misceline* and *mesline*. It is more probably the Fr. *meslinge* or *meslange*, a medley or mixture, from the verb *meslanger*, *mesler*, to meddle or mix. The Dutch have *misschteluy*n, from *mischelen*, to mix.

A medley or mixture, *sc.* of corn, metal, &c.

HEN. It must not be iron, for quicksilver is the tyrant of metals, and will soon fret it.

HEN. Nor brass, nor copper, nor *maslin*, nor mineral.
Brewer. Lingua, act iv. sc. 1.

Take thee, therefore, all kinds of grain, wheat, and barley, and beans, and lentiles, and fitches, and put them all together, and make bread of this *mesline*, and eat thereof for the space of three hundred and ninety days.

Hall. Hard Texts of Scripture. Ezekiel, ch. iv. ver. 9.

For what reason is there, which should but induce, and therefore much less inforce us to think that care of dissimilitude between the people of God and the heathen nations about them, was any more the cause of forbidding them to put on garments of sundry stuff, than in charging them withal not to sow their fields with *meslin*.

Hooker. Ecclesiasticall Politie, book iv. sec. 6. fol. 93.

It hath not been practised, but it is thought to be of use, to make some *missellane* in corne; as if you sow a few beans with wheat your wheat will be the better.

Bacon. Natural History, Cent. vii. sec. 670.

Mended, (saith your doctor) and yet admitted the *misceline* rabble for the prophane.

Hall. Works, vol. i. p. 533. *An Apologie against Brownists*.

MESOPOTAMIA, or the *Country between the rivers*, of the Greeks, the Aram-Naharaïm, or *Syria between the two rivers*, of the Hebrews, is an extensive region in Asia, the limits of which are clearly determined by natural boundaries. It is the peninsula formed by the Tigris and Euphrates, and bounded on the North by that part of Mount Taurus which lies between those two rivers.* Ptolemy divides Mesopotamia into several Regions or Provinces, but as few of them occur in any other writer, they need not be mentioned here. The Southern part of Mesopotamia Proper was usually called **BABYLONIA**, and has been already described in this Work. The site, therefore, of the ancient rampart of Semiramis may be considered as the Southern boundary of Mesopotamia, the subdivisions of which, according to the more ancient writers, were Sophanene, Anthemusia, or Osroene, Mygdonia, the Scenite Arabia, (*Arabia Scenitarum*), Singara, and Mesopotamia Proper.

i. Sophanene, (ἡ Σωφανήνη,) or rather Sophene, (Σωφανή, Strabo, xi. 11. 4. p. 522.) called Dzopk by the Armenians, (St. Martin, i. 91.) was on the Northern boundary, and is most properly assigned to Armenia, as D'Anville justly observes. (*Géogr. Ancienne*, ii. 207.)

* This interval is not much more than twenty geographical miles, as appears from the Map of Colonel Macdonald-Kinneir, whose accuracy is well known. The chains of hills which occupy it also run from North to South, and the defiles between them are traversed by streams flowing towards the Euphrates; the source of the Tigris is not far from Pállí, nearly due North of Diyár-Bekr. M. Lapie, on the contrary, makes Taurus an unbroken chain from West to East, and the source of the Tigris South-West of Arghaná Ma'den: Col. Kinneir has, however, omitted the river which flows by Khar-pút; but he rightly places a chain of hills between it and the lake.

The principal towns near its Southern extremity, the only part which can be comprehended within the limits of Mesopotamia, are these: 1. Charpote, (Cedrenus, ii. 686.) now called Kharpút, a place of importance in the times of the Lower Empire, and the seat of an Archbishop. It is on the summit of a hill, 90 miles North-West of Amida, and near a small lake bearing the same name. The hill on which it stands, at the foot of which flows the river Arsenias, (Sestini, p. 87.) overlooks one of the valleys (*devexa laterum*, Plin. *Nat. Hist.* vi. 16.) or defiles leading from Mesopotamia into Armenia. 2. Arsamosata, or Armosata, (Ἀρσαμόσατα, Ptolem. *Geogr.* v. 13.) a fortified town in the Beautiful Plain, (καλὴ πεδίω, Polyb. *Excerpt.* viii.) mid-way between the Tigris and Euphrates, but probably nearer to the latter, (Plin. vi. 10.) as Pliny seems to imply, and which D'Anville has placed at the confluence of the Deba and the Arsanias. (Arzan.) It is the Shimshát of the Arabs, (Gol. *ad Alferg.* 248.) Arshamashad of the Armenians. (St. Martin, i. 105.)* 3. Castrum Cepha, (*Notitia Dignitat.* p. 236.) still called Hisn Keífá, (the Castle of Cephas,) was a strong place in an elbow of the Tigris, to the South-East of Amida. (St. Martin, i. 173.) 4. The latter fortress, of which the name is still preserved, (see JEZIRA,) was nearly surrounded by that river at its junction with the Nymphæus, (Ammian. Marcellin. xviii. 9.) and perhaps on its Eastern side. (Ibn Haukal, p. 157.) It was enlarged and fortified by Constantius, who named it Constantia, about the middle of the IVth century, at which period it is first noticed in History. According to the Armenian writers (St. Martin, i. 172.) it is Tigranocerta, (Dikronagerd, Τίγρανοκερτα,) built, as they affirm, by Tigranes in the VIth century B. C. The Greeks, with more appearance of probability, ascribe the foundation of it to Tigranes, one of the Arsacidæ. (Strabo, xi. 13. 15. p. 532.) 5. Bizabda, (Hieronym. *in Chron.*) or Bezabde, (Ammian. Marcellin. xx. 15. 26.) also called Phœnica, (*Id.* xx. 18.) a strong fortress on a hill upon the banks of the Tigris, appears to be the place now called Jezírah ibn 'Omar. It was formerly named Bakerdí, or Bazabdá by the Arabs, and Gozartà di-Kerdú, (Kurd Island,) or Gozartà Zabdità by the Syrians, (Asemanni, *Bibl. Orient.* p. 751.) and thence the surrounding Country was called Zabdicene. The remains of this fortress are now inhabited by a Kurd Chief, whose wretchedness and villainy were witnessed by Colonel Macdonald-Kinneir. (*Kordistan*, p. 449.) Jezírah, the modern name of Bizabdá, implies that it is either in an island or peninsula, and it appears from Ammianus Marcellinus, that it was anciently enclosed only on three sides by the Tigris, the Western channel being very narrow and evidently artificial.

Mount Masius (called Karájah dâgh by the Turks) may be considered as here ascending gradually from the Tigris, from which it passes in a North-Westerly direction, till it meets that part of Taurus through which the Euphrates forces its way. This is by some Geographers considered as the Northern boundary of Mesopotamia, and it probably separated Sophene from the other divisions of the Province; but as Strabo very distinctly says, (xvi. 1. 21. p. 746.) that Taurus separates Mesopotamia from Armenia, it is most probable that the latter Country was not extended as far as

* Un fleuve nommé Arsanias, aujourd'hui Arsen, traverse le pays pour se rendre dans l'Euphrate, après avoir passé par Arsamosata, place considérable, dont on retrouve le nom sous la forme de Shimshat. (D'Anville, ii. 105.)

ii. Anthemusia (*Ἀνθεμουσία*) appears to have been the more ancient name of the Western and largest division of Mesopotamia, for which Osdravene, Osrhoene, (*Ὀσροηνή*), or Orrhoene, was substituted, from a native Prince named Osdroes or Chosroes, (*Κhosraú*), who flourished in or near the times of the Antonines, (*Celarius, Geogr. Ant. ii. 603.*) or from U'rhoi, the founder of Edessa, who flourished B. C. 137, according to the Syrians. (*Asemanni, Bibl. Orient. i. 462.*) Its Capital was U'rha, or Roha, called by the Macedonians Edessa, from one of the principal places in their own Country: U'rha, Roha, and O'rfah are the names by which it is still known. (See *EDESSA*.) 2. At a small distance South-East of Edessa was Carræ, (*Κάρραι*), first a Macedonian, and afterwards a Roman colony, remarkable on account of the signal defeat and death of Crassus. (*Flor. iii. 11. Eutrop. vi. 15.*) This is probably the Haran, or Charran, (*Χαρράν*, *Eusebius in Chron. and Josephus, Antiq. i. 7.*) of the Scriptures. (*Gen. xxix. 1. Acts vii. 2. 4.*) According to Stephanus Byzantinus (*de Urb. v. Κάρραι*) it was near a river bearing the name of Carra, or Carras, probably that which passes by Rásu-l'-aïn, in the way towards the Khábúr. 3. The position of Anthemus, or Anthemusia, (*Ἀνθεμούς*, *Stephan. de Urb. Ἀνθεμουσία*, *Strabo, xvi. 1. 27. p. 748.*) is very doubtful, but it was a Macedonian colony in this part of the Country, at first called Anthemusia from it, and probably bounded to the South by the Chaboras. (*Ἀβόρρας*, *Strabo, Ibid. Χαβώρας*, *Ptol. v. 18. Ἀβούρας*, *Isidor. Characenus, p. 4.*) That river, which is still called Khábúr, is the largest tributary to the Euphrates in this part of Mesopotamia. It rises in Mount Masius, and is joined by the Mygdonius, called Hirmás by the Arabs, (from Nahr Masà, i. e. the river Masius, according to Wahl, *Mittel Asien. i. 709.*) considerably above Cicesium, (*Karkesiyyah*), where the Chaboras joins the Euphrates. 4. Batnae, (*Βάτναι*), an Episcopal See, subject to the Archbishop of Edessa, was also called Batnae Serugi; it is the Serúg of the Syrians and the Serúj of the Arabs, just midway between Edessa and the Euphrates, and fifteen miles distant from each, according to the Itinerary of Antoninus. (p. 41.) It was a fortress of no importance in the time of Procopius. (*De Bello Persico, ii. 12.*) Its district is described as fertile and well watered in the *Jihán-numà*. (p. 444.)

iii. The Country on the banks of the Euphrates from Zeugma (i. e. the Bridge, now Rúm-kal'ah, or Kal'atur-rúm, i. e. Roman Castle) to Thapsacus, (*Al Deir*), and the tract between the Chaboras and the Mygdonius, was called by the Macedonians Mygdonia, from one of the divisions of their native Country. Its principal towns were, 1. Birtha, (*Βίρθα*, *Ptol. Geogr. v. 18.*) now Bír, or Bírèh-jík, a celebrated ferry over the Euphrates, and once a Bishopric under Edessa, appears to have belonged to this district. 2. Resaina. (*Ammian. Marcellin. xxiii. 14. Ρέσινα*, *Ptolem. Geogr. v. 18.*) on the Chaboras, (*Steph. de Urb. v. Ρέσινα*), remarkable on account of Gordian's victory over the Persians, and his subsequent assassination by the Pretorian Præfect, was for a time called Theodosiopolis, but is now known by its ancient name Rás-aïn. (Spring head.) 3. Magusa, (*Μαγούδα*, *Ptolem. Geogr. Ibid.*) on the Chaboras, may still be recognised in Mákesín, and Callinicum, or Nicephorium, is the Rakkah, or Ráfikah of the Arabs. Nicephorium (*Νικηχώριον*) was a strong fortress on the

bank of the Euphrates, built by Alexander. (*Plin. Nat. Hist. vi. 30.*) It was afterwards called Callinicum, from Seleucus Callinicus, who improved its fortifications, and Constantia, (*Κωνσταντεία*), and Leontopolis, from Leo the Thracian in the Vth century. Rakkah, corrupted into Aracte by the Latin writers of the Middle Ages, was probably the old Chaldee name preserved by the Arabs. "It is the Capital of Diyár Modar," says Idrísí, (*Geogr. Nubiens. p. 197. Arab. text 226.*) and is called by the Greeks Alaníkos, (by an error of transcription for *Kalaníkos*, *Golius in Alferganum, p. 254.*) Near this place the Bilicha, (*Βίλειχα*, or *Βίλληχα*, *Isidor. Charac. p. 3.*) a small stream, running from Carræ to Nicephorium, entered the Euphrates, on the banks of which the army of Crassus received its first defeat, and his son was killed. By the Arabs it is called Balikh, (*Gol. ut suprâ*), and said to rise near Harrán, having been increased by the Juláb, which comes from Edessa.

iv. Between the Chaboras and Macepraete, where the rampart of Semiramis appears to have terminated, was the level tract inhabited principally by wandering Arabs. (*οἱ Σκηνῖται Ἀραβες*, *Arabes Scenitæ*, *Strabo, xvi. 1. 26. p. 747.*) 1. The first town in this division was Circesium, (*Κίρκησιόν*, *Zosimus, iii. 12. Circesium*, *Ammian. Marcellin. xxiii. 11. Circessum*, *Sextus Rufus, 22.*) in an angle formed by the confluence of the Chaboras and Euphrates, and on the Southern side of the former. It was strongly fortified by Diocletian, (*Procopius, de Edific. i. 6.*) and is supposed to be the Carchemish of the Scriptures, (*2 Chron. xxxv. 20. Jerem. xlv. 2. Isaiah, x. 9.*) The Arabs call it Kirkisiyâ, and derive its name from Kirkis, a race-course. (*Golius in Alfergan. 258.*) 2. Twenty miles from Circesium (Eutrop. ix. 11.) was Zaita, or Zaitha, (*Ζαῦθα*, *Zosimus; Ζεῖθα*, by error for *Ζαῖθα*, *Ptolem. v. 11.*) where the soldiers raised a tumulus over the remains of Gordian. 3. Dura, (*Δούρα*), also called Europus, (*Ἐυρωπος*), was built by Nicator, (*Isidor. Characen. p. 4.*) but already entirely ruined before the time of Zosimus. 4. Anatho, (*Ἀναθώ*, *Isidor. Characen. p. 4.*) a fortified town on an island or peninsula of the Euphrates, is probably the 'Anah, or 'A'nát of the Arabs, (*Idrísí, Geogr. Nub. p. 198, 199.*) and, perhaps, the Bæthauna, (*Βαιθαῦνα*, (*Βαιθάννα*?) of Ptolemy. (*Geogr. Ibid.*) Beyond it is the river Saocoras, (*Σαοκόρας*), coming from the neighbourhood of Nisibis, and perhaps the Araxes of Xenophon. (*Anab. i. 4. 18.*) 5. Naarda, (*Νααρδά*, *Ptolem. Neapdá*, *Joseph. Antiq. Jud. xviii. 12.*) or Neharde'a, (*נְהַרְדָּעָא*, *Benjam. Tudelens. Itinerar. p. 63.*) being well fortified, and surrounded by the Euphrates, was chosen as a place of refuge by the Jews who escaped from the desolation occasioned by the armies of Tiberius; and some centuries later became, together with the neighbouring towns of Sora and Pumbeditha, the most flourishing School of Hebrew Literature. (*Buxtorf, Tiberias, 6.*) 6. Siphara, or Sippara, (*Σιππαρηνών πόλις*, *Eusebius, Præf. Evangel. ix. 41.*) the last town in Mesopotamia, was traversed by the great Royal Canal, (*Βασιλείος ποταμός*, in Chaldee *Nahar malcâ*), which united the waters of the Euphrates with those of the Tigris. Near that canal Ammianus Marcellinus places the village of Macepraeta, which is evidently the Syriac phrase Maï-fraktâ, (the division of the water,) alluding to the division of the stream (*Scinditur Euphrates*, says Ammianus, *loc. cit.*) at this place, by which one part was carried to the Tigris at Seleucia, and the other

MESOPOTAMIA. passed by Babylon to the sea. It is called Nahr 'I'sá by the Arabs, from 'I'sá ibn 'Alí, uncle of the Khalif Al Mansúr. Geographers are, however, much divided respecting the topography of this part of Mesopotamia, and D'Anville places the Nahr Malkà, or Royal Canal, further Southward, near Babylon itself, marking Sippara at the mouth of a smaller cut, between that Capital and Macepracta, which, according to him, was at one extremity of the rampart called the wall of Semiramis. Of that work no trace now remains. (Kinneir, *Koordistan*, p. 476.) 7. Hatra, or Hatræ, a town entirely surrounded by the Desert, lay on the way from the Tigris to Nisibis, (Ammian. Marcellin. xxv. 26. Herodian. iii. 9.) and was attacked by Trajan and Severus, as well as by Julian; it appears to be the Hadar of Idrísí, (*Geogr. Nubiens.* p. 198.) written Hatder, or Halder, in our Maps.

Hatra.
Hadar.

v. Singara. Sinjar. v. Between Hatra and Nisibis was the small territory of Singara, (*τα Σίγγαρα*), a mountainous tract, branching out probably from Mount Masius, now called Sinjar, celebrated for its fertility, and, in modern times, for the fanatic and ferocious character of its inhabitants, the Yazídís. Its Capital was taken by Trajan, and was a flourishing colony under Gordian and Lucius Verus, as its coins testify. In the wars of the Lower Empire, it often changed its masters, being alternately in the possession of the Greeks and Persians. Its mountains contain a small lake, and give rise to a stream which joins the Mygdonius. It has erroneously been taken for the Shinar (Sinear) of Scripture. (*Gen.* x. 10. xi. 2.)

vi. Meso-
potamia
Propria.

Nisibis.
Neseeben.
Antioch.

vi. That portion of the Country which lies between the mountains of Singara, the Tigris, and Osroene, was probably the tract called Mesopotamia Proper. 1. At a considerable distance from Singara, to the North-West, was Nisibis, (*Νίσσιβις*, Julian, *Orat.* ii. p. 62.) on the banks of the Mygdonius, (*Μυγδόνιος*), supposed by St. Jerom (*Quæst. in Genes.* x. 10.) to be the Achad (Accad) which formed a part of the Kingdom of Nimrod, and became a large and flourishing city under the Macedonians, from whom it received the name of the Mygdonian Antioch. (*Ἀντιόχεια Μυγδονικήν*, Plutarch, in *vitâ Luculli*, p. 574. Strabo, xvi. l. 23. p. 747.) Placed at the foot of Mount Masius, it was united to Armenia, when the Kings of that Country had possessed themselves of the Northern part of Mesopotamia; but having been taken from Tigranes by Lucullus, was from that period, till basely surrendered by Jovian, the strongest bulwark of the Roman Empire against the Persians. (Amm. Marcellin. xxv. 31.) On its coins, and by Syriac and Arabic writers, it is named Nesíbin, but in the ancient Armenian Mēdzpín. Its present state has been already noticed under JEZIRAH. 2. In the same range of mountains, but further to the North-West, was another town of considerable note in the times of the Lower Empire. It is named Marde (*Μαρδῆ*) by Ptolemy, (*Geogr.* vi. l.) Mardes, or Mardís by other writers, and is said by Menander Protector (*Excerpta de Legat.* p. 171.) to be three parasangs (90 stadia = 11½ miles) from Nisibis. There must, however, be an error in his text, as the distance is at least 30 miles. (Buckingham, *Trav. in Mesopot.* 241.) Mardà, or in the plural Mardín, as it was called by the Syrians, is still named Márdín by the Arabs, and Mērdín by the Armenians, who form a large proportion of its modern inhabitants. It is the See of a Bishop of that Church and Nation, suffragan to the Archbishop of

Marda.
Merdeen.

Amid. (R. Simon, *Hist. Crit. du Levant*, p. 224.) 3. MESOPOTAMIA. Half-way between Nisibis and Marda, in the hills skirting the plain through which the road passes, to the North-West was Dara, (called Karà Dárà, i. e. Black Dárà, by the Turks,) one of the strongest fortresses of the Byzantine Empire. It was founded by Anastasius, and thence called Anastasia, but greatly strengthened by Justinian. (Gibbon, vii. 139.) Considerable remains of it are said to be still visible. (Buckingham, p. 238.)

Dara.

Therefore we usen *message* for Crist as if God monestith bi us,
we bisechen for Crist be ghe recounceiled to God.

Wiclif. 2 Corinthians, ch. v.

Now then are we *messengers* in the roume of Chryste euen as
though God did besech you thorow vs.

Bible, Anno 1551.

And after this, befor the highe bord
He with a manly vois sayd his *message*.

Chaucer. The Squires Tale, v. 10413.

The eye is a good *messenger*,
Which can to the hart in such manner
Tidings sende, that hath sene
To void him of his paines elene.

Id. The Romant of the Rose, p. 192.

The raynbowe is hir *messagere*.

Gower. Conf. Am. book v. p. 132.

But, eare he thus had sayd,
With flying speede, and seeming great pretence
Came running in, much like a man dismay'd,
A *messenger* with letters, which his *message* sayd.

Spenser. Faerie Queene, book i. can. 12.

How I begin
To verifie that solemn *message* late,
On which I sent thee to the Virgin pure
In Galilee, that she should bear a son
Great in renown, and call'd the Son of God.

Milton. Paradise Regained, book i. l. 133.

For God will deigne
To visit oft the dwellings of just men
Delighted, and with frequent intercourse
Thither will send his winged *messengers*
On errands of supernal grace.

Id. Paradise Lost, book vii. l. 572.

The angels are still dispatched by God upon all his great *messsages* to the world: and therefore their very name in Greek, which is *ἄγγελος*, signifies a *messenger*.

South. Sermons, vol. viii. p. 75.

MESSI'AS, } Heb. from *מָשַׁח*, he anointed.

MESSI'ASHIP. } See the Quotation from Porteus.

The womman seith to him, I woot that *Messias* is comen, that is
seid Crist.

Wiclif. John, ch. iv.

The woman sayd vnto hym: I wot well *Mesias* shall come,
whiche is called Christ.

Bible, Anno 1551.

At thy nativity a glorious quire
Of angels in the fields of Bethlehem sung
To shepherds watching at their folds by night,
And told them the *Messiah* now was born.

Milton. Paradise Regained, book i. l. 245.

There was such demonstration and evidence given to Jesus's
being the true *Messias* by his coming in the flesh, that it cast its
discovering influence both backwards and forwards; and equally
baffled and confuted the pretences of those who went before, and
those who rose up after.

South. Sermons, vol. iii. p. 299.

A crown will not want pretenders to claim it, nor usurpers, if
their power serves them to possess it: and hereupon the *Messiaship*
was pretended to by several impostors.

Id. Ib.

The word *Messiah* signifies anointed; that is a person appointed
to some high station, dignity, or office; because originally among
the Eastern nations men so appointed (particularly kings, priests,
and prophets) were anointed with oil.

*Porteus. Tracts, p. 497. The Truth and Divine Origin of the
Christian Revelation.*

MESSINA, an ancient, beautiful, and populous City
of Sicily, is the Capital of the Province Val Demone, and
formerly ranked next after Palermo; though in conse-
quence of the ravages of Plague it is at present inferior
in population to Catania. It lies at the North-Eastern
extremity of the Island on the shore of the strait to
which it gives name. Its shape is a long, irregular oval
extending along the harbour, and towards the land it
is surrounded by hills, which at first of moderate height
further inland rise into lofty mountains richly clothed
with wood. The sweep of the shore of the harbour
resembles a sickle in shape, and caused the town to
receive the denomination of Zancle, a word signifying
that implement of husbandry in the Sicilian language.
It is considered the best haven in the Mediterranean,
and can scarcely be surpassed in safety and convenience
by any in the world. Vessels of any burthen can lie
with their bowsprits over the land, and so protected
from wind and sea as to require very slender mooring.
The circumference of the basin constituting the port is
four miles, its depth in many places seventy fathoms,
and this circumstance, combined with its regular figure,
gives reason to conclude that it has been produced by a
volcanic eruption forming a crater, which subsequently
was filled by the influx of the sea. A race or violent
and irregular ripple in the sea to the East of the en-
trance of the harbour at present bears the name of Cha-
rybdis, and though not so formidable as that celebrated
whirlpool has been described by the Ancients, is still
embarrassing and dangerous to navigators. Swinburne,
however, (vol. ii. p. 288.) doubts this to have been the
position of the Charybdis of the classical writers, and points
out Pantano Grande, some miles to the North, as the
spot which probably acquired so much celebrity under
that name. The breadth of the strait in the part opposite
Messina is 5427 yards, but further North, at Faro
point, it narrows to 3580 yards. The tongue of land
which forms the Eastern boundary of the harbour is
defended by the Castle of St. Salvador, and has a light-
house intended to warn navigators of their approach to

MES-
SAGE.
—
MES-
SINA.

MES-
SINA.

the dangers of Charybdis. The principal fortification is the citadel, a very strong place, built on the isthmus joining the above-mentioned tongue of land to the shore. The quay extends along the Western side of the harbour, and is adorned by a range of houses, which, four stories high, and built in a regular and magnificent style, extend for a mile in a line parallel to the water's edge, interrupted only by nineteen gates giving access to the upper parts of the city. Between these houses and the water there is a space of a hundred feet, affording a delightful walk. The town contains a number of beautiful streets and squares, fountains of marble executed in an excellent taste, numerous bronze statues, equestrian and pedestrian, large and splendid churches, and magnificent mansions. The Cathedral is Gothic, enriched with costly mosaics on the altars and shrines; the front of the high altar is particularly splendid. Messina has abundance of provisions of the finest quality, especially fish. The atmosphere is remarkably pure, and the temperature mild, with scarcely any other inconvenience than heavy rains for some weeks in winter, so that it presents many advantages as a residence for invalids. The view from the high grounds behind the town is indescribably beautiful. The strait appears as a mighty river flowing between two ranges of majestic hills, and in the distance losing itself in the expanse of the Mediterranean. The shores are covered with rich demesnes, luxuriant vineyards, towns, and churches, and the scene in the direction of the land is closed by high mountains covered with forests. Cockburn, in his *Voyage to Sicily*, (vol. i. p. 110.) thus expresses his admiration of Messina. "I cannot too often repeat the beauty of the country about Messina, which is never better enjoyed than from on board a man-of-war one mile from shore. To behold this city from sea, its beautiful harbour, the winding straits extending for miles from the Faros to St. Plaudo; its several capes and promontories, the chain of mountains of most irregular forms behind Messina; Forts Gonzaga and Castellaccio, with Antena Mare, next in height to Etna, crowning the whole; in short, an assemblage of mountains, water, orange-groves, with a fine city, convents, villages, all comprised in one view that cannot be surpassed; but as the sun declines, and strikes on Calabria, new and rich tints with different shades appear. The wild sublimity of these mountains, the light which at this time displays the distant hills, with range behind range, of all forms and shapes, constitute a scene at once magnificent, beautiful and sublime."

Fata Mor-
gana.

Among the Physical circumstances which render Messina celebrated, the phenomena of the *Fata Morgana* are highly deserving of notice. During the warmest time of summer, after the sea and air have been much agitated by gales, if a calm succeed, a singular appearance takes place in the part of the atmosphere over the Strait of Messina. The spectator is astonished, as the dawn breaks, by observing suspended in the air the representations of palaces, woods, gardens, men, and other animals, until daylight setting in more strongly, gradually produces an indistinctness of the visionary scene, which ceases entirely when the sun rises. This phenomenon is, no doubt, produced by the same cause as that from which the MIRAGE arises in the Desert: the populace of Messina attribute it to the agency of the Devil; and Brydone, after examining and rejecting the various theories advanced on the subject, observes, that probably the opinion which states it to be the work of the Prince of Air is as rational

VOL. XXV.

as any. He however does not the less advance a notion of his own that it may be the result of Electricity, and bear some analogy to the Aurora Borealis. Smyth, one of the latest and most intelligent travellers in Sicily, thus expresses himself on the subject: "One of the most extraordinary phenomena of this celebrated region is an aerial illusion, called the *Fata Morgana*, from its being supposed to be a spectacle under the influence of the Queen of the Fairies, the *Morgain la Fay* of popular legends. It occurs during calms, when the weather is warm and the tides are at their highest, and is said by some refractive property to present in the air multiplied images of objects existing on the coasts with wonderful precision and magnificence. The most perfect are reported to have been seen from the vicinity of Reggio about sunrise. I much doubt, however, the accuracy of the descriptions I have heard and read, as I cannot help thinking that the imagination assists these dioptric appearances, having never met a Sicilian who had actually seen any thing more than the loom or mirage consequent on a peculiar state of the atmosphere, but which, I must say, I have here observed many times to be unusually strong. It is spoken of by some as a luminous, ignescent phenomenon, infallibly predicting an approaching storm." *Memoir descriptive of Sicily and its Islands*, p. 109.

The inhabitants of Messina are singularly superstitious, and their infatuation in this respect is not less than that of the Hindûs or ancient Egyptians. The Virgin Mary is the Patroness of the city, and the Messinese preserve with undoubting credulity a Letter alleged to have been addressed by her to the citizens. Her Festival is celebrated several times in the course of the year.

Messina was computed to contain above 80,000 inhabitants before the dreadful Plague of 1743, which carried off 44,000 people. In 1783 a violent earthquake demolished a great part of the city, and overwhelmed 12,000 of the inhabitants under the ruins. These disasters reduced the population below 30,000, but in consequence of the influx of capital and improvements resulting from the presence of a large English garrison for several years during the late war, it has much recovered, and now contains 61,000 inhabitants. Latitude 38° 10' North, longitude 15° 4' East.

Gallo, *Annali della Citta di Messina*, 2 tom. folio, Messin. 1756—1758; Swinburne, *Travels in the Two Sicilies*; Brydone, *Tour in Sicily and Malta*; De Non, *Voyage en Sicile*, Paris, 1788; Cockburn, *Voyage to Sicily and Malta*; Hughes, *Travels in Sicily, Greece, and Albania*; Smyth, *Memoir on Sicily and its Islands*.

MESSUAGE, Skinner refers to *mease, domus*, which he derives from the Fr. *meix*, or as Menage writes it *mas*, and Du Cange *mes*, an old word for *maison*. Du Cange says of the Low Lat. *messuagium*, that it is formed from *mes*, i. e. *mansus*, a manse, or mansion, and Vossius, *quasi mansi-agium*. *De Vit.* lib. iii. c. 25. The word is of common usage in legal instruments of conveyance.

There were then greater number of *mesuages* and mansions almost in every place.

The skilful *metallist*, that findeth and refineth those precious veines, for publike use, is rewarded, is honoured.

Id. *lb.* decad. 5. ep. 7. fol. 338.

She said; and lo! a palace towering seems,

With Parian pillars and *metallic* beams.

King. *Rufinus, or the Favourite*.

Every man living, some time or other, sooner or later, shall assuredly meet with an hour of temptation; a certain critical hour, which shall more especially try what *mettle* his heart is made of, and in which the eternal concerns of his soul shall more particularly lie at stake.

South. *Sermons*, vol. vi. p. 253.

But their force differs from true spirit, as much as a vicious from a *mettlesome* horse.

Tatler, No. 61.

The quicksilver were by this means brought to appear a very close and lovely *metalline* cylinder, not interrupted by interspersed bubbles as before.

Boyle. *Works*, vol. i. p. 49. *New Experiments Physico-Mechanical touching the Spring of Air*.

Though not one wit bestrides the back

Of useful drudge, ycleped hack,

But fine-bred things of *mettled* blood,

Pick'd from Apollo's royal stud.

Lloyd. *The Actor*.

Fierce are my steeds; their fury to restrain
The strongest hand requires and stiffest rein:
For oft, their *mettle* rous'd, they rush along,
Nor feel the biting curb, or sounding thong.

Wilkie. *The Epigoniad*, book iii.

The frigid chymist culls, in mineral store,

The glossy spherules of *metallic* ore.

Brookes. *Universal Beauty*, book ii. l. 164.

METALASIA, in Botany, a genus of the class *Syn- genesia*, order *Superflua*, natural order *Compositæ*. Generic character: involucre cylindrical, coloured; receptacle naked; down deciduous, capillary, clavate; florets few, hermaphrodite.

One species, *M. seriphoides*, native of the South of Africa.

METALLITES, in Zoology, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, twelve-jointed, rather short, thickened, the scape ascending above the eyes, stout, clavate, the basal joints of the funiculus rather long, obconic, the remainder nodose, club oblong, oval, attenuated at the apex; head produced anteriorly into a short, somewhat rounded, rostrum, flat above, and slightly narrower than the head; eyes small, rounded, slightly prominent; *thorax* short, subcylindric, with the sides moderately rounded; *scutellum* moderate, rounded at the apex; *elytra* elongate, sublinear, slightly convex; legs stout; *femora* incrassated in the middle, sometimes dentate; *tibiæ* unarmed at the apex; *tarsi* with the penultimate joint rather broad, bilobed.

Type of the genus *M. mollis*, Germar. *Nov. Spec. Ins.* vol. i. p. 456. About six species, natives of Europe.

METALLOSETIA, in Zoology, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* long in the males, with the basal half densely clothed with elongate metallic scales, gradually decreasing in length towards the apex, which last is very slender and acute, simple, excepting the basal joint in the females; *palpi* slender, slightly recurved, distinctly triarticulate, the basal joint most robust, second rather shorter, terminal very slender, elongate, acuminate; head densely clothed with smooth, glossy, compact, metallic scales; *thorax* slender, also scaly; wings very slender, metallic, immaculate, convoluted, with very long cilia; legs rather slender; posterior stouter, considerably elongated, all with metallic scales.

Type of the genus *Porrectaria spissicornis*, Haworth, *Lep. Britt.* p. 537. Two species, both found in Britain.

METAMO'RPHOSE, v. } Fr. *metamorphose*; It.

METAMO'RPHOSE, n. } *metamorfosi*; Sp. *meta-*

METAMO'RPHOSER. } *morphosis*; Lat. *meta-*

morphosis; Gr. *μεταμόρφωσις*, from *μεταμορφόειν*, *transformare*, to transform; *μετὰ*, and *μορφή*, form.

To transform; to change from one form or shape to another.

Himselfe [Enuy] he fretteth as I vnderstond,

Witnesse of Ouid *methamorphose*.

Chaucer. *The Court of Loue*, p. 377.

Thus men (my lord) be *metamorphosed*,

From seemely shape, to byrds, and ougly beasts.

Gascoigne. *The Complaynt of Phylomene*.

What shall I name this man but a beastly *metamorphoser*, both of himself and of others?

Id. *Delic. Diet for Drunkards*, (1576.)

O Misery! where once thou art possest,

See but how quickly thou canst alter kind,

And, like a Circe, *metamorphosest*

The man that hath not a most godlike mind.

Drayton. *The Barons' Wars*, book vi.

METAL.

META-
MOR-
PHOSE.

META-
MOR-
PHOSE.
—
META-
PHRASE.

Can turn itself into disguises
Of all sorts, for all sorts of vices;
Can transubstantiate, *metamorphose*,
And charm whole herds of beasts, like Orpheus.
Butler. Miscellaneous Thoughts.

What odious change,
What *metamorphose* strikes the dubious eye?
Ah, whither is retir'd the scarlet wave
Mantling with health, which floated through the cheek.
Thompson. Sickness, book iii. The Argument.

METAPHOR, } Fr. *metaphore*; It. *metafora*;
METAPHORICAL, } Sp. *metaphora*; Gr. *μεταφορά*;
METAPHORICALLY. } *μεταφέρειν*, *transferre*, *μετά*, and
φέρειν, *ferre*, to bear.

A translation; *sc.* of the application of a word from its literal meaning, denominating some sensible object, or action, or operation, to supposed similar or corresponding objects, or actions, or operations of the human mind; also, from one object or class of objects to another, founded upon some similarity or resemblance.

See the *Essay on RHETORIC*, ch. iii.

Remember all my words,
And beare them wel in minde,
And make thereof a *metaphore*,
So shalt thou quickly finde.
Gascoigne. The Complaynt of Phylomene.

Metaphore is an alteration of a worde, from the proper and naturall meaning, to that which is not proper, and yet agreeth thereunto by some likenesse that appeareth to be in it.

Wilson. The Arte of Rhetorique, fol. 175.

An horn is the hieroglyphick of authority, power, and dignity, and in this *metaphor* is often used in scripture.

Sir Thomas Brown. Vulgar Errors, book v. ch. ix. p. 301.

How dangerous it is in sensible things to use *metaphorical* expressions unto the people, and what absurd conceits they will swallow in their literals.

Id. Ib. book iv. ch. x. p. 256.

Whether the like [magnetism] be really made out, or rather *metaphorically* verified in the sympathies of plants and animals, might afford a large dispute.

Id. Ib. book ii. ch. iii. p. 85.

However it [the carbuncle] be granted a very splendid gem, and whose sparks may somewhat resemble the glances of fire; and *metaphorically* deserve that name.

Id. Ib. book ii. ch. v. p. 103.

But *metaphors*, we know, are but weak mediums to prove any thing. And I refer it to any one of a clear impartial reason to judge, whether, when the spirit is said to be in us in a temple, this does not, at the very first sight, appear to be a *metaphorical* expression.

South. Sermons, vol. v. p. 282.

In respect of which union to an earthly nature it [the divine nature of Christ] might *metaphorically* be said to descend to the place where that nature did reside.

Id. Ib. vol. vii. p. 6.

In all languages, the series of physical causes and effects is *metaphorically* likened to a chain, the links of which are supposed to be indissolubly and necessarily connected.

Stewart. Philosophy of the Human Mind, vol. ii. ch. iv. sec. 1. p. 309.

METAPHRASE, } Gr. *μετάφρασις*, *μετά*, and
METAPHRAST, } *φράσις*, from *φράζειν*, to speak.
METAPHRASTIC. } Applied to

A literal or verbal translation; a translation *phrase* for *phrase*.

How-ever his other labours lie hid, his *metaphrase* of the Psalms is still in our hands, with the applause of all the learned.

Hall. Works, vol. i. fol. 141. To Mr. Samuel Burton.

[Margaret] sister to Sir Edwyn Sandys, of Borne, in com. Cantii knight, and to George Sandys, Esq. the famous traveller and excellent poetical *metaphrast*.

Wood. Fasti Oxonienses, 1285.

Nor shall it be dissembled, but that I had a great inclination to give a paraphrase (or *metaphrase* rather) of the xxviiiith chapter of Deuteronomy.

Harte. Christ's Parable of the Sower. Preface

It [the *Marchaunt's Tale*] was translated into Greek at Constantinople by Maximus Planudes, who has the merit of having fami-

liarised to his countrymen many Latin classics of the lower empire, by *metaphrastic* versions.

Warton. History of English Poetry, vol. ii. p. 169. sec. 9.

METAPHY'SICK, *adj.* } Fr. *metaphysique*; It.
METAPHY'SICK, *n.* } *metafisica*; Sp. *metaphi-*
METAPHY'SICAL, } *sica*; Low Lat. *meta-*
METAPHY'SICALLY, } *physica*; Gr. *μετά τὰ*
METAPHYSICIAN. } *φυσικά*. The Lat. *meta-*

physica is rendered *super-naturalia*, and it is so used by Shakspeare. And see the Quotation from Gillies's *Aristotle* for the imposition of the name upon some of the writings of that Philosopher.

And there corrupt they their iudgements with apparent arguments, and wyth alleaging vnto them textes of logike, of naturall philautia, of *metaphisike*, and morall philosophy, & all maner bookes of Aristotle.

Tyndall. Workes, fol. 104. *The Obedience of a Christian Man. Preface.*

All they haue none other thing for themselfe, as farre as I haue redde and could perceiue, but arguments grouded vpo philosophy & *metaphysicall* reasons.

Sir Thomas More. Workes, fol. 386. *The First Part of the Confutation of Tyndall.*

The one part which is physic, inquireth and handleth the material and efficient causes; and the other, which is *metaphysic*, handleth the formal and final causes.

Bacon. Works, vol. i. book ii. p. 57. *Of the Advancement of Learning.*

By which sayings, [Jer. xxiii. 24. 2 Chron. vi. 18.] the divine immensity is as fully expressed as by the artificial term, ubiquity; that is, every-where-ness, or by any *metaphysick* book.

Grew. Cosmo Sacra, book iv. ch. viii.

High thee hither
That I may poure my spirits in thine eare,
And chastise with the valour of my tongue
All that impeides thee from the golden round
Which fate and *metaphysicall* ayde doth seeme
To haue thee crown'd withall.

Shakspeare. Macbeth, fol. 134.

And of this sort, a man may find an infinite number of propositions, reasonings, and conclusions, in books of *metaphysicks*, school-divinity, and some sort of natural philosophy; and after all, know as little of God, spirits, or bodies, as he did before he set out.

Locke. On the Human Understanding, book iv. ch. viii. sec. 9. fol. 310.

Those who discourse *metaphysically* of the nature of truth, as to the reality of the thing, affirm a perfect coincidence between truth and goodness; and I believe it might be easily made out, that there is nothing in nature perfectly true but what is also really good.

South. Sermons, vol. vii. p. 88.

This experimental philosophy, no one now is in danger of confounding with the *metaphysical* speculations already mentioned.

Stewart. Philosophy of the Human Mind, part i. *Introduction*, p. 6.

In the writings, indeed, of several other modern *metaphysicians*, we meet with a variety of important and well ascertained facts; but, in general, these facts are blended with speculations upon subjects which are placed beyond the reach of the human faculties.

Id. Ib.

From this part of Aristotle's logic, there is an easy transition to what has been called his *metaphysics*; a name unknown to the author himself, and given to his most abstract philosophical works by his editors, from an opinion that those books ought to be studied immediately after his *physics*, or treatises on natural philosophy.

Gillies. Analysis of Aristotle's Works, vol. i. ch. ii. p. 100.

METASTASIS, Gr. *μετάστασις*, *μετά*, and *στάσις*, station, place.

Change of place: a motion or removal.

He considers what not unfrequently happens in distempered bodies by the *metastasis* of the morbifick matter.

Boyle. Works, vol. ii. p. 197. *The Usefulness of Natural Philosophy.*

For oftentimes nature will, in spite of remedies, make a *metastasis* of the peccant matter, and so impair the condition of the patient.

Id. Ib. vol. ii. p. 240. *Id. Appendix.*

METE, v. } A. S. *met-an*, *ge-met-an*, *metiri*, to
ME'TER, n. } measure, *q. v.*
ME'TING. }

þe tone is fro þe to þer moten a grete myle.

R. Brunne, p. 22.

And in what mesure ye *meten*, it schal be *meten* agen to you.
Wiclif. *Matthew*, ch. vii.

And w^t what mesure ye *mete*, w^t the same shall it be measured to
you agayne.
Bible, Anno 1551.

And there weren set sixe stoonen cannes aftir the clensing of the
Jewis, holdinge ech twayne either thre *metretis*.
Wiclif. *John*, ch. ii.

And therefore this marke that we must shoote at, set vp wel in
our sight, we shal nowe *meate* for the shoote, and consider how neare
toward, or how farre of, your arrowes are fro the prik.
Sir Thomas More. *Workes*, fol. 1167. *A Dialogue of Comfort*
against Tribulation.

For some of them I see wel be not worth the *meating*, and no
great maruayl, though I shoote wilde whyle I somewhat mystake
the marke.
Id. *Ib.*

The *meetrodde* that he hadde in his hande, was syxe cubytes
longe and a spanne.
Bible, Anno 1551. *Ezekiel*, ch. xl.

Nay say they, the scriptures is so harde, that thou couldest neuer
vnderstand it but by the doctours. That is, I must *measure* the
mete yarde by the cloth.

Tyndall. *Workes*, fol. 103. *The Obedience of a Christian Man*.
Preface.

The prince will, in the perfectness of time,
Cast off his followers: and their memorie
Shall as a patterne, or a measure, live,
By which his grace must *mete* the liues of others,
Turning past-euills to advantages.

Shakspeare. *Henry IV. Second Part*, fol. 93.

He reformed the olde vntrue measures, and made a measure by
the length of his own arme, which was then called *vlua*, an elle, and
now the same is called a yard, or a *metwand*, &c.

Stow. *Henry I. Anno* 1102.

Then, of your labour to compute the gain,
Before you fill the vessels, *mete* the grain.

Cooke. *Hesiod. Works and Days*, book ii.

But the aulnager, the weigher, the *meeter* of grants, will not suffer
us to acquiesce in the judgement of the prince reigning at the time
when they were made.

Burke. *Works*, vol. viii. p. 38. *Letter to a Noble Lord*.

METEMPSY'CHOSE, v. } Fr. *metempsychose*;
METEMPSYCHO'SIS. } Lat. *metempsychosis*;
Gr. *μετεμψύχωσις*, *μετὰ*, and *ψυχή*, the soul.

The transmigration or passage of the soul from one
body to another.

The souls of usurers after their death, Lucan affirms to be *metem-*
psychosed, or translated into the bodies of asses, and there remain
certain years, for poor men to take their pennyworth out of their
bones.
Peacham. *On Blazoning*.

How great a joy 'twould be, how great a bliss,
If we could have a *metempsychosis*!

Brome. *To Mr. J. B.*

For thus we read in Plato, that from the opinion of *metempsychosis*,
or transmigration of the souls of men into the bodies of beasts most
suitable unto their humane condition, after his death, Orpheus the
musician became a swan.

Sir Thomas Brown. *Vulgar Errours*, book iii. ch. xxvii. p. 216.

The sages of old live again in us; and in opinions there is a
metempsychosis. We are our re-animated ancestours, and antedate
their resurrection.

Glanvil. *The Vanity of Dogmatizing*, ch. xv. p. 138.

Oh! had he dy'd of old, how great a strife
Had been, who from his death should draw their life?
Who should, by one rich draught, become whate'er
Seneca, Cato, Numa, Cæsar, were?
Learn'd, virtuous, pious, great; and have by this
An universal *metempsychosis*.

Dryden. *On the Death of Lord Hastings*.

But if we understand it of sin already committed in his own per-
son [John ix. 23.] so it favours of the opinion of Pythagoras, then
common amongst the Jews, as also at this day, that there is a
metempsychosis, or transmigration of our souls from one body to
another successively.

South. *Sermons*, vol. viii. p. 294.

ME'TEOR,
METE'OROUS,
METEO'RICAL,
METEORO'LOGY,
METEOROLO'GICAL.

Fr. *meteore*; It. and Sp.
meteoro; Gr. *μετέωρος*, *sublimis*,
μετέωρα, *quæ in altum sunt*, *sub-*
lata, *sublimia*; *μετὰ*, and *ἀείρ-*
ειν, *tollere*, to raise aloft. The

Romans did not adopt the word.

See the *Essay on METEOROLOGY*.

New sorts of *meteors* gazing from the skies.

Drayton. *The Barons' Wars*, book iv.

The lute's light genius now does proudly rise
Heav'd on the surges of swoln rhapsodies,
Whose flourish (*meteor-like*) doth curl the air
With flash of high-born fancies.

Crashaw. *Musick's Duel*.

I see a resemblance of that *meteorical* light which appears in
morish places, that seems fire, but is nothing but a flimsy glittering
exhalation, causing both the wonder and error of the traveller;
leading him through the impulsive motion of the air into a ditch.

Hall. *Works*, vol. iii. fol. 426. *Soliloquy* 12.

In sundry animals we deny not a kind of natural *meteorology*, or
innate presentation both of wind and weather.

Sir Thomas Brown. *Vulgar Errours*, book iii. ch. x. p. 161.

With many others, considerable in *meteorological* divinity, which
would more sensibly make out the epithite of the heathens.

Id. *Ib.* book vii. ch. iv. p. 427.

The cherubim descended; on the ground
Gliding *meteorous*, as ev'ning mist
Ris'n from a river o'er the marish glides,
And gathers ground fast at the labourer's heel
Homeward returning.

Milton. *Paradise Lost*, book ix. l. 629.

Fate scatters lightening from thy *meteor-shield*,
And ruin spreads around the sanguine tide.

Beattie. *The Judgment of Paris* (1765.)

Now any appearance of a body of light in the air is called by the
Greek and Latin authors a star, though it be only a *meteor*, that is,
a transient, accidental, luminous vapour, neither of considerable
height, nor of long continuance; in which sense also the Scripture
speaks of stars falling from heaven.

Porteus. *Lecture* 2. vol. i. p. 44.

This, too, is the region of the most awful and alarming *meteo-*
rological appearances—"vapours, and clouds, and storms."
Stewart. *Philosophical Essays*, ess. ii. ch. ii. p. 370. *On the Sub-*
lime.

METEORUS, in *Botany*, a genus of the class
Monadelphia, order *Polyandria*. Generic character:
calyx four-cleft, superior, persisting; corolla, four-cleft,
salver-shaped, segments rather reflected; stamens twice
as long as the corolla; drupe one-seeded, crowned.

One species, *M. coccineus*, a large tree with terminal
scarlet flowers, native of the woods of Cochin China.
Loureiro.

METHEGLIN, Welsh, *meddyglyn*. A kind of
drink among the Welsh, made of wine and honie sodden
together. Minshew. See HYDROMEL

Howbeit they are not their onlie drinke at all times, but referred
vnto the delicate sorts of drinke, as *metheglin* is in Wales, whereof
the Welchmen make no lesse accompt (and not without cause if it
be well handled) than the Greeks did of their ambrosia or nectar.

Harrison. *Description of England*, vol. i. ch. vi. p. 286.

Asv. *Metheglin*! what's that, sir? may I be so audacious to
demand.

Ben Jonson. *Cynthia's Revels*, act i. sc. 4.

O'er our parch'd tongue the rich *metheglin* glides.

Gay. *Epistle* 1. *To a Lady*.

METEM-
PSY-
CHOSE.
—
METHE-
GLIN.

ME-
THINKS.
METHOD.

METHINKS. See ME.

METHOCA, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* twelve-jointed, longer than the head, curved, nearly filiform, pubescent, basal joint short, robust, second shortest, remainder oblong, a little decreasing in length to the last, which is elongate, ovate; maxillary *palpi* long, pilose, six-jointed, fourth joint longest; labial shorter, quadriarticulate, terminal joint longest; head large, subglobose; eyes lateral, oval; *ocelli* three, placed in a triangle; *thorax* nodose, formed of three distinct segments, first obovate, second oblong, third ovate; wings none; *abdomen* ovoid, attached by a short peduncle, furnished with a sting at the apex, which is slightly incurved; anterior *tibiæ* with a pectinated process at the tip.

Type of the genus, *M. ichneumonoides*, Latreille, *M. formicaria*, Jurine, *Hym.* pl. xiii. One species only, found in Europe and also in England, but rare in the latter country.

METHOD, } Fr. *methode*; It. and Sp. *methodo*; Lat. *methodus*; Gr. *μέθοδος*; *μετά*, with, and *ὁδός*, way. It is applied to
METHO'DICK, }
METHO'DICAL, }
METHO'DICALLY, }
METHODISM, } An orderly or regular course,
METHODIST, } way, progress, or proceeding; a
METHODISTICAL, } plan.
METHODIZE. } *Methodist*: one who pursues
an orderly course or way. Also one of

A religious sect; so called, probably, from the precise and orderly habits and manners of their founder and his early converts.

Method hath been placed, and not amiss, in logic, as a part of judgment: for as the doctrine of syllogisms comprehendeth the rules of judgment upon that which is invented, so the doctrine of *method* containeth the rules of judgment upon that which is to be delivered.

Bacon. *Works*, vol. i. p. 83. *Of the Advancement of Learning*, book ii.

— For honours, riches, kingdoms, glory,
Have been before contemn'd, and may agen:
Therefore to know what more thou art than man,
Worth naming Son of God by voice from heav'n,
Another *method* I must now begin.

Milton. *Paradise Regained*, book i. l. 540.

For of these manner of rulings by one, by the fewer part, and by the multitude or greater nuber, they which haue more *methodically* and more distinctly & perfittly written vpon them, doe make a subdiuision. Smith. *Commonwealth*, ch. iii. p. 3.

As Themison, and his old sect of *methodists* resolv'd, that the laxum and strictum, the immoderate dissolution or constipation, were the principles and originals of all diseases in the world, so it will be likely to prove in our spiritual estate also.

Hammond. *Works*, vol. iv. fol. 577. *Sermon* 3.

Let such persons rather acknowledge the goodness of God towards them, and not quarrel with the great physician of souls for having cured them by easy and gentle *methods*.

South. *Sermons*, vol. ix. p. 38.

For he [the devil] is able to present images of words and sentences to the imagination, in as clear and perspicuous an order, as the most faithful and *methodical* memory.

Id. *Ib.* vol. v. p. 106.

You must not expect that I should *methodically* enumerate and particularly discourse to you of all the grounds and motives I may have of looking for great advantages to accrue to mankind by men's future progresses in the discovery of nature.

Boyle. *Works*, vol. iii. p. 422. *The Usefulness of Experimental Philosophy*.

And therefore I wonder not that the most learned of the *methodists* themselves have much valued and celebrated some peculiar processes and receipts.

Id. *Ib.* vol. ii. p. 245. *Appendix to the Usefulness of Natural Philosophy*.

Those rules of old discover'd, not devis'd,
Are Nature still, but Nature *methodis'd*:
Nature, like Liberty, is but restrain'd
By the same laws, which first herself ordain'd.

Pope. *Essay on Criticism*, l. 89.

Let them not be left (as is too much, God knows, the case) to pick it up themselves as well as they can, from casual information, or a few superficial, unconnected instructions; but let it be taught them systematically and *methodically*.

Porteus. *Sermon* 9. vol. i. p. 260.

And of late this loose, and I can hardly help calling it profane humour, has been directed chiefly against the followers of *methodism*. Paley. *Sermon* 1. p. 20.

Do *methodists* deserve this treatment? Be their particular doctrines what they may, the professors of these doctrines appear to be in earnest about them; and a man who is in earnest in religion cannot be a bad man, still less a fit subject for derision.

Id. *Ib.* p. 21.

What was done in France was a wild attempt to *methodize* anarchy; to perpetuate and fix disorder.

Burke. *Works*, vol. vi. p. 85. *Appeal from the New to the Old Whigs*.

METONYMY, } Fr. *metonimie*; It. and Sp. *metonymia*; Lat. *metonymia*;
METONY'MICAL, } *metonymia*; Lat. *metonymia*;
METONY'MICALLY. } Gr. *μετωνυμία*, (*μετά*, trans, et *ὄνομα*, *nomen*,) a change of name. See the Quotation from Blair.

Here, therefore, ye have an evident *metonymy*: the thing signified, which is the husband's power, is put for that which signifies it, which is the woman's vail.

Hall. *Works*, vol. v. p. 487. *Sermon* 35.

Intricate turnings, by a transumptive and *metonymical* kind of speech, are called meanders: for this river [Meander] did so strangely path itself, that the foot seemed to touch the head.

Drayton. *Rosamond to King Henry*, note 2.

This vow of theirs therefore is *metonymically* filthy, because it makes them such.

Hall. *Works*, vol. i. fol. 705. *The Honour of the Married Clergie*, sec. 16.

By [life] I suppose, there can be no need of proving, that our Saviour does not here mean [life] barely and physically so taken, and no more; which is but a poor thing, God knows; but by life, according to a *metonymy* of the subject for the adjunct, understands the happiness of life in the very same sense wherein S. Paul takes this word in 1 Thess. ii. 8.

South. *Sermons*, vol. iv. p. 464.

The disposition also of the coloured body, as that modifies the light, may be called by that name [colour] *metonymically* (to borrow a school-term) or efficiently, that is in regard of its turning the light, that rebounds from it, or passes through it, into this or that particular colour.

Boyle. *Works*, vol. i. p. 671. *The Experimental History of Colours*.

To tropes, founded on these several relations, of cause and effect, container and contained, sign and thing signified, is given the name of *metonymy*.

Blair. *Lecture* 14. vol. i. p. 369.

METOPIA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* deflexed, triarticulate, the second joint prismatic, with a naked seta at the apex; lip retractile, fleshy, lobate; forehead broad; halteres concealed under a broad scale; wings divaricating, without a transverse nervure at the apex.

Type of the genus *Tachina leucocephala*, Panzer, *Faun. Ins. Germ.* fasc. 54. fig. 14. Several species, of which one has been detected in Britain.

METOPOSCOPY, Gr. *μετωπόςκοπος*, from *μέτωπον*, a forehead, and *σκέπτω*, I regard; Lat. *metoposcopus*; Fr. *metoposcopie*; Sp. *metoposcopia*.

The art of divination by inspection of the forehead.

Writers on
the Art.

Besides the above brief notice of METOPOSCOPY given by Pliny, we read in Suetonius that a Professor of that mode of Divination, upon inspecting the foreheads of Britannicus and Titus, pronounced that the former should never wear the Imperial Crown, which assuredly would descend upon the latter. (*Titus*, 2.) Zopyrus, who pronounced the celebrated opinion respecting the natural evil disposition of Socrates, is described by Cicero as one *qui se profitebatur hominum mores naturasque ex corpore, oculis, vultu, fronte pernoscere*. (*de Fato*, 5.) But Alexander Aphrodisiensis, who in his Book *περί εἰμαρμένης* probably transcribed from the same Greek original which furnished Cicero with the above anecdote, styles Zopyrus simply *φυσιογνώμων*, which word, indeed, is employed by Cicero also. Metoposcopy seems not to have been in high vogue at Rome when Juvenal wrote; for although it encounters his lash, he represents it as employed only by the lower orders, when he recommends a careful avoidance of the superstitious Dame, who

*Si mediocris erit —————
frontemque manumque
Præbebit vati.*

vi. 583.

Moderns.
Cardan.

It remained for the insane Cardan in modern times to expand this absurd fancy into a legitimate system; and from his *Metoposcopia*, which appeared at Paris in 1558, illustrated with engravings of 800 different foreheads, we shall present a few particulars.

General re-
marks on
lines.

All the marks on the forehead are to be inspected, and among them Cardan mentions the following, *Cruces, Circelli, Monticuli, Claustra maculata, Stellulae, Quadrata, Triangula, Lineæ Capillares*; but great care must be taken not to confound wrinkles with any of these figures. Continuous lines are fortunate, broken lines otherwise. Long lines indicate energy and prosperity, short lines the contrary. Breadth of lines betokens men of joyous dispositions and ready wit; distinctness,—perspicuity of understanding; straightness and simplicity,—similar mental qualities; ramification,—confusion, fickleness, and irresolution; intersection,—perils and losses from the Planets to which, as we shall see presently, the particular lines are assigned; and all these marks must be judged *vice versâ*. The extinction of lines refers to past events; and the more rarely lines are discovered on any forehead, the more worthy are they of special note, *veluti quibus tanquam divinis literis est scripta designataque hominum vita*.

Distribution
of lines.

The number of forehead lines is by no means determinate, but there are seldom less than three; when either very rare or wholly wanting they are ill-omened. The presence, however, of but few, denotes simplicity, justice, gentleness, seriousness, and freedom from care. Beginning from the uppermost part of the forehead, and descending to the eyebrows, seven places of lines may be assigned in order to the Heavenly bodies, as follows: 1. Saturn; 2. Jupiter; 3. Mars; 4. the Sun; 5. Venus; 6. Mercury; 7. the Moon. Any line which cannot be

attributed to one of these places, *e. g.* transverse, ascending, descending, wandering, and non-natural, are of evil omen.

The Planet ascendant in the Horoscope will always predominate in the forehead. The colour of lines varies, especially if the stomach be fasting; black, pale, or unequally-coloured lines denote approaching death. White, and yet more red, lines signify that the event which is prognosticated will speedily occur; a livid colour portends death within a year; unnatural colours, as black or yellow, are unfortunate. The following marks are of evil omen.

Those which succeed are no less fortunate.

Bad signs are worst when on the left; and even good signs when on that side lose some of their potency; and all vary in value according to the Planetary line upon which they are placed. Beginning from the left, the first third of a line belongs to the first thirty years of life, the central portion to the second thirty, the last on the extreme right to the closing thirty, if there be so many. The evil signified by a break in these divisions respectively is to be referred to the period of life which that particular division is supposed to regulate. The last aphorism must be given *ex cathedrâ*, in all the solemnity of Cardan's own words. *In effectibus et accidentibus hominum judicandis seu prædicendis, notentur sedulo quæ adinvicem conveniunt et dissentiunt: verbi gratiâ, si Signum aliquod reperiat in Fronte quod malam mortem minetur, et forsâ speciem illius præscire desideras, considerentur circumstantiæ et effectus alii ex Physiognomiâ totius. Si enim appareant Signa Furis, scilicet quod homo iste sit ad furtum proclivis, talem in patibulo periturum conjicies; si Homicidii Signa reperiantur, eum Rotæ affigendum judicabis; sic etiam si sit Lusor, Libidinosus, Iracundus, Præceps aut Contumeliosus, tunc et mortis seu supplicii speciem tali vitio destinata et congruam poteris prænuntiare, et hoc pacto effectus ex causâ conjicere.* With this piece of advice the Ist Book concludes. Its XII successors are given up to schemes of different foreheads; and, from the predominance of ill-fortune, he who trusts to a Metoposcopist for prediction ought most cordially to desire a smooth, polished, and unmarked forehead, before he submits it to the seer's inspection.

The first six of the Planetary lines, in general, have Planetary the following bearings. 1. Memory and Patience. 2. lines. Deliberation, Judgment, and Prudence. 3. Valour, Promptness, and Choler. 4. Wisdom, Moderation, Continnence, and Liberality. 5. Luxury and Gentleness. 6. Imagination and Memory. Some few of the presages which we cannot illustrate by diagrams, (nor, it may perhaps be thought, is there much necessity for so doing,) may be accepted as specimens of the whole. The man (so marked) is bilious, choleric, and will lose an arm. The man will endure much sorrow and be imprisoned; the woman will be imprisoned and whipped. The man will be frequently tormented with the colic. The man will fall from a high place, will be much wronged, im-

METO-
POS-
COPY.

Properties.

METO-
POS-
COPY.

prisoned, and drowned; the woman will be grievously wounded in the head with a stone. The man will be malignant, luxurious, and at last hanged; the woman will outlive two husbands, surrender herself to gallantry, haunt the society of Monks, and be malignant and wicked. The woman will have two bastards before marriage. The man will often fall into the water, labour under many complaints, and lead a bad life; the woman will be hysterical and gouty from intemperance, and die a violent death. The man will fall from his horse; the woman will break her neck. The man will be sick, imprisoned, tortured, and beheaded. The man will have a weak digestion, and die of the dropsy. The man will have two wives, and be weak both in legs and body, nevertheless if he lives temperately he shall attain the age of eighty. The man will be a murderer and traitor, and die in the Gallies. The woman will be licentious, wounded in the left leg, and smothered. The woman will be drowned for a witch. The fate indeed predicted for the unhappy women, with scarcely a single exception, would of itself sufficiently establish the general evil reputation of Cardan as a Misogynist.

Moles.

The XIIIth and last Book treats on Moles. Those on the forehead, according to their places, intimate relative moles in other parts of the body, and they appear in general far better omens than lines. In this part of his subject Cardan has been preceded by a Greek writer, Melampus, Hierogrammatist to one of the Ptolemies, whose nœval divinations in the original Greek are subjoined to the *Metoposcopia*. From them we learn that no one, of either sex, who has a mole on the eyebrows ought to contract matrimony, for if they do so they will inevitably renew the bond five separate times. Moreover, that moles on the right of the face or body denote wealth and goodness, on the left sickness and poverty. It may be gratifying to any one who is conscious of having a mark on the central region of his forehead (the line of the Sun) resembling a Q with an elongated tail, three perpendicular lines on the bridge, and a mole on the right of his nose, to be assured on Cardan's authority that he will acquire riches and honour by foreign travel, that he will be fortunate in all his undertakings, and enjoy great length of life. There is also a curious *Traet de Nævis*, by Ludovicus Septalius, a Patrician and Physician of Milan, 1626, but we cannot venture to expound the mysteries of the microcosm from which he deduces Moles, nor to point out from the inspection of those beauty spots which occupy the face, the absolute certainty with which an adept may pronounce upon the site of others which are concealed under the clothes.

Ludovicus
Septalius.

Battista
Porta.

Battista Porta, in his Chapter on human Foreheads, (*Fisonomia*, ii. 2.) refers them mostly to comparative anatomy. Thus a great forehead, from its resemblance to that of a Cow, implies weakness and timidity; narrowness recalls to mind a Pig's face; length belonged to Plato and Dante, and is borne also by the *Can bracco*, the Setting Dog, it therefore denotes intelligence; squareness marks the Lion's forehead, and signifies magnanimity. He who has a high and convex forehead may be "written down an Ass." A smooth and tranquil forehead, like that of a Greyhound, may always be accepted as the sign of a fawner and flatterer. One of the greatest monsters recorded by History bore his character distinctly on his forehead. If you looked at that of Azzolino, the Tyrant of Padua, continues Porta, it was *horribile e nebulosa, incorvata e torta, che spira*

horribilità e la tortuosità del suo animo; come l'habbiamo visto in Vinegia di marmo, terrore e manigoldo degli homini, che avanzò di crudeltà quelli del suo e antico tempo.

Rudolphus Godenius, who published *Uranoscopie, Chiroscopie, Metoposcopiae et Ophthalmoscopie Contemplatio*, at Frankfort in 1608, disposes the lines somewhat differently from Cardan. Saturn, Jove, and Mars govern the regions to which they are assigned by his predecessor, but the Sun is over the right eye, the Moon over the left, and then Venus and Mercury below. Out of seven persons, two of them of great note, whom Godenius had observed with the line of Mars intersected and cruciform, five were beheaded, the others murdered by banditti. (p. 272.)

Rudolphus
Godenius.

According to Christianus Moldenarius, in the IVth Book of his *Exercitationes Physiognomicæ*, 1616, if the forehead be large it is a sign of sloth, if small of indocility and dulness; if very large, rounded, and bald, of impudence and lying; if long, (the face also being long and the chin sharp,) of cruelty and tyranny; if the forehead be long and the body thin, it denotes cowardice, fraud, and ambition. A broad and lax forehead signifies that its owner is a flatterer to the face, a slanderer behind the back. A small and thin-skinned forehead promises a quick and subtle disposition. If the forehead be smooth and even, it denotes prudence, industry, and inflexibility, but also obduracy, obstinacy, and litigiousness; if it be over-smooth, its possessors *socordes, stupidi, stipites et trunci habentur*. A smooth and plain-skinned forehead, unless just over the bridge of the nose, marks profaneness, deceit, and choler; if it be confused and swollen, with cheeks too fat, instability, phlegm, dulness, and stupidity; narrowness shows dulness and indocility; cloudiness,—a daring spirit; concavity,—fraud, cowardice, and ambition; tenuity and wrinkles,—a defect of brain, as in old age and sickness; height and straightness,—pride; elevation,—liberality; depression,—cowardice, servility, and effeminacy. The interpretation of the several lines given by Moldenarius is very similar to that of Cardan, and he afterwards proceeds to examine the eyebrows as a legitimate branch of Metoposcopy. These, if hard and matted, denote immodesty, impudence, and envy; if soft, smooth, and equable with each other,—goodness and a well-tempered and commingled disposition; if thick and uniting at the bridge of the nose,—melancholy, bad habits, theft, fraud, pimping, homicide, and all other evil; if slender,—a good temperament, health, ingenuity, learning, and invention; if they move involuntarily, they signify bravery and a daring spirit. Length implies arrogance and impudence; bushiness, to such extent that they almost shadow the face,—an excess of heat, and consequently, garrulity, impetuosity, plenteous caprices, and indocility; want of hair,—feebleness; shedding of the hair and baldness,—immoderate debauchery; unbroken eyebrows denote sadness; an inflexion towards the nose signifies austerity, bitterness, and anger; towards the temples,—sarcasm and dissimulation; elevation towards the temples and depression towards the nose,—choler and craftiness; entire depression,—envy; thickness and deflexion towards the nose,—magnanimity and virtue; straightness and length,—effeminacy; archedness without junction,—subtlety, ingenuity, and love of study. The worst eyebrows a man can possess are those which are thick and joined; and Johannes de Indagine has frequently remarked such undoubted tokens of ill in

Fuchsius.

Hagecius.

witches and magicians who have perished at the stake. Black eyebrows, moderately curved, and properly separated, are of all others the greatest proofs of virtue: whiteness denotes weakness and credulity; redness, cholera, propensity to disturb the public peace, craft, and ill manners. The reader doubtless will assent to the concluding paragraph of this ingenious writer, *tantum quidem de Frontis contemplatione et inde instituendâ divinatione dictum esse sufficiat.*

The *Metoposcopia* of Samuel Fuchsius, Argentinae, 1615, is worth consulting, if on no other account, certainly for the beauty of its illustrative engravings. The *Aphorismorum Metoposcopicorum Libellus Unus* of Dr. Thaddæus Hagecius ab Hagek, Francofurti, 1584, does not contain any matter which is not found much more fully in the pages of Cardan, of whom the excellent author appears to have been not a little jealous. The Tract, however, is introduced by half a dozen commendatory lines, which we shall transcribe, in conclusion, as far more spirited than most other similar compositions.

Martinus Cuthænus
Lectori

*Frontis ut est index speculum, sic prorsus in ipsâ
Fronte, velut speculo, mentis imago patet.
Illud quisque suo tantum non lumine captus
Perspicit, at sapiens solus utrumque videt.
Lumina nil Lyncis, nil sunt specularia Momi;
Frons docet hic quicquid pectora clausa gerunt.*

METRA, in Zoology, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* rather long, very plumose in the male, each joint producing obliquely a setaceous, ciliated branch, shortened towards the apex and base; subserrated in the females; *maxillæ* not very short, slender; *palpi* very short, concealed within the hairs of the front, pilose, triarticulated; head densely pilose, the hairs forming a conical projection between the *antennæ*; *thorax* robust, very woolly; wings rather thin, all slightly dentate on the hinder margin, with a central dark spot, the anterior with two strigæ, the posterior with one; body moderately stout; the male with a tuft at the apex, very robust and acute in the female, which is generally the smaller sex. *Larva* with ten legs, cylindrical, smooth, with two fleshy points directed backwards on the penultimate segment; head small, rounded; *pupa* superficial.

Type of the genus, *Ph. Ge. pennaria*, Linnæus; Donovan, *Britt. Ins.* vol. viii. pl. cclxxxvii. fig. 2. One species only, which inhabits Britain and other parts of Europe. It corresponds with the genus *Himera* of Dupontel.

METTLE. See METAL.

MEUM, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Umbelliferae*. Generic character: calyx obsolete; corolla, petals inflexed, entire, general involucre one-leaved, partial involucre few leaved; fruit elliptic-oblong, with three ribs on each side.

Three species, natives of Europe. *M. athamanticum* is a native of England.

Boundaries. MEURTHE, a Department of France which formed a part of the ci-devant Province of Lorraine, is bounded by the Departments of Moselle, Bas-Rhin, Vosges, and Meuse. It covers a surface of 2700 square miles, which is much diversified by hills and valleys, extensive forests, rich pastures, and cultivated fields. It is watered by the Meurthe, which also gives its name to the Department. This river has its source in the Department of Vosges, near St. Die, which it traverses; it passes Raon-l'Etape, Baccarat, and Luneville, below which it is augmented by the Vezouze and the Mortagne; it divides Rosiers-aux-Salines, passes Dombale-St. Nicolas, where it joins the Sanon, and, leaving Nancy on the left, it falls into the Moselle below Frouard. The other rivers of this Department are the Moselle, the Sarre, the Seille, the Blamont, and the Rosogne. The climate is in general temperate and salubrious. The surface is in some places mountainous and rocky, and, consequently, incapable of cultivation; but in other districts it yields grain, fruits, wines, hops, flax, hemp, rapeseed, and many other crops. Its mountains and hills are covered with extensive forests, and excellent pastures, on which multitudes of horses and cattle are reared. In general, this Department is one of the most important in France, abounding in all the necessities and in many of the luxuries of life. It affords excellent covers for game of all kinds; its rivers, streams, lakes, and ponds teem with fish of many sorts; eight salt-works established in it yield upwards of 40,000 tons annually; and it contains iron mines, marble quarries, and several sorts of precious stones. Population 365,500. The principal articles of its commerce are timber and firewood, woollen goods, hosiery, iron-ware, nails, tablecloths, buckram, papers, salt, alum, saltpetre, cattle, wool, rapeseed, oil, wax, honey, skins, glass, delft-ware, and liqueurs.

VOL. XXV.

Chateau-Salins stands on the small river Seille; population between two and three thousand; it is the chief place of a very fertile district, and carries on an extensive trade in salt. The town of *Vic* is in the Arrondissement of Chateau-Salins; population nearly 4000; and its mill-stockings are in high estimation.

Luneville, a large open town, with regularly-built and well-paved streets, is situated in an agreeable and fertile plain, near the junction of the Vezouze with the Meurthe. The Castle built by Leopold I. Duke of Lorraine, St. James's Church, the *Hôtel de Ville*, the Barracks, and some of the Hospitals, with other public establishments, form the striking features of the town. It has a population of nearly 11,000, and manufactures of woollen stuffs, and also of glass. This town was the place in which the Treaty of Peace was signed between Austria and France on the 9th of February, 1801. Distant 12 miles from Nancy, and 80 from Strasburg. *Blamont*, *Vezelize*, and some other small towns belong to the Arrondissement of Luneville.

Nancy, a large, and one of the most beautiful cities of France, is the Capital of the Department. It is situated in an agreeable plain, at the foot of a mountain, not far from the left bank of the Meurthe. It is divided by means of a canal into the Old and New Town; the former is crowded and confused, but the latter is well-built with broad and straight streets. The gates are peculiarly elegant, and more resemble triumphal arches than the ordinary approaches to a city. The Royal Square, whence the finest streets diverge, was built by Stanislaus I., who, when Duke of Lorraine, was elected to the throne of Poland, and after being forced to abdicate his regal dignity, made this city his residence, and contributed greatly to its splendour, extension, and embellishment. Beyond the gates are two well-built suburbs. Nancy is the chief place of a Prefecture, the seat of a Bishop, and of four tribunals. The public buildings for which it is chiefly distinguished, are, its Town-hall, Cathedral, the Church of St. Sebastian, the Theatre, the Palace of Justice, the Exchange, and the Barracks. The Church of Notre-Dame, in which Stanislaus and his Queen are interred, stands in the suburb named *Bon Secours*. Nancy likewise contains several Hospitals, and is the seat of some Literary and Scientific Institutions. Population upwards of 30,000. Its manufactures consist in cloths, woollen stuffs, silk and woollen stockings, silk goods, lace, hats, iron goods, and copper articles. It is especially famous for candles of a good quality. Distant 16 miles W. from Strasburg; 30 S. from Metz; and 230 E. from Paris.

Pont-a-Mousson, a town which contains a population of more than 6000 individuals, is on the Moselle, within the Arrondissement of Nancy.

Sarrebourg, a town on the Sarre, has a population of about 2000, and manufactures of alum, acids, iron goods, glass, porcelain, and paper.

Toul, the chief place of a district, is situated on the right bank of the Moselle, in a fertile plain, almost entirely surrounded by hills of a considerable elevation, and covered with vineyards. This town is regularly fortified, has a stone bridge across the Moselle, and a well-built Cathedral and Episcopal Palace. Population 7000. Its manufactures consist chiefly in leather, hats, hosiery, and linens, and its commerce in grain, wines, and brandy. Distant 14 miles W. from Nancy, and 78 leagues from Paris.

MEUR- THE.

Chateau-Salins.

Luneville.

Nancy.

MEUSE.
—
MEW.

MEUSE, or MAESE, a Department in the North-East Region of France, bounded on the North by the Duchy of Luxemburg; on the East by the Departments of the Moselle and the Meurthe; on the South by the Marne and the Vosges; on the West by the Marne and the Ardennes. It contains 2500 square miles, and a population of nearly 280,000. Its general aspect is hilly; on the North the soil is barren and rocky, but the South is tolerably fertile. The climate is healthy, but not warm. But little corn is produced, and the wine is of inferior quality, the chief agricultural employments being pasturage and rearing cattle. The manufactures are linens, woollens, and hardware.

Bar le Duc. *Bar le Duc*, the chief town, stands on the Ornain. In the ancient distribution of France, it was, as its name betokens, the Capital of a Duchy, the territory of which is now apportioned among the surrounding Departments, principally that of Meuse. The town was built by Frederic I., brother-in-law to Hugh Capet, and a Castle, which divided the Upper and Lower Town, and was considered as the *barrier* between France and Lorraine, was demolished by Louis XIV. Much lore respecting the Duchy and its rights may be found in two Works respectively by Louis le Fevre le Chantereau and F. de Rosieres. Population about 8000. Distant 138 miles E. from Paris, 27 from Toul.

Commercy. *Commercy*, on the left bank of the Maese, has a magnificent Castle built by Stanislaus King of Poland. Population 3700. Distant 169 miles E. from Paris.

Ligny. *Ligny*, on the Ornain, is a walled town, with a Collegiate Church, containing a monument to the Marshal Luxembourg. Population 2850. Distant 9 miles S. E. from Bar le Duc.

Montmedy. *Montmedy*, on the Chiers, is a small manufacturing town. Population 2000. Distant 22 miles N. from Verdun.

St. Mihiel. *St. Mihiel*, stands on the Maese. Population 5600. Distant 33 miles N. W. from Nancy.

Varennes. *Varennes*, on the Aire, has some manufactures of leather and paper. Population 1300. It is the town in which Louis XVI. was unhappily stopped in 1791, when attempting his escape from Paris. Distant 18 miles N. W. from Verdun, 150 from Paris.

Verdun. *Verdun* is traversed by the Meuse, and is divided into three parts, the Upper, Lower, and New Towns; it is neatly built and strongly fortified by a citadel on an eminence overhanging the river. A few manufactures are carried on in it of woollen, leather, confectionary, liqueurs, and bijouterie. It is the See of a Bishop, and is well known to Englishmen as the town appropriated by Napoleon for the chief custody of *détenus* on the breaking out of the war in 1803. Population above 9000. Distant 55 miles N. W. from Nancy, 35 W. from Metz.

MEW, or } To make the noise or cry of a cat. *Vox*
MEWL. } *a sono ficta*.

Have at your devil's pate; do you mew?
Beaumont and Fletcher. The Chances, act iv. sc. 1.

HOTSP. Marry, and I am glad of it with all my heart,
I had rather be a kitten, and cry *mew*,
Than one of these same meeter ballad-mongers.
Shakspeare. Henry IV. First Part, fol. 61.

At first the infant,
Mewling, and puking in the nurse's arms.
Id. As You Like It, fol. 194.

A dog will never learn to *mew*, nor a cat to bark.
Grew. Cosmo Sacra, book ii. ch. iii. sec. 7.

MEW, or } Fr. *muer*; Lat. *mutare*, to change.
MUE, v. and n. } And *mue*, "A change or changing,
hence any casting of the coat or skin, as the *mewing* of
a hawke; also an hawke's *mue*, and a *mue*, or coope
wherein fowl is fattened." Cotgrave.

To change; to change the feathers, to moult; and as
mue, the noun, was applied not merely to the change, but
to the place of change, (*sc.* the cage or coop where hawks
changed or moulted their feathers,) to *mue* became, con-
sequentially,

To encage, to coop up, to confine.

And see FALCONRY.

And by hire beddes had she [Canace] made a *mew*,
And covered it with velouettes blew,
In signe of trouth, that is in woman sene.

Chaucer. The Squieres Tale, v. 10960.

And Thisbe durst not remewe,
But as a byrde, whiche were in *mewe*,
Within a busshe she kepte her close.

Gower. Conf. Am. book iii. p. 83.

Let hir go hide her head,
in lothsome lurking *mue*,
For crabbed Crowfoote marres her face,
and quite distaines hir hue.

*Turbervile. The Louer against one that compared his Mistresse with
his Ladie.*

Whatsoever estate or prince doth rest upon them, [mercenary
forces] he may spread his feathers for a time, but he will *mew* them
soon after. *Bacon. Essay* 29. p. 127.

PHU. Forsooth, they say, the king has *mew'd*
All his gray beard, instead of which is budded
Another of a pure carnation colour,
Speckled with green and russet.

Ford. The Broken Heart, act ii. sc. 1.

CEL. It was a kind of death, sir,
I suffer'd in your absence, *mew'd* up here,
And kept conceal'd I know not how.

One that *mew'd* content
And all her teeth together.
Id. The Tamer Tam'd, act iv. sc. 1.

Whose body *mewes* more plaisters every month,
Than women doe old faces.
Id. Thierry and Theodorat, act ii. sc. 1.

Can you love a poor man,
That relies on cold meat, and cast stockings,
One only suit to his back, which now is *mewing*?
Id. The Honest Man's Fortune, act v. sc. 1.

Methinks I see her as an eagle *muing* her mighty youth, and
kindling her undazl'd eyes at the full mid-day beam.
Milton. Works, vol. i. fol. 158. *Of Unlicens'd Printing*.

Where griesly night, with visage deadly sad,
That Phoebus chearefull face durst never vew,
And in a foule blacke pitchy mantle clad,
She findes forth comming from her darksome *mew*.
Spenser. Faerie Queene, book i. can. 5.

Italy, Spain, Artois, and now of late France itself, provides nests,
and perches, and *mewes*, for these birds, with the same confidence
wherewith wee breed our own at home.

Hall. Works, vol. i. sec. 23. fol. 656. *Quo Vadis?*

On the North side of Charing Cross stand the royal stables,
called from the original use of the buildings on their site, the *mews*;
having been used for keeping the king's falcons, at least from the
time of Richard II. *Pennant, London*, p. 151.

MEW.

MEXICO.

MEXICO. MEXICO, a vast territory conquered and colonized by the Spaniards in North America, and from its extent and Geographical position, the productiveness of its soil, the amount of its population, and its mineral wealth, by far the most important of those States into which the transatlantic possessions of that people have been divided. Bounded on the East by the great inlet to which it has given name, on the West by the Pacific Ocean, it possesses an extent of sea-coast greater than any other tract united under a single Government; and while its Northern frontier is protected by that most formidable of barriers, a parched and stony desert, the Continent narrows to the South in such a manner as not to afford room for any State whose rivalry need be dreaded. Baron von Humboldt observes with respect to the natural advantages of this great realm, that "the Geographical position of Mexico offers incalculable advantages if we consider it with regard to facility of communication with the rest of the World. Placed on an isthmus washed by both the Pacific and Atlantic, Mexico appears destined to possess a powerful influence on the political events of both hemispheres. A King of Spain who should make Mexico the seat of his Government, could in five weeks transmit his mandates to Europe, whilst in six weeks they would commonly reach his Asiatic dominions. The vast territory of New Spain would, under judicious culture, produce every thing that Commerce is usually employed in collecting from all parts of the World, sugar, cochineal, cacao, cotton, coffee, wheat, hemp, flax, silk, oil, and wine. It produces every metal without excepting even mercury. Abundance of the finest timber, of iron, and copper, present every inducement and facility to extend the navigation of Mexico."

Boundaries. This highly favoured region is bounded on the East by the Gulf of Mexico, on the South by the territory of Guatemala, from which it is separated by a boundary line commencing at the Bay of Honduras, traversing the Lake of Terminos, and terminating at the Pacific, thus assigning Yucatan to Mexico. The exact line of demarcation is, however, liable to be altered by an amicable discussion, in which the Governments of the respective States are at present engaged. On the West it is bounded by the Pacific Ocean, and on the North by a frontier defined in 1819, in the Treaty of Washington. According to the third article of that Treaty, the boundary line commences at the point at which the river Sabina flows into the Gulf of Mexico, and is marked out by the course of that stream for about 200 miles, taking subsequently a Northerly direction, until it reaches the Red River of Natchitoches, along which it proceeds to the 100th degree of West longitude, whence inclining due North, it is continued to the river Arkansas, and runs along its channel to the source, where it takes a Westward direction, coinciding with the 42d parallel of latitude, until it terminates at the Pacific. The territory thus secured to the Republic of Mexico free from the interference of any Civilized Power extends in length, according to the estimate of Von Humboldt, 1830 Geographical miles, measuring in a direction from North-West to South-East. Its greatest breadth lies between the

mouth of the Sabina and that part of the Western shore immediately opposite the Isle of Tiburon, a distance, according to the same authority, of 1092 Geographical miles. Its superficial contents are 1,062,000 square Geographical miles, of which extent one-third lies between the Tropics, the remainder in the temperate zone.

The sea-coasts of Mexico are low, damp, and unwholesome, exhibiting, however, that luxuriant vegetation which always accompanies moisture in Tropical regions. Its Eastern shore is shoaly, in consequence of the sand accumulated by the currents from the East, which set violently against it under the influence of the trade-winds prevailing in the Atlantic. Its Western shore is bolder, possessing many excellent harbours, and among them Acapulco, considered by Ward the best in the World. The low, moist tract, the *Tierra caliente*, or Hot country, as it is called by the natives, extends along nearly the whole of the Eastern and Western shores with the same uniform features of heat, unhealthiness, and fertility, in a degree equalling and often exceeding that in which they are elsewhere exhibited under similar circumstances. Stretching every where along the coast to the depth of several miles inland, the *Tierra caliente* in some places expands into wide tracts which occupy two-fifths of the Tropical region of Mexico, and a still greater proportion in the more Northerly parts. To this region belong the district of Vera Cruz, that of Yucatan, a great portion of Oaxaca, New Santander, Texas, New Kingdom of Leon, Cohahuila, Bolson de Mapimi, a great part of California, of Sonora, of Cinaloa, of New Galicia, of Valladolid, of Mexico, and of La Puebla. The mean height of the thermometer is 76° of Fahrenheit, an elevation of temperature which, acting on an atmosphere moist and loaded with exhalations from decomposed organic bodies, produces cholera and yellow fever, or black vomit, (*vomito prieto*), as it is styled by the natives, diseases which during the summer months spread frightful devastations, especially among strangers.

From the limits of this region so genial to vegetation and many forms of animal life, but so fatal to the human constitution, rises the *Tierra templada*, or Temperate country, which, with various degrees of acclivity and temperature, extends up the sides of the mountains. The traveller, in ascending through this region, finds the mean height of the thermometer fall from 76° to 64° of Fahrenheit, its average on the Table Land. It is described by Von Humboldt as possessing a delightful temperature, never varying more than a few degrees. But even Physical advantages are not to be had on this Globe without alloy; the elevation of the *Tierra templada* is that at which the clouds usually rest, and hence its most favoured spots are often enveloped in fog. The ascent from the *Tierra caliente* to the Table Land constituting the greater part of the Mexican territory, is more gradual on the Western than the Eastern side of the Continent, where in the course of a day the traveller may mount from the low lands of Vera Cruz, exhibiting in the most striking form all the features of a burning Tropical climate, to the region of snows, which during the greater part of the year cover the *Cofre de Perote*. As he rises he sees with admiration the regular

MEXICO.

Physical features.

Tierra templada.

MEXICO. succession in which the vegetable tribes range themselves according as the altered temperature produces a state of atmosphere favourable to the developement of their structure; and in his progress he is struck with the change in the aspect of the country, the character of the vegetation, the appearance of animals, the manners of the inhabitants, and the modes of culture in which they are engaged. In proportion to the height of his ascent, Nature appears to act with diminished energy, the vegetable tribes gradually suffer a diminution of their luxuriant beauty, their stalks and branches become less succulent, their flowers are smaller, less expanded, and display fainter colours. The appearance of the Mexican oak cheers him by affording an unerring assurance that he has now entered a region where the ravages of the yellow fever need no longer be dreaded. Presently enveloped in fogs, he finds that he has reached that portion of the surface of the mountains at which the soil is continually refreshed by the moisture deposited from clouds borne against it under the influence of the great atmospheric current sweeping over the Atlantic. Pines then succeed to the forests of oaks which he has hitherto traversed, and continue with diminishing luxuriance to clothe the ground until the intense cold precludes the vegetation even of that hardy timber.

Tierra fria.

Such is the contrast observable by a traveller choosing to continue his ascent above the level of the great Table Land over which by far the most considerable portion of the Mexican population is spread. This vast extent of elevated country, denominated by the natives *Tierra fria*, or Cold region, lies on the expanded summits of the Andes, which, having passed along the Isthmus of Darien in a low and single range, diverge, as they enter North America, into two chains. These, as they proceed Northward, separate still further to the East and West, thus constituting the lateral walls, as it were, of the vast platform which, at an elevation generally of from six to eight thousand feet above the level of the sea, forms the principal part of the territory of Mexico. This Table Land consists of vast plains separated by low ridges of hills, and impressing the spectator with the idea that at some remote period they were the basins of lakes dried up by the desiccating process which, even at present, is taking place throughout this elevated region. In various parts, especially in the narrow tract to the Eastward of the City of Mexico, are scattered insulated peaks of a great height, and generally rendered more striking by being the vomitories (if so bold an expression may be used) of extinct or active volcanoes.

Volcanoes.

Popocatepetl	17,550 feet.
Orizaba	17,208
Sierra Nevada de Mexico..	15,553
Nevado de Toluca.....	15,018
Cofre de Perote.....	13,289

The first four attain the limit of perpetual congelation.

Of the volcanic mountains, Popocatepetl, Orizaba, and Colima still continue to send forth flames; and it may be added, that Tuxtla, near Vera Cruz, and Jorullo, in the Intendancy or District of Valladolid, attaining elevations much inferior to those above stated, are still active volcanoes. The origin of Jorullo proves that the active energies of Nature are not confined to the animal and vegetable kingdoms, but continue to affect the Globe itself. In 1759 the spot on which this volcano now stands was a sugar plantation, situated on a gentle eminence: in

Jorullo formed in a single night.

the course of one night a subterranean explosion threw up the peak to its present height of 1500 feet, and surrounded it with thousands of small cones, which still continue to smoke. Popocatepetl, the highest mountain in North America, except Mount St. Elias, early attracted the attention of the Spaniards; for Cortes, when marching to besiege Mexico, despatched Ordaz, one of his officers, to ascertain the cause of the smoke incessantly issuing from it; but that emissary returned without success, being deterred by the deep snows and the frightful explosions which every moment assailed his ears. Montano subsequently descended the crater by the aid of a rope, and carried from it some sulphur, and the place has subsequently been often visited by smugglers searching for that mineral. Still more dauntless was the exploit of a Dominican Friar, Blas de Inena, who, in a basket suspended by a chain 840 feet long, descended the crater of a volcano, which near the Lake Nicaragua bears the name of the Cerro de Massayo, and, provided with a long ladle of iron, attempted to scoop up the liquid lava, imagining that it consisted of melted gold. He did not succeed in gratifying the *auri sacra fames*, and his rashness had no other consequence than the loss of the ladle, which was melted by the violent heat.

MEXICO.

Popocatepetl.

Cerro de Massayo.

The six lofty mountains of Orizaba, Popocatepetl, Sierra Nevada de Mexico, Nevado de Toluca, the Cofre de Perote, and Colima, are ranged nearly along the 19th parallel of latitude. The summits of the first four enter the limit of congelation, varying here according to the season of the year, from 12,000 to 14,600 feet; the two others are covered with snow through the winter months. There are no other eminences in the Mexican territory which ascend to the limit of perpetual congelation. The mean temperature of the Table Land does not exceed 64° of Fahrenheit. In the neighbourhood of Mexico sometimes, though rarely, the thermometer has fallen nearly to the freezing point; but in general the winters are as mild as those of Naples or Lisbon, the mean heat of mid-day being about 57° of Fahrenheit's thermometer. There are, based on this great platform, some other Table Lands which rise still higher; and when their elevation exceeds 8000 feet, the climate becomes cold and inclement even to the sensations of a native of the North of Europe. Such are the plains of Tolma and Guchila, where Fahrenheit's thermometer seldom indicates a higher temperature than 46°. In the *Tierra fria*, or Great Table Land, although the average temperature equals that of France, yet the vegetation is far less vigorous than in the parts of Europe enjoying a corresponding degree of mean heat, and the plants transferred from them do not thrive so well as in their native soil. The winters indeed, even at the height of 8000 feet, are not severe, but still during the summer the sun does not warm the rarefied air to cause flowers to blow, or fruits to arrive at maturity. This equable temperature and absence of a considerable degree of heat at any period of the year, is the cause of the peculiar character of the country throughout the Table Land; and hence it is, that many departments of cultivation are less successful there than in the plains to the North of the Tropic, under the influence of a temperature in the mean inferior. A cloudless sky, an atmosphere of admirable purity, clearness, and salubrity, scanty and tardy vegetation, and a soil bare of trees, deficient in moisture, and impregnated with carbonate of soda and other salts, characterise the greater part of

Temperature of the Table Land.

MEXICO. the Table Land. Wherever there is water there is fertility; but the rivers are few, and the sun generally rather parches the soil than calls its productive powers into action. The Table Land extends from the 18th to the 40th degree of North latitude with so little interruption, that wheeled carriages proceed from the City of Mexico to Santa Fé, a distance of 1500 Geographical miles; and in no place does the level of the road descend below the height of 5500 feet. In proceeding Northward the greater part of the surface is found to fall with a gentle inclination, until it sinks towards the North-East into those plains through which flow the Rio del Norte, and the great tributary streams that, from the West, fall into the lower part of the Mississippi. The Western rampart of the Table Land, on the contrary, rises until it assumes the character of a bold range, which beyond the Mexican frontier receives the name of the Rocky Mountains, and is continued Northward until it ultimately becomes lost to the view of Civilized Man among the snows of Arctic America. The lakes of the Mexican territory are generally found in the *Tierra fria*. According to Humboldt, they are continually diminishing, and were formerly far more numerous and extensive; as, in his opinion, the spacious valleys, constituting the greater part of the surface, were originally the basins of lakes dried up by the aridity which is continually increasing. He enumerates the great lake of Chapala, in Guadalajara, estimating its extent at 1620 square Geographical miles, the five lakes of the Valley of Mexico, the lake of Patzcuaro in the district of Valladolid, the lakes of Mextitlan and Parras in Durarigo. The only important river running through the Table Land is the navigable Rio Grande de Santiago, which, rising near the City of Mexico, falls into the Pacific at San Blas; but, in general, the great natural disadvantage of this region is the want of water; little rain falls; the evaporation is rapid in consequence of the rarefaction of the atmosphere, resulting from the elevation of the surface; the evil is still further increased by the scarcity of trees, and the injudicious labours of the Spaniards have been more often directed to drain than to irrigate the soil. In the Valley of Mexico, for instance, they have formed canals to lower the level of the water in the lakes, and they have cut down the forests without making any provision for replacing them. In consequence of this want of judgment or foresight, a great proportion of this valley, once celebrated for its beauty and fertility, has become a barren expanse, incrustated, like the Steppes of Central Asia or the African deserts, with various kinds of salts. The less important rivers of the Table Land are the Rio Tula, or river of Montezuma, which drains the Valley of Mexico, the Rio Yopez, Rio Bolsas, Rio Grande de Barispe. The Rio del Norte, by far the greatest river within the Mexican territory, rises in the Sierra Verde, under the 40th degree of latitude, and after a course of 1536 Geographical miles through the low country to the North-East of the Table Land, falls into the Gulf of Mexico. The next in importance is the Red river of Texas; which, at some distance further North, runs nearly in the same direction, a course of 750 Geographical miles. The Red river of Natchitoches, which for a considerable distance forms the boundary line between Mexico and the United States, is navigable for near a thousand miles from the sea. The Brazos and Guadalupe are large rivers, and navigable for a considerable distance. Inferior to these, but still considerable streams, are the Nueces, Trinidad, and San Antonio, all watering the district of Texas, and

facilitating communication through it. The Rio del MEXICO. Ascension, the Rio Gila, and the Rio Colorado of California, holding a long course through the unexplored regions to the North-West, may be considered as closing the list of Mexican rivers.

A territory stretching through 27 degrees of latitude, and containing within its limits parched and bare Deserts, swamps which, at the level of the sea, are exposed to the rays of a vertical sun, and mountains of such a height as to enter within the limits of perpetual congelation, must present every possible variety of climate. On the Eastern and Western coasts the climate is excessively hot, loaded generally with moisture, acting with a frightful fatality on the constitution of strangers, and insalubrious even for the natives. This state of atmosphere is diversified on the Eastern side by the *Nortes*, or tempestuous winds, which, from October to April, lower the temperature by conveying the cold air from Canada, Labrador, and other frozen tracts of the Continent. These winds blow with such violence, as to cause imminent danger to navigators who may be exposed to their effects, especially as along the whole extent of the Eastern coast there is no harbour capable of affording protection to large vessels. The Western coast is visited during the summer months by violent hurricanes from the South-West, bringing with them heavy rains. During the winter season the air of that coast is clear and dry, but agitated by furious storms, known by the name of *Papagayos*, and blowing from the North-East. The air on the tracts which ascend from the sea-coast to the Table Land is mild, healthful, and subject to little variation of temperature. As the clouds are generally suspended at an elevation through which this region passes, fogs prevail, and a gentle moisture produces delightful freshness of vegetation. The air throughout the Table Land itself is healthful, pure, piercing, and dry: the heat is oppressive in all cases of immediate exposure to the rays of the sun; but when that influence is withdrawn, it is succeeded by a considerable degree of cold, resulting from the great rarefaction of the atmosphere.

The vegetable productions applicable to the purposes of Man, are the banana, (*Musa Paradisiaca*), which affords, on a given surface, a greater proportion of food congenial to the human constitution than any other esculent. The quantity of nourishment supplied by an acre of ground planted with banana, is to that drawn from the same extent when under wheat, as 133 to 1; and we find the relative productiveness as 44 to 1 when we compare it with the potato. Its nutritious qualities lie in a starch combined with a small quantity of vegetable gluten. Although the fruit of a tree, it is not exposed to the disadvantage attending the olive and other trees affording food; an enemy cannot destroy the resources of the people through several years by cutting down their plantations of bananas; for suckers committed to the earth arrive in a few months at such maturity as to produce a crop: 450,000 square miles within the Mexican territory are applicable to the cultivation of this invaluable tree. Next in importance is maize, which possesses such versatility of organization, that it may be cultivated throughout nearly the whole territory, on the coasts, on the slope of the Cordilleras, and on the Table Land. So vigorous is its vegetation, that in the most favourable situations it grows to the height of nine feet; and such its fecundity, that it often produces eight hundred fold. All lands suitable to the

Varieties of climate.

Rivers.

- MEXICO. cultivation of the banana produce likewise the manioc, or *yuca*, the root of which, grated and drained carefully of its poisonous juice, becomes the cassava, or flour, extensively used as an article of diet either without further preparation or formed into bread. The potato (*Solanum tuberosum*) and the sweet potato (or *Convolvulus batatas*,) are much cultivated on the Table Land, and the yam (*Dioscorea alata*) on the coast. The cacao, (*Cacao theobroma*,) called by the Mexicans *cacahuatl*, a name softened down into the word *chocolate*, so familiar to our ears, was first made known to Europe by the Spaniards, who found it in general use throughout the dominions of Montezuma. It is now little cultivated in the Mexican territory, and the great consumption is supplied by importation from South America. All the *cerealia* of Europe, wheat, rye, oats, and barley, are cultivated with great success on the Table Land. Sugar might be produced in quantities abundantly adequate to the supply of the demands of the whole Commercial World. From the maguey (*Agave Americana*) is obtained *pulque*, the favourite beverage of the indigenous Mexicans. The maguey flourishes in the driest soil of the Table Land, where it rises usually to the height of five feet; usually when eight years old it gives symptoms of sending up the great central stalk destined by Nature to bear the blossom. This moment is anxiously watched by the cultivator, who cuts away the central leaves, and thus forms a sort of basin for the reception of the sap, which flows from the surface of the cut shoots and foliage in such abundance, that from 200 to 350 cubic inches of the fluid are poured out every day for four or five months. This juice is sweet with a slight and agreeable tartness, and by a simple and easy process is converted into a fermented drink resembling cider. This beverage, properly called *pulque*, has an odour extremely fetid and disagreeable to strangers; but when habit reconciles the senses to this peculiarity, all relish it, and attribute to it nutritious and stomachic qualities in the highest degree. Like other fermented liquors it, by distillation, gives an ardent spirit. Its use is so general that the yearly duty levied on the quantity introduced into the cities of Mexico, Toluca, and Puebla amounted, at the time of M. Humboldt's visit, to above £170,000. Both the cultivation and use of maguey is confined principally to the Indians, some of which race, though living like indigent peasants, possess considerable wealth in their plantations. Among such instances, Humboldt mentions that of an old woman, who left to her children maguey plants to the value of above £12,000. Notwithstanding the amazing quantity of sap given out by this plant, it thrives in the driest soils, and even on rocks, and bears uninjured the greatest droughts, as well as the hail-storms and severe frosts often occurring on the Table Land of Mexico. After the sap has been drawn from the plant, it withers, but the root sends up a great number of shoots, each of which, if allowed room to expand, is fit for the process by which the sap is drawn off in a space of time varying from five to eight years, according as the soil may be more or less favourable for this sort of crop. The leaves of the maguey are manufactured into paper of various thickness, from that of the finest Chinese to that of pasteboard: the fibres also are worked up into excellent cordage. The nopal, or *cactus*, had been cultivated for feeding the cochineal insect during several centuries previous to the Spanish conquest. The management of this insect, the exuviae of which give the most admired of dyes, requires unwearied attention and industry: in three years after it is planted the nopal arrives at maturity, and is then stocked with the female insect at the moment it is about to lay its eggs; and such is the care required for a successful result, that every plant must be carefully kept clean with a brush, usually made of the tail of a deer or squirrel. According to Humboldt, the fruit and some other parts of the *cactus* afford a scarlet dye, and the virtues of the cochineal result merely from receiving those juices without the process of assimilation. At the proper season the insects are collected in wooden vessels, and killed, either by immersion in boiling water, by exposure to the rays of the sun, or by the application of a due degree of heat in a close stove. The valuable drug jalap is still produced in great abundance and perfection about the town of Xalapa, from which it originally derived its name. The oak, as we have before mentioned, is the principal timber of the temperate region; at a greater elevation it is replaced by various species of pines, which extend to the limit of perpetual congelation. The low maritime tract produces cypress, of which some have attained an enormous size; in the district of Oaxaca a tree of that species is 112 feet in girth.
- The indigenous Zoology, as is usually the case throughout America, is not rich. The principal wild animals are the anta, or tapir, a pachydermatous and amphibious quadruped, about the size of a mule or a small horse. Its figure and nature, which seem to hold an intermediate place between those of the rhinoceros and hippopotamus, have been so often described by Naturalists, that any further notice of it must be here unnecessary, except to mention that it is found in the hottest and moistest situations of the South of the Mexican territory. The bison (*Bos Americanus*) and the musk ox (*Bos moschatus*) exist in vast numbers in the Deserts extending along the Northern frontier. The *venados*, which are to be found throughout New California in herds of fifty or sixty individuals, are animals of the elk species, and grow to the size of a small horse, whilst their appearance is rendered more striking by their huge antlers, usually five, and in some instances, it is said, nine feet long; their colour is a uniform brown. The speed of this quadruped is such that no horse under ordinary circumstances can overtake it, and the hunter is obliged to watch the moment when, having slaked its thirst, which it does at very distant intervals, it becomes languid, and remits its fleetness, so as to allow the pursuer to throw the *lasso*, or noose, over its horns. The Indians, who pursue it on foot, contrive to decoy it by stratagem within reach of their arrows. The hunter in this case provides himself with the skin, taken carefully off the neck of a *venado*, and retaining the head and horns; he thrusts his head into this skin, and concealing his body in some thicket, imitates the movements of the animal when feeding, until some *venado* comes to join its supposed companion, and is enticed within reach of the arrow. The rapacious animals differ little from those of the rest of North America: the principal are the bear, the cougar, the wolf, fox, and several indigenous varieties of the canine tribe. Those who wish for more detailed information may consult Hernandez and Clavigero, whose accounts of the animals of Mexico are minute and full, but coarse and inaccurate. A scientific Treatise on the Zoology of this Country is still a desideratum.
- The population is at present estimated by Ward at 8,000,000; and when we consider the extent of territory, the length of time during which it has been the scene of

MEXICO. a considerable degree of civilization, and the necessary imperfection of a census executed by an imbecile Government among a people suspicious and fond of seclusion, the conjectured amount is probably below the actual. Humboldt states the number at 6,500,000 in 1803, and calculates from the proportion of deaths to births that the population would, under ordinary circumstances, double in nineteen years. The desperate Civil war which for so long a period raged through the Country must have greatly checked this rate of increase, as well by the direct destruction of human life as by the diminution of the means of the people, in consequence of the shock to all departments of national industry. Ward states the number of those who perished by the sword in this sanguinary and protracted struggle at the enormous amount of 300,000 men; and informs us, that many districts, formerly exhibiting a high degree of cultivation, retain no marks of having been the scene of human industry except the ruins which disfigure them.

Diseases. Epidemics and famine at irregular intervals so retard the rate of increase, that Humboldt considers the period of doubling should be stated rather at thirty-six years than at nineteen, the number deduced from observations under ordinary circumstances. The small-pox rages every eighteen or twenty years with dreadful mortality: in 1779 it cut off 9000 persons in the City of Mexico, and throughout the whole territory extended its ravages in a corresponding degree of destructiveness.

Small-pox. The disease is particularly destructive to the Indians, whose constitutions are remarkably disinclined from the determination of humours to the surface, and consequently singularly exempt from cutaneous affections: hence the virulence of the disorder, instead of finding an outlet by eruption on the skin, is thrown with fatal effect upon the vital parts. Vaccination, introduced in 1804 by the benevolent exertions of Don Thomas Murphy, has had great influence in mitigating this scourge. In the course of the exertions made for extending the practice of it among the Indians it was ascertained that the knowledge of its effects as a preservative had long existed among them; they were aware that such as had accidentally become affected by the vaccine virus from contact with cows suffering from the eruption, need have no apprehensions of attack from small-pox, but they had not possessed sufficient sagacity to place the constitution artificially under its influence.

Vaccination. The *matlazahuatl*, an epidemic peculiar to the Indian race, prevails generally at the remote intervals of about a century. It resembles in many respects the yellow fever, but does not attack the white population, exclusively the subjects of that disease; and differs from it, not only in the choice of its victims, but in the region through which it rages, spreading death over the driest, coldest, and most elevated tracts. Torquemado conjectures that 2,000,000 Indians perished in 1576, when this epidemic raged: so extravagant an estimate deserves notice merely as a proof of the impression which its dreadful ravages made on the mind of an observer. The yellow fever, though so deadly in its attacks, being confined to the most thinly peopled districts, has no material influence in checking the population, as the number of deaths which it causes annually does not exceed 3000. Far more devastating is the effect of famines, which sometimes takes place to a dreadful extent, in consequence of the indolence of the inhabitants, their imperfect acquaintance with agriculture, and the peculiar nature of maize, their staple article of food.

This grain, though generally so productive, is more liable to disappoint the hopes of the cultivator than perhaps any other crop. A season unusually dry will diminish the produce to a degree ruinous to an improvident people, not much accustomed to cultivate other alimentary vegetables, which might enable them to eke out a scanty crop. But far more disastrous are the effects of frost, which sometimes in a single night will destroy the maize through a great extent of country. In consequence of a disaster of this kind in 1784, 300,000 people were computed to have perished of famine.

The population of the Mexican territory consists of several varieties, resulting from the assemblage in the same country of three races totally distinct—the European, the Indian, and the Negro. These varieties are seven: 1. natives of Spain, who are distinguished by the name of *Gachupins*; 2. Spanish *Creoles*, or White people, natives of Mexico, but of pure European descent; 3. *Mestizoes*, or the offspring of the white and Indian races; 4. *Mulattoes* sprung from the white and negro race; 5. *Zamboes*, the offspring of union between Indians and Negroes; 6. Indians, the indigenous copper-coloured race; 7. Negroes. Of these the most numerous are the Indians, constituting two-fifths of the whole population: in the Intendancy of Oaxaca they amount to eighty-eight in the hundred. They are principally found on the Table Land, especially to the South, for they are rarely to be met with in the Northern Provinces, which are chiefly peopled by the White race. The Negroes, Mulattoes, and Zamboes occupy the sea-shore. The Mestizoes, spread over the whole territory, are next in number to the Indians, and constitute seven-eighths of the mixed population. The number of the White race is estimated by Ward at 1,200,000. As "divide and govern" was the maxim adopted by the Spanish Government in the management of its Colonies, it used much artifice to maintain among the various races a mutual jealousy and dislike. The *Gachupins*, or natives of Spain, engrossing all departments of Government, regarded the Creoles with hatred and contempt so virulent and inveterate, that even feelings of affection were disregarded under the influence of the insane pride of imaginary superiority; so that a European father would consider his son, born of a Creole mother, inferior to his clerk, in case he happened to be a native of Spain. The stranger took rank before the son even in his father's house, and in case there were a daughter he had the offer of her hand with a large share of the family property. "You are a Creole," was the bitterest reproach a *Gachupin* could utter; and the population towards which this dangerous contempt was displayed gave it force by consenting to consider the degree in which an individual approached European origin as the test of his rank. Whiteness of the skin was the general criterion of nobility; and resentment for any assumption of authority was usually expressed by the question, "Is it possible that you think yourself whiter than I?" The King exercised a whimsical prerogative of conferring degrees of whiteness; and this was done by a decree of the local Government, which, in the words "let him be white," conferred the envied distinction. For a long time this policy was successful: the *Gachupin* trampled on the Creole, who in turn gave vent to his offended pride by his insulting haughtiness towards all other castes. But when the wrongs inflicted by the Mother Country became too great for the endurance of a People beginning to feel its strength, and roused to try it by the

Different
races.

Privileges
of the
Whites.

MEXICO. noise of Wars and Revolutions throughout the Civilized World, the Creoles found it necessary to fraternize with all classes of the native population, and anxiously, though preposterously, put themselves forward as the descendants and avengers of those who had fallen under the arms of Cortes and his companions. All the native classes coalescing were bound by the common influence of dread and hatred of the Gachupins; and they have used, and no doubt secured their victory, by the Civil proscription of that tyrannical and infatuated class.

Abolition
of castes.

The division of castes no longer exists in the Mexican territory; and such might well be the case, for those who produced the present order of affairs had every shade of colour, and rose from every mixture of race. All, except the Gachupins, are now equally entitled to the privileges of citizens, and equally eligible to the highest offices. General Guerrero (Ward informs us) laboured under no disadvantage in his suit for the Presidentship in consequence of his African descent. Slavery has no existence in the Mexican territory: at all times extremely limited, it ceased during the Civil war in consequence of the necessity of conciliating all classes, or the opportunities which the disturbed state of society afforded slaves for throwing off their chains. Ward, our latest authority, does not specify any law formally declaring its non-existence.

Indians.

Physical
character.

By far the most interesting race, both by its character, present condition, and past fortune, is the Indian. The indigenous Mexican, like the Indians of Canada, or of the United States, has a copper-coloured skin, lank hair, scanty beard, aquiline nose, long eyes, with the external angle elevated towards the temples, prominent cheek bones, full lips, a mouth presenting an expression of gentleness, in contrast with the gloomy and austere air of the rest of the countenance. The forehead is lower and more retreating than in any other variety of human race, the facial line straight, but greatly inclined, the back part of the skull rather prominent than spherical. As the Grecian Sculptors, in representing their Deities, made the facial line perpendicular, or gave it even an inclination external to the perpendicular, because they placed beauty in the exaggeration of the contour which naturally marked their race, so the human figure in the old Mexican Paintings is exhibited with a forehead retreating, and depressed in a degree greater than it probably any where actually exists. Tall, and usually robust, the Indians are singularly exempt from deformity, they are never afflicted with curved spine, rarely lame, or otherwise disabled by nature, and in those districts where *goître* prevails, they never suffer from it. An Indian's years are not registered on his person by those marks so mortifying to the vanity of a European. He scarcely ever becomes grey, even at the most advanced age, and as he seldom can number the years which he has lived, erroneous opinions have generally prevailed with respect to the briefness of life in this race, of which some individuals have exhibited remarkable instances of longevity. Hilario Pari, an Indian, lived a hundred and forty-three years, and at the age of a hundred and thirty was in the habit of walking three or four leagues every day.

Mental character.

The Indians are phlegmatic, melancholy, silent, affecting mysteriousness and concealment even in their ordinary actions, fond of retirement, and often preferring as their place of residence the most sequestered vales and least frequented ridges of the Cordilleras; not prone to anger, but under strong provocation passing from a

state of tranquillity to the most furious agitation. Consistently with this cold and obstinate character, they adhere blindly and pertinaciously to the opinions first inculcated on their minds; and as the early missionaries, in consequence of their zeal and talents, aided by the ready swords of their victorious Countrymen, succeeded in replacing the Mexican superstitions by their own Religious system, the indigenous population are rigid and bigoted Roman Catholics. Remarkably deficient in imagination, the Indian learns readily, judges justly, reasons well, and in comparing and discriminating displays a degree of acuteness amounting to subtilty. Like the Russians and some other half-civilized People, they show much ingenuity and skill in Painting and Sculpture, imitating with the rudest implements and coarsest materials the objects before them. Any originality or invention which they may possess, is destroyed by the tenet inculcated by their Priests, that deviations from the model once established amount to sacrilege; but even when educated under circumstances favouring a developement of a taste for the Fine Arts, they exhibit rather perseverance and aptitude for imitation than invention. They possess much readiness in mechanical contrivances, a species of talent quite congenial to the other qualities of their minds. Their passionate fondness for flowers shows that they are not totally devoid of perception of the beautiful. Even their sanguinary character at the epoch of the conquest possessed this gentle and refined trait, for a garland of the most beautiful flowers was considered at the Court of Montezuma the most honourable present to an ambassador. At the great market of Mexico a native will not sell fruit, vegetables, or *pulque*, without decorating his stall with a profusion of flowers, renewed carefully every day. The dealer, with his wares, is seated in an inclosure, about a yard high, semicircular in shape, and formed of fresh herbs, and displaying on the green ground tasteful festoons and knots of various flowers, which have a very pleasing effect. Flowers form also an important article of sale with them, and they take much pains in arranging them together with various fruits in an agreeable form.

The *Indios bravos*, or restless Tribes of natives, who rove over the most Northern part of the territory, though insignificant in number, are formidable to the Mexican Government on account of their ferocity and activity. Late accounts agree with Humboldt in representing them as greatly superior to the same race in the more Southern part of the territory. Where well treated, their fidelity may be depended on, so that the Opatas, a Tribe of Sonora, are intrusted with fire-arms, and incorporated with the militia of the State. But those Tribes whose enmity has been provoked by the oppression of the Spaniards, incessantly exercise depredations with all the cunning, perseverance, and inhuman cruelty that mark the warfare of their brethren who infest the frontiers of the United States. Prisoners have often been taken by the Spaniards in this incessant war, and generally conveyed to the Capital, where they were allowed to perish in dungeons, or conveyed to Vera Cruz or Cuba, situations producing inevitable and speedy death to the Indian, removed from the elevated region congenial to his constitution.

It is considered by Humboldt and Clavigero as an unquestionable fact that the Tribes which successively occupied Mexico, proceeded from the region lying to the North of the river Gila, the Tolteques in the VIIth, the

Tribes.

MEXICO. Chichimeques and the Azteques in the XIth century. The Tolteques, already possessing considerable civilization, introduced the culture of maize and cotton, constructed roads, towns, and vast pyramids, recorded events by means of hieroglyphic painting, and were acquainted with the art of hewing stone, as well as with many branches of Metallurgy; and, if credit may be given to Humboldt, who, it must be confessed, shows no inclination to undervalue the attainments of indigenous Mexicans, they possessed such skill in Astronomy, as to establish a Solar year more perfect than that of the Greeks and Romans. Strong features of resemblance may be observed between the Mexicans and the Tribes established about Nootka Sound, as well in their addiction to symbolical painting, as in their Language and a degree of civilization superior to the rest of the North American Tribes. Hence these Northern Tribes have been considered a portion of stragglers, who separated themselves from the main body pursuing its course of emigration from the North of Asia, and ultimately establishing itself on the Table Land of Mexico. The researches of De Guignes, Horn, Scherer, and others have shown it probable that since the Vth century a communication has been maintained between the North-East of Asia and the Western coast of North America. According to the hypothesis of Humboldt, the Tolteques and Azteques were emigrants of the race of Huns; as we are informed by the Chinese Annals, that a division of that mighty people emigrated in a North-Eastern direction, until it was lost to all further observation in the depths of the Siberian desert. Malte-Brun considers them to have been emigrants from the country about the Irtysh, who, superior in civilization to the Barbarians of central Asia, but inferior in military prowess, fled to the East, bearing with them those attainments in the Arts, the discovery of which in the midst of the ruder Tribes of America so startled the first Europeans who visited Mexico. This, it must be allowed, is a specious hypothesis, in accordance with the theory of Bailly, that the North of Asia had in the remotest periods been the seat of high civilization. The use of the *cerealia* of the old Continent might easily be lost in the course of a tedious and painful emigration; as well as the art of working iron, a metal scarcely ever found in a natural state, and very difficult to reduce from the ore. Humboldt mentions, as an objection to his own hypothesis that the Mexicans sprung from the Huns, the fact that milk was not used as an article of diet in any part of the American Continent; but he ought rather to have viewed this fact as corroborating than subverting his hypothesis, since that secretion is not used as food among the people of Eastern Asia.

Architectural antiquities.

Pyramid of Cholula.

The most remarkable monuments which at present attest the greatness of the ancient Mexicans, are the ruins of various Pyramids of vast dimensions. The principal is that of Cholula, a truncated Pyramid, 175 feet high, and having a base of such extent that each of its sides (two of which lie exactly in the meridian) is 1426 feet long. The material is brick, disposed in layers alternating with clay, and like the Tower of Belus at Babylon and the Temples of the Burmese, its sides are constructed in terraces, of which there are four. Some circumstances connected with this monument are striking instances of the vicissitudes which attend great national memorials: its majesty has been insulted by the Arts of another Age, for a high road has been cut through it, and the position of a Christian Church on its summit, shows the

VOL. XXV.

triumph of another Faith over that which dictated its erection. Of the great Teocalli, or Pyramidal Temple of Mexico, the very ruins have perished, though huge fragments of porphyry, occasionally discovered in excavating the ground adjacent to the Cathedral which has replaced the principal edifice of Mexican superstition, point out the materials of which it was composed; one mass covered with sculptures measured 23 feet in length, 19 in breadth, and 10 in height. At Teotihuacan, situated a short distance to the North-East of the City of Mexico, are two Pyramids, called by the Indians the House of the Sun and the House of the Moon. The House of the Sun is 645, measured along the base, with a height of 171 feet: the House of the Moon has a much smaller base, and is but 140 feet high. Two sides of each deviate but 50' from the line of the meridian. The internal mass consists of a mixture of clay and pebbles, and has a coating of stone, which had formerly been overlaid with a plastering of lime. Each, when perfect, had exhibited four terraces, access to which, as well as to the summit, was given by stairs. About the bases of these great edifices many hundreds of smaller Pyramids, each about 30 feet high, are arranged in lines parallel to the bases, which coincide with the meridian: tradition represents them as dedicated to the stars; but Humboldt considers them mounds raised over the graves of eminent Chiefs. These remarkable monuments, according to Mexican History, are as old as the VIIIth century. The Pyramid of Papautla is inferior to these in dimensions, but far more curious, as exhibiting the considerable progress made by the Mexicans in Architecture. Embosomed in a deep forest to the North-East of Vera Cruz it had been concealed from the Spaniards by the suspicious veneration of the Indians, until about sixty years ago it was accidentally discovered by some hunters. It is constructed of large pieces of hewn porphyry, cemented with mortar, and sculptured in relief with innumerable figures of hieroglyphics, principally of serpents and alligators. Like the other monuments of the same sort its sides are formed into terraces, of which there may be reckoned six, and the vegetation which overgrows the base, is supposed to conceal a seventh. The wall rising above each terrace contains a number of square niches, ranged at regular intervals, and in number amounting altogether to 378, being, as is supposed, intended to represent the common year, and the intercalary days at the termination of each cycle. This edifice, which may be compared with respect to its finish and dimensions to the Pyramid of Cestius at Rome, is about 60 feet high, and has a base about 80 feet broad. The other monuments most worthy of attention are the great circular stone, covered with hieroglyphical sculptures denoting the Mexican calendar, which contains a mass of about a thousand cubic feet; and numerous stones, resembling the upper slab of a druidical altar, as well in their great size as in being grooved with channels, which conveyed in a particular direction the blood of the human victim stretched at full length on them, and slaughtered in that posture. The colossal statue of the Goddess Teoyaomiqui, covered with hieroglyphics, is still preserved at the University of Mexico.

Though the intellectual progress of the Mexicans has been greatly checked by the dreadful struggle in which they have lately achieved their independence, they far outstripped the natives of Spain in the career of scientific improvement, and as a natural consequence, the

State of Learning and the Arts.

MEXICO. more polished classes of society entertain a degree of contempt for the attainments of the inhabitants of the Mother Country. Humboldt expresses the gratification which he felt at witnessing in Mexico the great love of information and zeal for improvement evinced by youth, singularly endowed with quickness in acquiring the elements of Science, and perseverance in pursuing it to its depths. At the University of Mexico and the School of Mineralogy, all branches of Mathematics are studied with such ardour and success, that Humboldt remarks, that the difficulty which the long war caused in procuring instruments of sufficient accuracy, alone prevented him from meeting in all parts of the Country young men capable of performing the nicest observations and most intricate calculations. The pureness of the atmosphere and mildness of the climate have at all times disposed the inhabitants to Astronomy; in later times, Velasquez Gama and Alzate have most distinguished themselves in that Science.

Velasquez Cardenas y Leon. Velasquez Cardenas y Leon, who would do honour to any Age or Country, was first introduced to the true path of study, by accidentally finding the Works of Newton and Bacon; and adding practical to abstract pursuits, he, like Guinand in the present day, set himself to supply the deficiency in the instruments which were within his reach, by grinding lenses and making telescopes and quadrants. At the same time he supported himself by his practice as an advocate, which, Humboldt thinks it worth while to remark, is at Mexico as elsewhere, a more lucrative calling than observing the stars. Appointed Professor at the University, and sent by the Government to California, he amazed the French Academician Chappe de Auteroche, by proving himself superior in scientific attainments to that zealous traveller, and among other services to Science, he made an excellent observation of the transit of Venus, in 1769. The foundation of the School of Mineralogy was owing to his exertions, and its present state throws a lustre on the memory of its founder. It has succeeded in exciting such a zeal for the cultivation of Chemistry, that in all parts of the Country, individuals occur who have the justest and most recent information with respect to the Science. The School possesses a Chemical laboratory, a Geological collection arranged according to the Wernerian system, and an admirable assortment of instruments for experiments in Natural Philosophy, executed by Ramsden, Adams, Berthond, and other eminent artists. The best Treatise on Mineralogy which is to be found in the Spanish Language was first published at Mexico; and the translation of Lavoisier into Spanish first appeared there. A Public Garden is devoted to the advancement of Botany, among the eminent cultivators of which Science Mexico has produced Cervantes, Mocino, and Sesse; the first celebrated for the excellence of his Lectures delivered from the Professor's chair, the other two for the copious and well-arranged collections of the botanical productions of New Spain formed by them in the course of extensive journeys, undertaken by the order of the Government. The Academy of the Fine Arts has had a most important influence in purifying and refining the national taste, as well as in giving to the public buildings of Mexico an air of judicious magnificence not unworthy the greatest Capitals of the European States. It is a singular circumstance, and gratifying to the votaries of the Fine Arts, that their influence alone succeeded in suspending the inveterate prejudices connected with difference of blood.

School of Mineralogy.

Botany.

Fine Arts.

In the great saloons of the Academy assembled a mixed crowd of some hundreds of Creoles, Mestizoes, and even Indians, who, without the superciliousness of imaginary superiority or the resentment of injured pride, united in the common pursuit of admiring or imitating the unperishing models of Greek and Roman Art. The Fine Arts need never excite the apprehensions of the most jealous Government; and the Court of Madrid, not ignorant of this truth, gave the Academy an income of above £2000 per annum; to this the association of Mexican Miners added £1000, and the Merchants' Company of Mexico above £650. Of these funds an honest and liberal use has been made by the Directors of the Institution. In the spacious building assigned by the State to the Academy, there is deposited a collection of casts from the most valuable antiques, supplied by the Spanish Government at the expense of above £8000, and selected with such judgment that they could not easily be rivalled in Europe. Here in one building may be viewed faithful copies of some of the noblest and most highly-finished productions of the human mind, the Apollo Belvidere, the Venus de' Medici, and the Laocoon, in contrast with the grotesque and rude objects of Azteque Idolatry. Tolsa, Professor of Sculpture at Mexico, has cast in bronze an equestrian statue of Charles IV., which, in the opinion of Humboldt, exceeds any similar production of European Art, if we except that of Marcus Aurelius at Rome. The noblest building in Mexico is the School of Mineralogy, constructed at an expense of £120,000, and throughout the whole city there reigns such an air of magnificence, combined with utility, that Humboldt, though he in a short space of time after his visit to Mexico surveyed Lima, Washington, Philadelphia, Rome, Paris, Naples, and all the great towns of Germany, assures us that none left on his mind such an impression of grandeur as the Capital of New Spain.

In the consideration of the state of the Arts some notice of the enormous hydraulic works constructed for draining the Valley of Mexico ought suitably to find a place. The artificial outlet which bears the name of Desague de Huehuetoca, was commenced in 1607, under the conduct of Enrico Martinez, for the purpose of giving to the waters of the river Guautitlan and Lake Zumpango an exit from the Mexican valley. Of the five lakes of the Mexican valley, that of Tezcuco, whose waters are nearly on a level with the greater part of the metropolis built at its extremity, is the lowest; and as there is no natural channel for the discharge of the waters descending on all sides from the hills enclosing this basin, their accumulation in a rainy season produced inundations which threatened the total destruction of the town. The first expedient was a tunnel, commenced 1607, and, by the labour of fifteen thousand Indians, excavated for the length of 21,450 feet through the hill of Nochistongo, beyond which a channel of 28,000 feet in length discharged its current into the river of Montezuma, which falls 7000 feet to Tampico, where it reaches the sea. The parsimony of the Mexican Government had so restricted the engineer, that he gave the tunnel the breadth of 23 feet and height of 26, dimensions found quite inadequate for evacuating the water which might accumulate so as to raise the level to a dangerous height, and the crumbling earth soon fell down in such quantities, as to render the water-way still more inadequate. It was then thought advisable to arch the tunnel, but in the execution of this plan, instead of an elliptical pipe of masonry, side walls and a vault above were constructed, so that the

Drainage of the Valley of Mexico.

MEXICO. rapid current undermining the foundation, the work in many places fell in, and closed the passage. In 1629, a great inundation laid the streets of Mexico under water, which continued for five years so to overspread them, that all communication between the houses was managed by means of boats, and so great misery resulted, that the Court of Madrid issued orders for abandoning the town, and building another on a more elevated site, a project, however, which, yielding to the representations made of the vast loss of fixed capital resulting from such a measure, was subsequently relinquished, and recourse had to an expedient highly characteristic: supplications were offered to the Image of the patroness of Mexico, the Holy Virgin of Guadalupe, and presently some shocks of an earthquake produced such chasms in the soil, as swallowed the superfluous water. The tunnel was repaired, but being found inadequate, and liable continually to go out of order, it was determined to substitute a canal, and to cut through the whole mass of the hill; and after about one hundred and fifty years of exertion, at various and irregular intervals, this great work was finished in 1798. The section of the current which passes through this excavation varies from eight to twenty square yards, and Humboldt observes that, to secure the exit of such a body of water, the hill has been divided by a channel, which for nearly 3000 yards has a section of from 1800 to 3000 square yards. The total expense of all these operations amounted to £1,300,000, and yet there is no security afforded by them against inundations from the two Southern lakes, which have on several occasions endangered the safety of the Capital, and become every year more formidable, as the bed of the lake of Tezcuco is raised by deposits from the streams which it receives. The whole length of the artificial channel of the Desague is 67,537 feet, for 2624 feet of which the depth of the opening varies from 140 to 200 feet, and its breadth, not any where less than 250 feet, in some places exceeds 350. The Desague has shared in the disastrous consequences of the revolution, and having been quite neglected, is at present obstructed, and of very little efficacy as a drain.

Road from
Vera Cruz
to Perote.

Fortress of
San Juan
de Ulua.

Agriculture
and its pro-
ducts.

Among public works should also be mentioned the great road which the merchants of Vera Cruz caused to be formed from that town to Perote, at an expense of about £620,000, a large sum for the construction of a road not more than 140 miles in length. The fortress of San Juan de Ulua, situated on the little Island which shelters the roadstead of Vera Cruz from the violence of the waves, is built of madrepores and other zoolithes drawn from the bottom of the sea. Since the materials have been obtained by such a laborious process, it will appear the less surprising that the construction of the fortress cost the enormous sum of £8,300,000.

Humboldt remarks that two great mistakes have prevailed among those not intimately acquainted with the state of Mexico; they suppose that the mines are the principal sources of its wealth, and that the working of them is unfavourable to the progress of Agriculture; in refutation of which opinions, he shows that a far greater proportion of the national income is derived from Agriculture than from mines, and that in the mining districts Agriculture is extensively and actively pursued under Physical circumstances which would otherwise have condemned the soil to remain in a state of nature. While the total produce of the mines is estimated at 74 millions of piastres, the value of the

products of agriculture is made to amount to 96 millions. Of these products, undoubtedly the most important is maize, the staple article of diet to the great majority of the natives, and cultivated through nearly all the territory to such an extent, that the whole produce is stated to amount to 3,600,000 quarters. In addition to the abundant nutriment supplied by its grain, the succulent stalks, when crushed, afford copiously sirop, which may be converted by crystallization into sugar, and if subjected to the processes of fermentation and distillation would yield a large proportion of ardent spirit. The various species of European corn are the articles next worthy the notice of the political economist, not from their comparative productiveness, but from the great proportion in which they supply the consumption of the population. Of these by far the most important is wheat, which throughout the portion of the territory lying between the Tropics requires a situation elevated at least 3000 feet to produce such a modification of temperature as may allow the ear to form; as it is found that in hot and maritime tracts it shoots into a tall and rank stalk, never producing grain. In the Northern districts, however, its cultivation is extensively pursued throughout the low country with such success, that Ward states its productiveness in some parts of Sonora at the incredible rate of 240 quarters to one sown. Humboldt mentions that at Cholula it produces from seventy to eighty-fold, and states the average returns throughout the Country in general about twenty-five; whilst that of France, one of the most fertile Countries in Europe, is but five-fold. The whole amount of wheat produced in the Mexican territory is estimated at 1,280,000 setiers. Barley, which generally supplies the place of oats in feeding horses, is cultivated to considerable extent at elevations too great for the production of wheat, and gives a return of about twenty-fold. Of manioc, the banana, potatoes, and yams, we have already spoken. Rice, which might be produced in great profusion, is not much liked by the inhabitants, and, consequently, there is little ground appropriated to its growth.

MEXICO

Maize.

Wheat.

Barley.

Rice.

Vineyards.

The culture of the vine, though discouraged by the Spanish Government, was conducted to considerable extent, and with much success. This department of Agriculture was principally attended to in the Northern Provinces; in Sonora, a white wine is made not inferior to Sherry. During Humboldt's visit, the Viceroy received instructions from the Court of Spain to destroy all the vineyards within his jurisdiction, but the imminent danger of revolt in consequence of such oppression induced him to decline compliance. Such apprehensions were well founded, for subsequently, in 1810, the famous Hidalgo was so exasperated at the destruction of one of his vineyards, in conformity with an order issued by the Government, that he organized and commenced the furious and extensive insurrection which, after various fortune, terminated in the establishment of the independence of Mexico. The olive and all the other fruits of Europe thrive well in the variety of soils and climates which occur throughout the Mexican territory. The sugar-cane is cultivated from the sea-coast to the height of 5000 feet above the level of the Ocean with such activity, that there are some plantations which produce 1,000,000 pounds annually; and such is the fertility of the soil, that Humboldt computes that a square of seven leagues' dimension would be adequate to produce sugar sufficient for the consumption of all France. The inhabitants of Mexico use a large quantity of this article, so that of 50,000,000 pounds

MEXICO. produced in the territory, 35,000,000 pounds are required for home consumption. This branch of Agriculture has retrograded, in consequence of the ravages of the Revolutionary war, which caused the desolation of the plantations and the destruction of the machinery and buildings, but it is rapidly recovering, being found a most profitable mode of employing capital; a fact the more worthy of notice as the work is performed altogether by free labourers. Coffee is little used or cultivated in Mexico.

Vanilla. Vanilla, used to give an aromatic flavour to chocolate, grows both spontaneously and by culture throughout the States of Oaxaca and Vera Cruz, whence is obtained all which supplies the European markets.

Tobacco. Tobacco might easily be produced to a great extent, but the Government claims a monopoly in the right of purchasing from the growers, and in consequence of this discouraging circumstance, the produce is inadequate to the consumption, and the deficiency is supplied by the importation of 50 or 60,000 pounds every year. The revenue derived by the State from the various duties on this plant amount to about £850,000 annually. The *Tierra caliente*, or low tract along the coasts, is admirably suited for the growth of the best cotton, but in consequence of the scarcity of hands in that region little has yet been done; though the cotton planter of Mexico would have a great advantage over the cotton planter of the United States, as he would find it necessary merely to keep the plantation free from weeds, since the cotton wool is in that warm climate produced on a tree of perennial growth, whilst in the Countries to the North of the Gulf of Mexico, the frost every Winter destroys the plant, which must be replaced with the same labour each successive Spring. At present, national industry so little exerts itself in this department that though there is scarcely any cotton wrought up in the Country, in consequence of the superior cheapness at which European fabrics can be imported, the quantity of the raw material exported amounts to no more than 700,000 pounds annually. Of all the departments of Agricultural industry, the most important is that which is directed to the growth of the cactus, which supplies the food of the cochineal insect. The production of cochineal is confined to the State of Oaxaca, though it had formerly been extensive in Yucatan; but about seventy years ago, all the plants of cactus growing in that Province were cut down in the course of one night, an act of devastation asserted by the Indians to have been committed in conformity with an order of Government, which was anxious to enhance the price of the article by increasing its scarcity; and charged by the Whites against the Indians, who, they alleged, did it from a feeling of irritation, produced by the merchants laying a low price on the dye. Of the cochineal insect, *Coccus*, and the mode by which the dye is obtained, we have already spoken largely. The quantity grown yearly in the Mexican territory is variously stated by Humboldt at 911,756 pounds, of the value of 3,303,470 dollars, and by Ward at 743,400 pounds, sold on the spot at the rate of two dollars a pound. Indigo is an indigenous production, and still found wild in many places; but as that dye is produced of a superior quality in Guatemala its growth is neglected in Mexico.

Horses. All the domestic animals of Europe thrive admirably in Mexico. Their horses are hardy, active, lasting, and remarkable for hoofs of such a firm consistence that shoes are scarcely requisite; the scarcity of iron, as well as of skilled labour, renders this a valuable quality. Vast droves of these noble animals roam wild over the desert

plains of the Northern frontier, and in a climate and soil similar to that of Arabia attain, in a high degree, strength, fleetness, and symmetry of form.

The policy of Spain with respect to the manufactures of the Mexican territory was at once oppressive and inconsistent. Whilst it allowed the importation of European goods exclusively at the Port of Vera Cruz, and thus laid the inhabitants of the remoter Provinces under the necessity of procuring their supplies of such commodities by a land-carriage, in some instances of above a thousand miles, performed principally on the backs of mules, it discouraged by all practicable means the manufacturing industry of the natives. To so great an extent was this oppression carried, that, as Ward informs us, in remote districts the landholder, unless possessed of a very large and productive estate, was obliged to mortgage his property piecemeal for the purpose of supplying his family with the plainest articles of manufacture; as he was exposed to the accumulated extortion of monopolists in the Mother Country, and in Vera Cruz to the profits taken by the traders of the Capital and the Provincial markets, and to the great expense of a long land-carriage; and besides this, the scarcity of specie at a distance from the seat of Government compelled him to make his payments principally in kind, at a ruinous depreciation. In consequence of this state of affairs, a considerable proportion of the landed property of the remoter Provinces passed into the hands of the traders of Mexico, Saltillo, and other entrepôts. But though a powerful Government may exterminate a population, it cannot permanently place it under political arrangements incompatible with its existence. The wants of the Mexican population supported to a certain extent some manufactures which required the employment of but a slight degree of skill and capital. The total value of the manufactures of Mexico is estimated by Humboldt at the surprisingly small sum of £1,600,000 annually. This does not include the value of the tobacco and gunpowder prepared for the market, as the supply of these articles is monopolized by the Government. The yearly value of the tobacco sent by Government into the market is stated by Humboldt at the great sum of £1,565,182, an amount the more extraordinary, as he informs us that the Indian portion of the population do not use the plant in any form. There are about 4,000,000 pounds of powder manufactured annually, of which the works at Santa Fé, near Mexico, belonging to the Government, and alone authorized by it, produce above 786,000 pounds, the remainder being manufactured by unauthorized persons, who, in consequence of the vast quantities of sulphur and nitre found in the volcanic districts, have great facility in procuring the materials, and find a ready market for their produce in the mines, the situations of which are often so retired and difficult as to render it nearly impossible to subject them to the close inspection of the officers of the revenue. The principal manufactures left in the hands of the people are those of cotton and woollen cloth for making the large mantles, the favourite dress in the Country; and of soap, the quantity of which manufactured every year amounts to above 5,600,000 pounds. The soda employed in the soap factories is procured from the carbonate of soda, which abounds in the Valley of Mexico and other parts of the Table Land. There are besides a few unimportant manufactories of earthen ware, and in the Capital the art of working gold and silver is carried to very great perfection; so that Humboldt remarks, that the

MEXICO. services of plate, as well as the rich ornaments and the vessels used in the churches of Mexico, are executed there with a degree of skill, taste, and highly finished workmanship, not excelled by the artists of any Country.

extraordinary interest, since, according to Humboldt, the silver exported from the Port of Vera Cruz alone amounts to two-thirds of all extracted from the silver mines of the whole Globe. According to this authority, the average value of all the silver annually obtained from the Mexican mines, and paying the Royal duty, amounted to 21,000,000 dollars, to which should be added, in the estimate of productiveness, about 1,000,000 dollars extracted without paying that charge. The five thousand mines which supplied this quantity are divided by Humboldt into the following groups :

	Marc.
1. The central group containing Guanaxuato, Catorce, and Zacatecas, and affording	1,300,000
2. Group of Durango	400,000
3. Group of Chihahua	Uncertain
4. Group of Biscaina	120,000
5. Group of Zimapan	60,000
6. Group of New Galicia	230,000
7. Group of Tasco	260,000
8. Group of Oaxaca	Uncertain
Marc of silver*	2,370,000

These mines occupy a space of about 100,000 square miles. It appears from the above statement that the central group supplies above one-half of the silver of Mexico; Guanaxuato alone affords one-fourth of the silver of Mexico, and one-sixth of that of all America. It also results that the other mines of Mexico must be far less productive, so much so, that nineteen-twentieths of the shafts at present worked do not altogether produce more than 200,000 marcs of silver. The thirteen richest mines are thus ranked by Humboldt according to the order of their productiveness.

Guanaxuato.	Tasco.
Catorce.	Batopilas.
Zacatecas.	Zimapan.
Real del Monte.	Fresnillo.
Bolanos.	Ramos.
Guarisamey.	Parral.
Sombrerete.	

They are, with scarcely any exception, placed either on the Table Land or on the Western slope of the Cordilleras, and the ore occurs for the most part in the form of veins penetrating the primitive and transition rocks, being rarely found in those of secondary formation. Their situations are elevated from 6000 to 9500 feet above the level of the sea. The great productiveness of the Mexican mines does not result from the richness of the ore, but from its abundance and the ease with which it may be procured, for the average produce is four ounces of silver to a quintal of the ore. The mine of Guanaxuato, as has been already stated, produced silver to the enormous amount of £58,300,000 between the years 1600 and 1803. The mine of the Count of Valenciana, at Guanaxuato, furnished in four years, from 1787, silver to the amount of £3,474,000 : no less productive, for a short time, was the *reta negra* of Sombrerete, which in the space of a few months gave the

Fagoaga family £830,000. Catorce, discovered in MEXICO. 1778, produced in the first year above £330,000. The Count Valenciana, the proprietor of the richest mine in existence, for it has in some years produced silver

speculations as a penniless adventurer from Spain. Obregon, (for such was his name before receiving his title,) after some fruitless labour in working the mines of Guanaxuato, by good fortune, or guided by his sagacity, struck upon the vein which in a short time made him one of the richest men in existence. The expenses of working those mines have of latter years been enormous, as the construction of the principal shafts cost above £250,000, and the annual disbursements amount to about £200,000 annually; still, such is the productiveness, that the net profit resulting to the proprietors has seldom been less than £200,000. The Count of Regla, in a few years after he commenced working the mine of La Biscaina, drew from it a clear profit of above a million; and subsequently obtained such vast wealth, that he presented to Charles III. of Spain two ships of war, the largest carrying 112 guns, and lent the Court of Madrid £208,000, which have remained unpaid. The whole amount of silver produced by all the Mexican mines from 1492 to 1803 is computed by Humboldt at £443,633,000. This able judge expresses his conviction, that the quantity of the produce of the mines might be trebled; and the researches of Ward so far support this hypothesis, that they point out an increase of the average in the years immediately previous to the Revolution from 23,000,000 to 24,000,000 of dollars. In consequence, however, of the effects produced by the Revolutionary war, in interrupting regular labour, in destroying machinery, and in withdrawing of capital, the yearly average fell so low as 10,487,986 piastres. The capital withdrawn by the Spaniards on the separation from the Mother Country is estimated at 36,500,000 dollars; and to supply a deficiency, ruinous immediately to the mining interest, and more remotely through it to the interests of Agriculture and Trade, the Congress of Mexico passed a decree, admitting foreign adventurers, under very advantageous conditions, to become shareholders in the property of the mines of its territory. This permission was eagerly accepted, and seven English Companies, one German, and two American Companies, were formed for working the mines of Mexico.

	Capital.
The Real del Monte Company	400,000
Bolanos Company	200,000
Halpujahuia Company	400,000
Anglo Mexican	1,000,000
United Mexican	1,200,000
Mexican Company*	60,000
Catorce Company	£3,460,000

American Company of Baltimore*	
American Company of New York*	
German Company of Eberfield	£127,000

The capital of these Companies, though considerable, is found to be inadequate to the exigencies of their undertaking, as it does not exceed one-third of the loss of fixed and circulating capital, in consequence of the events of the Revolutionary war. Accordingly the speculator is struck by the contrast between the comparatively

mines.

insignificant efforts made by the foreign Companies and the vast works of the Spanish miners, the former existence of which is proved by their ruins. The proceeds of the mines in the hands of these proprietors have also been limited by their ignorance of the circumstances of their introduction of foreign labourers instead of employing the experience and activity of those of the native race, and by a general and injudicious substitution of European machinery for that previously used throughout Mexico. The measures of the German Company participated least in these errors, and hence their operations have been more lucrative; since in the first year, whilst their plans were in a state of imperfect effectiveness, they acquired a profit of twenty-five per cent. on their capital, and the most competent judges were of opinion that it would soon amount to cent. per cent. The English Companies have generally profited by their dear-bought experience, and so far altered their measures, that whilst the management of the mining operations continues in the hands of Europeans, the execution is left to the native labourers. Of the English Companies, that of Halpujahu had from the commencement of its operations acted on this principle, and experienced accordingly its beneficial results. The alarm and disinclination felt during 1826 in England for all bold speculation, combined with the disappointment caused in consequence of the returns of the expenditure necessarily having some delay, generally induced the English Companies to meditate the sacrifice of the funds which they had already invested in these speculations, and to withdraw from their undertakings, whilst the Mexicans looked forward to reaping the fruits of their labours, and continuing to carry into effect the abandoned projects. Fortunately for the English Companies their despondency has not lasted, and all have a prospect of deriving a great and permanent income from their mines; inso-much, that it is generally expected that the annual produce of the Mexican mines will in a few years exceed that of the period of greatest former prosperity. The general terms of the contract made by the foreign Companies were, that the capital invested by them should first be repaid, and subsequently the profits shared equally between them and the original proprietors. Thus there appears little risk of failure resulting from the unproductiveness of the mines; and the rational apprehensions of the proprietors need only be directed to Civil commotions, and the danger that the great prosperity of mining operations may tempt the Government of the Mexican Republic to lay upon them heavy duties. Those acquainted with the state of the Country assure us that the People are heartily tired with war, so that however violent the struggles for supreme power in the Capital, their disturbing influence will be confined to it, and the inhabitants of the States at large will be left to pursue their private interests unmolested. As the natives are co-proprietors in the mines, Ward is of opinion that the great weight of their influence, and the general conviction of the vast advantage derived to the Country at large from an active state of mining operations, will prevent any attempt to throw an unfair burden on the income derived from them.

There is a fact connected with the Geographical position of the deposits of silver ore throughout the Mexican territory, likely to effect a considerable change in the Mineralogical operations and trade of that Country, and to exert some influence all over the civi-

lized world. The unanimous authority of the native miners represents the greatest mineral wealth of Mexico as commencing to the North of the 24th degree of North latitude, at the very line where the labours of the Spanish miners terminated: so that if this opinion be well founded, the richest deposits of silver that have existed, or probably are at present in existence, are still untouched by human labour. The causes of this singular circumstance resulted from the monopoly enjoyed by the Mint of the Capital, which, in a Country where communication is maintained by remote land-carriage so operated that the small quantity of silver raised in the remote Northern Provinces was sold there for one-half of the Mint price. In addition to the necessity laid on the miners of the Northern Provinces to convey the silver which they extracted above a thousand miles, and to reconvey it the same distance before they could bring it into circulation in their own neighbourhood, they were under the necessity of obtaining both the mercury and gunpowder (of both of which great quantities are used in the Mexican mines) under circumstances no less disadvantageous. The States of Durango, Sonora, Chihuahua, and Sinaloa, contain vast deposits of silver ore hitherto but little known, but holding out wherever they have been tried a promise of riches superior to any that Mexico has yet produced. The ores of Santa Juliana, in Sonora are fifty times richer than those of Guanaxuato, which has supplied a greater quantity of silver than any other mine in existence. In some instances at Batopilas, in the State of Chihuahua, the ore, a quartz impregnated with silver, yields above one half of the pure metal. The ore of San Dimas, in Durango, is above thirty times richer than those of Guanaxuato. Documents preserved in the archives of the Treasury at Madrid state, that at Arizona, lying far to the North, several masses of silver were found, and that amongst them one was ascertained to have weighed twenty-seven pounds. The quantity of gold supplied by the mines of Mexico is far less important than that of silver. It is generally obtained in Sonora by washing the earth, and masses have sometimes occurred which weighed six pounds. In Oaxaca it is generally found in veins of quartz impregnated with the metal, and few of the silver ores are totally devoid of an admixture of gold. In one of the mines of Guanaxuato there are sometimes found veins of clay so richly impregnated with gold, that the miners, after leaving the mine, though they are nearly naked, are compelled to bathe and wash themselves in tanks, provided with a view to prevent them from carrying off any of the precious earth. In general, however, the silver of this mine contains but three ounces of gold in every thousand ounces. The quantity of gold supplied by Mexico is estimated by Humboldt at £206,966 annually. Mercury, in the form of cinnabar, is to be met with in many parts of the Mexican territory; but in consequence of the injudicious process adopted for its extraction the mines have not been successfully worked, and Mexico has always been dependent on Europe for the supply of this mineral, so important to its mineralogical operations. The ores of copper, iron, and lead abound; tin is obtained in small quantities in the alluvial earth of Guanaxuato. Zinc, arsenic, antimony, cobalt, and manganese also occur; no platina has as yet been discovered. The ancient Mexicans, by a judicious admixture of tin, produced an alloy of copper so hard at once and tough, that it was no contemptible substitute for iron in the formation of cutting tools.

MEXICO.

Gold.

Mercury.

Other ores.

MEXICO. Up to the commencement of the Revolution the foreign trade of Mexico was strictly confined to the Port of Vera Cruz on the Eastern, and that of Acapulco on the Western coast. In consequence of this oppressive regulation the whole of the exports from the Mexican territory to Europe, exclusive of the precious metals belonging to the crown, amounted but to £2,329,451 annually; and of this sum £1,748,143 consisted of the precious metals exported on the account of private merchants. The average value of the imports was £2,159,216. At present the whole extent of the coast may be visited by foreign vessels; and on the East there are the Ports of Sisal, Campeche, Isla del Carmen, Guasacoalco, Alvarado, Vera Cruz, Tuspan, Pueblo, Viejo de Tampico, Tampico de las Tamaulipas, Santander, Refugio, San Bernardo, and Galveston. On the West the Ports are San Blas, Mazatlan, Guaymas, and Acapulco. The effect of the Revolutionary war was so injurious to commerce, that in 1823 the exports fell to one-third of their former amount. In 1824 the amount of the exports and imports was not inferior to those of the most prosperous year previous to the Revolution, and they have since been steadily and greatly increasing. In 1823 the number of vessels which entered the Ports of Mexico did not amount to 200; in 1826 their number increased to 1273. Such has been the increase in the consumption of European wares, that Ward concludes that it exceeds its former amount tenfold. At present, in consequence of the weakness of the Government and the vast extent of frontier, one-third of the goods brought into the Mexican market is computed to be smuggled; and the Lower House of Congress sought to apply the proper remedy by reducing the Customs fifty per cent., but the proposal was rejected by the Senate. The duties at present paid are regulated by a tariff established since the Revolution. All goods imported in general pay a duty of twenty-five per cent.; and when carried inland are subject to an additional charge of fifteen per cent., besides three per cent. levied by the States in the territories of which each article may be consumed. Mercury, surgical and mathematical instruments, machinery, books, drawings and casts, music, seeds and plants, flax, and all animals, are admitted free of duty. Gold and silver unwrought are not permitted to be exported. The following are the duties payable on exportation:—

	Per cent.
Gold coined	2
Gold wrought	1
Silver coined	3½
Silver wrought	3
Cochineal	6
Vanilla	10

There is great room for improvement in the financial regulations of the Mexican Government, which, in consequence of its necessities and inexperience, has passed many ordinances highly detrimental to the commercial prosperity of the Country.

New Government. The founders of the present Political Constitution of the American Republic have been mainly guided in their legislative labours by observation of the beneficial provisions of the legal systems of England and the United States of North America. The form of government is that of a Federal Republic, established on the 4th of October, 1824; and whilst it leaves each Constituent State at liberty to manage its internal concerns, it binds all into one Political Body, for the effecting of such

objects as may be indispensable for the welfare of the whole. **MEXICO**

The Federal Constitution declares the unqualified independence of the Country.

It recognises the Roman Catholic Faith as the Religion of the State.

It admits, as the Constituent States of the federation, the nineteen Districts of Chiapas, Chihuahua, Cohahuila with Texas, Durango, Guanajuato, Mexico, Michoacan, New Leon, Oaxaca, Puebla de los Angeles, Queretaro, San Luis Potosi, Sonora with Sinaloa, Tabasco, las Tamaulipas, Vera Cruz, Xalisco, Yucatan, and Zacatecas. There are besides, the territories of Old California, New California, Colima, New Mexico, and Tlascala; each of which, in case it shall attain a population of 80,000 inhabitants, is entitled to become a Constituent State, and as such be duly represented in the Federal Congress.

The Federal Congress consists of two Houses, the Senate and the House of Representatives. The Senate is composed of the aggregate of two Members supplied by each State, and elected by the majority of the votes in the Legislative Assembly of that State. Of these two Members one holds his place for four, the other but for two years; each must be thirty years old. The House of Representatives is composed of Members elected by the citizens of each State in the proportion of a Member for each 80,000 inhabitants; and when the excess above this exact number shall amount to 40,000, it still entitles the State to return an additional Member: thus a State having 130,000 inhabitants will return two representatives as well as a State having 190,000. A representative must be twenty-five years old; if not a Mexican he must, in case he be a native of any other of the Countries of America formerly belonging to Spain, have resided three years in the Mexican territory: all other persons must have resided eight years to acquire the quality of eligibility. Each Member has a yearly salary of 4000 dollars, and cannot be made responsible for any opinions which he may utter in his representative capacity. The Congress meets every year on the 1st of January, and closes its session on the 15th of April. Any proposal regarding taxes, or money to be levied or disposed of, must originate in the House of Representatives, but all other laws may be proposed either there or in the Senate. The concurrence of both Chambers is required before a law can be transmitted to the President. If he approve of it, he affixes his signature, which immediately gives it the force of law: in case of disapproval, he must within ten days send it back to the Chambers with his observations; when, if it be still sanctioned by a majority of two-thirds of the Members of both, the President must sign and publish it without any further remonstrance. Each House can take cognizance of accusations alleging treasonable charges against the President and other great officers; and having taken them into consideration, provide that they shall be submitted to the proper tribunals. The Congress possesses all the powers of Government: its principal functions are, to maintain the Federal Union of the States, and their independence of each other; to incorporate new States into the Union; to raise taxes and regulate their disbursement; to coin money, to declare war, to guard the liberty of the Press from suspension or suppression in any part of the Mexican territory; and ultimately to sanction all Treaties, and to enter into negotiations with the See of Rome respecting the Religious establishment of the Republic.

Constituent States.

Senate.

House of Representatives.

Powers of Congress.

MEXICO.
The President.

The President cannot be considered as possessing any share in the Legislature, being in fact as devoid of influence as was the Doge of Venice at the period when the Aristocracy of that State was most vigilant, and possessed exclusively the powers of the Government. He must be a native of Mexico, and thirty-five years of age. The election rests with the Congresses, which regulate the affairs of each Constituent State: each of those Assemblies naming two candidates, one of whom, at least, must not be a native of the State selecting him. If any individual obtain a majority of votes, he is declared President; but should it happen that two or more had an equal number of votes, the House of Representatives makes choice between those competitors, and in case the voices of that Assembly prove equally divided, the matter is ultimately determined by lot. Twelve great judicial officers, selected in the same manner as the President, but holding their places for life, unless they forfeit them by some delinquency, constitute the Supreme Tribunal, which distributes justice in all cases which could not properly come under the cognizance of the judicature of any separate State. It takes cognizance of all disputes between Constituent States, of all crimes against the Federal Government, and of impeachments against the President and other great officers of the State, being itself subjected to the jurisdiction of a Tribunal appointed by the House of Representatives. All the barbarous provisions of the feudal law are strictly excluded from the Mexican code. There is no law declaring attain of blood in consequence of crimes: the infamy attaches to the offender alone, and is not accompanied by confiscation of property, nor is torture admitted on any pretence whatever.

Supreme Tribunal.
Armed force.

The army of Mexico consists of troops of the line and militia, divided into the regiments in actual service, and such as, though enrolled and disciplined to a certain extent, are allowed to retire to their homes while their services are not requisite. The present numerical force is as follows:

Troops of the line:

Artillery.....	1,178
Infantry.....	10,796
Cavalry.....	10,814
Total.....	22,788
Militia in actual service.....	9,373

Total force under arms.....	32,161
Militia armed, and in some degree disciplined, and liable to be called on to serve in the army of the State.....	26,789

Total applicable on an exigency to the purposes of national defence..... 58,950

In consequence of the jealousy which the Government entertains of the army, there is an intention of reducing it to three-fourths of its present number.

The security of the Republic from foreign aggression is greatly increased by the difficulty of landing an army on its shores, by the great obstacles to conducting a large force to the Table Land from the *Tierra caliente*, and by the climate of this low tract, so deadly to the constitution of foreigners, that it would in a short time effect the destruction of a numerous army.

The navy consists of one ship of the line, two frigates, a corvette, four brigs of war, a schooner, and four gun-boats. As the greater part of the coast is

unfavourable to navigation, and the population very scanty in that part of the territory which borders on the sea, this force is not likely for a long time to receive any accession.

The revenue of Mexico previous to the Revolution was computed to be not less than 20,000,000 dollars annually, derived from duties on the precious metals, monopolies of mercury, tobacco, and gunpowder, sale of indulgences, Indian capitation-tax, import and export duties, and post-office. Under the Government of the Republic the capitation-tax, amounting to 1,300,000 dollars, and duties on gold and silver amounting to 5,500,000, have been abolished, and it is proposed to supply the resulting deficiency by the increase in the duties on exports and imports.

The revenue of the Federal Government is at present estimated as follows:

	Dollars.
Importation duties.....	8,000,000
Monopoly of tobacco.....	2,500,000
Contingent or extraordinary contribution paid by the Constituent States to the support of the Federal Government.....	1,573,756
Monopoly of gunpowder.....	250,000
Post-Office.....	320,000
Lottery.....	120,000
Monopoly of salt.....	75,000
Mint.....	250,000
Crown estates seized at the Revolution.....	70,000
Duty on exportation of the precious metals.....	75,000
Miscellaneous sources.....	698,074
	13,931,830

Against which there is a charge,

For the army.....	9,073,932
Navy.....	1,309,045
Interest on public debt.....	2,109,600
Miscellaneous charges of Government.....	3,466,265
Total.....	15,958,842
Leaving a deficiency of.....	2,027,012

Proposed to be met by reductions in the army and navy estimates.

Though the third Article of the Federal Constitution has declared the Roman Catholic Religion exclusively that of the State, the spirit of the Government with respect to matters of Faith is liberal, though cautious in offending the feelings of the People. This freedom from bigotry has resulted not so much from the bold opinions which they have derived from the French school, whence they drew many of their Political principles, as from their having always been accustomed to view Ecclesiastical power in the last resort, exercised not by a spiritual, but by a temporal personage; for in consequence of a Papal Bull, issued 1502, the King of Spain was constituted Head of the American Church, and from that time forward all communications made by the Pope to the inhabitants of Spanish America, were previously sanctioned, and ultimately published, solely by the Royal authority. The Kings of Spain, sheltering their consciences under the power of an infallible Church, which had conferred on them this great prerogative, had steadily and effectually resisted the frequent attempts of the Popes to interfere immediately in the spiritual affairs of Spanish America; and when the Royal power was overthrown in Mexico, the Government then established naturally considered itself as succeeding in a consider-

State of the Religious establishment.

Revenue and finances.

MEXICO. able degree to the Ecclesiastical functions which had been previously held by the Court of Madrid. In 1824, the Pope addressed a circular Bull (*Encuclica* as it was styled) to the Clergy of Spanish America, exhorting them to unite in leading back their flocks to obedience to the King, whose power was founded on Divine right, and inseparable from the preservation of the authority of the Holy See. The Congress published this instrument with an address to the nation, wherein a distinction was drawn between the temporal and spiritual power of the Pope, and an intimation given that even the spiritual power might be lost by an unjustifiable exertion of it. These opinions were received favourably among the people of all classes, with scarcely any exception. Encouraged by this demonstration of the feelings of the nation, the Congress sequestered the revenues of the Primate and several other Ecclesiastics who had emigrated, and thus seized on an annual income of 371,148 dollars. The Republican Government, however, has not yet ventured to exercise the patronage formerly possessed by the Crown, and as it has not succeeded in negotiating the *Concordat* with the See of Rome, the Country, although the population in general is devotedly attached to the Roman Catholic Religion, may be considered as having its Religious establishment in a good measure suspended, since a great proportion of Ecclesiastical dignities and benefices are vacant. Of ten Bishoprics nine are vacant, and of one hundred and eighty-five Prebends and Canonries, seventy-nine are vacant. This state of affairs has caused a strong and extensively diffused feeling in favour of the establishment of an independent national Church; and the jurisdiction of the See of Rome is still further threatened by the growing spirit of infidelity, or at least indifference on matters of Faith, which may be observed, especially among the younger members of the community, and which naturally resulted from the great abuses which prevailed in the Ecclesiastical establishment. Whilst some of the great dignitaries possessed annual revenues of above 100,000 dollars, the *Curas*, the most meritorious and useful of the Ecclesiastical body, were left to languish on incomes of 100 or 150. Even this small income was obtained by means discreditable and painful to the moral feeling of the incumbent as well as oppressive and pernicious to the spiritual welfare of the congregation. It resulted principally from fees so exorbitant, that an Indian peasant, in some of the Dioceses, must on his marriage pay twenty-two dollars to the *Cura*. If the peasant be not much under the influence of scruples, he, in case of inability to make up such a sum, cohabits with the object of his attachment without any previous ceremony; but if his Faith be very sensitive, he borrows or steals the means of satisfying the demands of the Priest. In the mining district each miner pays yearly three dollars and a quarter to secure the performance of Religious rites at his funeral. Some facts are worthy of mention, as strikingly illustrative of the change of Religious feeling in Mexico. In all the Republic no more than eighty-seven individuals are at present serving their novitiate for the profession of Monastic orders, and the whole amount of contributions to the one hundred and fifty Convents is less than formerly had been obtained by one. It is also a striking proof of the slight importance attributed by Congress to Ecclesiastical jurisdiction, that, most jealous as they are in limiting the power of the President, they have not hesitated in conferring on him the authority of rejecting or sanctioning the Papal Bulls.

VOL. XXV.

In the Congresses of some of the Constituent States, laws had been passed for seizing the property of the Church, although subsequently the interference of the Federal Congress caused them to be reversed; but very generally the cognizance of all causes between the Laity and Clergy have been transferred from Ecclesiastical to Lay tribunals. Still by the existing law, although scarcely enforced, toleration forms no part of the Mexican Constitution; no Religion but the Roman Catholic can be exercised, marriages are not permitted between Protestants and Roman Catholics, and the profession of the Faith declared to be that of the State is indispensable to any one seeking to become a citizen of the Mexican Republic.

The following Tables will present a compendious view of the present state of the Religious establishment in Mexico. Number of the Clergy.

Ecclesiastical Institutions.

Archbishopric.....	1
Bishoprics.....	9
Convents.....	150
Curacies attached to Convents.....	40
Missions attached to Convents.....	106

Bishops.....	9
Canons and Prebends.....	185
Parochial Clergy.....	3677
Regular Clergy.....	1913
Members of the Colleges de Prop. Fide.....	307

Total of Ecclesiastical personages.... 6092

If this estimate which Ward gives of the number of the Clergy of Mexico be correct, it shows a great diminution from the time of Humboldt, who states their number at 10,000.

The property of the Mexican Clergy consisted, in the first place of tithes, amounting to the annual average of 1,835,382 dollars; secondly, of landed property, so limited in its amount as not to exceed in value 3,000,000 dollars; thirdly, property in the singular form of a capital in money accumulated by the misapplication of charitable donations and bequests, and as the income always greatly exceeded the charges allocated on it by the managers, this fund before the Revolution amounted to 44,500,000 dollars, but has since been reduced by the effects of that political convulsion to 20,000,000 dollars. It is lent to landed proprietors on the security of mortgage of their lands. From those funds the following incomes are assigned to the Bishops:

	Dollars.
Archbishop of Mexico.....	130,000
Bishop of Puebla.....	110,000
Valladolid.....	100,000

MEXICO.

Political
divisions.

The territory of the Federal Republic of Mexico, containing 118,478 square leagues, is at present divided into the following States and Districts, with a population estimated at eight millions :

	Square leagues.	Inhabitants in 1803.
1. Mexico, and } formed out of the former In-		
2. Queretaro, } tendancy of Mexico, amount-		
	ing together to	5,927 1,511,800
3. Puebla de los Angeles	2,696	813,300
4. Guanaxuato	911	517,300
5. Valladolid	3,446	376,400
6. Guadalajara, from which a small portion, about one-tenth, has been severed, and declared the District of Colima	9,612	630,500
7. Zacatecas	2,255	153,300
8. Oaxaca	4,447	534,800
9. Yucatan	5,977	465,800
10. Vera Cruz, } formed out of the former In-		
11. Tabasco, } tendancy of Vera Cruz, and		
12. Chiapa, } collectively containing	4,141	156,000
13. San Luis Potosi, } formed out of the for-		
14. Cohahuila & Texas, } mer Intendency of San		
15. New Leon, } Luis Potosi, and con-		
16. Tamaulipas, } taining collectively	27,821	334,900
17. Durango, } formed out of the former In-		
18. Chihuahua, } tendancy of Durango, and		
	containing collectively	16,873 159,700
19. Sonora and Sinaloa	19,143	121,400

Territories, the population of which has not reached the number entitling them to send Representatives to the Federal Congress :

1. New Mexico	5,709	40,200
2. Old California	7,295	9,000
3. New California	2,125	15,600
4. Tlascala, (population and extent included in those assigned to Puebla de los Angeles.)		
5. Colima, (population and extent included in those assigned to Guadalajara.)		

Of the above States, CALIFORNIA OLD and NEW, DURANGO, GUANAXUATO, and GUADALAXARA, have already been described separately, according to our alphabetical arrangement.

State of
Mexico.

The State of MEXICO ranks first in importance amongst those of the Federation, containing the most numerous population, both absolutely and in proportion to the extent of its territory, as well as the principal City of the Republic and the seat of its Government. The Pacific forms its Western boundary for 270 miles, and the parts adjacent to that line of coast, amounting to about a third of the extent of the State, are sultry, unwholesome, moist, and fertile. The remaining two-thirds lie on the Table Land, or the ascent to it, and have the character usually found in that region. The highest mountain is that of Toluca, which has an elevation of 15,018 feet, and retains snow on its summit throughout the year, except during the rainy months of November and October. The principal towns are MEXICO, with a population of 137,000; (see *infra*;) Tezcuco, 5000; Hachco, remarkable for the magnificent Church built by Laborde, a French adventurer, at an expense of above £80,000. After amassing a vast property by successful operations in the mines, Laborde, by this and similar acts of imprudence, was reduced to poverty, but resuming his early pursuits, he again realized a very great fortune. Acapulco, formerly the only port allowed by the Spanish Government to be frequented on the Western shore of Mexico, is at present the principal port on that side of the State; it contains a population of about 6000, and exhibits a singular work of Art, a cut made through the rocky hills which surround the haven, and admitting the sea-breeze to mitigate the suffocating and dele-

terious effects of the air, previously pent up in the deep basin, at the bottom of which it lies. *Pachu-* **MEXICO.**
cha, where is situated the celebrated mine of Real del Monte.

The State of QUERETARO lies entirely on the Table Land; its principal town, bearing the same name, has a population of 35,000, and is remarkable for the beauty of its buildings, as well as for some degree of manufacturing activity. The principal mines are El Doctor, Maconi, and San Cristoval. The country generally consists of extensive plains, in some instances fifty miles in length and twenty in breadth.

The State of PUEBLA DE LOS ANGELES has probably four-fifths of its territory situated on the Table Land. That part extending from the Western slope of the Cordillera to the Pacific, along the shore of which it extends for about 120 miles, is nearly desert, although admirably suited by nature for the cultivation of the most precious productions of Tropical climates. The Table Land produces the most abundant crops of wheat, maize, and maguëy. The volcano Popocatepetl, the highest mountain in the Mexican territory, and, with the exception of Mount St. Elias, in all the extent of North America, is situated in this State. Its summit, reaching an elevation of 17,550 feet, is covered with perpetual snow. In this State is situated the Great Pyramid of Cholula. The principal places are *La Puebla*, the Capital, containing 65,000 inhabitants, and founded by the Spaniards in 1531, and *Cholula*, with a population of 16,000. Within the limits of this State is included the territory of *Tlascala*, containing 59,000 inhabitants, remarkable for retaining the impatient and independent spirit of their ancestors, but at present exhibiting it principally by a restless and litigious disposition. The town of *Tlascala*, once so powerful and populous, now contains but 3400 inhabitants.

VALLADOLID extends principally over the Western slope of the Andes, here more gradual than on the Eastern side. It is bounded by the Pacific for a distance of 600 miles, and the part adjoining the coast has the quality invariably attending such situations in Mexico, heat, fertility, and insalubrity. The greater part of the territory, however, possesses a delightful, healthful, and temperate climate. The highest mountain is that of Taucitaro, often, though not always, covered with snow. It likewise contains the volcano Jorullo, a phenomenon bearing evidence of one of the greatest Physical events presented by the records of the Globe.* *Valladolid*, the Capital, contains 18,000 inhabitants, *Pascuaro* 6000. *Huitzitzilla*, the ancient Capital of the Kingdom of Michoacan, the boundaries of which in a great measure coincided with those of the present State, has a population of 2500. The State contains the mines of Zita-guao, Aganguco, Tlapudahua, Real del Oro, and Inguaran.

The State of ZACATECAS lies entirely on the Table Land, and although the soil is rugged, parched, and barren, the climate cold and disagreeable, the richness of its mines gives it a high degree of importance. The soil is in general saturated with the muriate and carbonate of soda, which are also found in abundance in nine small lakes scattered over the district. The principal towns are *Zacatecas*, the Capital, containing a population of 40,000, *Fresnillo*, and *Sombrerete*. It contains the celebrated mines of Sombrerete and Zacatecas,

* P. 132.

MEXICO. besides those of Sierra de Pinos, Chachiguitec, and Mazapic.

Oaxaca.

The State of OAXACA is celebrated for the beauty of its scenery, purity of air, fertility, and civilization, considerable in degree, and commencing at an early period. From one point, the Cerro of Senpualtepec, 7600 feet high, the spectator can view the Gulf of Mexico and the Pacific. The climate is rather moist, and the vegetation consequently remarkable for luxuriance, the most striking instance of which is the famous cypress of Santa Maria del Tule, measuring 117 feet round the trunk. In this State much the greater part of all the cochineal of commerce is produced. Its principal towns are *Oaxaca*, the Capital, with a population of 24,000, and *Tehuantepec*, where an inlet of the Pacific forms a haven, and offers, in conjunction with the river Guasacualco, falling into the Gulf of Mexico, a facility of communication between the two Oceans, separated here by intervening land about 120 miles in breadth.

Yucatan.

The State of YUCATAN extends over the Peninsula of the same name, with the exception of the part occupied on the Eastern shore, by the British settlements on the Bay of Honduras, where the facility of procuring log-wood and mahogany have induced a mixed race, under the protection of Britain, to build towns, and push their operations up the Country with such activity, that they have navigated the river Balize for 200 miles from its mouth. It is one vast plain, except where a chain of hills, slightly elevated, traverses it from North-East to South-West. The climate, although one of the hottest in the World, is healthy, insomuch that invalids from the West Indian Islands visit it for recovery. This salubrity is owing to the dryness of the atmosphere and soil, which is so great, that fresh water is no where to be met with for above 150 miles along the Western and Northern shores. Near the mouth of the Rio Lagartos a singular phenomenon may be observed. At about a quarter of a mile from the shore a copious spring of fresh water bursts up amidst the sea water. The only important articles of commerce are wax, brazil-wood, log-wood, and mahogany. The increase of population has been checked by the Spanish Government, which, to render communication with the English contraband traders more difficult, removed the inhabitants from the Eastern part, and concentrated them on the Western shore. The principal towns are *Merida*, the Capital, with a population of 10,000, *Campeche*, the sea-port of the State, with a population of 6,000, and *Valladolid*.

Vera Cruz.

The State of VERA CRUZ possesses great importance, in consequence of containing the harbour bearing the same name, and forming the principal means of communication between the territory of the Republic and the rest of the World. With a sea-coast of 400 miles, it possesses every variety of climate, from the suffocating heat of the port of Vera Cruz to the frosts of Perote, and in consequence of the steepness of the Cordillera in this part, the traveller may experience all these changes in the course of a day's journey. Although very fertile, it is thinly peopled, in consequence of the unhealthiness of the climate, as well as of the preference given both by the Spaniards and Indians to the Table Land as a place of residence; yet such is the demand and encouragement for labour at Vera Cruz, that an unskilled labourer earns five shillings a day, and a mechanic three times that sum. It contains the volcano of Orizaba, having an elevation of 17,208 feet, and the Coffin of Perote, 13,289 feet high, and familiar to navigators as the first

land seen when approaching the coast of Mexico. The mountain of Tuxtla, also within the limits of this State, is subject to violent volcanic eruptions, during one of which, in 1793, the ashes and noise produced by the volcano reached to places above 180 miles distant. The principal towns are *Vera Cruz*, protected by the strong fortress of San Juan de Ulua, seated on a small island lying before the city. The population is 30,000. *Xalapa*, well known in commerce as the place supplying the greater portion of the valuable drug to which it has given name, and celebrated for the genial atmosphere and beautiful country in which it is placed. Its population is 13,000. *Tampico*, an important sea-port at the mouth of the river of the same name; its population is 20,000. *Papantla*, population 8000.

The States of TABASCO and CHIAPA are thinly peopled and their inhabitants poor, and generally in a low degree of civilization. The soil is fertile and well watered by numerous streams, but the great imperfection of the sources of information respecting these districts renders it impossible to give any full or satisfactory information concerning them. Tabasco does not contain any town of importance, except *Villa Hermosa*, the Capital. The principal towns of Chiapa are the Capital, bearing the same name as the State, and *Ciudad Real*.

The extent of the State of SAN LUIS POTOSI is probably not a tenth of the Intendancy which formerly bore the same name. It is important on account of its valuable mines, and is the great channel for supplying the vast districts on the North and West with imported goods. It is very fertile, and the proprietors generally employ their estates in breeding cattle, especially horses and mules, which are produced in so great abundance as to supply the demand for them from all the Southern States of the Federation. *San Luis Potosi*, the Capital, the only town of importance, contains 50,000 inhabitants, a considerable proportion of whom are employed in manufactures. The principal mines are La Purissima, Catorce, Cerro de San Pedro, Cerro de la Leona, and Real de Charcas.

The State of COAHUILA and TEXAS, at present thinly peopled and possessing little wealth or importance, is likely, at some future period, to be the most opulent, powerful, and civilized in the Federation; from the advantages of a soil of surprising fertility, a great facility of internal communication by means of the numerous rivers intersecting it, and a Geographical position highly favouring its intercourse, both with the Anglo-American Union and the Old Continent. It has a sea-coast of 350 miles long, affording, by means of the numerous rivers which disembogue along it, intercourse at a great number of points with the Gulf of Mexico. Although the mouths of these rivers seldom admit vessels drawing more than ten feet of water, the Red river has depth sufficient for ships of 400 tons. Most of the productions of Tropical climates grow here in as great perfection as in any part of the World; cotton in particular is equal to the finest produced in the United States. The population is rapidly increasing by the influx of settlers from the Anglo-American Union, and this colonization is anxiously encouraged by the Mexican Government with doubtful policy, as such settlers will unquestionably favour the views entertained by the Cabinet of Washington for extending the frontier of their Republic in this direction. The name of town is scarcely applicable to any post at present existing in this extensive tract; the principal are *Cohahuila*, *San Antonio de Bejar*, and *Monclova*.

MEXICO. The scanty information which can be obtained respecting the State of *New Leon* prevents more than an enumeration of its principal towns; which are *Saltillo*, with a population of 6000, and a place of importance as being the great entrepôt of imported goods destined for distribution over the Northern Provinces; *Monterey*, a Bishop's See; and *Linares*.

Tamaulipas. **TAMAULIPAS** is a narrow tract extending for 300 miles along the coast of the Gulf of Mexico. A chain of long, narrow, and low islands accompany the shore through its whole extent, and greatly obstruct navigation, as the channels between them are intricate, shallow, and very dangerous for shipping. The Rio del Norte falls into the sea in this State after having flowed through it for a distance of about 250 miles. Like the Nile, Ganges, and other great rivers of tropical regions, it overflows the country to a great extent, the period of its inundation being from the beginning of April to the end of June. This State ranks very low among those of the Federation in point of wealth, population, and civilization, insomuch that even in late years tracts of ten or twelve square miles in extent have been sold for a few shillings. The principal town is *Nuevo Santander*, the port of which is important as the only one occurring for a great length of coast, but its utility is greatly obstructed by a bar which admits ships only of moderate burthen. There are a few other unimportant towns, among which *San Jose de Tamaulipas* appears most worthy of notice.

Chihuahua. The extensive State of **CHIHUAHUA** is thinly peopled and ill cultivated, as the lands are generally unenclosed, neglected, and employed for feeding cattle. It however contains numerous mines, some of them in their natural capability probably the richest in the World, but as the population is scanty and ignorant, the product is by no means proportionate to the wealth of the mineral deposits. The principal towns are, **CHIHUAHUA**, separately described; *San Pedro de Batopilas*, population 10,000; and *San Jose del Parral* 8000. The principal mines are those of Batopilas, where the ore is so rich that in many places the silver is cut out with a chisel. The Marquis del Bustamante has drawn enormous wealth from El Carmen, one of the veins in this group of mines. Buen Suceso, another lode, was discovered by an Indian, in consequence of a torrent having laid it bare, when the ore appeared in the form of silver nearly pure. Morelos, another lode, was discovered by two Indian brothers, who the night before they met with this instance of their good fortune, had been refused credit for a little maize. They drew from their mine 270,000 dollars in two months; yet so rude are their habits that they live like peasants of the very lowest class, though they have in their huts wealth to a very great amount. Such has been the wealth extracted from the mine of El Refugio that a proprietor entitled to a share of one-eighth is known to have obtained from it 337,000 dollars in the course of a few years. Pacheco, the chief proprietor, with a profuseness unexampled in the history even of the bucaniers, gave 8000 dollars for a velvet cloak which particularly pleased him. At the mines of Jesus Maria, discovered in 1822, upwards of two hundred lodes of silver ore were registered in one year, in a district of a form nearly circular and nine miles in diameter.

Sonora and Cinaloa. The State of **SONORA** and **CINALOA** occupies a vast extent of territory, possessing, among other great natural advantages, a sea-coast of 900 miles, as it is for that distance washed either by the Pacific or the Gulf of

California. There are several good ports in this length of coast; Guaymas, one of the best in the Pacific, Mazatlan, less safe and commodious, and some others not frequented, amongst which the best is one situated opposite the Island of Santa Cruz. The country is generally hilly, and a large portion of it lies on the Table Land. Though in general devoid of large rivers, it has a number of small streams flowing through the ravines of the Cordilleras, but seldom having such a body of water as reaches in the dry season to the sea-shore, being evaporated or swallowed up in the low grounds. The soil is fertile in a high degree, and produces in abundance all things requisite for the support or enjoyment of life, and the inhabitants have attained a considerable degree of civilization. It abounds in mineral wealth; gold is obtained by searching the sands in the ravines, and in this simple process masses have been met with weighing above five pounds. There are besides some gold mines worked on more scientific principles. The richest is that at Cosala, belonging to an eccentric individual of the name of Triarte, who seldom permits it to be worked for any length of time, contenting himself with drawing from its immense stores not more, usually, than a hundred weight, which he finds no difficulty in obtaining in a week. He is said to have in his possession gold and silver to the amount of £500,000, yet such is his singularity, that he lives in a state of the rudest simplicity, and compels his sons to keep a shop in the town adjacent. Many places abound in copper of the best quality, and this metal is eagerly purchased by the Chinese, as it contains a considerable proportion of gold, which they have skill to extract by an easy process. The mines of silver are rich and numerous. The principal are, those of Alamos, so productive that the proprietors there are said to possess bullion to the amount of 6,000,000 of dollars; Babiadora, containing a great number of productive lodes, some so rich that the metal is cut out with chisels; San Juan, containing mineral deposits of great extent and richness; and Nacosari, near the town of Arispe. If we may believe a notice annexed to Ward's *Mexico*, and professing to have been drawn up by an eye-witness, almost every mountain and hill in Sonora contains gold and silver. The chief towns are *Arispe*, the Capital, with a population of 7600; *Sonora*, population 6400; *Culiacan*, population 10,800; *Cinaloa*, population 9500; *El Rosario*, population 5600; *Villa del Fuerte*, population 7900; *Los Alamos*, population 8000.

The territory of *New Mexico* is a district extending about 500 miles from South to North, and contracted within a narrow breadth on the East by the Bolson de Mapimi, a desert region infested by wandering savages, and on the West by an extensive tract belonging to Tribes more settled and removed from Barbarism, but equally independent. The soil is fertile, and, although elevated, in general level, so that the greater part of the country may be traversed by wheel-carriages. The climate is very cold, so that it freezes severely even in May, and the rapid Rio del Norte is usually covered with ice for some time in Winter. Its principal towns are *Santa Fé*, the Capital, with a population of 3600, *Albuquerque*, population 6000, and *Taos*, population 8900.

MEXICO, the Capital of the State of the same name, and the seat of the Government of the Mexican Confederation, is the most wealthy and beautiful city of the American Continent, and until the late rapid advances which New York and Philadelphia have made in population, exceeded all others in the number of its inhabitants also. It is situated in an oval valley 200 miles in circumference, the mountains enclosing which are sterile, bold, and striking, formed of porphyry and basaltic amygdaloid, and presenting to the view the colossal volcanoes Popocatepetl and Iztaccihuatl. The elevation of its site, which lies 8150 feet above the level of the sea, ensures it a moderate temperature, and from the rarefaction of the atmosphere on the Table Land which extends over this part of the American Continent, a dryness results which, though not conducive to fertility, is most favourable to health. It was originally situated on an Island in the Lake of Tezcuco, but in consequence of the process of desiccation which is extensively taking place over the Table Land, the water of this basin has become so much lower that the city is now on the main land, and lies three miles from the water's edge. The water of this lake is salt, though not so much so as that of the Ocean. It is shallow, seldom exceeding ten and nowhere twenty feet in depth, and through a considerable portion of its extent it has not more than three feet of water, so that in dry seasons such parts are not navigable even for the canoes of the Indians. As the great Square of Mexico is only five feet above the ordinary level of the lake, inundations have sometimes threatened the total destruction of the town, and laid every part of it under water. The Lake of Xochimilco lies to the South of the city, and as its water is fresh, it is conducted in navigable canals to supply the inhabitants. There are besides two aqueducts for conveying fresh water into the city from other sources; the arches of the Aqueduct of Chapoltepec extend 10,733 feet, those of the Aqueduct of Santa Fé 11,050 feet.

"Mexico (such are the words of Humboldt) is one of the most beautiful cities in the World. With the exception of Petersburg, Berlin, Philadelphia, and the more modern parts of London, no town of the same extent can bear comparison with it, for the uniform level of the site, the regularity and size of the streets, and the magnificence of the Squares. The architecture is in general pure, and in some instances beautiful, without being burdened with an ill-judged superfluity of ornaments, and derives an air of solid grandeur from the material, which is usually porphyry. The houses are not disfigured with the heavy wooden balconies usual

in the towns of Spanish America; and the roofs flat, according to the general mode of construction throughout warm Countries, are surrounded with handsome iron balustrades ornamented with bronze. Nothing can be more rich and varied than the view from the great tower of the Cathedral on a fine summer's morning, when the air is clear and pure, and the cloudless sky exhibits the intense blue which is peculiar to it in an elevated position and a dry atmosphere. Immediately beneath the spectator lies the city with its magnificent buildings; beyond its limits on all sides extends a vast plain, carefully cultivated to the bases of colossal mountains covered with perpetual snow. The Lake of Tezcuco, bordered on one side by the city, and in other directions by numerous towns and villages, might suggest the recollection of the most beautiful pieces of water in Switzerland. Noble avenues shaded with elms and poplars lead from every side to the Capital: two aqueducts raised on lofty arches traverse the plain, and render the scene still more striking. To the North is seen the magnificent convent of Our Lady of Guadeloupe, behind which rise the mountains of Tepeyacac, and around it the ground is diversified by ravines overgrown with palms and the arborescent yucca. To the South the plain appears one immense plantation, producing in the utmost plenty oranges, peaches, cherries, apples, and other European fruits; and this smiling picture is rendered more striking by the wild and sterile aspect of the mountains, which enclose the valley, and exhibit among their summits the huge volcanoes, Popocatepetl and Iztaccihuatl, the former of which is in incessant activity, sending forth volumes of smoke and discharges of inflamed matter, amidst its covering of perpetual snow."

The City is divided into four districts—those of St. Paul, St. Sebastian, St. John, St. Mary; and the streets run with much regularity from North to South, and from East to West. Of some of the principal public edifices we have already spoken in our general account of the Republic.* The Cathedral is a large pile of building, constructed partly in the Gothic and partly in Grecian Orders: in the ground close to this building is imbedded a circular disc of porphyry, nine feet in diameter, exhibiting in singular hieroglyphical figures the Mexican Calendar, which, according to Humboldt, was more correct than that used by the Greeks and Romans: an equestrian statue of King Charles IV. stands opposite the principal front of the Cathedral in an oval space. Tolsa, a native artist, formed it in bronze at a single cast, although weighing 45,000 pounds. The Mint is an extensive building; and in carrying into effect the purposes to which it is devoted much mechanical ingenuity is displayed. The Acordada, or public Prison, a noble edifice, contains in its spacious and airy apartments above 1200 prisoners, as well offenders against the laws as captives taken from the hostile Indian Tribes. The School-of-Mines, the greatest and most beautiful building in Mexico, was raised at an expense of 600,000 dollars; but in consequence of the failure of the foundation, the walls in several places have opened in large cracks, and other alarming symptoms of dilapidation threaten speedy ruin to the structure. The Academy of the Fine Arts is so much neglected, that the roof has in many places been allowed to fall in. Neither the University nor Public Library are worthy of so great a city, or the exalted purposes for which they are destined. The

* Pp. 137, 138.

MEXICO. streets, which are well paved and lighted, and have flag-ways on each side for the convenience of foot-passengers, are kept very neat, except in the parts inhabited by the Indians, where the visitor is disgusted by the most revolting filth, brutality, and misery. Of the population, exceeding at present 150,000, there are in every 100 individuals, on an average, fifty Creoles, twenty-four aboriginal Indians, and twenty-six of mixed race. Nearly 30,000 persons, known by the names of Saragates or Leperos, and belonging to the Indian or mixed castes, pass their lives in the open air, spending the day basking in the heat of the sun, with no covering but a small piece of blanket insufficient even for the purposes which decency requires. Indolent, inoffensive, and abstemious, by the labour of a couple of days in the week, they supply themselves with the small

portion of *pulque* and food which they require, and sacrifice all other considerations to the love of ease. The higher classes are generally in a state of great affluence, and display that propensity for pomp, pleasure, and ease, which generally characterises the inhabitants of Spanish America. Cock-fighting is a favourite amusement, and Bull-fights are viewed with as much interest and enjoyment as in Spain. The smoking of tobacco is practised to a great extent among the Creoles and mixed classes; and even women of all ranks and ages indulge the habit, so that in their assemblies young beauties may be seen with their mouths garnished with large cigars, sending forth clouds of smoke.

Mexico lies in latitude $19^{\circ} 25' 25''$ North; longitude $90^{\circ} 0'$ West.

MEXICO.
MICCO-
TROGUS.

MEYERA, in *Botany*, a genus of the class *Syn-
genesia*, order *Superflua*. Generic character: common calyx four-cleft, the two interior leaves small; receptacle small, chaffy, the chaff enclosing two keeled seeds; down none.

One species, *M. sessilis*, native of watery places in the Island of Jamaica.

MEZIUM, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* approximating, sub-filiform, robust, squamous, eleven-jointed, the basal joint slightly clavate, and the two following a little stouter than the remainder, which are subequal, the last being longest and obliquely acuminate; head small; eyes minute; *thorax* pubescent, longitudinally squamous; *scutellum* wanting; *elytra* connate or united, gibbous, shining, subhyaline; legs rather long; *femora* clavate; *tarsi* pentamerous.

Type of the genus, *Ptinus sulcatus*, Fabricius; Curtis, *Ent. Britt.* vol. v. pl. ccxxxii. One species, found in old houses in Europe, not uncommon in London.

MEZONEURUM, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Leguminosæ*. Generic character: calyx five-leaved, connected at the base; corolla, petals five, hooked, the superior petal small; stamens villous at the base; style incurved; pod flat, ovate-oblong, one-celled, many seeded.

Two species, trees, natives of the Islands of Java and Timor. Decandolle.

MEZZOTINTO, It. *mezzo*, middle, and *tinto*, tint, or dye.

See the *Essay on ENGRAVING*.

Evelyn. *Memoirs*, vol. i. p. 331.

MIANA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* short, finely ciliated and pubescent in the males, simple in the females; *palpi* short, porrected obliquely, the two basal joints sparingly

clothed with elongate scales, the terminal one exposed, somewhat acute, and placed obliquely, very slender when denuded; the basal joint short, stouter than the following, which is slightly curved, attenuated towards the apex, and nearly three times as long as the basal; terminal elongate-ovate, nearly as stout as the second, and about the length of the basal; *maxillæ* elongate; head with a frontal crest; eyes naked; *thorax* subquadrate, with a posterior dorsal crest; *abdomen* slender, with a small tuft at the apex in the males; and a little crested down the back; wings entire, deflexed, anterior elongate, triangular, with indistinct, nearly concolorous stigmata. Caterpillar naked; *pupa* subterraneous.

Type of the genus *Noctua literosa*, Haworth; Stephens, *Illust. Brit. Ent. (Haustellata)*, vol. iii. p. 12. pl. xxv. fig. 1. Nine species, all found in Britain.

MIARUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, ten-jointed, rather slender; funiculus five-jointed, its two basal joints obconic, the other three transverse, rounded at the apex; club four-jointed, ovate; head produced anteriorly into a rostrum, which is filiform, slightly bent, inserted in a groove beneath the *thorax*, this last transverse, with the posterior angles rounded; *elytra* somewhat depressed, subquadrate, not covering the apex of the abdomen; legs short; anterior *tibiæ* with a minute hook at the apex.

Type of the genus, *Curculio campanulæ*, Linnæus; Herbst, *Coleopt.* vol. vi. pl. lxx. fig. 15. About six species, natives of temperate Europe, four of them inhabiting Britain.

MICCOTROGUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, rather short, somewhat stout, eleven-jointed, the scape elongated, clavate, the funiculus six-jointed, its two basal joints rather long, obconic, the second stoutest, the remainder subglobose, the club thick, oblong-ovate; head produced anteriorly into a rostrum, which is as long as the *thorax*, rounded, curved, and rather slender; eyes rounded, slightly prominent; *thorax* nearly transverse, narrowed in front, with the sides rounded, the base trisinuated, the disc moderately convex; *scutellum* small, triangular, distinct; *elytra* oblong, suboval, con-

MICCO-TROGUS. vex, scarcely broader than the middle of the *thorax*, covering the apex of the *abdomen*; legs rather short, stout, the anterior approximating at the base.

MI-CHAUX-IA. Type of the genus, *Curculio cuprifer*, Panzer, *Fauna Ins. Germ.* pl. xli. fig. 14. Two species only, one of which is found in Britain in grassy places.

MICH, } Also written *meech*; to *miche*, to lurk,
MI'CHER, } with a slight deviation, from the Fr.
MI'CHERY, } *muser*, to idle. A *micher*, a covetous
MI'CHING. } man, either from Lat. *miser*, or from the
Fr. *miche*; *mica panis*, because he counts all the crumbs that fall from his table. Skinner. The latter Etymology is undoubtedly the true one. Mr. Tyrwhitt tells us that in the *Promptuarium parvum*, "*mychyn*" stands as equivalent to "*pryvely stelyn smale thyngs*." And Lambard, in his *Eirenarchia*, says, that one Justice may charge constables to arrest such as shall be suspected to be "*draw-latches*, wastors, or robertsmen, that is to say, either *miching* or *mightie theeves*." Contrasting these different sorts of plunderers. The Fr. *miche*, Lat. *mica*, is a small thing.

To *miche*, is to take or steal small things, to pilfer; and, consequentially, to lay in wait, to lurk.

A *micher*, one who takes or steals, small things, a pilferer, a petty thief; one who lies in wait, lurks, or loiters about; either to thieve, or for other purposes.

How should I by this word him leve,
Unneth that he nis a *micher*
Forsworne, or els Goddes lier.

Chaucer. *The Romant of the Rose*, p. 219.

But nowe thou shalt full sore abie
That ilke stelthe of *micherie*,
That thou hast both take and do.

Gower. *Conf. Am.* book v. p. 171.

For no man of his counsaile knoweth,
What he maie gette of his *michynge*.

Id. *Ib.* p. 173.

But should straggle up and downe the country, or *mich* in corners amongst their friends idly.
Spenser. *Works*, vol. viii. p. 499. *View of the State of Ireland*.

Shall the blessed Sonne of Heauen proue a *micher*, and eate black-berrys? a question not to be askt.

Shakspeare. *Henry IV. First Part*, fol. 58.

Sure she has some *meeching* rascal in her house, some hind, that she hath seen bear (like another Milo) quarters of malt upon his back and sing with't.

Beaumont and Fletcher. *The Scornful Lady*, act iv. sc. 1.

Lon. O *meiching* varlet, I'll fit ye as I live.

Id. *The Noble Gentleman*, act i. sc. 1.

Come, *meecher*,
Thou shalt have both.

Id. *Bonduca*, act i. sc. 1.

DUR. Forward, you *micher*.

Massinger. *The Guardian*, act i. sc. 5.

ST. MICHAEL'S, or as it is corruptly called *Mitchell*, a Borough in the County of Cornwall, and in Saxon times a place of considerable note as *Modishole*. It has returned two Members to Parliament since the reign of Edward VI. Population 160, distant from London 250 miles.

MICHAUXIA, in *Botany*, a genus of the class *Oc-tandria*, order *Monogynia*, natural order *Campanel-laceæ*. Generic character: calyx many-cleft; corolla wheel-shaped, eight to ten cleft, revolute; nectary eight-valved, bearing the stamens; capsule eight to ten celled, many seeded.

Two species, natives of Persia and Syria.

MICHELIA, in *Botany*, a genus of the class *Poly-andria*, order *Polygynia*, natural order *Magnoliæ*. Generic character: calyx three-leaved; corolla, petals fifteen; berries numerous, four-seeded.

Two species, natives of the East Indies.

MICKLE. See MUCKLE.

MICONIA, in *Botany*, a genus of the class *Decan-dria*, order *Monogynia*. Generic character: calyx five-toothed; corolla, petals five; nectaries, five scales; stamens declining, anthers folded; capsules five-celled.

Three species, natives of Peru.

MICRANTHERA, in *Botany*, a genus of the class *Dioecia*, order *Polyandria*, natural order *Guttiferæ*. Generic character: male flower, calyx two-leaved; corolla, petals eight to ten, rather longer than the calyx; anthers two-celled: female flower, stigma six-toothed; berry six-celled, cells one-seeded.

One species, *M. Clusiæfolia*, native of Cayenne. Decandolle.

MICROCARPÆA, in *Botany*, a genus of the class *Diandria*, order *Monogynia*, natural order *Scrophula-rinæ*. Generic character: calyx tubular, five-angled, five-cleft; corolla, two-lipped; capsule two-valved.

One species, *M. muscosa*, a small herbaceous plant, native of New South Wales.

MICROCHLOA, in *Botany*, a genus of the class *Triandria*, order *Digynia*, natural order *Graminææ*. Generic character: spike one-sided; glume one-flowered, two-valved, acute, membranaceous; calyx awnless, vil-lose, two-valved, inversed.

One species, *M. setacea*, a grass, native of New South Wales.

MICROCORYS, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*, natural order *La-biataæ*. Generic character: calyx, semi-five-cleft; middle segment of the lower lip of the corolla broad.

Three species, natives of New South Wales.

MI'CROCOSM, } Fr. *microcosme*; It. and Sp.
MICROCO'SMICAL. } *microcosmo*; Lat. *microcosmus*;
Gr. *μικρόκοσμος*, *μικρός*, small, little, and *κόσμος*, the world. The Examples explain the usage; see espe-cially that from Raleigh.

She, to whom this world must itself refer,
As suburbs, or the *microcosm* of her;
She, she is dead.

Donne. *Funeral Elegies. An Anatomy of the World. The First Anniversary*.

There were some also, that staid not here; but went further, and held; that if the spirit of man (whom they call the *microcosm*) do give a fit touch to the spirit of the world, by strong imaginations, and beleeves, it might command nature.

Bacon. *Natural History*, Cent. x. sec. 900.

Because in the little frame of man's body there is a representa-tion of the universal, and (by allusion) a kind of participation of all the parts there, therefore was man called *microcosmos*, or the little world. Raleigh. *History of the World*, book i. ch. ii.

This opinion confirmed would much advance the *microcosmical* conceit, and commend the geography of Paracelsus; who according to the cardinal points of the world divideth the body of man.

Sir Thomas Brown. *Vulgar Errours*, book ii. ch. iii. p. 76.

Why, as great, no doubt, and of as fatal consequence to the affairs and government of the *microcosm*, or lesser world, as if, in the greater, God should put out the sun, and establish one great, uni-versal cloud in the room of it.

South. *Sermons*, vol. ii. p. 389.

MICRODON, in *Zoology*, a genus of *Dipterous* insects.

MICHE-LIA.
MICRO-DON.

MICRO-
DON.
—
MICROM-
MATA.

Generic character. *Antennæ* porrected, triarticulate, the basal joint elongate, cylindric, the second short, cup-shaped, third elongate, ovate, conic, furnished at its base with a naked seta as long as the joint; *labrum* short, obtuse; tongue slender, as long as the labrum, acute; *labium* very much dilated; head short, broad; *scutellum* bidentate; wings incumbent, parallel; *tarsi* five-jointed.

Type of the genus *Mulio apiarius*, Fabricius; *Microdon apiformis*, Curtis, *Britt. Ent.* pl. lxx. Five species, all European; two of them found in England.

MICRODUS, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* as long as the body, composed of numerous articulations; maxillary *palpi* five-jointed; labial three-jointed; mandibles stout; *abdomen* sessile; wings long; anterior with a broad, costal nervure; posterior *tarsi* elongate.

Type of the genus *Bassus gloriatorius*, Panzer, *Fauna Germ.* pl. cii. fig. 17. Eleven species, all parasitic; six natives of England.

MICROGASTER, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* setaceous, composed of numerous articulations; mandibles stout, short, not dilated at the apex, nor gaping; *palpi* four, unequal, maxillary five-jointed, labial three-jointed; *labium* simple, short, with the margin entire.

Type of the genus, *Cryptus globatus*, Fabricius. About twenty species, parasitic, on the larvæ of *Lepidopterous* insects.

MICROGRAPHY, Gr. μικρὸς, small, and γράφειν, to write, to describe.

The description of small things, (sc. visible by aid of the microscope.)

(For want of Dr. Hook's *Micrography* being at hand, it being a very scarce book) [I have] given descriptions of two or three things, which I have thought had not been tolerably well observed before, but are described well by that curious gentleman.

Derham. *Physico-Theology*. Preface.

MICROLÆNA, in *Botany*, a genus of the class *Tetrandria*, order *Digynia*, natural order *Gramineæ*. *Generic character*: glume one-flowered, minute, two-valved; calyx on a bearded foot-stalk, doubly two-valved, exterior valve aristate; two scales, opposite, alternating with the valves of the calyx; stigmas sessile, plumose.

One species, *M. stipoides*, a grass, native of New South Wales.

MICROLICIA, in *Botany*, a genus of the class *Oc-tandria*, order *Monogynia*, natural order *Melastomaceæ*. *Generic character*: calyx globular, five-lobed, subulate, persisting; corolla, petals five, obovate; anthers alternately dissimilar; capsule dry, three-celled, three-valved, sometimes two-celled and two-valved.

A genus divided from *Rhexia*, containing twenty-seven species, mostly natives of Brazil. Decandolle.

MICROLÔMA, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Asclepiadææ*. *Generic character*: calyx five-cleft; masses of pollen ten, smooth, pendulous; tube of stamens naked; corolla pitcher-shaped.

One species, *M. sagittatum*, native of the South of Africa.

MICROMMATA, in *Zoology*, a genus of *Arach-nidæ*.

Generic character. Legs eight, long, nearly of equal length, the second pair longest; *maxillæ* straight, pa-

rallel, and distant; eyes eight, disposed in two transverse lines, of which the posterior is largest; *thorax* cordiform; *abdomen* oval, soft, downy; *tarsi* furnished beneath, with a double brush at the apex.

Type of the genus *M. smaragdina*, Latreille, *Genera*, &c. vol. i. p. 115. There are four species only, of which the type inhabits umbelliferous plants in woods in the South of England.

MICROPEPLUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* shorter than the *thorax*, received during repose in a groove on the under side of the margin of the latter, nine-jointed, the two basal joints larger than the following, the first subovate, the second pear-shaped, the six following decreasing in length, the ninth forming a large, solid, globose, pubescent club; maxillary *palpi* small, incrassated in the middle, and attenuated to the apex; labial minute; head subtrigonal, inserted up to the eyes, which are small, into the *thorax*, the latter narrowed anteriorly, with the angles acute; *elytra* quadrate, margined, very much abbreviated, with three elevated lines on each; *abdomen* acuminate at the tip; legs slender; *tarsi* simple; *tibiæ* four-jointed.

Type of the genus, *M. porcatus*; *H. porcatus*, Paykul. Four species known, natives of Europe; three found in Britain.

MICROPETALON, in *Botany*, a genus of the class *Decandria*, order *Tetragynia*. *Generic character*: calyx five-leaved; corolla, petals very small, entire, sometimes none; capsule ovate, longer than the calyx, four-valved.

Three species, natives of North America.

MICROPEZA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrect, small, triarticulate, with the third joint patelliform, compressed; furnished at the base with a long pubescent seta; head elongate, elliptic; *hypostome* reclined, naked; eyes rounded, prominent, remote; *abdomen* elongate, cylindric, with six annulations; wings incumbent, parallel, as long as the *abdomen*; legs very long, filiform, the anterior pair remote; *tarsi* short.

Type of the genus, *Musca corrigiolata*, Linnæus; Meigen, *Zweiflugen*, &c. vol. v. p. 384. pl. liii. fig. 6. Two species, natives of Europe and of England.

MICROPTERUS, from the Greek μικρὸς, small, and πτέρυξ, a fin. Lacep. In *Zoology*, a genus of animals belonging to the family *Percoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Mouth large, the lower jaw projecting beyond the upper; teeth very fine; on the oper-cule a flat spine; two dorsal fins, the second small, and consisting at most of five soft rays.

M. Dolomieu, Lacep. The only species known has the depth of the body of greater dimensions than its length; the lateral line at first descends, but mounts again to take the curve of the back; scales on the back large and rounded; pectoral and anal fins much rounded; caudal crescent-shaped.

See Lacepede, *Histoire Naturelle des Poissons*.

MICROPUS, in *Botany*, a genus of the class *Syn-genesia*, order *Superflua*, natural order *Corymbiferaæ*. *Generic character*: calyx cup-shaped, leaflets lax; down none; no radial florets, seeds involved in the scales of the calyx.

Two species, natives of Europe.

MID.

MI'CROSCOPE, } From the Greek μικρός, small
MICROSCO'PIC, } or little, and σκοπή, σκοπεῖν, to
MICROSCO'PICAL. } see, to view, to see small things;

sc. magnified or enlarged.

An instrument to see or examine small things (magnified or enlarged.)

And see the *Treatise on OPTICS*, Art. 347, &c. and *LIGHT*, Art. 389.

Many a fair edifice besides, more like
 Houses of Gods (so well I have dispos'd
 My aery microscope) thou may'st behold
 Outside and inside both.

Milton. Paradise Regained, book iv. l. 57.

To the performance of every muscular motion, in greater animals at least, there are not fewer distinct parts concerned than many millions of millions and these visible through a *microscope*.

Ray. Of the Creation, part i. p. 197.

There are, besides the above mentioned, innumerable retainers to physick, who, for want of other patients, amuse themselves with the stifling of cats in an air-pump; cutting up dogs alive, or impaling of insects upon the point of a needle for *microscopic* observations.

Spectator, No. 21.

The magic of those works, in which by the help of glasses we discover all the beauties of statuary and drawing, and even the science of anatomy, has been restricted to an age that was ignorant of *microscopic* glasses; a problem hitherto unresolved to satisfaction.

Walpole. Anecdotes of Painting, vol. iv. ch. ii. p. 102.

MICROSTEMMA, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Asclepiadæ*. Generic character: calyx five-cleft; corolla rotate, five-cleft; crown of stamens one-leaved, fleshy, five-lobed; apex of the anthers simple.

One species, *M. tuberosum*, a shrub, with a tuberous root, native of New South Wales.

MICROTEA, in *Botany*, a genus of the class *Pentandria*, order *Digynia*. Generic character: calyx five-leaved, spreading; corolla none; drupe dry, spiny.

One species, *M. debilis*, native of the Carribee Islands.

MICROTIS, in *Botany*, a genus of the class *Gynandria*, order *Monandria*, natural order *Orchideæ*. Generic character: labellum dissimilar, oblong, obtuse, callous at the base; column of anthers funnel-shaped.

Five species, natives of New South Wales.

MICTYRIS, in *Zoology*, a genus of *Brachyurous Crustacea*.

Generic character. Shell nearly oval, elevated, and truncated behind; *antennæ* very short; the basilar joint of the internal footstalk of the external double *palpi* very large; arms jointed at the base of the wrist.

Type of the genus *M. longicarpus*, Latreille, *Genera Crust. &c.* vol. i. p. 41. Inhabits the Indian Ocean; one species only.

MID, } A. S. *mid, midda, midde, middle*,
MI'DDEST, or } (*mid-dæl*.) *midt, midlest*; Lat.
MIDST, } *med-ius*.

MI'DDLE, *adj.* } The centre or point from which
MI'DDLE, *n.* } the circumference is every where
MI'DDLEMOST, } equidistant; the point between, and
MI'DDLING, } equidistant from extremes, the point,
MI'DDLER. } the place, any thing surrounded or

encompassed equally on all sides; and more laxly; remote or distant from an extreme point or line; from excess.

Mid is used much in Composition.

About Jerusalem þys noumbryng he bi gan,
 As in þe myddes of þe world, to noumbre eche man.

Then with envy, fraught and rage
Flies to his place, nor rests, but in *mid air*
To council summons all his mighty peers.

Milton. Paradise Regained, book i. l. 40.

Who since the morning hour set out from heav'n
Where God resides, and ere *mid-day* arriv'd
In Eden; distance inexpressible
By numbers that have name.

Id. Paradise Lost, book viii. l. 102.

Betwixt which two some have placed a third, a *midknowledge* of
future conditionate contingents.

Hall. Works, vol. iii. book ii. sec. 6. fol. 35. Christian Moderation.

Our souls best baiting and *mid-period*
In her long journey of considering God.

Donne. Elegy on the Death of Prince Henry.

By others, that under the name of Chimæra, was ment a cruel
pirate of the Lycians, whose ship had in her prow a lion, a goat in
the *mid-ship*, and a dragon in the stern.

Raleigh. History of the World, book ii. ch. xiii. sec. 3. fol. 239.

It being then the *mid-time* of the night
Ere they could quit the castle of the rout.

Drayton. The Barons' Wars, book vi.

He who serves has still the low and ignoble restraints of dread
upon his spirit; which in business, and even in the *midst* of action,
cramps and ties up his activity.

South. Sermons, vol. ii. p. 51.

The cohesion of the *middlemost* of the three lately mentioned
small dyes with the other two, the one above it, the other below, is
not so strong as that of the parts of that *middlemost* corpuscle.

Boyle. Works, vol. i. p. 412. The History of Firmness.

No readers here with hectic looks are found,
No eyes in rheum, through *midnight-watching* drown'd.

Garth. The Dispensary, can. 1. l. 76.

There are grown men and women, nay, even *middle-aged* persons,
who have not thought seriously about religion an hour, nor a
quarter of an hour, in the whole course of their lives.

Paley. Sermon 1. p. 2.

We should be pleas'd that things are so,
Who do for nothing see the show,
And *middle-siz'd*, can pass between
Life's hubbub safe, because unseen.

Green. The Spleen.

MIDDLESEX, an inland County of England,
Boundaries, bounded on the North by the County of Hertford, on
&c. the East by that of Essex, on the South by that of
Surrey, and on the West by that of Buckingham. Pre-
viously to the Roman invasion, this part of the Island
was inhabited by the *Trinobantes*, and it derives its
present name from its position relatively to the three
surrounding Kingdoms of the Heptarchy; namely, the

East, West, and South Saxons; of the first of which, or MIDDLE-
East-Sex, it formed a part during the long period of SEX.
about three centuries. Though of an irregular figure,
it resembles a parallelogram, 20 miles long, and 14 broad,
with an area of 288 square miles, or 179,200 acres.

This County presents a gently waving surface; in General
the ground rises from the banks of the Thames aspect,
towards the North. The principal eminences are Hamp-
stead, Highgate, Highwood, Hendon, Harrow, Barnet,
Brockley, and Muswell. The chief rivers by which this Rivers.
County is watered are the Thames, the Lea, the Coln,
the Brent, and the Cran. The Thames forms its
Southern boundary. The Lea flows from Hertfordshire,
and skirts the Eastern border of the County, till it joins
the Thames at the East India Docks; it is navigable
to Hertford. The Coln enters Middlesex by several
streams at the North-Western corner of the County,
which it separates from Buckinghamshire; at Longford
it is subdivided into several branches, by three of the
principal of which it enters the Thames at Staines,
while a fourth winds through the County till it reaches
that river at Sunbury, a fifth till it unites with the Cran,
and a sixth flows from Longford, over Hounslow Heath,
through Hanworth, Bushey, and Hampton Court Parks.
The Brent rises in Hertfordshire, enters Middlesex at
Finchley, and the Thames at Brentford. The Cran has
its source near Harrow, and in a winding course reaches
the Thames at Isleworth.

In the vicinity of London are various mineral springs, Mineral
the waters of which were once much used for their waters.
puted medicinal qualities. Islington Spa resembles the
waters of Tunbridge, and for that reason it has been
called New Tunbridge Wells. At Bagnigge Wells there
are both chalybeate and cathartic springs. Near Hamp-
stead are several strongly impregnated chalybeate springs,
which formerly were highly esteemed and much fre-
quented; and in the same neighbourhood are several
saline springs, said to bear an affinity to the Cheltenham
waters. St. Chad's Wells, near the bottom of Gray's-inn
Lane Road, possess both a diuretic and a purgative qua-
lity. Kilbourn Wells and Acton Wells are saline and
purgative, and were once regarded as possessing valu-
able medicinal qualities; there are also saline springs
at Shadwell. Except in the low clayey bottoms spring
water may be obtained in most parts of the County by
sinking to the depth of from five to twenty feet below
the surface.

The order of the strata observed on digging wells is, Mineral
immediately under the cultivated surface, from five to strata.
ten feet of flinty gravel, leaden-coloured clay from one
to three hundred feet in thickness, marine sediment
from three to five feet thick, consisting chiefly of oyster
and cockle shells, agglutinated together, and indurated
into a stony substance; and loose sand, gravel, and
water. In 1802, a bed of *fuller's earth* was discovered
at Paddington; and in 1798 a quantity of loose coals
were found at Chelsea fifty feet below the surface.
Marine exuviae, especially bivalve fossil shells, have been
met with in different places. The County has a fertile
and highly-cultivated surface, from which excellent crops
are obtained. Sand and gravel, intermixed with loam, Soil.
constitute the prevailing ingredients of the soil on the
summits of the hills; loamy sand, mixed with flints, on
a subsoil of brick clay, extends on either side of the
road from Hounslow to Colnbrook, and on the Eastern
side of the County from Tottenham to Enfield-wash the
soil is of the same light quality. A sandy loam, on a

MIDDLESEX. bottom of impervious clay, abounds in several districts bordering on the Thames, and in the North-Western part of the County. Strong loam abounds from Ryslip to Greenford, Apperton, and Harrow; also between Pinner and Northcote; about South Mims, and the level between Islington, Hampstead, and Hornsey: loamy clay prevails at Harefield, Hanger Hill, on the Hendon road, and other places. Strong, adhesive, unproductive clay occurs at different places; and all the hollows, bowls, and chinks are filled with gravel; peat is found in the meers near the river Coln, from Rickmansworth to Staines, on the borders of the river Lea, and in the Isle of Dogs. The deposit of still water, as it abounds with the richest parts of every soil, and with dissolved animal and vegetable substances, is especially fertile; the Isle of Dogs contains more than 1000 acres of such soil; most of the land on the flat borders of the rivers Lea and Coln, some of that on the sides of the Brent, many nooks and windings of the Thames, and all the small Islands in that river, are of this description.

Divisions. The County is divided into six Hundreds, exclusive of the City and Liberties of London and Westminster, and the Tower Hamlets. These are subdivided into 230 parishes, precincts, and extra-parochial places, of which 98 are exclusive of London and Westminster; 122 are within the City of London, and ten in the City and Liberties of Westminster. Eight Members of Parliament are returned within it; two for the County, two for the City of Westminster, and four for the City of London.

Population. In 1801 the inhabited houses, exclusive of those of London and Westminster, were

77,712, and the inhabitants 535,329

In 1811 ... 95,645 670,282

In 1821 ... 117,097 837,012

Agriculture. The farms are in general small, many of them consisting of only a few acres, and none of them exceeding five or six hundred acres. Contiguous to London are many gardens and nurseries; meadows and pasture lands abound in the Eastern part of the County, while the Western division is mostly under tillage. Ploughing is an expensive process, as from three to six horses are yoked in length, with three men to guide them, besides the ploughman. Since the introduction of green crops fallowing has fallen into disuse, and is profitably superseded by a judicious rotation. The farming gardeners at Kensington, Fulham, and other places, raise first a succession of cabbages, then potatoes or turnips, and then wheat every two years. In the neighbourhood of Harrow and Uxbridge the course is beans, peas, and wheat, the former two twice hoed, and earthed up at the latter hoeing: the bean and pea crops are grown in rows fifteen inches asunder. In the light land between Longford and Sunbury the rotation is wheat, barley, hog-peas in rows, a few acres of beans, two or three acres of tares, then wheat, barley, and lastly clover. This mode of cropping, and the great command of manure of the best quality, keep the land in good heart, and free from exhaustion. The common white crops are wheat and barley, with smaller quantities of oats and rye. The green crops are more various; such as peas, beans, turnips, cabbages, white and red clover, rye-grass cut green, tares and barley as food for cattle, lucerne and buck-wheat on a small scale; potatoes, carrots, parsnips, and vegetables of all kinds. The meadow land is very productive, and the Middlesex

MIDDLESEX. farmers excel in the art of hay-making. About 10,000 acres are annually sown with wheat, 4000 with barley; the grass lands exceed 10,000 acres; 1500 acres, lying chiefly near Chelsea, Brompton, Kensington, Hackney, Dalston, Bow, and Mile End, are laid out into nursery gardens; 10,000 acres are formed into kitchen gardens, and about 3000 acres, exclusive of those attached to private houses, are devoted to the growth of fruit. Licorice and hops are cultivated on a small scale in a few places.

Of the chief places in this County, ACTON, BRENTFORD, CHELSEA, and LONDON, are separately described.

Chiswick stands on the banks of the Thames, about five miles West from Hyde Park Corner. It is distinguished for a seat built by the Earl of Burlington, after a design by Palladio, and added to by the Dukes of Devonshire, to whom it now belongs. Hogarth long lived in the village, near a spot known as Chiswick Field, and he is buried in the Church-yard. Westminster School possesses an ancient house in the parish, built in the reign of Elizabeth, as a place of retirement during the Plague. The hamlets of *Turnham Green* and *Strand on the Green* are included in the Parish. The living is a Vicarage, in the gift of the Dean and Chapter of St. Paul's. Population, in 1821, 4236.

Ealing is divided into *Great* and *Little*, and contains the Hamlet of *Old Brentford*. It stands about seven miles West from London, a short distance Southward from the Uxbridge road. Castlebeare Hill, about a mile from the village, was the residence of the late Duke of Kent, as Gunnersbury was that of the Princess Amelia, aunt of George III. Population, in 1821, 6608, including Old Brentford. A Vicarage, in the gift of the Bishop of London.

Edmonton is distant seven miles North from London. Population, in 1821, 7900. A Vicarage, in the gift of the Dean and Chapter of St. Paul's.

Enfield, ten miles North from London, was a residence of Edward VI. and Elizabeth; one of the principal rooms of the Palace, richly ornamented with carved work, still remains. The Chase, lying on the North-West of the town, was disforested during the Great Rebellion. South Lodge, within its range, was a favourite seat of the great Earl of Chatham. Population of the Parish, which includes *Baker's Street*, *Four-tree Hill*, *Bull's Cross*, *Ponder's End*, *Enfield Highway*, and *Enfield Chase*, in 1821, 8827. A Vicarage, in the gift of Trinity College, Cambridge.

Fulham, four miles from Hyde Park Corner, includes the Hamlet of *Hammersmith*; it is an ancient village, known in Saxon times as *Fullonham*, the habitation of fowls, and the manor belonged to the Bishops of London before the Conquest. The oldest part of the Episcopal Palace is a quadrangle, built by Bishop Fitzjames, temp. Henry VII., the remainder was altered and almost erected in 1814; the site is low, and the grounds are surrounded by a moat. The gardens, once very rich in exotics, were laid out by Bishop Grindall, and received great attention from Bishop Compton. The Eastern side of the Church-yard contains monuments to several of the Bishops. Adjoining Hammersmith stood Brandenburgh House, which passed successively from Lord Melcombe to the Margrave of Anspach and the late Queen Caroline. Population of Fulham, in 1821, 6492; of Hammersmith, 8809. The Rectory is in the patronage of the Bishop of London, the Vicarage in that of the Rector.

MEUSE. **MEUSE**, or **MAESE**, a Department in the North-East Region of France, bounded on the North by the Duchy of Luxemburg; on the East by the Departments of the Moselle and the Meurthe; on the South by the Marne and the Vosges; on the West by the Marne and the Ardennes. It contains 2500 square miles, and a population of nearly 280,000. Its general aspect is hilly; on the North the soil is barren and rocky, but the South is tolerably fertile. The climate is healthy, but not warm. But little corn is produced, and the wine is of inferior quality, the chief agricultural employments being pasturage and rearing cattle. The manufactures are linens, woollens, and hardware.

Bar le Duc. *Bar le Duc*, the chief town, stands on the Ornain. In the ancient distribution of France, it was, as its name betokens, the Capital of a Duchy, the territory of which is now apportioned among the surrounding Departments, principally that of Meuse. The town was built by Frederic I., brother-in-law to Hugh Capet, and a Castle, which divided the Upper and Lower Town, and was considered as the *barrier* between France and Lorraine, was demolished by Louis XIV. Much lore respecting the Duchy and its rights may be found in two Works respectively by Louis le Fevre le Chantereau and F. de Rosieres. Population about 8000. Distant 138 miles E. from Paris, 27 from Toul.

Commercy. *Commercy*, on the left bank of the Maese, has a magnificent Castle built by Stanislaus King of Poland. Population 3700. Distant 169 miles E. from Paris.

Ligny. *Ligny*, on the Ornain, is a walled town, with a Collegiate Church, containing a monument to the Marshal Luxembourg. Population 2850. Distant 9 miles S. E. from Bar le Duc.

Montmedy. *Montmedy*, on the Chiers, is a small manufacturing town. Population 2000. Distant 22 miles N. from Verdun.

St. Mihiel. *St. Mihiel*, stands on the Maese. Population 5600. Distant 33 miles N. W. from Nancy.

Varennnes. *Varennnes*, on the Aire, has some manufactures of leather and paper. Population 1300. It is the town in which Louis XVI. was unhappily stopped in 1791, when attempting his escape from Paris. Distant 18 miles N. W. from Verdun, 150 from Paris.

Verdun. *Verdun* is traversed by the Meuse, and is divided into three parts, the Upper, Lower, and New Towns; it is neatly built and strongly fortified by a citadel on an eminence overhanging the river. A few manufactures are carried on in it of woollen, leather, confectionary, liqueurs, and bijouterie. It is the See of a Bishop, and is well known to Englishmen as the town appropriated by Napoleon for the chief custody of *détenus* on the breaking out of the war in 1803. Population above 9000. Distant 55 miles N. W. from Nancy, 35 W. from Metz.

MEW, or } To make the noise or cry of a cat. *Vox*
MEWL. } *a sono ficta.*

Have at your devil's pate; do you *mew*?
Beaumont and Fletcher. The Chances, act iv. sc. 1.

HOTSP. Marry, and I am glad of it with all my heart,
I had rather be a kitten, and cry *mew*,
Than one of these same meeter ballad-mongers.
Shakspeare. Henry IV. First Part, fol. 61.

At first the infant,
Mewling, and puking in the nurse's arms.
Id. As You Like It, fol. 194.

A dog will never learn to *mew*, nor a cat to bark.
Grew. Cosmo Sacra, book ii. ch. iii. sec. 7.

MEW, or } **Fr.** *muer*; **Lat.** *mutare*, to change.
MUE, *v.* and *n.* } And *mue*, "A change or changing,
hence any casting of the coat or skin, as the *mewing* of
a hawke; also an hawke's *mue*, and a *mue*, or coope
wherein fowl is fattened." *Cotgrave*.

To change; to change the feathers, to moult; and as
mue, the noun, was applied not merely to the change, but
to the place of change, (*sc.* the cage or coop where hawks
changed or moulted their feathers,) to *mue* became, con-
sequentially,

To encage, to coop up, to confine.

And see **FALCONRY**.

And by hire beddes had she [*Canace*] made a *mew*,
And covered it with velouettes blew,
In signe of trouth, that is in woman sene.

Chaucer. The Squieres Tale, v. 10960.

And Thisbe durst not remewe,
But as a byrde, whiche were in *mewe*,
Within a busshe she kepte her close.

Gower. Conf. Am. book iii. p. 83.

Let hir go hide her head,
in lothsome lurking *mue*,
For crabbed Crowfoote marres her face,
and quite distaines hir hue.

*Turbervile. The Louer against one that compared his Mistresse with
his Ladie.*

Whatsoever estate or prince doth rest upon them, [*mercenary
forces*] he may spread his feathers for a time, but he will *mew* them
soon after. *Bacon. Essay* 29. p. 127.

PHU. Forsooth, they say, the king has *mew'd*
All his gray beard, instead of which is budded
Another of a pure carnation colour,
Speckled with green and russet.

Ford. The Broken Heart, act ii. sc. 1.

CEL. It was a kind of death, sir,
I suffer'd in your absence, *mew'd* up here,
And kept conceal'd I know not how.

Beaumont and Fletcher. The Humourous Lieutenant, act iv. sc. 8.

'Tis true I was a lawyer,
But I have *mew'd* that coat; I hate a lawyer.
Id. The Little French Lawyer, act iii. sc. 1.

Hark ye

She keeps her shape?

THEO. Yes, and I think by this time
Has *mew'd* her old. *Id. Love's Pilgrimage*.

GUN. This Jew sure,
That alter'd you, is a mad knave.

SOF. Oh a most excellent fellow.

GUN. How he has *mew'd* your head, has rub'd the snow off.
Id. The Double Marriage, act iii. sc. 1.

One that *mew'd* content

And all her teeth together.
Id. The Tamer Tam'd, act iv. sc. 1.

Whose body *mewes* more plaisters every month,
Than women doe old faces.

Id. Thierry and Theodorat, act ii. sc. 1.

Can you love a poor man,
That relies on cold meat, and cast stockings,
One only suit to his back, which now is *mewing*?
Id. The Honest Man's Fortune, act v. sc. 1.

Methinks I see her as an eagle *muing* her mighty youth, and
kindling her undazl'd eyes at the full mid-day beam.

Milton. Works, vol. i. fol. 158. *Of Unlicens'd Printing*.

Where griesly night, with visage deadly sad,
That Phoebus chearefull face durst never vew,
And in a foule blacke pitchy mantle clad,
She findes forth comming from her darksome *mew*.
Spenser. Faerie Queene, book i. can. 5.

Italy, Spain, Artois, and now of late France itself, provides nests,
and perches, and *mewes*, for these birds, with the same confidence
wherewith wee breed our own at home.

Hall. Works, vol. i. sec. 23. fol. 656. *Quo Vadis?*

On the North side of Charing Cross stand the royal stables,
called from the original use of the buildings on their site, the *mews*;
having been used for keeping the king's falcons, at least from the
time of Richard II. *Pennant, London*, p. 151.

MEXICO.

MEXICO. MEXICO, a vast territory conquered and colonized by the Spaniards in North America, and from its extent and Geographical position, the productiveness of its soil, the amount of its population, and its mineral wealth, by far the most important of those States into which the transatlantic possessions of that people have been divided. Bounded on the East by the great inlet to which it has given name, on the West by the Pacific Ocean, it possesses an extent of sea-coast greater than any other tract united under a single Government; and while its Northern frontier is protected by that most formidable of barriers, a parched and stony desert, the Continent narrows to the South in such a manner as not to afford room for any State whose rivalry need be dreaded. Baron von Humboldt observes with respect to the natural advantages of this great realm, that "the Geographical position of Mexico offers incalculable advantages if we consider it with regard to facility of communication with the rest of the World. Placed on an isthmus washed by both the Pacific and Atlantic, Mexico appears destined to possess a powerful influence on the political events of both hemispheres. A King of Spain who should make Mexico the seat of his Government, could in five weeks transmit his mandates to Europe, whilst in six weeks they would commonly reach his Asiatic dominions. The vast territory of New Spain would, under judicious culture, produce every thing that Commerce is usually employed in collecting from all parts of the World, sugar, cochineal, cacao, cotton, coffee, wheat, hemp, flax, silk, oil, and wine. It produces every metal without excepting even mercury. Abundance of the finest timber, of iron, and copper, present every inducement and facility to extend the navigation of Mexico."

Boundaries. This highly favoured region is bounded on the East by the Gulf of Mexico, on the South by the territory of Guatemala, from which it is separated by a boundary line commencing at the Bay of Honduras, traversing the Lake of Terminos, and terminating at the Pacific, thus assigning Yucatan to Mexico. The exact line of demarcation is, however, liable to be altered by an amicable discussion, in which the Governments of the respective States are at present engaged. On the West it is bounded by the Pacific Ocean, and on the North by a frontier defined in 1819, in the Treaty of Washington. According to the third article of that Treaty, the boundary line commences at the point at which the river Sabina flows into the Gulf of Mexico, and is marked out by the course of that stream for about 200 miles, taking subsequently a Northerly direction, until it reaches the Red River of Natchitoches, along which it proceeds to the 100th degree of West longitude, whence inclining due North, it is continued to the river Arkansas, and runs along its channel to the source, where it takes a Westward direction, coinciding with the 42d parallel of latitude, until it terminates at the Pacific. The territory thus secured to the Republic of Mexico free from the interference of any Civilized Power extends in length, according to the estimate of Von Humboldt, 1830 Geographical miles, measuring in a direction from North-West to South-East. Its greatest breadth lies between the

mouth of the Sabina and that part of the Western shore immediately opposite the Isle of Tiburon, a distance, according to the same authority, of 1092 Geographical miles. Its superficial contents are 1,062,000 square Geographical miles, of which extent one-third lies between the Tropics, the remainder in the temperate zone.

The sea-coasts of Mexico are low, damp, and unwholesome, exhibiting, however, that luxuriant vegetation which always accompanies moisture in Tropical regions. Its Eastern shore is shoaly, in consequence of the sand accumulated by the currents from the East, which set violently against it under the influence of the trade-winds prevailing in the Atlantic. Its Western shore is bolder, possessing many excellent harbours, and among them Acapulco, considered by Ward the best in the World. The low, moist tract, the *Tierra caliente*, or Hot country, as it is called by the natives, extends along nearly the whole of the Eastern and Western shores with the same uniform features of heat, unhealthiness, and fertility, in a degree equalling and often exceeding that in which they are elsewhere exhibited under similar circumstances. Stretching every where along the coast to the depth of several miles inland, the *Tierra caliente* in some places expands into wide tracts which occupy two-fifths of the Tropical region of Mexico, and a still greater proportion in the more Northerly parts. To this region belong the district of Vera Cruz, that of Yucatan, a great portion of Oaxaca, New Santander, Texas, New Kingdom of Leon, Cohahuila, Bolson de Mapimi, a great part of California, of Sonora, of Cinaloa, of New Galicia, of Valladolid, of Mexico, and of La Puebla. The mean height of the thermometer is 76° of Fahrenheit, an elevation of temperature which, acting on an atmosphere moist and loaded with exhalations from decomposed organic bodies, produces cholera and yellow fever, or black vomit, (*vomito prieto*), as it is styled by the natives, diseases which during the summer months spread frightful devastations, especially among strangers.

From the limits of this region so genial to vegetation and many forms of animal life, but so fatal to the human constitution, rises the *Tierra templada*, or Temperate country, which, with various degrees of acclivity and temperature, extends up the sides of the mountains. The traveller, in ascending through this region, finds the mean height of the thermometer fall from 76° to 64° of Fahrenheit, its average on the Table Land. It is described by Von Humboldt as possessing a delightful temperature, never varying more than a few degrees. But even Physical advantages are not to be had on this Globe without alloy; the elevation of the *Tierra templada* is that at which the clouds usually rest, and hence its most favoured spots are often enveloped in fog. The ascent from the *Tierra caliente* to the Table Land constituting the greater part of the Mexican territory, is more gradual on the Western than the Eastern side of the Continent, where in the course of a day the traveller may mount from the low lands of Vera Cruz, exhibiting in the most striking form all the features of a burning Tropical climate, to the region of snows, which during the greater part of the year cover the *Cofre de Perote*. As he rises he sees with admiration the regular

Physical features.

Tierra caliente.

Tierra templada.

MEXICO. succession in which the vegetable tribes range themselves according as the altered temperature produces a state of atmosphere favourable to the development of their structure; and in his progress he is struck with the change in the aspect of the country, the character of the vegetation, the appearance of animals, the manners of the inhabitants, and the modes of culture in which they are engaged. In proportion to the height of his ascent, Nature appears to act with diminished energy, the vegetable tribes gradually suffer a diminution of their luxuriant beauty, their stalks and branches become less succulent, their flowers are smaller, less expanded, and display fainter colours. The appearance of the Mexican oak cheers him by affording an unerring assurance that he has now entered a region where the ravages of the yellow fever need no longer be dreaded. Presently enveloped in fogs, he finds that he has reached that portion of the surface of the mountains at which the soil is continually refreshed by the moisture deposited from clouds borne against it under the influence of the great atmospheric current sweeping over the Atlantic. Pines then succeed to the forests of oaks which he has hitherto traversed, and continue with diminishing luxuriance to clothe the ground until the intense cold precludes the vegetation even of that hardy timber.

Tierra fria.

Volcanoes.

Such is the contrast observable by a traveller choosing to continue his ascent above the level of the great Table Land over which by far the most considerable portion of the Mexican population is spread. This vast extent of elevated country, denominated by the natives *Tierra fria*, or Cold region, lies on the expanded summits of the Andes, which, having passed along the Isthmus of Darien in a low and single range, diverge, as they enter North America, into two chains. These, as they proceed Northward, separate still further to the East and West, thus constituting the lateral walls, as it were, of the vast platform which, at an elevation generally of from six to eight thousand feet above the level of the sea, forms the principal part of the territory of Mexico. This Table Land consists of vast plains separated by low ridges of hills, and impressing the spectator with the idea that at some remote period they were the basins of lakes dried up by the desiccating process which, even at present, is taking place throughout this elevated region. In various parts, especially in the narrow tract to the Eastward of the City of Mexico, are scattered insulated peaks of a great height, and generally rendered more striking by being the vomitories (if so bold an expression may be used) of extinct or active volcanoes. The elevation of the highest summits are:

Popocatepetl	17,550 feet.
Orizaba	17,208
Sierra Nevada de Mexico..	15,553
Nevado de Toluca.....	15,018
Cofre de Perote.....	13,289

The first four attain the limit of perpetual congelation.

Jorullo formed in a single night.

Of the volcanic mountains, Popocatepetl, Orizaba, and Colima still continue to send forth flames; and it may be added, that Tuxtla, near Vera Cruz, and Jorullo, in the Intendancy or District of Valladolid, attaining elevations much inferior to those above stated, are still active volcanoes. The origin of Jorullo proves that the active energies of Nature are not confined to the animal and vegetable kingdoms, but continue to affect the Globe itself. In 1759 the spot on which this volcano now stands was a sugar plantation, situated on a gentle eminence: in

the course of one night a subterranean explosion threw up the peak to its present height of 1500 feet, and surrounded it with thousands of small cones, which still continue to smoke. Popocatepetl, the highest mountain in North America, except Mount St. Elias, early attracted the attention of the Spaniards; for Cortes, when marching to besiege Mexico, despatched Ordaz, one of his officers, to ascertain the cause of the smoke incessantly issuing from it; but that emissary returned without success, being deterred by the deep snows and the frightful explosions which every moment assailed his ears. Montano subsequently descended the crater by the aid of a rope, and carried from it some sulphur, and the place has subsequently been often visited by smugglers searching for that mineral. Still more dauntless was the exploit of a Dominican Friar, Blas de Inena, who, in a basket suspended by a chain 840 feet long, descended the crater of a volcano, which near the Lake Nicaragua bears the name of the Cerro de Massayo, and, provided with a long ladle of iron, attempted to scoop up the liquid lava, imagining that it consisted of melted gold. He did not succeed in gratifying the *auri sacra fames*, and his rashness had no other consequence than the loss of the ladle, which was melted by the violent heat.

The six lofty mountains of Orizaba, Popocatepetl, Sierra Nevada de Mexico, Nevado de Toluca, the Cofre de Perote, and Colima, are ranged nearly along the 19th parallel of latitude. The summits of the first four enter the limit of congelation, varying here according to the season of the year, from 12,000 to 14,600 feet; the two others are covered with snow through the winter months. There are no other eminences in the Mexican territory which ascend to the limit of perpetual congelation. The mean temperature of the Table Land does not exceed 64° of Fahrenheit. In the neighbourhood of Mexico sometimes, though rarely, the thermometer has fallen nearly to the freezing point; but in general the winters are as mild as those of Naples or Lisbon, the mean heat of mid-day being about 57° of Fahrenheit's thermometer. There are, based on this great platform, some other Table Lands which rise still higher; and when their elevation exceeds 8000 feet, the climate becomes cold and inclement even to the sensations of a native of the North of Europe. Such are the plains of Tolma and Guchila, where Fahrenheit's thermometer seldom indicates a higher temperature than 46°. In the *Tierra fria*, or Great Table Land, although the average temperature equals that of France, yet the vegetation is far less vigorous than in the parts of Europe enjoying a corresponding degree of mean heat, and the plants transferred from them do not thrive so well as in their native soil. The winters indeed, even at the height of 8000 feet, are not severe, but still during the summer the sun does not warm the rarefied air to cause flowers to blow, or fruits to arrive at maturity. This equable temperature and absence of a considerable degree of heat at any period of the year, is the cause of the peculiar character of the country throughout the Table Land; and hence it is, that many departments of cultivation are less successful there than in the plains to the North of the Tropic, under the influence of a temperature in the mean inferior. A cloudless sky, an atmosphere of admirable purity, clearness, and salubrity, scanty and tardy vegetation, and a soil bare of trees, deficient in moisture, and impregnated with carbonate of soda and other salts, characterise the greater part of

Popocatepetl.

Cerro de Massayo.

Temperature of the Table Land.

MEXICO. the Table Land. Wherever there is water there is fertility; but the rivers are few, and the sun generally rather parches the soil than calls its productive powers into action. The Table Land extends from the 18th to the 40th degree of North latitude with so little interruption, that wheeled carriages proceed from the City of Mexico to Santa Fé, a distance of 1500 Geographical miles; and in no place does the level of the road descend below the height of 5500 feet. In proceeding Northward the greater part of the surface is found to fall with a gentle inclination, until it sinks towards the North-East into those plains through which flow the Rio del Norte, and the great tributary streams that, from the West, fall into the lower part of the Mississippi. The Western rampart of the Table Land, on the contrary, rises until it assumes the character of a bold range, which beyond the Mexican frontier receives the name of the Rocky Mountains, and is continued Northward until it ultimately becomes lost to the view of Civilized Man among the snows of Arctic America. The lakes of the Mexican territory are generally found in the *Tierra fria*. According to Humboldt, they are continually diminishing, and were formerly far more numerous and extensive; as, in his opinion, the spacious valleys, constituting the greater part of the surface, were originally the basins of lakes dried up by the aridity which is continually increasing. He enumerates the great lake of Chapala, in Guadalajara, estimating its extent at 1620 square Geographical miles, the five lakes of the Valley of Mexico, the lake of Patzcuaro in the district of Valladolid, the lakes of Mextitlan and Parras in Durarigo. The only important river running through the Table Land is the navigable Rio Grande de Santiago, which, rising near the City of Mexico, falls into the Pacific at San Blas; but, in general, the great natural disadvantage of this region is the want of water; little rain falls; the evaporation is rapid in consequence of the rarefaction of the atmosphere, resulting from the elevation of the surface; the evil is still further increased by the scarcity of trees, and the injudicious labours of the Spaniards have been more often directed to drain than to irrigate the soil. In the Valley of Mexico, for instance, they have formed canals to lower the level of the water in the lakes, and they have cut down the forests without making any provision for replacing them. In consequence of this want of judgment or foresight, a great proportion of this valley, once celebrated for its beauty and fertility, has become a barren expanse, incrustated, like the Steppes of Central Asia or the African deserts, with various kinds of salts. The less important rivers of the Table Land are the Rio Tula, or river of Montezuma, which drains the Valley of Mexico, the Rio Yopez, Rio Bolsas, Rio Grande de Barispe. The Rio del Norte, by far the greatest river within the Mexican territory, rises in the Sierra Verde, under the 40th degree of latitude, and after a course of 1536 Geographical miles through the low country to the North-East of the Table Land, falls into the Gulf of Mexico. The next in importance is the Red river of Texas; which, at some distance further North, runs nearly in the same direction, a course of 750 Geographical miles. The Red river of Natchitoches, which for a considerable distance forms the boundary line between Mexico and the United States, is navigable for near a thousand miles from the sea. The Brazos and Guadalupe are large rivers, and navigable for a considerable distance. Inferior to these, but still considerable streams, are the Nueces, Trinidad, and San Antonio, all watering the district of Texas, and

Rivers.

facilitating communication through it. The Rio del Ascension, the Rio Gila, and the Rio Colorado of California, holding a long course through the unexplored regions to the North-West, may be considered as closing the list of Mexican rivers.

A territory stretching through 27 degrees of latitude, and containing within its limits parched and bare Deserts, swamps which, at the level of the sea, are exposed to the rays of a vertical sun, and mountains of such a height as to enter within the limits of perpetual congelation, must present every possible variety of climate. On the Eastern and Western coasts the climate is excessively hot, loaded generally with moisture, acting with a frightful fatality on the constitution of strangers, and insalubrious even for the natives. This state of atmosphere is diversified on the Eastern side by the *Nortes*, or tempestuous winds, which, from October to April, lower the temperature by conveying the cold air from Canada, Labrador, and other frozen tracts of the Continent. These winds blow with such violence, as to cause imminent danger to navigators who may be exposed to their effects, especially as along the whole extent of the Eastern coast there is no harbour capable of affording protection to large vessels. The Western coast is visited during the summer months by violent hurricanes from the South-West, bringing with them heavy rains. During the winter season the air of that coast is clear and dry, but agitated by furious storms, known by the name of *Papagayos*, and blowing from the North-East. The air on the tracts which ascend from the sea-coast to the Table Land is mild, healthful, and subject to little variation of temperature. As the clouds are generally suspended at an elevation through which this region passes, fogs prevail, and a gentle moisture produces delightful freshness of vegetation. The air throughout the Table Land itself is healthful, pure, piercing, and dry: the heat is oppressive in all cases of immediate exposure to the rays of the sun; but when that influence is withdrawn, it is succeeded by a considerable degree of cold, resulting from the great rarefaction of the atmosphere.

Varieties of climate.

The vegetable productions applicable to the purposes of Man, are the banana, (*Musa Paradisiaca*), which affords, on a given surface, a greater proportion of food congenial to the human constitution than any other esculent. The quantity of nourishment supplied by an acre of ground planted with banana, is to that, drawn from the same extent when under wheat, as 133 to 1; and we find the relative productiveness as 44 to 1 when we compare it with the potato. Its nutritious qualities lie in a starch combined with a small quantity of vegetable gluten. Although the fruit of a tree, it is not exposed to the disadvantage attending the olive and other trees affording food; an enemy cannot destroy the resources of the people through several years by cutting down their plantations of bananas; for suckers committed to the earth arrive in a few months at such maturity as to produce a crop: 450,000 square miles within the Mexican territory are applicable to the cultivation of this invaluable tree. Next in importance is maize, which possesses such versatility of organization, that it may be cultivated throughout nearly the whole territory, on the coasts, on the slope of the Cordilleras, and on the Table Land. So vigorous is its vegetation, that in the most favourable situations it grows to the height of nine feet; and such its fecundity, that it often produces eight hundred fold. All lands suitable to the

Vegetable productions.

Banana.

Maize.

- MEXICO. cultivation of the banana produce likewise the manioc, or *yuca*, the root of which, grated and drained carefully of its poisonous juice, becomes the cassava, or flour, extensively used as an article of diet either without further preparation or formed into bread. The potato (*Solanum tuberosum*) and the sweet potato (or *Convolvulus batatas*,) are much cultivated on the Table Land, and the yam (*Dioscorea alata*) on the coast. The cacao, (*Cacao theobroma*,) called by the Mexicans *cacahuatl*, a name softened down into the word *chocolate*, so familiar to our ears, was first made known to Europe by the Spaniards, who found it in general use throughout the dominions of Montezuma. It is now little cultivated in the Mexican territory, and the great consumption is supplied by importation from South America. All the *cerealia* of Europe, wheat, rye, oats, and barley, are cultivated with great success on the Table Land. Sugar might be produced in quantities abundantly adequate to the supply of the demands of the whole Commercial World. From the maguey (*Agave Americana*) is obtained *pulque*, the favourite beverage of the indigenous Mexicans. The maguey flourishes in the driest soil of the Table Land, where it rises usually to the height of five feet; usually when eight years old it gives symptoms of sending up the great central stalk destined by Nature to bear the blossom. This moment is anxiously watched by the cultivator, who cuts away the central leaves, and thus forms a sort of basin for the reception of the sap, which flows from the surface of the cut shoots and foliage in such abundance, that from 200 to 350 cubic inches of the fluid are poured out every day for four or five months. This juice is sweet with a slight and agreeable tartness, and by a simple and easy process is converted into a fermented drink resembling cider. This beverage, properly called *pulque*, has an odour extremely fetid and disagreeable to strangers; but when habit reconciles the senses to this peculiarity, all relish it, and attribute to it nutritious and stomachic qualities in the highest degree. Like other fermented liquors it, by distillation, gives an ardent spirit. Its use is so general that the yearly duty levied on the quantity introduced into the cities of Mexico, Toluca, and Puebla amounted, at the time of M. Humboldt's visit, to above £170,000. Both the cultivation and use of maguey is confined principally to the Indians, some of which race, though living like indigent peasants, possess considerable wealth in their plantations. Among such instances, Humboldt mentions that of an old woman, who left to her children maguey plants to the value of above £12,000. Notwithstanding the amazing quantity of sap given out by this plant, it thrives in the driest soils, and even on rocks, and bears uninjured the greatest droughts, as well as the hail-storms and severe frosts often occurring on the Table Land of Mexico. After the sap has been drawn from the plant, it withers, but the root sends up a great number of shoots, each of which, if allowed room to expand, is fit for the process by which the sap is drawn off in a space of time varying from five to eight years, according as the soil may be more or less favourable for this sort of crop. The leaves of the maguey are manufactured into paper of various thickness, from that of the finest Chinese to that of pasteboard: the fibres also are worked up into excellent cordage. The nopal, or *cactus*, had been cultivated for feeding the cochineal insect during several centuries previous to the Spanish conquest. The management of this insect, the exuviae of which give the most admired of dyes, requires unwearied attention and industry: in three years after it is planted the nopal arrives at maturity, and is then stocked with the female insect at the moment it is about to lay its eggs; and such is the care required for a successful result, that every plant must be carefully kept clean with a brush, usually made of the tail of a deer or squirrel. According to Humboldt, the fruit and some other parts of the *cactus* afford a scarlet dye, and the virtues of the cochineal result merely from receiving those juices without the process of assimilation. At the proper season the insects are collected in wooden vessels, and killed, either by immersion in boiling water, by exposure to the rays of the sun, or by the application of a due degree of heat in a close stove. The valuable drug jalap is still produced in great abundance and perfection about the town of Xalapa, from which it originally derived its name. The oak, as we have before mentioned, is the principal timber of the temperate region; at a greater elevation it is replaced by various species of pines, which extend to the limit of perpetual congelation. The low maritime tract produces cypress, of which some have attained an enormous size; in the district of Oaxaca a tree of that species is 112 feet in girth.
- The indigenous Zoology, as is usually the case throughout America, is not rich. The principal wild animals are the anta, or tapir, a pachydermatous and amphibious quadruped, about the size of a mule or a small horse. Its figure and nature, which seem to hold an intermediate place between those of the rhinoceros and hippopotamus, have been so often described by Naturalists, that any further notice of it must be here unnecessary, except to mention that it is found in the hottest and moistest situations of the South of the Mexican territory. The bison (*Bos Americanus*) and the musk ox (*Bos moschatus*) exist in vast numbers in the Deserts extending along the Northern frontier. The *venados*, which are to be found throughout New California in herds of fifty or sixty individuals, are animals of the elk species, and grow to the size of a small horse, whilst their appearance is rendered more striking by their huge antlers, usually five, and in some instances, it is said, nine feet long; their colour is a uniform brown. The speed of this quadruped is such that no horse under ordinary circumstances can overtake it, and the hunter is obliged to watch the moment when, having slaked its thirst, which it does at very distant intervals, it becomes languid, and remits its fleetness, so as to allow the pursuer to throw the *lasso*, or noose, over its horns. The Indians, who pursue it on foot, contrive to decoy it by stratagem within reach of their arrows. The hunter in this case provides himself with the skin, taken carefully off the neck of a *venado*, and retaining the head and horns; he thrusts his head into this skin, and concealing his body in some thicket, imitates the movements of the animal when feeding, until some *venado* comes to join its supposed companion, and is enticed within reach of the arrow. The rapacious animals differ little from those of the rest of North America: the principal are the bear, the cougar, the wolf, fox, and several indigenous varieties of the canine tribe. Those who wish for more detailed information may consult Hernandez and Clavigero, whose accounts of the animals of Mexico are minute and full, but coarse and inaccurate. A scientific Treatise on the Zoology of this Country is still a desideratum.
- The population is at present estimated by Ward at 8,000,000; and when we consider the extent of territory, the length of time during which it has been the scene of

MEXICO. a considerable degree of civilization, and the necessary imperfection of a census executed by an imbecile Government among a people suspicious and fond of seclusion, the conjectured amount is probably below the actual. Humboldt states the number at 6,500,000 in 1803, and calculates from the proportion of deaths to births that the population would, under ordinary circumstances, double in nineteen years. The desperate Civil war which for so long a period raged through the Country must have greatly checked this rate of increase, as well by the direct destruction of human life as by the diminution of the means of the people, in consequence of the shock to all departments of national industry. Ward states the number of those who perished by the sword in this sanguinary and protracted struggle at the enormous amount of 300,000 men; and informs us, that many districts, formerly exhibiting a high degree of cultivation, retain no marks of having been the scene of human industry except the ruins which disfigure them.

Diseases. Epidemics and famine at irregular intervals so retard the rate of increase, that Humboldt considers the period of doubling should be stated rather at thirty-six years than at nineteen, the number deduced from observations under ordinary circumstances. The small-pox rages every eighteen or twenty years with dreadful mortality: in 1779 it cut off 9000 persons in the City of Mexico, and throughout the whole territory extended its ravages in a corresponding degree of destructiveness. The disease is particularly destructive to the Indians, whose constitutions are remarkably disinclined from the determination of humours to the surface, and consequently singularly exempt from cutaneous affections: hence the virulence of the disorder, instead of finding an outlet by eruption on the skin, is thrown with fatal effect upon the vital parts. Vaccination, introduced in 1804 by the benevolent exertions of Don Thomas Murphy, has had great influence in mitigating this scourge. In the course of the exertions made for extending the practice of it among the Indians it was ascertained that the knowledge of its effects as a preservative had long existed among them; they were aware that such as had accidentally become affected by the vaccine virus from contact with cows suffering from the eruption, need have no apprehensions of attack from small-pox, but they had not possessed sufficient sagacity to place the constitution artificially under its influence.

Matlazahuatl. The *matlazahuatl*, an epidemic peculiar to the Indian race, prevails generally at the remote intervals of about a century. It resembles in many respects the yellow fever, but does not attack the white population, exclusively the subjects of that disease; and differs from it, not only in the choice of its victims, but in the region through which it rages, spreading death over the driest, coldest, and most elevated tracts. Torquemado conjectures that 2,000,000 Indians perished in 1576, when this epidemic raged: so extravagant an estimate deserves notice merely as a proof of the impression which its dreadful ravages made on the mind of an observer. The yellow fever, though so deadly in its attacks, being confined to the most thinly peopled districts, has no material influence in checking the population, as the number of deaths which it causes annually does not exceed 3000. Far more devastating is the effect of famines, which sometimes takes place to a dreadful extent, in consequence of the indolence of the inhabitants, their imperfect acquaintance with agriculture, and the peculiar nature of maize, their staple article of food.

This grain, though generally so productive, is more liable to disappoint the hopes of the cultivator than perhaps any other crop. A season unusually dry will diminish the produce to a degree ruinous to an improvident people, not much accustomed to cultivate other alimentary vegetables, which might enable them to eke out a scanty crop. But far more disastrous are the effects of frost, which sometimes in a single night will destroy the maize through a great extent of country. In consequence of a disaster of this kind in 1784, 300,000 people were computed to have perished of famine.

The population of the Mexican territory consists of several varieties, resulting from the assemblage in the same country of three races totally distinct—the European, the Indian, and the Negro. These varieties are seven: 1. natives of Spain, who are distinguished by the name of *Gachupins*; 2. Spanish *Creoles*, or White people, natives of Mexico, but of pure European descent; 3. *Mestizoes*, or the offspring of the white and Indian races; 4. *Mulattoes* sprung from the white and negro race; 5. *Zamboes*, the offspring of union between Indians and Negroes; 6. Indians, the indigenous copper-coloured race; 7. Negroes. Of these the most numerous are the Indians, constituting two-fifths of the whole population: in the Intendancy of Oaxaca they amount to eighty-eight in the hundred. They are principally found on the Table Land, especially to the South, for they are rarely to be met with in the Northern Provinces, which are chiefly peopled by the White race. The Negroes, Mulattoes, and Zamboes occupy the sea-shore. The Mestizoes, spread over the whole territory, are next in number to the Indians, and constitute seven-eighths of the mixed population. The number of the White race is estimated by Ward at 1,200,000. As "divide and govern" was the maxim adopted by the Spanish Government in the management of its Colonies, it used much artifice to maintain among the various races a mutual jealousy and dislike. The *Gachupins*, or natives of Spain, engrossing all departments of Government, regarded the *Creoles* with hatred and contempt so virulent and inveterate, that even feelings of affection were disregarded under the influence of the insane pride of imaginary superiority; so that a European father would consider his son, born of a Creole mother, inferior to his clerk, in case he happened to be a native of Spain. The stranger took rank before the son even in his father's house, and in case there were a daughter he had the offer of her hand with a large share of the family property. "You are a Creole," was the bitterest reproach a *Gachupin* could utter; and the population towards which this dangerous contempt was displayed gave it force by consenting to consider the degree in which an individual approached European origin as the test of his rank. Whiteness of the skin was the general criterion of nobility; and resentment for any assumption of authority was usually expressed by the question, "Is it possible that you think yourself whiter than I?" The King exercised a whimsical prerogative of conferring degrees of whiteness; and this was done by a decree of the local Government, which, in the words "let him be white," conferred the envied distinction. For a long time this policy was successful: the *Gachupin* trampled on the Creole, who in turn gave vent to his offended pride by his insulting haughtiness towards all other castes. But when the wrongs inflicted by the Mother Country became too great for the endurance of a People beginning to feel its strength, and roused to try it by the

Different
races.

Privileges
of the
Whites.

MEXICO. noise of Wars and Revolutions throughout the Civilized World, the Creoles found it necessary to fraternize with all classes of the native population, and anxiously, though preposterously, put themselves forward as the descendants and avengers of those who had fallen under the arms of Cortes and his companions. All the native classes coalescing were bound by the common influence of dread and hatred of the Gachupins; and they have used, and no doubt secured their victory, by the Civil proscription of that tyrannical and infatuated class.

Abolition
of castes.

The division of castes no longer exists in the Mexican territory; and such might well be the case, for those who produced the present order of affairs had every shade of colour, and rose from every mixture of race. All, except the Gachupins, are now equally entitled to the privileges of citizens, and equally eligible to the highest offices. General Guerrero (Ward informs us) laboured under no disadvantage in his suit for the Presidentship in consequence of his African descent. Slavery has no existence in the Mexican territory: at all times extremely limited, it ceased during the Civil war in consequence of the necessity of conciliating all classes, or the opportunities which the disturbed state of society afforded slaves for throwing off their chains. Ward, our latest authority, does not specify any law formally declaring its non-existence.

Indians.

Physical
character.

By far the most interesting race, both by its character, present condition, and past fortune, is the Indian. The indigenous Mexican, like the Indians of Canada, or of the United States, has a copper-coloured skin, lank hair, scanty beard, aquiline nose, long eyes, with the external angle elevated towards the temples, prominent cheek bones, full lips, a mouth presenting an expression of gentleness, in contrast with the gloomy and austere air of the rest of the countenance. The forehead is lower and more retreating than in any other variety of human race, the facial line straight, but greatly inclined, the back part of the skull rather prominent than spherical. As the Grecian Sculptors, in representing their Deities, made the facial line perpendicular, or gave it even an inclination external to the perpendicular, because they placed beauty in the exaggeration of the contour which naturally marked their race, so the human figure in the old Mexican Paintings is exhibited with a forehead retreating, and depressed in a degree greater than it probably any where actually exists. Tall, and usually robust, the Indians are singularly exempt from deformity, they are never afflicted with curved spine, rarely lame, or otherwise disabled by nature, and in those districts where *goître* prevails, they never suffer from it. An Indian's years are not registered on his person by those marks so mortifying to the vanity of a European. He scarcely ever becomes grey, even at the most advanced age, and as he seldom can number the years which he has lived, erroneous opinions have generally prevailed with respect to the briefness of life in this race, of which some individuals have exhibited remarkable instances of longevity. Hilario Pari, an Indian, lived a hundred and forty-three years, and at the age of a hundred and thirty was in the habit of walking three or four leagues every day. The Indians are phlegmatic, melancholy, silent, affecting mysteriousness and concealment even in their ordinary actions, fond of retirement, and often preferring as their place of residence the most sequestered vales and least frequented ridges of the Cordilleras; not prone to anger, but under strong provocation passing from a

Mental character.

state of tranquillity to the most furious agitation. Consistently with this cold and obstinate character, they adhere blindly and pertinaciously to the opinions first inculcated on their minds; and as the early missionaries, in consequence of their zeal and talents, aided by the ready swords of their victorious Countrymen, succeeded in replacing the Mexican superstitions by their own Religious system, the indigenous population are rigid and bigoted Roman Catholics. Remarkably deficient in imagination, the Indian learns readily, judges justly, reasons well, and in comparing and discriminating displays a degree of acuteness amounting to subtilty. Like the Russians and some other half-civilized People, they show much ingenuity and skill in Painting and Sculpture, imitating with the rudest implements and coarsest materials the objects before them. Any originality or invention which they may possess, is destroyed by the tenet inculcated by their Priests, that deviations from the model once established amount to sacrilege; but even when educated under circumstances favouring a development of a taste for the Fine Arts, they exhibit rather perseverance and aptitude for imitation than invention. They possess much readiness in mechanical contrivances, a species of talent quite congenial to the other qualities of their minds. Their passionate fondness for flowers shows that they are not totally devoid of perception of the beautiful. Even their sanguinary character at the epoch of the conquest possessed this gentle and refined trait, for a garland of the most beautiful flowers was considered at the Court of Montezuma the most honourable present to an ambassador. At the great market of Mexico a native will not sell fruit, vegetables, or *pulque*, without decorating his stall with a profusion of flowers, renewed carefully every day. The dealer, with his wares, is seated in an inclosure, about a yard high, semicircular in shape, and formed of fresh herbs, and displaying on the green ground tasteful festoons and knots of various flowers, which have a very pleasing effect. Flowers form also an important article of sale with them, and they take much pains in arranging them together with various fruits in an agreeable form.

Their love
for flowers.

The *Indios bravos*, or restless Tribes of natives, who rove over the most Northern part of the territory, though insignificant in number, are formidable to the Mexican Government on account of their ferocity and activity. Late accounts agree with Humboldt in representing them as greatly superior to the same race in the more Southern part of the territory. Where well treated, their fidelity may be depended on, so that the Opatas, a Tribe of Sonora, are intrusted with fire-arms, and incorporated with the militia of the State. But those Tribes whose enmity has been provoked by the oppression of the Spaniards, incessantly exercise depredations with all the cunning, perseverance, and inhuman cruelty that mark the warfare of their brethren who infest the frontiers of the United States. Prisoners have often been taken by the Spaniards in this incessant war, and generally conveyed to the Capital, where they were allowed to perish in dungeons, or conveyed to Vera Cruz or Cuba, situations producing inevitable and speedy death to the Indian, removed from the elevated region congenial to his constitution.

Indios
bravos.

It is considered by Humboldt and Clavigero as an unquestionable fact that the Tribes which successively occupied Mexico, proceeded from the region lying to the North of the river Gila, the Tolteques in the VIIth, the

Origin of
the native
Tribes.

MEXICO. Chichimeques and the Azteques in the XIth century. The Tolteques, already possessing considerable civilization, introduced the culture of maize and cotton, constructed roads, towns, and vast pyramids, recorded events by means of hieroglyphic painting, and were acquainted with the art of hewing stone, as well as with many branches of Metallurgy; and, if credit may be given to Humboldt, who, it must be confessed, shows no inclination to undervalue the attainments of indigenous Mexicans, they possessed such skill in Astronomy, as to establish a Solar year more perfect than that of the Greeks and Romans. Strong features of resemblance may be observed between the Mexicans and the Tribes established about Nootka Sound, as well in their addiction to symbolical painting, as in their Language and a degree of civilization superior to the rest of the North American Tribes. Hence these Northern Tribes have been considered a portion of stragglers, who separated themselves from the main body pursuing its course of emigration from the North of Asia, and ultimately establishing itself on the Table Land of Mexico. The researches of De Guignes, Horn, Scherer, and others have shown it probable that since the Vth century a communication has been maintained between the North-East of Asia and the Western coast of North America. According to the hypothesis of Humboldt, the Tolteques and Azteques were emigrants of the race of Huns; as we are informed by the Chinese Annals, that a division of that mighty people emigrated in a North-Eastern direction, until it was lost to all further observation in the depths of the Siberian desert. Malte-Brun considers them to have been emigrants from the country about the Irtish, who, superior in civilization to the Barbarians of central Asia, but inferior in military prowess, fled to the East, bearing with them those attainments in the Arts, the discovery of which in the midst of the ruder Tribes of America so startled the first Europeans who visited Mexico. This, it must be allowed, is a specious hypothesis, in accordance with the theory of Bailly, that the North of Asia had in the remotest periods been the seat of high civilization. The use of the *cerealia* of the old Continent might easily be lost in the course of a tedious and painful emigration; as well as the art of working iron, a metal scarcely ever found in a natural state, and very difficult to reduce from the ore. Humboldt mentions, as an objection to his own hypothesis that the Mexicans sprung from the Huns, the fact that milk was not used as an article of diet in any part of the American Continent; but he ought rather to have viewed this fact as corroborating than subverting his hypothesis, since that secretion is not used as food among the people of Eastern Asia.

Architectural antiquities.

Pyramid of Cholula.

The most remarkable monuments which at present attest the greatness of the ancient Mexicans, are the ruins of various Pyramids of vast dimensions. The principal is that of Cholula, a truncated Pyramid, 175 feet high, and having a base of such extent that each of its sides (two of which lie exactly in the meridian) is 1426 feet long. The material is brick, disposed in layers alternating with clay, and like the Tower of Belus at Babylon and the Temples of the Burmese, its sides are constructed in terraces, of which there are four. Some circumstances connected with this monument are striking instances of the vicissitudes which attend great national memorials: its majesty has been insulted by the Arts of another Age, for a high road has been cut through it, and the position of a Christian Church on its summit, shows the

VOL. XXV.

triumph of another Faith over that which dictated its erection. Of the great Teocalli, or Pyramidal Temple of Mexico, the very ruins have perished, though huge fragments of porphyry, occasionally discovered in excavating the ground adjacent to the Cathedral which has replaced the principal edifice of Mexican superstition, point out the materials of which it was composed; one mass covered with sculptures measured 23 feet in length, 19 in breadth, and 10 in height. At Teotihuacan, situated a short distance to the North-East of the City of Mexico, are two Pyramids, called by the Indians the House of the Sun and the House of the Moon. The House of the Sun is 645, measured along the base, with a height of 171 feet: the House of the Moon has a much smaller base, and is but 140 feet high. Two sides of each deviate but 50' from the line of the meridian. The internal mass consists of a mixture of clay and pebbles, and has a coating of stone, which had formerly been overlaid with a plastering of lime. Each, when perfect, had exhibited four terraces, access to which, as well as to the summit, was given by stairs. About the bases of these great edifices many hundreds of smaller Pyramids, each about 30 feet high, are arranged in lines parallel to the bases, which coincide with the meridian: tradition represents them as dedicated to the stars; but Humboldt considers them mounds raised over the graves of eminent Chiefs. These remarkable monuments, according to Mexican History, are as old as the VIIIth century. The Pyramid of Papautla is inferior to these in dimensions, but far more curious, as exhibiting the considerable progress made by the Mexicans in Architecture. Embosomed in a deep forest to the North-East of Vera Cruz it had been concealed from the Spaniards by the suspicious veneration of the Indians, until about sixty years ago it was accidentally discovered by some hunters. It is constructed of large pieces of hewn porphyry, cemented with mortar, and sculptured in relief with innumerable figures of hieroglyphics, principally of serpents and alligators. Like the other monuments of the same sort its sides are formed into terraces, of which there may be reckoned six, and the vegetation which overgrows the base, is supposed to conceal a seventh. The wall rising above each terrace contains a number of square niches, ranged at regular intervals, and in number amounting altogether to 378, being, as is supposed, intended to represent the common year, and the intercalary days at the termination of each cycle. This edifice, which may be compared with respect to its finish and dimensions to the Pyramid of Cestius at Rome, is about 60 feet high, and has a base about 80 feet broad. The other monuments most worthy of attention are the great circular stone, covered with hieroglyphical sculptures denoting the Mexican calendar, which contains a mass of about a thousand cubic feet; and numerous stones, resembling the upper slab of a druidical altar, as well in their great size as in being grooved with channels, which conveyed in a particular direction the blood of the human victim stretched at full length on them, and slaughtered in that posture. The colossal statue of the Goddess Teoyaomiqui, covered with hieroglyphics, is still preserved at the University of Mexico.

Though the intellectual progress of the Mexicans has been greatly checked by the dreadful struggle in which they have lately achieved their independence, they far outstripped the natives of Spain in the career of scientific improvement, and as a natural consequence, the

State of Learning and the Arts.

T

MEXICO. more polished classes of society entertain a degree of contempt for the attainments of the inhabitants of the Mother Country. Humboldt expresses the gratification which he felt at witnessing in Mexico the great love of information and zeal for improvement evinced by youth, singularly endowed with quickness in acquiring the elements of Science, and perseverance in pursuing it to its depths. At the University of Mexico and the School of Mineralogy, all branches of Mathematics are studied with such ardour and success, that Humboldt remarks, that the difficulty which the long war caused in procuring instruments of sufficient accuracy, alone prevented him from meeting in all parts of the Country young men capable of performing the nicest observations and most intricate calculations. The pureness of the atmosphere and mildness of the climate have at all times disposed the inhabitants to Astronomy; in later times, Velasquez Gama and Alzate have most distinguished themselves in that Science.

Velasquez Cardenas y Leon. Velasquez Cardenas y Leon, who would do honour to any Age or Country, was first introduced to the true path of study, by accidentally finding the Works of Newton and Bacon; and adding practical to abstract pursuits, he, like Guinand in the present day, set himself to supply the deficiency in the instruments which were within his reach, by grinding lenses and making telescopes and quadrants. At the same time he supported himself by his practice as an advocate, which, Humboldt thinks it worth while to remark, is at Mexico as elsewhere, a more lucrative calling than observing the stars. Appointed Professor at the University, and sent by the Government to California, he amazed the French Academician Chappe de Auteroche, by proving himself superior in scientific attainments to that zealous traveller, and among other services to Science, he made an excellent observation of the transit of Venus, in 1769. The foundation of the School of Mineralogy was owing to his exertions, and its present state throws a lustre on the memory of its founder. It has succeeded in exciting such a zeal for the cultivation of Chemistry, that in all parts of the Country, individuals occur who have the justest and most recent information with respect to the Science. The School possesses a Chemical laboratory, a Geological collection arranged according to the Wernerian system, and an admirable assortment of instruments for experiments in Natural Philosophy, executed by Ramsden, Adams, Berthond, and other eminent artists. The best Treatise on Mineralogy which is to be found in the Spanish Language was first published at Mexico; and the translation of Lavoisier into Spanish first appeared there. A Public Garden is devoted to the advancement of Botany, among the eminent cultivators of which Science Mexico has produced Cervantes, Mocino, and Sesse; the first celebrated for the excellence of his Lectures delivered from the Professor's chair, the other two for the copious and well-arranged collections of the botanical productions of New Spain formed by them in the course of extensive journeys, undertaken by the order of the Government. The Academy of the Fine Arts has had a most important influence in purifying and refining the national taste, as well as in giving to the public buildings of Mexico an air of judicious magnificence not unworthy the greatest Capitals of the European States. It is a singular circumstance, and gratifying to the votaries of the Fine Arts, that their influence alone succeeded in suspending the inveterate prejudices connected with difference of blood.

In the great saloons of the Academy assembled a mixed crowd of some hundreds of Creoles, Mestizoes, and even Indians, who, without the superciliousness of imaginary superiority or the resentment of injured pride, united in the common pursuit of admiring or imitating the unperishing models of Greek and Roman Art. The Fine Arts need never excite the apprehensions of the most jealous Government; and the Court of Madrid, not ignorant of this truth, gave the Academy an income of above £2000 per annum; to this the association of Mexican Miners added £1000, and the Merchants' Company of Mexico above £650. Of these funds an honest and liberal use has been made by the Directors of the Institution. In the spacious building assigned by the State to the Academy, there is deposited a collection of casts from the most valuable antiques, supplied by the Spanish Government at the expense of above £8000, and selected with such judgment that they could not easily be rivalled in Europe. Here in one building may be viewed faithful copies of some of the noblest and most highly-finished productions of the human mind, the Apollo Belvidere, the Venus de' Medici, and the Laocoon, in contrast with the grotesque and rude objects of Azteque Idolatry. Tolsa, Professor of Sculpture at Mexico, has cast in bronze an equestrian statue of Charles IV., which, in the opinion of Humboldt, exceeds any similar production of European Art, if we except that of Marcus Aurelius at Rome. The noblest building in Mexico is the School of Mineralogy, constructed at an expense of £120,000, and throughout the whole city there reigns such an air of magnificence, combined with utility, that Humboldt, though he in a short space of time after his visit to Mexico surveyed Lima, Washington, Philadelphia, Rome, Paris, Naples, and all the great towns of Germany, assures us that none left on his mind such an impression of grandeur as the Capital of New Spain.

In the consideration of the state of the Arts some notice of the enormous hydraulic works constructed for draining the Valley of Mexico ought suitably to find a place. The artificial outlet which bears the name of Desague de Huehuetoca, was commenced in 1607, under the conduct of Enrico Martinez, for the purpose of giving to the waters of the river Guautitlan and Lake Zumpango an exit from the Mexican valley. Of the five lakes of the Mexican valley, that of Tezcuco, whose waters are nearly on a level with the greater part of the metropolis built at its extremity, is the lowest; and as there is no natural channel for the discharge of the waters descending on all sides from the hills enclosing this basin, their accumulation in a rainy season produced inundations which threatened the total destruction of the town. The first expedient was a tunnel, commenced 1607, and, by the labour of fifteen thousand Indians, excavated for the length of 21,450 feet through the hill of Nochistongo, beyond which a channel of 28,000 feet in length discharged its current into the river of Montezuma, which falls 7000 feet to Tampico, where it reaches the sea. The parsimony of the Mexican Government had so restricted the engineer, that he gave the tunnel the breadth of 23 feet and height of 26, dimensions found quite inadequate for evacuating the water which might accumulate so as to raise the level to a dangerous height, and the crumbling earth soon fell down in such quantities, as to render the water-way still more inadequate. It was then thought advisable to arch the tunnel, but in the execution of this plan, instead of an elliptical pipe of masonry, side walls and a vault above were constructed, so that the

MEXICODrainage of
the Valley
of Mexico.

MEXICO. rapid current undermining the foundation, the work in many places fell in, and closed the passage. In 1629, a great inundation laid the streets of Mexico under water, which continued for five years so to overspread them, that all communication between the houses was managed by means of boats, and so great misery resulted, that the Court of Madrid issued orders for abandoning the town, and building another on a more elevated site, a project, however, which, yielding to the representations made of the vast loss of fixed capital resulting from such a measure, was subsequently relinquished, and recourse had to an expedient highly characteristic: supplications were offered to the Image of the patroness of Mexico, the Holy Virgin of Guadalupe, and presently some shocks of an earthquake produced such chasms in the soil, as swallowed the superfluous water. The tunnel was repaired, but being found inadequate, and liable continually to go out of order, it was determined to substitute a canal, and to cut through the whole mass of the hill; and after about one hundred and fifty years of exertion, at various and irregular intervals, this great work was finished in 1798. The section of the current which passes through this excavation varies from eight to twenty square yards, and Humboldt observes that, to secure the exit of such a body of water, the hill has been divided by a channel, which for nearly 3000 yards has a section of from 1800 to 3000 square yards. The total expense of all these operations amounted to £1,300,000, and yet there is no security afforded by them against inundations from the two Southern lakes, which have on several occasions endangered the safety of the Capital, and become every year more formidable, as the bed of the lake of Tezcucio is raised by deposits from the streams which it receives. The whole length of the artificial channel of the Desague is 67,537 feet, for 2624 feet of which the depth of the opening varies from 140 to 200 feet, and its breadth, not any where less than 250 feet, in some places exceeds 350. The Desague has shared in the disastrous consequences of the revolution, and having been quite neglected, is at present obstructed, and of very little efficacy as a drain.

Road from
Vera Cruz
to Perote.

Fortress of
San Juan
de Ulua.

Agriculture
and its pro-
ducts.

Among public works should also be mentioned the great road which the merchants of Vera Cruz caused to be formed from that town to Perote, at an expense of about £620,000, a large sum for the construction of a road not more than 140 miles in length. The fortress of San Juan de Ulua, situated on the little Island which shelters the roadstead of Vera Cruz from the violence of the waves, is built of madrepores and other zoolithes drawn from the bottom of the sea. Since the materials have been obtained by such a laborious process, it will appear the less surprising that the construction of the fortress cost the enormous sum of £8,300,000.

Humboldt remarks that two great mistakes have prevailed among those not intimately acquainted with the state of Mexico; they suppose that the mines are the principal sources of its wealth, and that the working of them is unfavourable to the progress of Agriculture; in refutation of which opinions, he shows that a far greater proportion of the national income is derived from Agriculture than from mines, and that in the mining districts Agriculture is extensively and actively pursued under Physical circumstances which would otherwise have condemned the soil to remain in a state of nature. While the total produce of the mines is estimated at 74 millions of piastres, the value of the

products of agriculture is made to amount to 96 millions. Of these products, undoubtedly the most important is maize, the staple article of diet to the great majority of the natives, and cultivated through nearly all the territory to such an extent, that the whole produce is stated to amount to 3,600,000 quarters. In addition to the abundant nutriment supplied by its grain, the succulent stalks, when crushed, afford copiously sirop, which may be converted by crystallization into sugar, and if subjected to the processes of fermentation and distillation would yield a large proportion of ardent spirit. The various species of European corn are the articles next worthy the notice of the political economist, not from their comparative productiveness, but from the great proportion in which they supply the consumption of the population. Of these by far the most important is wheat, which throughout the portion of the territory lying between the Tropics requires a situation elevated at least 3000 feet to produce such a modification of temperature as may allow the ear to form; as it is found that in hot and maritime tracts it shoots into a tall and rank stalk, never producing grain. In the Northern districts, however, its cultivation is extensively pursued throughout the low country with such success, that Ward states its productiveness in some parts of Sonora at the incredible rate of 240 quarters to one sown. Humboldt mentions that at Cholula it produces from seventy to eighty-fold, and states the average returns throughout the Country in general about twenty-five; whilst that of France, one of the most fertile Countries in Europe, is but five-fold. The whole amount of wheat produced in the Mexican territory is estimated at 1,280,000 setiers. Barley, which generally supplies the place of oats in feeding horses, is cultivated to considerable extent at elevations too great for the production of wheat, and gives a return of about twenty-fold. Of manioc, the banana, potatoes, and yams, we have already spoken. Rice, which might be produced in great profusion, is not much liked by the inhabitants, and, consequently, there is little ground appropriated to its growth.

MEXICO

Maize.

Wheat.

Barley.

Rice.

Vineyards.

The culture of the vine, though discouraged by the Spanish Government, was conducted to considerable extent, and with much success. This department of Agriculture was principally attended to in the Northern Provinces; in Sonora, a white wine is made not inferior to Sherry. During Humboldt's visit, the Viceroy received instructions from the Court of Spain to destroy all the vineyards within his jurisdiction, but the imminent danger of revolt in consequence of such oppression induced him to decline compliance. Such apprehensions were well founded, for subsequently, in 1810, the famous Hidalgo was so exasperated at the destruction of one of his vineyards, in conformity with an order issued by the Government, that he organized and commenced the furious and extensive insurrection which, after various fortune, terminated in the establishment of the independence of Mexico. The olive and all the other fruits of Europe thrive well in the variety of soils and climates which occur throughout the Mexican territory. The sugar-cane is cultivated from the sea-coast to the height of 5000 feet above the level of the Ocean with such activity, that there are some plantations which produce 1,000,000 pounds annually; and such is the fertility of the soil, that Humboldt computes that a square of seven leagues' dimension would be adequate to produce sugar sufficient for the consumption of all France. The inhabitants of Mexico use a large quantity of this article, so that of 50,000,000 pounds

MEXICO. produced in the territory, 35,000,000 pounds are required for home consumption. This branch of Agriculture has retrograded, in consequence of the ravages of the Revolutionary war, which caused the desolation of the plantations and the destruction of the machinery and buildings, but it is rapidly recovering, being found a most profitable mode of employing capital; a fact the more worthy of notice as the work is performed altogether by free labourers. Coffee is little used or cultivated in Mexico.

Vanilla. Vanilla, used to give an aromatic flavour to chocolate, grows both spontaneously and by culture throughout the States of Oaxaca and Vera Cruz, whence is obtained all which supplies the European markets.

Tobacco. Tobacco might easily be produced to a great extent, but the Government claims a monopoly in the right of purchasing from the growers, and in consequence of this discouraging circumstance, the produce is inadequate to the consumption, and the deficiency is supplied by the importation of 50 or 60,000 pounds every year. The revenue derived by the State from the various duties on this plant amount to about £850,000 annually. The *Tierra caliente*, or low tract along the coasts, is admirably suited for the growth of the best cotton, but in consequence of the scarcity of hands in that region little has yet been done; though the cotton planter of Mexico would have a great advantage over the cotton planter of the United States, as he would find it necessary merely to keep the plantation free from weeds, since the cotton wool is in that warm climate produced on a tree of perennial growth, whilst in the Countries to the North of the Gulf of Mexico, the frost every Winter destroys the plant, which must be replaced with the same labour each successive Spring. At present, national industry so little exerts itself in this department that though there is scarcely any cotton wrought up in the Country, in consequence of the superior cheapness at which European fabrics can be imported, the quantity of the raw material exported amounts to no more than 700,000 pounds annually. Of all the departments of Agricultural industry, the most important is that which is directed to the growth of the cactus, which supplies the food of the cochineal insect. The production of cochineal is confined to the State of Oaxaca, though it had formerly been extensive in Yucatan; but about seventy years ago, all the plants of cactus growing in that Province were cut down in the course of one night, an act of devastation asserted by the Indians to have been committed in conformity with an order of Government, which was anxious to enhance the price of the article by increasing its scarcity; and charged by the Whites against the Indians, who, they alleged, did it from a feeling of irritation, produced by the merchants laying a low price on the dye. Of the cochineal insect, *Coccus*, and the mode by which the dye is obtained, we have already spoken largely. The quantity grown yearly in the Mexican territory is variously stated by Humboldt at 911,756 pounds, of the value of 3,303,470 dollars, and by Ward at 743,400 pounds, sold on the spot at the rate of two dollars a pound. Indigo is an indigenous production, and still found wild in many places; but as that dye is produced of a superior quality in Guatemala its growth is neglected in Mexico.

Horses. All the domestic animals of Europe thrive admirably in Mexico. Their horses are hardy, active, lasting, and remarkable for hoofs of such a firm consistence that shoes are scarcely requisite; the scarcity of iron, as well as of skilled labour, renders this a valuable quality. Vast droves of these noble animals roam wild over the desert

plains of the Northern frontier, and in a climate and soil similar to that of Arabia attain, in a high degree, strength, fleetness, and symmetry of form.

The policy of Spain with respect to the manufactures of the Mexican territory was at once oppressive and inconsistent. Whilst it allowed the importation of European goods exclusively at the Port of Vera Cruz, and thus laid the inhabitants of the remoter Provinces under the necessity of procuring their supplies of such commodities by a land-carriage, in some instances of above a thousand miles, performed principally on the backs of mules, it discouraged by all practicable means the manufacturing industry of the natives. To so great an extent was this oppression carried, that, as Ward informs us, in remote districts the landholder, unless possessed of a very large and productive estate, was obliged to mortgage his property piecemeal for the purpose of supplying his family with the plainest articles of manufacture; as he was exposed to the accumulated extortion of monopolists in the Mother Country, and in Vera Cruz to the profits taken by the traders of the Capital and the Provincial markets, and to the great expense of a long land-carriage; and besides this, the scarcity of specie at a distance from the seat of Government compelled him to make his payments principally in kind, at a ruinous depreciation. In consequence of this state of affairs, a considerable proportion of the landed property of the remoter Provinces passed into the hands of the traders of Mexico, Saltillo, and other entrepôts. But though a powerful Government may exterminate a population, it cannot permanently place it under political arrangements incompatible with its existence. The wants of the Mexican population supported to a certain extent some manufactures which required the employment of but a slight degree of skill and capital. The total value of the manufactures of Mexico is estimated by Humboldt at the surprisingly small sum of £1,600,000 annually. This does not include the value of the tobacco and gunpowder prepared for the market, as the supply of these articles is monopolized by the Government. The yearly value of the tobacco sent by Government into the market is stated by Humboldt at the great sum of £1,565,182, an amount the more extraordinary, as he informs us that the Indian portion of the population do not use the plant in any form. There are about 4,000,000 pounds of powder manufactured annually, of which the works at Santa Fé, near Mexico, belonging to the Government, and alone authorized by it, produce above 786,000 pounds, the remainder being manufactured by unauthorized persons, who, in consequence of the vast quantities of sulphur and nitre found in the volcanic districts, have great facility in procuring the materials, and find a ready market for their produce in the mines, the situations of which are often so retired and difficult as to render it nearly impossible to subject them to the close inspection of the officers of the revenue. The principal manufactures left in the hands of the people are those of cotton and woollen cloth for making the large mantles, the favourite dress in the Country; and of soap, the quantity of which manufactured every year amounts to above 5,600,000 pounds. The soda employed in the soap factories is procured from the carbonate of soda, which abounds in the Valley of Mexico and other parts of the Table Land. There are besides a few unimportant manufactories of earthen ware, and in the Capital the art of working gold and silver is carried to very great perfection; so that Humboldt remarks, that the

Manufactures

MEXICO. services of plate, as well as the rich ornaments and the vessels used in the churches of Mexico, are executed there with a degree of skill, taste, and highly finished workmanship, not excelled by the artists of any Country.

extraordinary interest, since, according to Humboldt, the silver exported from the Port of Vera Cruz alone amounts to two-thirds of all extracted from the silver mines of the whole Globe. According to this authority, the average value of all the silver annually obtained from the Mexican mines, and paying the Royal duty, amounted to 21,000,000 dollars, to which should be added, in the estimate of productiveness, about 1,000,000 dollars extracted without paying that charge. The five thousand mines which supplied this quantity are divided by Humboldt into the following groups :

	Marc.
1. The central group containing Guanaxuato, Catorce, and Zacatecas, and affording	1,300,000
2. Group of Durango	400,000
3. Group of Chihuahua	Uncertain
4. Group of Biscaina	120,000
5. Group of Zimapan	60,000
6. Group of New Galicia	230,000
7. Group of Tasco	260,000
8. Group of Oaxaca	Uncertain
Marc. of silver*	2,370,000

These mines occupy a space of about 100,000 square miles. It appears from the above statement that the central group supplies above one-half of the silver of Mexico; Guanaxuato alone affords one-fourth of the silver of Mexico, and one-sixth of that of all America. It also results that the other mines of Mexico must be far less productive, so much so, that nineteen-twentieths of the shafts at present worked do not altogether produce more than 200,000 marcs of silver. The thirteen richest mines are thus ranked by Humboldt according to the order of their productiveness.

Guanaxuato.	Tasco.
Catorce.	Batopilas.
Zacatecas.	Zimapan.
Real del Monte.	Fresnillo.
Bolanos.	Ramos.
Guarisamey.	Parral.
Sombrerete.	

They are, with scarcely any exception, placed either on the Table Land or on the Western slope of the Cordilleras, and the ore occurs for the most part in the form of veins penetrating the primitive and transition rocks, being rarely found in those of secondary formation. Their situations are elevated from 6000 to 9500 feet above the level of the sea. The great productiveness of the Mexican mines does not result from the richness of the ore, but from its abundance and the ease with which it may be procured, for the average produce is four ounces of silver to a quintal of the ore. The mine of Guanaxuato, as has been already stated, produced silver to the enormous amount of £58,300,000 between the years 1600 and 1803. The mine of the Count of Valenciana, at Guanaxuato, furnished in four years, from 1787, silver to the amount of £3,474,000 : no less productive, for a short time, was the *rela negra* of Sombrerete, which in the space of a few months gave the

Fagoaga family £830,000. Catorce, discovered in MEXICO. 1778, produced in the first year above £330,000. The Count Valenciana, the proprietor of the richest mine in existence, for it has in some years produced silver

speculations as a penniless adventurer from Spain. Obregon, (for such was his name before receiving his title,) after some fruitless labour in working the mines of Guanaxuato, by good fortune, or guided by his sagacity, struck upon the vein which in a short time made him one of the richest men in existence. The expenses of working those mines have of latter years been enormous, as the construction of the principal shafts cost above £250,000, and the annual disbursements amount to about £200,000 annually; still, such is the productiveness, that the net profit resulting to the proprietors has seldom been less than £200,000. The Count of Regla, in a few years after he commenced working the mine of La Biscaina, drew from it a clear profit of above a million; and subsequently obtained such vast wealth, that he presented to Charles III. of Spain two ships of war, the largest carrying 112 guns, and lent the Court of Madrid £208,000, which have remained unpaid. The whole amount of silver produced by all the Mexican mines from 1492 to 1803 is computed by Humboldt at £443,633,000. This able judge expresses his conviction, that the quantity of the produce of the mines might be trebled; and the researches of Ward so far support this hypothesis, that they point out an increase of the average in the years immediately previous to the Revolution from 23,000,000 to 24,000,000 of dollars. In consequence, however, of the effects produced by the Revolutionary war, in interrupting regular labour, in destroying machinery, and in withdrawing of capital, the yearly average fell so low as 10,487,986 piastres. The capital withdrawn by the Spaniards on the separation from the Mother Country is estimated at 36,500,000 dollars; and to supply a deficiency, ruinous immediately to the mining interest, and more remotely through it to the interests of Agriculture and Trade, the Congress of Mexico passed a decree, admitting foreign adventurers, under very advantageous conditions, to become shareholders in the property of the mines of its territory. This permission was eagerly accepted, and seven English Companies, one German, and two American Companies, were formed for working the mines of Mexico.

Count Valenciana.

Count of Regla.

Admission of foreign adventurers.

	Capital.
The Real del Monte Company	400,000
Bolanos Company	200,000
Halpujahuat Company	400,000
Anglo Mexican	1,000,000
United Mexican	1,200,000
Mexican Company*	
Catorce Company	60,000
	£3,460,000

American Company of Baltimore*	
American Company of New York*	
German Company of Eberfeld	£127,000

The capital of these Companies, though considerable, is found to be inadequate to the exigencies of their undertaking, as it does not exceed one-third of the loss of fixed and circulating capital, in consequence of the events of the Revolutionary war. Accordingly the spectator is struck by the contrast between the comparatively

silver
mines.

insignificant efforts made by the foreign Companies and the vast works of the Spanish miners, the former existence of which is proved by their ruins. The proceeds of the mines in the hands of these proprietors have also been limited by their ignorance of the circumstances of their introduction of foreign labourers instead of employing the experience and activity of those of the native race, and by a general and injudicious substitution of European machinery for that previously used throughout Mexico. The measures of the German Company participated least in these errors, and hence their operations have been more lucrative; since in the first year, whilst their plans were in a state of imperfect effectiveness, they acquired a profit of twenty-five per cent. on their capital, and the most competent judges were of opinion that it would soon amount to cent. per cent. The English Companies have generally profited by their dear-bought experience, and so far altered their measures, that whilst the management of the mining operations continues in the hands of Europeans, the execution is left to the native labourers. Of the English Companies, that of Halpujahu had from the commencement of its operations acted on this principle, and experienced accordingly its beneficial results. The alarm and disinclination felt during 1826 in England for all bold speculation, combined with the disappointment caused in consequence of the returns of the expenditure necessarily having some delay, generally induced the English Companies to meditate the sacrifice of the funds which they had already invested in these speculations, and to withdraw from their undertakings, whilst the Mexicans looked forward to reaping the fruits of their labours, and continuing to carry into effect the abandoned projects. Fortunately for the English Companies their despondency has not lasted, and all have a prospect of deriving a great and permanent income from their mines; inso-much, that it is generally expected that the annual produce of the Mexican mines will in a few years exceed that of the period of greatest former prosperity. The general terms of the contract made by the foreign Companies were, that the capital invested by them should first be repaid, and subsequently the profits shared equally between them and the original proprietors. Thus there appears little risk of failure resulting from the unproductiveness of the mines; and the rational apprehensions of the proprietors need only be directed to Civil commotions, and the danger that the great prosperity of mining operations may tempt the Government of the Mexican Republic to lay upon them heavy duties. Those acquainted with the state of the Country assure us that the People are heartily tired with war, so that however violent the struggles for supreme power in the Capital, their disturbing influence will be confined to it, and the inhabitants of the States at large will be left to pursue their private interests unmolested. As the natives are co-proprietors in the mines, Ward is of opinion that the great weight of their influence, and the general conviction of the vast advantage derived to the Country at large from an active state of mining operations, will prevent any attempt to throw an unfair burden on the income derived from them.

There is a fact connected with the Geographical position of the deposits of silver ore throughout the Mexican territory, likely to effect a considerable change in the Mineralogical operations and trade of that Country, and to exert some influence all over the civi-

lized world. The unanimous authority of the native miners represents the greatest mineral wealth of Mexico as commencing to the North of the 24th degree of North latitude, at the very line where the labours of the Spanish miners terminated: so that if this opinion be well founded, the richest deposits of silver that have existed, or probably are at present in existence, are still untouched by human labour. The causes of this singular circumstance resulted from the monopoly enjoyed by the Mint of the Capital, which, in a Country where communication is maintained by remote land-carriage so operated that the small quantity of silver raised in the remote Northern Provinces was sold there for one-half of the Mint price. In addition to the necessity laid on the miners of the Northern Provinces to convey the silver which they extracted above a thousand miles, and to reconvey it the same distance before they could bring it into circulation in their own neighbourhood, they were under the necessity of obtaining both the mercury and gunpowder (of both of which great quantities are used in the Mexican mines) under circumstances no less disadvantageous. The States of Durango, Sonora, Chihuahua, and Sinaloa, contain vast deposits of silver ore hitherto but little known, but holding out wherever they have been tried a promise of riches superior to any that Mexico has yet produced. The ores of Santa Juliana, in Sonora are fifty times richer than those of Guanaxuato, which has supplied a greater quantity of silver than any other mine in existence. In some instances at Batopilas, in the State of Chihuahua, the ore, a quartz impregnated with silver, yields above one half of the pure metal. The ore of San Dimas, in Durango, is above thirty times richer than those of Guanaxuato. Documents preserved in the archives of the Treasury at Madrid state, that at Arizona, lying far to the North, several masses of silver were found, and that amongst them one was ascertained to have weighed twenty-seven pounds. The quantity of gold supplied by the mines of Mexico is far less important than that of silver. It is generally obtained in Sonora by washing the earth, and masses have sometimes occurred which weighed six pounds. In Oaxaca it is generally found in veins of quartz impregnated with the metal, and few of the silver ores are totally devoid of an admixture of gold. In one of the mines of Guanaxuato there are sometimes found veins of clay so richly impregnated with gold, that the miners, after leaving the mine, though they are nearly naked, are compelled to bathe and wash themselves in tanks, provided with a view to prevent them from carrying off any of the precious earth. In general, however, the silver of this mine contains but three ounces of gold in every thousand ounces. The quantity of gold supplied by Mexico is estimated by Humboldt at £206,966 annually. Mercury, in the form of cinnabar, is to be met with in many parts of the Mexican territory; but in consequence of the injudicious process adopted for its extraction the mines have not been successfully worked, and Mexico has always been dependent on Europe for the supply of this mineral, so important to its mineralogical operations. The ores of copper, iron, and lead abound; tin is obtained in small quantities in the alluvial earth of Guanaxuato. Zinc, arsenic, antimony, cobalt, and manganese also occur; no platina has as yet been discovered. The ancient Mexicans, by a judicious admixture of tin, produced an alloy of copper so hard at once and tough, that it was no contemptible substitute for iron in the formation of cutting tools.

MEXICO.

Gold.

Mercury.

Other ores.

MEXICO. Up to the commencement of the Revolution the foreign trade of Mexico was strictly confined to the Port of Vera Cruz on the Eastern, and that of Acapulco on the Western coast. In consequence of this oppressive regulation the whole of the exports from the Mexican territory to Europe, exclusive of the precious metals belonging to the crown, amounted but to £2,329,451 annually; and of this sum £1,748,143 consisted of the precious metals exported on the account of private merchants. The average value of the imports was £2,159,216. At present the whole extent of the coast may be visited by foreign vessels; and on the East there are the Ports of Sisal, Campeche, Isla del Carmen, Guasacoalco, Alvarado, Vera Cruz, Tuspan, Pueblo, Viejo de Tampico, Tampico de las Tamaulipas, Santander, Refugio, San Bernardo, and Galveston. On the West the Ports are San Blas, Mazatlan, Guaymas, and Acapulco. The effect of the Revolutionary war was so injurious to commerce, that in 1823 the exports fell to one-third of their former amount. In 1824 the amount of the exports and imports was not inferior to those of the most prosperous year previous to the Revolution, and they have since been steadily and greatly increasing. In 1823 the number of vessels which entered the Ports of Mexico did not amount to 200; in 1826 their number increased to 1273. Such has been the increase in the consumption of European wares, that Ward concludes that it exceeds its former amount tenfold. At present, in consequence of the weakness of the Government and the vast extent of frontier, one-third of the goods brought into the Mexican market is computed to be smuggled; and the Lower House of Congress sought to apply the proper remedy by reducing the Customs fifty per cent., but the proposal was rejected by the Senate. The duties at present paid are regulated by a tariff established since the Revolution. All goods imported in general pay a duty of twenty-five per cent.; and when carried inland are subject to an additional charge of fifteen per cent., besides three per cent. levied by the States in the territories of which each article may be consumed. Mercury, surgical and mathematical instruments, machinery, books, drawings and casts, music, seeds and plants, flax, and all animals, are admitted free of duty. Gold and silver unwrought are not permitted to be exported. The following are the duties payable on exportation:—

	Per cent.
Gold coined	2
Gold wrought	1
Silver coined	3½
Silver wrought	3
Cochineal	6
Vanilla	10

There is great room for improvement in the financial regulations of the Mexican Government, which, in consequence of its necessities and inexperience, has passed many ordinances highly detrimental to the commercial prosperity of the Country.

New Government. The founders of the present Political Constitution of the American Republic have been mainly guided in their legislative labours by observation of the beneficial provisions of the legal systems of England and the United States of North America. The form of government is that of a Federal Republic, established on the 4th of October, 1824; and whilst it leaves each Constituent State at liberty to manage its internal concerns, it binds all into one Political Body, for the effecting of such

objects as may be indispensable for the welfare of the whole.

The Federal Constitution declares the unqualified independence of the Country.

It recognises the Roman Catholic Faith as the Religion of the State.

It admits, as the Constituent States of the federation, the nineteen Districts of Chiapas, Chihuahua, Cohahuila with Texas, Durango, Guanajuato, Mexico, Michoacan, New Leon, Oaxaca, Puebla de los Angeles, Queretaro, San Luis Potosi, Sonora with Sinaloa, Tabasco, las Tamaulipas, Vera Cruz, Xalisco, Yucatan, and Zacatecas. There are besides, the territories of Old California, New California, Colima, New Mexico, and Tlascala; each of which, in case it shall attain a population of 80,000 inhabitants, is entitled to become a Constituent State, and as such be duly represented in the Federal Congress.

The Federal Congress consists of two Houses, the Senate and the House of Representatives.

The Senate is composed of the aggregate of two Members supplied by each State, and elected by the majority of the votes in the Legislative Assembly of that State. Of these two Members one holds his place for four, the other but for two years; each must be thirty years old. The House of Representatives is composed of Members elected by the citizens of each State in the proportion of a Member for each 80,000 inhabitants; and when the excess above this exact number shall amount to 40,000, it still entitles the State to return an additional Member: thus a State having 130,000 inhabitants will return two representatives as well as a State having 190,000. A representative must be twenty-five years old; if not a Mexican he must, in case he be a native of any other of the Countries of America formerly belonging to Spain, have resided three years in the Mexican territory: all other persons must have resided eight years to acquire the quality of eligibility. Each Member has a yearly salary of 4000 dollars, and cannot be made responsible for any opinions which he may utter in his representative capacity. The Congress meets every year on the 1st of January, and closes its session on the 15th of April.

Any proposal regarding taxes, or money to be levied or disposed of, must originate in the House of Representatives, but all other laws may be proposed either there or in the Senate. The concurrence of both Chambers is required before a law can be transmitted to the President. If he approve of it, he affixes his signature, which immediately gives it the force of law: in case of disapproval, he must within ten days send it back to the Chambers with his observations; when, if it be still sanctioned by a majority of two-thirds of the Members of both, the President must sign and publish it without any further remonstrance. Each House can take cognizance of accusations alleging treasonable charges against the President and other great officers; and having taken them into consideration, provide that they shall be submitted to the proper tribunals. The Congress possesses all the powers of Government: its principal functions are, to maintain the Federal Union of the States, and their independence of each other; to incorporate new States into the Union; to raise taxes and regulate their disbursement; to coin money, to declare war, to guard the liberty of the Press from suspension or suppression in any part of the Mexican territory; and ultimately to sanction all Treaties, and to enter into negotiations with the See of Rome respecting the Religious establishment of the Republic.

Constituent States.

Senate.

House of Representatives.

Powers of Congress.

MEXICO.

The President.

The President cannot be considered as possessing any share in the Legislature, being in fact as devoid of influence as was the Doge of Venice at the period when the Aristocracy of that State was most vigilant, and possessed exclusively the powers of the Government. He must be a native of Mexico, and thirty-five years of age. The election rests with the Congresses, which regulate the affairs of each Constituent State: each of those Assemblies naming two candidates, one of whom, at least, must not be a native of the State selecting him. If any individual obtain a majority of votes, he is declared President; but should it happen that two or more had an equal number of votes, the House of Representatives makes choice between those competitors, and in case the voices of that Assembly prove equally divided, the matter is ultimately determined by lot. Twelve great judicial officers, selected in the same manner as the President, but holding their places for life, unless they forfeit them by some delinquency, constitute the Supreme Tribunal, which distributes justice in all cases which could not properly come under the cognizance of the judicature of any separate State. It takes cognizance of all disputes between Constituent States, of all crimes against the Federal Government, and of impeachments against the President and other great officers of the State, being itself subjected to the jurisdiction of a Tribunal appointed by the House of Representatives. All the barbarous provisions of the feudal law are strictly excluded from the Mexican code. There is no law declaring attain of blood in consequence of crimes: the infamy attaches to the offender alone, and is not accompanied by confiscation of property, nor is torture admitted on any pretence whatever.

Supreme Tribunal.

Armed force.

The army of Mexico consists of troops of the line and militia, divided into the regiments in actual service, and such as, though enrolled and disciplined to a certain extent, are allowed to retire to their homes while their services are not requisite. The present numerical force is as follows:

Troops of the line:	
Artillery.....	1,178
Infantry.....	10,796
Cavalry.....	10,814
Total.....	22,788
Militia in actual service.....	9,373
Total force under arms.....	32,161
Militia armed, and in some degree disciplined, and liable to be called on to serve in the army of the State.....	26,789
Total applicable on an exigency to the purposes of national defence.....	58,950

In consequence of the jealousy which the Government entertains of the army, there is an intention of reducing it to three-fourths of its present number.

The security of the Republic from foreign aggression is greatly increased by the difficulty of landing an army on its shores, by the great obstacles to conducting a large force to the Table Land from the *Tierra caliente*, and by the climate of this low tract, so deadly to the constitution of foreigners, that it would in a short time effect the destruction of a numerous army.

The navy consists of one ship of the line, two frigates, a corvette, four brigs of war, a schooner, and four gun-boats. As the greater part of the coast is

unfavourable to navigation, and the population very scanty in that part of the territory which borders on the sea, this force is not likely for a long time to receive any accession.

The revenue of Mexico previous to the Revolution was computed to be not less than 20,000,000 dollars annually, derived from duties on the precious metals, monopolies of mercury, tobacco, and gunpowder, sale of indulgences, Indian capitation-tax, import and export duties, and post-office. Under the Government of the Republic the capitation-tax, amounting to 1,300,000 dollars, and duties on gold and silver amounting to 5,500,000, have been abolished, and it is proposed to supply the resulting deficiency by the increase in the duties on exports and imports.

The revenue of the Federal Government is at present estimated as follows:

	Dollars.
Importation duties.....	8,000,000
Monopoly of tobacco.....	2,500,000
Contingent or extraordinary contribution paid by the Constituent States to the support of the Federal Government.....	1,573,756
Monopoly of gunpowder.....	250,000
Post-Office.....	320,000
Lottery.....	120,000
Monopoly of salt.....	75,000
Mint.....	250,000
Crown estates seized at the Revolution.....	70,000
Duty on exportation of the precious metals.....	75,000
Miscellaneous sources.....	698,074
	13,931,830

Against which there is a charge,

For the army.....	9,073,932
Navy.....	1,309,045
Interest on public debt.....	2,109,600
Miscellaneous charges of Government.....	3,466,265
Total.....	15,958,842
Leaving a deficiency of.....	2,027,012

Proposed to be met by reductions in the army and navy estimates.

Though the third Article of the Federal Constitution has declared the Roman Catholic Religion exclusively that of the State, the spirit of the Government with respect to matters of Faith is liberal, though cautious in offending the feelings of the People. This freedom from bigotry has resulted not so much from the bold opinions which they have derived from the French school, whence they drew many of their Political principles, as from their having always been accustomed to view Ecclesiastical power in the last resort, exercised not by a spiritual, but by a temporal personage; for in consequence of a Papal Bull, issued 1502, the King of Spain was constituted Head of the American Church, and from that time forward all communications made by the Pope to the inhabitants of Spanish America, were previously sanctioned, and ultimately published, solely by the Royal authority. The Kings of Spain, sheltering their consciences under the power of an infallible Church, which had conferred on them this great prerogative, had steadily and effectually resisted the frequent attempts of the Popes to interfere immediately in the spiritual affairs of Spanish America; and when the Royal power was overthrown in Mexico, the Government then established naturally considered itself as succeeding in a consider-

State of the Religious establishment.

MEXICO. able degree to the Ecclesiastical functions which had been previously held by the Court of Madrid. In 1824, the Pope addressed a circular Bull (*Encuclica* as it was styled) to the Clergy of Spanish America, exhorting them to unite in leading back their flocks to obedience to the King, whose power was founded on Divine right, and inseparable from the preservation of the authority of the Holy See. The Congress published this instrument with an address to the nation, wherein a distinction was drawn between the temporal and spiritual power of the Pope, and an intimation given that even the spiritual power might be lost by an unjustifiable exertion of it. These opinions were received favourably among the people of all classes, with scarcely any exception. Encouraged by this demonstration of the feelings of the nation, the Congress sequestered the revenues of the Primate and several other Ecclesiastics who had emigrated, and thus seized on an annual income of 371,148 dollars. The Republican Government, however, has not yet ventured to exercise the patronage formerly possessed by the Crown, and as it has not succeeded in negotiating the *Concordat* with the See of Rome, the Country, although the population in general is devotedly attached to the Roman Catholic Religion, may be considered as having its Religious establishment in a good measure suspended, since a great proportion of Ecclesiastical dignities and benefices are vacant. Of ten Bishoprics nine are vacant, and of one hundred and eighty-five Prebends and Canonries, seventy-nine are vacant. This state of affairs has caused a strong and extensively diffused feeling in favour of the establishment of an independent national Church; and the jurisdiction of the See of Rome is still further threatened by the growing spirit of infidelity, or at least indifference on matters of Faith, which may be observed, especially among the younger members of the community, and which naturally resulted from the great abuses which prevailed in the Ecclesiastical establishment. Whilst some of the great dignitaries possessed annual revenues of above 100,000 dollars, the *Curas*, the most meritorious and useful of the Ecclesiastical body, were left to languish on incomes of 100 or 150. Even this small income was obtained by means discreditable and painful to the moral feeling of the incumbent as well as oppressive and pernicious to the spiritual welfare of the congregation. It resulted principally from fees so exorbitant, that an Indian peasant, in some of the Dioceses, must on his marriage pay twenty-two dollars to the *Cura*. If the peasant be not much under the influence of scruples, he, in case of inability to make up such a sum, cohabits with the object of his attachment without any previous ceremony; but if his Faith be very sensitive, he borrows or steals the means of satisfying the demands of the Priest. In the mining district each miner pays yearly three dollars and a quarter to secure the performance of Religious rites at his funeral. Some facts are worthy of mention, as strikingly illustrative of the change of Religious feeling in Mexico. In all the Republic no more than eighty-seven individuals are at present serving their novitiate for the profession of Monastic orders, and the whole amount of contributions to the one hundred and fifty Convents is less than formerly had been obtained by one. It is also a striking proof of the slight importance attributed by Congress to Ecclesiastical jurisdiction, that, most jealous as they are in limiting the power of the President, they have not hesitated in conferring on him the authority of rejecting or sanctioning the Papal Bulls.

VOL. XXV.

In the Congresses of some of the Constituent States, laws had been passed for seizing the property of the Church, although subsequently the interference of the Federal Congress caused them to be reversed; but very generally the cognizance of all causes between the Laity and Clergy have been transferred from Ecclesiastical to Lay tribunals. Still by the existing law, although scarcely enforced, toleration forms no part of the Mexican Constitution; no Religion but the Roman Catholic can be exercised, marriages are not permitted between Protestants and Roman Catholics, and the profession of the Faith declared to be that of the State is indispensable to any one seeking to become a citizen of the Mexican Republic.

The following Tables will present a compendious view of the present state of the Religious establishment in Mexico. Number of the Clergy.

Ecclesiastical Institutions.

Archbishopric.....	1
Bishoprics.....	9
Convents.....	150
Curacies attached to Convents.....	40
Missions attached to Convents.....	106
Cathedral Churches.....	10
Collegiate Church.....	1
Colleges de Propagandâ Fide.....	6

Archbishop.....	1
Bishops.....	9
Canons and Prebends.....	185
Parochial Clergy.....	3677
Regular Clergy.....	1913
Members of the Colleges de Prop. Fide.....	307

Total of Ecclesiastical personages.... 6092

If this estimate which Ward gives of the number of the Clergy of Mexico be correct, it shows a great diminution from the time of Humboldt, who states their number at 10,000.

The property of the Mexican Clergy consisted, in the first place of tithes, amounting to the annual average of 1,835,382 dollars; secondly, of landed property, so limited in its amount as not to exceed in value 3,000,000 dollars; thirdly, property in the singular form of a capital in money accumulated by the misapplication of charitable donations and bequests, and as the income always greatly exceeded the charges allocated on it by the managers, this fund before the Revolution amounted to 44,500,000 dollars, but has since been reduced by the effects of that political convulsion to 20,000,000 dollars. It is lent to landed proprietors on the security of mortgage of their lands. From those funds the following incomes are assigned to the Bishops:

	Dollars.
Archbishop of Mexico.....	130,000
Bishop of Puebla.....	110,000
Valladolid.....	100,000
Guadalajara.....	90,000
Durango.....	35,000
Monterey.....	30,000
Yucatan.....	20,000
Oaxaca.....	18,000
Sonora.....	6,000
Chiapa.....	not ascertained

Total..... 539,000

U

MEXICO.

Political divisions.

The territory of the Federal Republic of Mexico, containing 118,478 square leagues, is at present divided into the following States and Districts, with a population estimated at eight millions :

	Square leagues.	Inhabitants in 1803.
1. Mexico, and { formed out of the former Intendancy of Mexico, amounting together to	5,927	1,511,800
2. Queretaro, {		
3. Puebla de los Angeles.....	2,696	813,300
4. Guanaxuato	911	517,300
5. Valladolid.....	3,446	376,400
6. Guadalajara, from which a small portion, about one-tenth, has been severed, and declared the District of Colima	9,612	630,500
7. Zacatecas	2,255	153,300
8. Oaxaca.	4,447	534,800
9. Yucatan	5,977	465,800
10. Vera Cruz, { formed out of the former Intendancy of Vera Cruz, and		
11. Tabasco, { collectively containing.....	4,141	156,000
12. Chiapa, {		
13. San Luis Potosi, { formed out of the former Intendancy of San		
14. Cohahuila & Texas, { Luis Potosi, and containing collectively....	27,821	334,900
15. New Leon, {		
16. Tamaulipas, {		
17. Durango, { formed out of the former Intendancy of Durango, and		
18. Chihuahua, { containing collectively	16,873	159,700
19. Sonora and Sinaloa	19,143	121,400

Territories, the population of which has not reached the number entitling them to send Representatives to the Federal Congress :

1. New Mexico	5,709	40,200
2. Old California	7,295	9,000
3. New California	2,125	15,600
4. Tlascala, (population and extent included in those assigned to Puebla de los Angeles.)		
5. Colima, (population and extent included in those assigned to Guadalajara.)		

Of the above States, CALIFORNIA OLD and NEW, DURANGO, GUANAXUATO, and GUADALAXARA, have already been described separately, according to our alphabetical arrangement.

State of Mexico.

The State of MEXICO ranks first in importance amongst those of the Federation, containing the most numerous population, both absolutely and in proportion to the extent of its territory, as well as the principal City of the Republic and the seat of its Government. The Pacific forms its Western boundary for 270 miles, and the parts adjacent to that line of coast, amounting to about a third of the extent of the State, are sultry, unwholesome, moist, and fertile. The remaining two-thirds lie on the Table Land, or the ascent to it, and have the character usually found in that region. The highest mountain is that of Toluca, which has an elevation of 15,018 feet, and retains snow on its summit throughout the year, except during the rainy months of November and October. The principal towns are MEXICO, with a population of 137,000 ; (see *infra*;) *Tezcuco*, 5000 ; *Hachco*, remarkable for the magnificent Church built by Laborde, a French adventurer, at an expense of above £80,000. After amassing a vast property by successful operations in the mines, Laborde, by this and similar acts of imprudence, was reduced to poverty, but resuming his early pursuits, he again realized a very great fortune. *Acapulco*, formerly the only port allowed by the Spanish Government to be frequented on the Western shore of Mexico, is at present the principal port on that side of the State ; it contains a population of about 6000, and exhibits a singular work of Art, a cut made through the rocky hills which surround the haven, and admitting the sea-breeze to mitigate the suffocating and dele-

terious effects of the air, previously pent up in the deep basin, at the bottom of which it lies. *Pachuca*, where is situated the celebrated mine of Real del Monte.

The State of QUERETARO lies entirely on the Table Land ; its principal town, bearing the same name, has a population of 35,000, and is remarkable for the beauty of its buildings, as well as for some degree of manufacturing activity. The principal mines are El Doctor, Maconi, and San Cristoval. The country generally consists of extensive plains, in some instances fifty miles in length and twenty in breadth.

The State of PUEBLA DE LOS ANGELES has probably four-fifths of its territory situated on the Table Land. That part extending from the Western slope of the Cordillera to the Pacific, along the shore of which it extends for about 120 miles, is nearly desert, although admirably suited by nature for the cultivation of the most precious productions of Tropical climates. The Table Land produces the most abundant crops of wheat, maize, and maguëy. The volcano Popocatepetl, the highest mountain in the Mexican territory, and, with the exception of Mount St. Elias, in all the extent of North America, is situated in this State. Its summit, reaching an elevation of 17,550 feet, is covered with perpetual snow. In this State is situated the Great Pyramid of Cholula. The principal places are *La Puebla*, the Capital, containing 65,000 inhabitants, and founded by the Spaniards in 1531, and *Cholula*, with a population of 16,000. Within the limits of this State is included the territory of *Tlascala*, containing 59,000 inhabitants, remarkable for retaining the impatient and independent spirit of their ancestors, but at present exhibiting it principally by a restless and litigious disposition. The town of *Tlascala*, once so powerful and populous, now contains but 3400 inhabitants.

VALLADOLID extends principally over the Western slope of the Andes, here more gradual than on the Eastern side. It is bounded by the Pacific for a distance of 600 miles, and the part adjoining the coast has the quality invariably attending such situations in Mexico, heat, fertility, and insalubrity. The greater part of the territory, however, possesses a delightful, healthful, and temperate climate. The highest mountain is that of Taucitaro, often, though not always, covered with snow. It likewise contains the volcano Jorullo, a phenomenon bearing evidence of one of the greatest Physical events presented by the records of the Globe.* *Valladolid*, the Capital, contains 18,000 inhabitants, *Pascuaro* 6000. *Huitzitzilla*, the ancient Capital of the Kingdom of Michoacan, the boundaries of which in a great measure coincided with those of the present State, has a population of 2500. The State contains the mines of Zita-guao, Aganguero, Tlapudahua, Real del Oro, and Inguaran.

The State of ZACATECAS lies entirely on the Table Land, and although the soil is rugged, parched, and barren, the climate cold and disagreeable, the richness of its mines gives it a high degree of importance. The soil is in general saturated with the muriate and carbonate of soda, which are also found in abundance in nine small lakes scattered over the district. The principal towns are *Zacatecas*, the Capital, containing a population of 40,000, *Fresnillo*, and *Sombrerete*. It contains the celebrated mines of Sombrerete and Zacatecas,

MEXICO. besides those of Sierra de Pinos, Chachiguitec, and Mazapic.

Oaxaca.

The State of OAXACA is celebrated for the beauty of its scenery, purity of air, fertility, and civilization, considerable in degree, and commencing at an early period. From one point, the Cerro of Sempualtepec, 7600 feet high, the spectator can view the Gulf of Mexico and the Pacific. The climate is rather moist, and the vegetation consequently remarkable for luxuriance, the most striking instance of which is the famous cypress of Santa Maria del Tule, measuring 117 feet round the trunk. In this State much the greater part of all the cochineal of commerce is produced. Its principal towns are *Oaxaca*, the Capital, with a population of 24,000, and *Tehuantepec*, where an inlet of the Pacific forms a haven, and offers, in conjunction with the river Guasacualco, falling into the Gulf of Mexico, a facility of communication between the two Oceans, separated here by intervening land about 120 miles in breadth.

Yucatan.

The State of YUCATAN extends over the Peninsula of the same name, with the exception of the part occupied on the Eastern shore, by the British settlements on the Bay of Honduras, where the facility of procuring log-wood and mahogany have induced a mixed race, under the protection of Britain, to build towns, and push their operations up the Country with such activity, that they have navigated the river Balize for 200 miles from its mouth. It is one vast plain, except where a chain of hills, slightly elevated, traverses it from North-East to South-West. The climate, although one of the hottest in the World, is healthy, insomuch that invalids from the West Indian Islands visit it for recovery. This salubrity is owing to the dryness of the atmosphere and soil, which is so great, that fresh water is no where to be met with for above 150 miles along the Western and Northern shores. Near the mouth of the Rio Lagartos a singular phenomenon may be observed. At about a quarter of a mile from the shore a copious spring of fresh water bursts up amidst the sea water. The only important articles of commerce are wax, brazil-wood, log-wood, and mahogany. The increase of population has been checked by the Spanish Government, which, to render communication with the English contraband traders more difficult, removed the inhabitants from the Eastern part, and concentrated them on the Western shore. The principal towns are *Merida*, the Capital, with a population of 10,000, *Campeche*, the sea-port of the State, with a population of 6,000, and *Valladolid*.

Vera Cruz.

The State of VERA CRUZ possesses great importance, in consequence of containing the harbour bearing the same name, and forming the principal means of communication between the territory of the Republic and the rest of the World. With a sea-coast of 400 miles, it possesses every variety of climate, from the suffocating heat of the port of Vera Cruz to the frosts of Perote, and in consequence of the steepness of the Cordillera in this part, the traveller may experience all these changes in the course of a day's journey. Although very fertile, it is thinly peopled, in consequence of the unhealthiness of the climate, as well as of the preference given both by the Spaniards and Indians to the Table Land as a place of residence; yet such is the demand and encouragement for labour at Vera Cruz, that an unskilled labourer earns five shillings a day, and a mechanic three times that sum. It contains the volcano of Orizaba, having an elevation of 17,208 feet, and the Coffer of Perote, 13,289 feet high, and familiar to navigators as the first

land seen when approaching the coast of Mexico. The mountain of Tuxtla, also within the limits of this State, is subject to violent volcanic eruptions, during one of which, in 1793, the ashes and noise produced by the volcano reached to places above 180 miles distant. The principal towns are *Vera Cruz*, protected by the strong fortress of San Juan de Ulua, seated on a small island lying before the city. The population is 30,000. *Xalapa*, well known in commerce as the place supplying the greater portion of the valuable drug to which it has given name, and celebrated for the genial atmosphere and beautiful country in which it is placed. Its population is 13,000. *Tampico*, an important sea-port at the mouth of the river of the same name; its population is 20,000. *Papantla*, population 8000.

The States of TABASCO and CHIAPA are thinly peopled and their inhabitants poor, and generally in a low degree of civilization. The soil is fertile and well watered by numerous streams, but the great imperfection of the sources of information respecting these districts renders it impossible to give any full or satisfactory information concerning them. Tabasco does not contain any town of importance, except *Villa Hermosa*, the Capital. The principal towns of Chiapa are the Capital, bearing the same name as the State, and *Ciudad Real*.

The extent of the State of SAN LUIS POTOSI is probably not a tenth of the Intendancy which formerly bore the same name. It is important on account of its valuable mines, and is the great channel for supplying the vast districts on the North and West with imported goods. It is very fertile, and the proprietors generally employ their estates in breeding cattle, especially horses and mules, which are produced in so great abundance as to supply the demand for them from all the Southern States of the Federation. *San Luis Potosi*, the Capital, the only town of importance, contains 50,000 inhabitants, a considerable proportion of whom are employed in manufactures. The principal mines are La Purissima, Catorce, Cerro de San Pedro, Cerro de la Leona, and Real de Charcas.

The State of COAHUILA and TEXAS, at present thinly peopled and possessing little wealth or importance, is likely, at some future period, to be the most opulent, powerful, and civilized in the Federation; from the advantages of a soil of surprising fertility, a great facility of internal communication by means of the numerous rivers intersecting it, and a Geographical position highly favouring its intercourse, both with the Anglo-American Union and the Old Continent. It has a sea-coast of 350 miles long, affording, by means of the numerous rivers which disembogue along it, intercourse at a great number of points with the Gulf of Mexico. Although the mouths of these rivers seldom admit vessels drawing more than ten feet of water, the Red river has depth sufficient for ships of 400 tons. Most of the productions of Tropical climates grow here in as great perfection as in any part of the World; cotton in particular is equal to the finest produced in the United States. The population is rapidly increasing by the influx of settlers from the Anglo-American Union, and this colonization is anxiously encouraged by the Mexican Government with doubtful policy, as such settlers will unquestionably favour the views entertained by the Cabinet of Washington for extending the frontier of their Republic in this direction. The name of town is scarcely applicable to any post at present existing in this extensive tract; the principal are *Cohahuila*, *San Antonio de Bejar*, and *Monclova*.

MEXICO. The scanty information which can be obtained respecting the State of *New Leon* prevents more than an enumeration of its principal towns; which are *Saltillo*, with a population of 6000, and a place of importance as being the great entrepôt of imported goods destined for distribution over the Northern Provinces; *Monterey*, a Bishop's See; and *Linares*.

Tamaulipas. **TAMAULIPAS** is a narrow tract extending for 300 miles along the coast of the Gulf of Mexico. A chain of long, narrow, and low islands accompany the shore through its whole extent, and greatly obstruct navigation, as the channels between them are intricate, shallow, and very dangerous for shipping. The Rio del Norte falls into the sea in this State after having flowed through it for a distance of about 250 miles. Like the Nile, Ganges, and other great rivers of tropical regions, it overflows the country to a great extent, the period of its inundation being from the beginning of April to the end of June. This State ranks very low among those of the Federation in point of wealth, population, and civilization, insomuch that even in late years tracts of ten or twelve square miles in extent have been sold for a few shillings. The principal town is *Nuevo Santander*, the port of which is important as the only one occurring for a great length of coast, but its utility is greatly obstructed by a bar which admits ships only of moderate burthen. There are a few other unimportant towns, among which *San Jose de Tamaulipas* appears most worthy of notice.

Chihuahua. The extensive State of **CHIHUAHUA** is thinly peopled and ill cultivated, as the lands are generally unenclosed, neglected, and employed for feeding cattle. It however contains numerous mines, some of them in their natural capability probably the richest in the World, but as the population is scanty and ignorant, the product is by no means proportionate to the wealth of the mineral deposits. The principal towns are, **CHIHUAHUA**, separately described; *San Pedro de Batopilas*, population 10,000; and *San Jose del Parral* 8000. The principal mines are those of Batopilas, where the ore is so rich that in many places the silver is cut out with a chisel. The Marquis del Bustamante has drawn enormous wealth from El Carmen, one of the veins in this group of mines. Buen Suceso, another lode, was discovered by an Indian, in consequence of a torrent having laid it bare, when the ore appeared in the form of silver nearly pure. Morelos, another lode, was discovered by two Indian brothers, who the night before they met with this instance of their good fortune, had been refused credit for a little maize. They drew from their mine 270,000 dollars in two months; yet so rude are their habits that they live like peasants of the very lowest class, though they have in their huts wealth to a very great amount. Such has been the wealth extracted from the mine of El Refugio that a proprietor entitled to a share of one-eighth is known to have obtained from it 337,000 dollars in the course of a few years. Pacheco, the chief proprietor, with a profuseness unexampled in the history even of the bucaniers, gave 8000 dollars for a velvet cloak which particularly pleased him. At the mines of Jesus Maria, discovered in 1822, upwards of two hundred lodes of silver ore were registered in one year, in a district of a form nearly circular and nine miles in diameter.

Sonora and Cinaloa. The State of **SONORA** and **CINALOA** occupies a vast extent of territory, possessing, among other great natural advantages, a sea-coast of 900 miles, as it is for that distance washed either by the Pacific or the Gulf of

California. There are several good ports in this length of coast; Guaymas, one of the best in the Pacific, Mazatlan, less safe and commodious, and some others not frequented, amongst which the best is one situated opposite the Island of Santa Cruz. The country is generally hilly, and a large portion of it lies on the Table Land. Though in general devoid of large rivers, it has a number of small streams flowing through the ravines of the Cordilleras, but seldom having such a body of water as reaches in the dry season to the sea-shore, being evaporated or swallowed up in the low grounds. The soil is fertile in a high degree, and produces in abundance all things requisite for the support or enjoyment of life, and the inhabitants have attained a considerable degree of civilization. It abounds in mineral wealth; gold is obtained by searching the sands in the ravines, and in this simple process masses have been met with weighing above five pounds. There are besides some gold mines worked on more scientific principles. The richest is that at Cosala, belonging to an eccentric individual of the name of Triarte, who seldom permits it to be worked for any length of time, contenting himself with drawing from its immense stores not more, usually, than a hundred weight, which he finds no difficulty in obtaining in a week. He is said to have in his possession gold and silver to the amount of £500,000, yet such is his singularity, that he lives in a state of the rudest simplicity, and compels his sons to keep a shop in the town adjacent. Many places abound in copper of the best quality, and this metal is eagerly purchased by the Chinese, as it contains a considerable proportion of gold, which they have skill to extract by an easy process. The mines of silver are rich and numerous. The principal are, those of Alamos, so productive that the proprietors there are said to possess bullion to the amount of 6,000,000 of dollars; Babiadora, containing a great number of productive lodes, some so rich that the metal is cut out with chisels; San Juan, containing mineral deposits of great extent and richness; and Nacosari, near the town of Arispe. If we may believe a notice annexed to Ward's *Mexico*, and professing to have been drawn up by an eye-witness, almost every mountain and hill in Sonora contains gold and silver. The chief towns are *Arispe*, the Capital, with a population of 7600; *Sonora*, population 6400; *Culiacan*, population 10,800; *Cinaloa*, population 9500; *El Rosario*, population 5600; *Villa del Fuerte*, population 7900; *Los Alamos*, population 8000.

The territory of *New Mexico* is a district extending about 500 miles from South to North, and contracted within a narrow breadth on the East by the Bolson de Mapimi, a desert region infested by wandering savages, and on the West by an extensive tract belonging to Tribes more settled and removed from Barbarism, but equally independent. The soil is fertile, and, although elevated, in general level, so that the greater part of the country may be traversed by wheel-carriages. The climate is very cold, so that it freezes severely even in May, and the rapid Rio del Norte is usually covered with ice for some time in Winter. Its principal towns are *Santa Fé*, the Capital, with a population of 3600, *Albuquerque*, population 6000, and *Taos*, population 8900.

MEXICO, the Capital of the State of the same name, and the seat of the Government of the Mexican Confederation, is the most wealthy and beautiful city of the American Continent, and until the late rapid advances which New York and Philadelphia have made in population, exceeded all others in the number of its inhabitants also. It is situated in an oval valley 200 miles in circumference, the mountains enclosing which are sterile, bold, and striking, formed of porphyry and basaltic amygdaloid, and presenting to the view the colossal volcanoes Popocatepetl and Iztaccihuatl. The elevation of its site, which lies 8150 feet above the level of the sea, ensures it a moderate temperature, and from the rarefaction of the atmosphere on the Table Land which extends over this part of the American Continent, a dryness results which, though not conducive to fertility, is most favourable to health. It was originally situated on an Island in the Lake of Tezcuco, but in consequence of the process of desiccation which is extensively taking place over the Table Land, the water of this basin has become so much lower that the city is now on the main land, and lies three miles from the water's edge. The water of this lake is salt, though not so much so as that of the Ocean. It is shallow, seldom exceeding ten and nowhere twenty feet in depth, and through a considerable portion of its extent it has not more than three feet of water, so that in dry seasons such parts are not navigable even for the canoes of the Indians. As the great Square of Mexico is only five feet above the ordinary level of the lake, inundations have sometimes threatened the total destruction of the town, and laid every part of it under water. The Lake of Xochimilco lies to the South of the city, and as its water is fresh, it is conducted in navigable canals to supply the inhabitants. There are besides two aqueducts for conveying fresh water into the city from other sources; the arches of the Aqueduct of Chapultepec extend 10,733 feet, those of the Aqueduct of Santa Fé 11,050 feet.

"Mexico (such are the words of Humboldt) is one of the most beautiful cities in the World. With the exception of Petersburg, Berlin, Philadelphia, and the more modern parts of London, no town of the same extent can bear comparison with it, for the uniform level of the site, the regularity and size of the streets, and the magnificence of the Squares. The architecture is in general pure, and in some instances beautiful, without being burdened with an ill-judged superfluity of ornaments, and derives an air of solid grandeur from the material, which is usually porphyry. The houses are not disfigured with the heavy wooden balconies usual

in the towns of Spanish America; and the roofs flat, according to the general mode of construction throughout warm Countries, are surrounded with handsome iron balustrades ornamented with bronze. Nothing can be more rich and varied than the view from the great tower of the Cathedral on a fine summer's morning, when the air is clear and pure, and the cloudless sky exhibits the intense blue which is peculiar to it in an elevated position and a dry atmosphere. Immediately beneath the spectator lies the city with its magnificent buildings; beyond its limits on all sides extends a vast plain, carefully cultivated to the bases of colossal mountains covered with perpetual snow. The Lake of Tezcuco, bordered on one side by the city, and in other directions by numerous towns and villages, might suggest the recollection of the most beautiful pieces of water in Switzerland. Noble avenues shaded with elms and poplars lead from every side to the Capital: two aqueducts raised on lofty arches traverse the plain, and render the scene still more striking. To the North is seen the magnificent convent of Our Lady of Guadeloupe, behind which rise the mountains of Tepeyacac, and around it the ground is diversified by ravines overgrown with palms and the arborescent yucca. To the South the plain appears one immense plantation, producing in the utmost plenty oranges, peaches, cherries, apples, and other European fruits; and this smiling picture is rendered more striking by the wild and sterile aspect of the mountains, which enclose the valley, and exhibit among their summits the huge volcanoes, Popocatepetl and Iztaccihuatl, the former of which is in incessant activity, sending forth volumes of smoke and discharges of inflamed matter, amidst its covering of perpetual snow."

The City is divided into four districts—those of St. Paul, St. Sebastian, St. John, St. Mary; and the streets run with much regularity from North to South, and from East to West. Of some of the principal public edifices we have already spoken in our general account of the Republic.* The Cathedral is a large pile of building, constructed partly in the Gothic and partly in Grecian Orders: in the ground close to this building is imbedded a circular disc of porphyry, nine feet in diameter, exhibiting in singular hieroglyphical figures the Mexican Calendar, which, according to Humboldt, was more correct than that used by the Greeks and Romans: an equestrian statue of King Charles IV. stands opposite the principal front of the Cathedral in an oval space. Tolsa, a native artist, formed it in bronze at a single cast, although weighing 45,000 pounds. The Mint is an extensive building; and in carrying into effect the purposes to which it is devoted much mechanical ingenuity is displayed. The Acordada, or public Prison, a noble edifice, contains in its spacious and airy apartments above 1200 prisoners, as well offenders against the laws as captives taken from the hostile Indian Tribes. The School-of-Mines, the greatest and most beautiful building in Mexico, was raised at an expense of 600,000 dollars; but in consequence of the failure of the foundation, the walls in several places have opened in large cracks, and other alarming symptoms of dilapidation threaten speedy ruin to the structure. The Academy of the Fine Arts is so much neglected, that the roof has in many places been allowed to fall in. Neither the University nor Public Library are worthy of so great a city, or the exalted purposes for which they are destined. The

* Pp. 137, 138.

MEXICO. streets, which are well paved and lighted, and have flag-ways on each side for the convenience of foot-passengers, are kept very neat, except in the parts inhabited by the Indians, where the visitor is disgusted by the most revolting filth, brutality, and misery. Of the population, exceeding at present 150,000, there are in every 100 individuals, on an average, fifty Creoles, twenty-four aboriginal Indians, and twenty-six of mixed race. Nearly 30,000 persons, known by the names of Saragates or Leperos, and belonging to the Indian or mixed castes, pass their lives in the open air, spending the day basking in the heat of the sun, with no covering but a small piece of blanket insufficient even for the purposes which decency requires. Indolent, inoffensive, and abstemious, by the labour of a couple of days in the week, they supply themselves with the small

portion of *pulque* and food which they require, and sacrifice all other considerations to the love of ease. The higher classes are generally in a state of great affluence, and display that propensity for pomp, pleasure, and ease, which generally characterises the inhabitants of Spanish America. Cock-fighting is a favourite amusement, and Bull-fights are viewed with as much interest and enjoyment as in Spain. The smoking of tobacco is practised to a great extent among the Creoles and mixed classes; and even women of all ranks and ages indulge the habit, so that in their assemblies young beauties may be seen with their mouths garnished with large cigars, sending forth clouds of smoke.

Mexico lies in latitude $19^{\circ} 25' 25''$ North; longitude $90^{\circ} 0'$ West.

MEXICO.
MICCO-
TROGUS.

MEYERA, in *Botany*, a genus of the class *Syn- genesia*, order *Superflua*. Generic character: common calyx four-cleft, the two interior leaves small; receptacle small, chaffy, the chaff enclosing two keeled seeds; down none.

One species, *M. sessilis*, native of watery places in the Island of Jamaica.

MEZIUM, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* approximating, sub-filiform, robust, squamous, eleven-jointed, the basal joint slightly clavate, and the two following a little stouter than the remainder, which are subequal, the last being longest and obliquely acuminate; head small; eyes minute; *thorax* pubescent, longitudinally squamous; *scutellum* wanting; *elytra* connate or united, gibbous, shining, subhyaline; legs rather long; *femora* clavate; *tarsi* pentamerous.

Type of the genus, *Ptinus sulcatus*, Fabricius; Curtis, *Ent. Britt.* vol. v. pl. ccxxxii. One species, found in old houses in Europe, not uncommon in London.

MEZONEURUM, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Leguminosæ*. Generic character: calyx five-leaved, connected at the base; corolla, petals five, hooked, the superior petal small; stamens villous at the base; style incurved; pod flat, ovate-oblong, one-celled, many seeded.

Two species, trees, natives of the Islands of Java and Timor. Decandolle.

MEZZOTINTO, It. *mezzo*, middle, and *tinto*, tint, or dye.

See the *Essay on ENGRAVING*.

Baxter, with apostolic grace,
Display'd his *mezzotinto* face;
While here and there some luckier saint
Attain'd to dignity of paint.

Cotton. *A Fable*.

This afternoon [13 March, 1661] Prince Rupert shew'd me with his owne hands y^e new way of graving call'd *Mezzo Tinto*.
Evelyn. *Memoirs*, vol. i. p. 331.

MIANA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* short, finely ciliated and pubescent in the males, simple in the females; *palpi* short, porrected obliquely, the two basal joints sparingly

clothed with elongate scales, the terminal one exposed, somewhat acute, and placed obliquely, very slender when denuded; the basal joint short, stouter than the following, which is slightly curved, attenuated towards the apex, and nearly three times as long as the basal; terminal elongate-ovate, nearly as stout as the second, and about the length of the basal; *maxillæ* elongate; head with a frontal crest; eyes naked; *thorax* subquadrate, with a posterior dorsal crest; *abdomen* slender, with a small tuft at the apex in the males; and a little crested down the back; wings entire, deflexed, anterior elongate, triangular, with indistinct, nearly concolorous stigmata. Caterpillar naked; *pupa* subterraneous.

Type of the genus *Noctua literosa*, Haworth; Stephens, *Illust. Brit. Ent. (Haustellata)*, vol. iii. p. 12. pl. xxv. fig. 1. Nine species, all found in Britain.

MIARUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, ten-jointed, rather slender; funiculus five-jointed, its two basal joints obconic, the other three transverse, rounded at the apex; club four-jointed, ovate; head produced anteriorly into a rostrum, which is filiform, slightly bent, inserted in a groove beneath the *thorax*, this last transverse, with the posterior angles rounded; *elytra* somewhat depressed, subquadrate, not covering the apex of the abdomen; legs short; anterior *tibiæ* with a minute hook at the apex.

Type of the genus, *Curculio campanulæ*, Linnæus; Herbst, *Coleopt.* vol. vi. pl. lxx. fig. 15. About six species, natives of temperate Europe, four of them inhabiting Britain.

MICCOTROGUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, rather short, somewhat stout, eleven-jointed, the scape elongated, clavate, the funiculus six-jointed, its two basal joints rather long, obconic, the second stoutest, the remainder subglobose, the club thick, oblong-ovate; head produced anteriorly into a rostrum, which is as long as the *thorax*, rounded, curved, and rather slender; eyes rounded, slightly prominent; *thorax* nearly transverse, narrowed in front, with the sides rounded, the base trisinuated, the disc moderately convex; *scutellum* small, triangular, distinct; *elytra* oblong, suboval, con-

MICCO-TROGUS. vex, scarcely broader than the middle of the *thorax*, covering the apex of the *abdomen*; legs rather short, stout, the anterior approximating at the base.

MI-CHAUX-IA. Type of the genus, *Curculio cuprifer*, Panzer, *Fauna Ins. Germ.* pl. xli. fig. 14. Two species only, one of which is found in Britain in grassy places.

MICH, } Also written *meech*; to *miche*, to lurk,
MI'CHER, } with a slight deviation, from the Fr.
MI'CHERY, } *muser*, to idle. A *micher*, a covetous
MI'CHING. } man, either from Lat. *miser*, or from the
Fr. *miche*; *mica panis*, because he counts all the crumbs that fall from his table. Skinner. The latter Etymology is undoubtedly the true one. Mr. Tyrwhitt tells us that in the *Promptuarium parvum*, "*mychyn*" stands as equivalent to "*pryvely stelyn smale thyngs*." And Lambard, in his *Eirenarchia*, says, that one Justice may charge constables to arrest such as shall be suspected to be "*draw-latches*, wastors, or robertsmen, that is to say, either *muching* or *mightie theeves*." Contrasting these different sorts of plunderers. The Fr. *miche*, Lat. *mica*, is a small thing.

To *miche*, is to take or steal small things, to pilfer; and, consequentially, to lay in wait, to lurk.

A *micher*, one who takes or steals, small things, a pilferer, a petty thief; one who lies in wait, lurks, or loiters about; either to thieve, or for other purposes.

How should I by this word him leve,
Unneth that he nis a *micher*
Forsworne, or els Goddes lier.

Chaucer. *The Romant of the Rose*, p. 219.

But nowe thou shalt full sore abie
That Ilke stelthe of *micherie*,
That thou hast both take and do.

Gower. *Conf. Am.* book v. p. 171.

For no man of his counsaile knoweth,
What he maie gette of his *michynge*.

Id. *Ib.* p. 173.

But should straggle up and downe the country, or *mich* in corners amongst their friends idly.
Spenser. *Works*, vol. viii. p. 499. *View of the State of Ireland*.

Shall the blessed Sonne of Heauen proue a *micher*, and eate black-berrys? a question not to be askt.

Shakspeare. *Henry IV. First Part*, fol. 58.

Sure she has some *meeching* rascal in her house, some hind, that she hath seen bear (like another Milo) quarters of malt upon his back and sing with't.

Beaumont and Fletcher. *The Scornful Lady*, act iv. sc. 1.

LON. O *meiching* varlet, I'll fit ye as I live.

Id. *The Noble Gentleman*, act i. sc. 1.

— Come, *meecher*,
Thou shalt have both.

Id. *Bonduca*, act i. sc. 1.

DUR. Forward, you *micher*.

Massinger. *The Guardian*, act i. sc. 5.

ST. MICHAEL'S, or as it is corruptly called *Mitchell*, a Borough in the County of Cornwall, and in Saxon times a place of considerable note as *Modishole*. It has returned two Members to Parliament since the reign of Edward VI. Population 160, distant from London 250 miles.

MICHAUXIA, in *Botany*, a genus of the class *Oc-tandria*, order *Monogynia*, natural order *Campanel-laceæ*. Generic character: calyx many-cleft; corolla wheel-shaped, eight to ten cleft, revolute; nectary eight-valved, bearing the stamens; capsule eight to ten celled, many seeded.

Two species, natives of Persia and Syria.

MICHELIA, in *Botany*, a genus of the class *Poly-andria*, order *Polygynia*, natural order *Magnoliæ*. Generic character: calyx three-leaved; corolla, petals fifteen; berries numerous, four-seeded.

Two species, natives of the East Indies.

MICKLE. See MUCKLE.

MICONIA, in *Botany*, a genus of the class *Decan-dria*, order *Monogynia*. Generic character: calyx five-toothed; corolla, petals five; nectaries, five scales; stamens declining, anthers folded; capsules five-celled.

Three species, natives of Peru.

MICRANTHERA, in *Botany*, a genus of the class *Dioecia*, order *Polyandria*, natural order *Guttiferæ*. Generic character: male flower, calyx two-leaved; corolla, petals eight to ten, rather longer than the calyx; anthers two-celled: female flower, stigma six-toothed; berry six-celled, cells one-seeded.

One species, *M. Clusiæfolia*, native of Cayenne. Decandolle.

MICROCARPÆA, in *Botany*, a genus of the class *Diandria*, order *Monogynia*, natural order *Scrophula-rinæ*. Generic character: calyx tubular, five-angled, five-cleft; corolla, two-lipped; capsule two-valved.

One species, *M. muscosa*, a small herbaceous plant, native of New South Wales.

MICROCHLOA, in *Botany*, a genus of the class *Triandria*, order *Digynia*, natural order *Gramineæ*. Generic character: spike one-sided; glume one-flowered, two-valved, acute, membranaceous; calyx awnless, vil-lose, two-valved, inversed.

One species, *M. setacea*, a grass, native of New South Wales.

MICROCORYS, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*, natural order *La-biataæ*. Generic character: calyx, semi-five-cleft; middle segment of the lower lip of the corolla broad.

Three species, natives of New South Wales.

MICROCOSM, } Fr. *microcosme*; It. and Sp.
MICROCOSMICAL. } *microcosmo*; Lat. *microcosmus*;
Gr. *μικρόκοσμος*, *μικρός*, small, little, and *κόσμος*, the world. The Examples explain the usage; see espe-cially that from Raleigh.

She, to whom this world must itself refer,
As suburbs, or the *microcosm* of her;
She, she is dead.

Donne. *Funeral Elegies. An Anatomy of the World. The First Anniversary*.

There were some also, that staid not here; but went further, and held; that if the spirit of man (whom they call the *microcosm*) do give a fit touch to the spirit of the world, by strong imaginations, and beleefes, it might command nature.

Bacon. *Natural History*, Cent. x. sec. 900.

Because in the little frame of man's body there is a representa-tion of the universal, and (by allusion) a kind of participation of all the parts there, therefore was man called *microcosmos*, or the little world.

Raleigh. *History of the World*, book i. ch. ii.

This opinion confirmed would much advance the *microcosmical* conceit, and commend the geography of Paracelsus; who according to the cardinal points of the world divideth the body of man.

Sir Thomas Brown. *Vulgar Errours*, book ii. ch. iii. p. 76.

Why, as great, no doubt, and of as fatal consequence to the affairs and government of the *microcosm*, or lesser world, as if, in the greater, God should put out the sun, and establish one great, uni-versal cloud in the room of it.

South. *Sermons*, vol. ii. p. 389.

MICRODON, in *Zoology*, a genus of *Dipterous* insects.

MICHE-LIA.
—
MICRO-DON.

MICRO-
DON.
—
MICROM-
MATA.

Generic character. *Antennæ* porrected, triarticulate, the basal joint elongate, cylindric, the second short, cup-shaped, third elongate, ovate, conic, furnished at its base with a naked seta as long as the joint; *labrum* short, obtuse; tongue slender, as long as the labrum, acute; *labium* very much dilated; head short, broad; *scutellum* bidentate; wings incumbent, parallel; *tarsi* five-jointed.

Type of the genus *Mulio apiarius*, Fabricius; *Microdon apiformis*, Curtis, *Britt. Ent. pl. lxx*. Five species, all European; two of them found in England.

MICRODUS, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* as long as the body, composed of numerous articulations; maxillary *palpi* five-jointed; labial three-jointed; mandibles stout; *abdomen* sessile; wings long; anterior with a broad, costal nervure; posterior *tarsi* elongate.

Type of the genus *Bassus gloriatorius*, Panzer, *Fauna Germ. pl. cii. fig. 17*. Eleven species, all parasitic; six natives of England.

MICROGASTER, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* setaceous, composed of numerous articulations; mandibles stout, short, not dilated at the apex, nor gaping; *palpi* four, unequal, maxillary five-jointed, labial three-jointed; *labium* simple, short, with the margin entire.

Type of the genus, *Cryptus globatus*, Fabricius. About twenty species, parasitic, on the larvæ of *Lepidopterous* insects.

MICROGRAPHY, Gr. μικρὸς, small, and γράφειν, to write, to describe.

The description of small things, (sc. visible by aid of the microscope.)

(For want of Dr. Hook's *Micrography* being at hand, it being a very scarce book) [I have] given descriptions of two or three things, which I have thought had not been tolerably well observed before, but are described well by that curious gentleman.

Derham. *Physico-Theology. Preface.*

MICROLÆNA, in *Botany*, a genus of the class *Tetrandria*, order *Digynia*, natural order *Gramineæ*. *Generic character*: glume one-flowered, minute, two-valved; calyx on a bearded foot-stalk, doubly two-valved, exterior valve aristate; two scales, opposite, alternating with the valves of the calyx; stigmas sessile, plumose.

One species, *M. stipoides*, a grass, native of New South Wales.

MICROLICIA, in *Botany*, a genus of the class *Oc-tandria*, order *Monogynia*, natural order *Melastomaceæ*. *Generic character*: calyx globular, five-lobed, subulate, persisting; corolla, petals five, obovate; anthers alternately dissimilar; capsule dry, three-celled, three-valved, sometimes two-celled and two-valved.

A genus divided from *Rhexia*, containing twenty-seven species, mostly natives of Brazil. Decandolle.

MICROLOMA, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Asclepiadeæ*. *Generic character*: calyx five-cleft; masses of pollen ten, smooth, pendulous; tube of stamens naked; corolla pitcher-shaped.

One species, *M. sagittatum*, native of the South of Africa.

MICROMMATA, in *Zoology*, a genus of *Arach-nidæ*.

Generic character. Legs eight, long, nearly of equal length, the second pair longest; *maxillæ* straight, pa-

rallel, and distant; eyes eight, disposed in two transverse lines, of which the posterior is largest; *thorax* cordiform; *abdomen* oval, soft, downy; *tarsi* furnished beneath, with a double brush at the apex.

Type of the genus *M. smaragdina*, Latreille, *Genera, &c. vol. i. p. 115*. There are four species only, of which the type inhabits umbelliferous plants in woods in the South of England.

MICROPEPLUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* shorter than the *thorax*, received during repose in a groove on the under side of the margin of the latter, nine-jointed, the two basal joints larger than the following, the first subovate, the second pear-shaped, the six following decreasing in length, the ninth forming a large, solid, globose, pubescent club; maxillary *palpi* small, incrassated in the middle, and attenuated to the apex; labial minute; head subtrigonal, inserted up to the eyes, which are small, into the *thorax*, the latter narrowed anteriorly, with the angles acute; *elytra* quadrate, margined, very much abbreviated, with three elevated lines on each; *abdomen* acuminate at the tip; legs slender; *tarsi* simple; *tibiæ* four-jointed.

Type of the genus, *M. porcatus*; *H. porcatus*, Paykul. Four species known, natives of Europe; three found in Britain.

MICROPETALON, in *Botany*, a genus of the class *Decandria*, order *Tetragynia*. *Generic character*: calyx five-leaved; corolla, petals very small, entire, sometimes none; capsule ovate, longer than the calyx, four-valved.

Three species, natives of North America.

MICROPEZA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrect, small, triarticulate, with the third joint patelliform, compressed; furnished at the base with a long pubescent seta; head elongate, elliptic; *hypostome* reclined, naked; eyes rounded, prominent, remote; *abdomen* elongate, cylindric, with six annulations; wings incumbent, parallel, as long as the *abdomen*; legs very long, filiform, the anterior pair remote; *tarsi* short.

Type of the genus, *Musca corrigiolata*, Linnæus; Meigen, *Zweiflugen, &c. vol. v. p. 384. pl. liii. fig. 6*. Two species, natives of Europe and of England.

MICROPTERUS, from the Greek μικρὸς, small, and πτερυξ, a fin. Lacep. In *Zoology*, a genus of animals belonging to the family *Percoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Mouth large, the lower jaw projecting beyond the upper; teeth very fine; on the oper-cule a flat spine; two dorsal fins, the second small, and consisting at most of five soft rays.

M. Dolomieu, Lacep. The only species known has the depth of the body of greater dimensions than its length; the lateral line at first descends, but mounts again to take the curve of the back; scales on the back large and rounded; pectoral and anal fins much rounded; caudal crescent-shaped.

See Lacepede, *Histoire Naturelle des Poissons*.

MICROPUS, in *Botany*, a genus of the class *Syn-genesia*, order *Superflua*, natural order *Corymbifera*. *Generic character*: calyx cup-shaped, leaflets lax; down none; no radial florets, seeds involved in the scales of the calyx.

Two species, natives of Europe.

MICROM-
MATA.

MI'CROSCOPE, } From the Greek μικρός, small
MICROSCO'PIC, } or little, and σκοπή, σκοπεῖν, to
MICROSCO'PICAL. } see, to view, to see small things ;

sc. magnified or enlarged.

An instrument to see or examine small things (magnified or enlarged.)

And see the *Treatise on OPTICS*, Art. 347, &c. and *LIGHT*, Art. 389.

Many a fair edifice besides, more like
Houses of Gods (so well I have dispos'd
My aery microscope) thou may'st behold
Outside and inside both.

Milton. *Paradise Regained*, book iv. l. 57.

To the performance of every muscular motion, in greater animals at least, there are not fewer distinct parts concerned than many millions of millions and these visible through a microscope.

Ray. *Of the Creation*, part i. p. 197.

There are, besides the above mentioned, innumerable retainers to physick, who, for want of other patients, amuse themselves with the stifling of cats in an air-pump; cutting up dogs alive, or impaling of insects upon the point of a needle for microscopic observations.

Spectator, No. 21.

The magic of those works, in which by the help of glasses we discover all the beauties of statuary and drawing, and even the science of anatomy, has been restricted to an age that was ignorant of microscopic glasses; a problem hitherto unresolved to satisfaction.

Walpole. *Anecdotes of Painting*, vol. iv. ch. ii. p. 102.

MICROSTEMMA, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Asclepiadææ*. Generic character: calyx five-cleft; corolla rotate, five-cleft; crown of stamens one-leaved, fleshy, five-lobed; apex of the anthers simple.

One species, *M. tuberosum*, a shrub, with a tuberous root, native of New South Wales.

MICROTEA, in *Botany*, a genus of the class *Pentandria*, order *Digynia*. Generic character: calyx five-leaved, spreading; corolla none; drupe dry, spiny.

One species, *M. debilis*, native of the Carribee Islands.

MICROTIS, in *Botany*, a genus of the class *Gynandria*, order *Monandria*, natural order *Orchideæ*. Generic character: labellum dissimilar, oblong, obtuse, callous at the base; column of anthers funnel-shaped.

Five species, natives of New South Wales.

MICTYRIS, in *Zoology*, a genus of *Brachyurous Crustacea*.

Generic character. Shell nearly oval, elevated, and truncated behind; antennæ very short; the basilar joint of the internal footstalk of the external double palpi very large; arms jointed at the base of the wrist.

Type of the genus *M. longicarpus*, Latreille, *Genera Crust.* &c. vol. i. p. 41. Inhabits the Indian Ocean; one species only.

MID, } A. S. *mid, midda, midde, middle,*
MI'DDEST, or } (*mid-dæl*), *midl, midlest*; Lat.
MIDST, } *med-ius*.

MI'DDLE, *adj.* } The centre or point from which
MI'DDLE, *n.* } the circumference is every where
MI'DDLEMOST, } equidistant; the point between, and
MI'DDLING, } equidistant from extremes, the point,
MI'DDLER. } the place, any thing surrounded or

encompassed equally on all sides; and more laxly; remote or distant from an extreme point or line; from excess.

Mid is used much in Composition.

About Jerusalem þys noumbryng he bi gan,
As in þe myddes of þe world, to noumbre eche man.

quarter of an hour, in the whole course of their lives.

Paley. Sermon 1. p. 2.

We should be pleas'd that things are so,
Who do for nothing see the show,
And *middle-siz'd*, can pass between
Life's hubbub safe, because unseen.

Green. The Spleen.

MIDDLESEX, an inland County of England,
Boundaries, bounded on the North by the County of Hertford, on
the East by that of Essex, on the South by that of
Surrey, and on the West by that of Buckingham. Pre-
viously to the Roman invasion, this part of the Island
was inhabited by the *Trinobantes*, and it derives its
present name from its position relatively to the three
surrounding Kingdoms of the Heptarchy; namely, the

East, West, and South Saxons; of the first of which, or MIDDLE-
East-Sex, it formed a part during the long period of SEX.
about three centuries. Though of an irregular figure,
it resembles a parallelogram, 20 miles long, and 14 broad,
with an area of 288 square miles, or 179,200 acres.

This County presents a gently waving surface; in General
general the ground rises from the banks of the Thames aspect,
towards the North. The principal eminences are Hamp-
stead, Highgate, Highwood, Hendon, Harrow, Barnet,
Brockley, and Muswell. The chief rivers by which this Rivers.
County is watered are the Thames, the Lea, the Coln,
the Brent, and the Cran. The Thames forms its
Southern boundary. The Lea flows from Hertfordshire,
and skirts the Eastern border of the County, till it joins
the Thames at the East India Docks; it is navigable
to Hertford. The Coln enters Middlesex by several
streams at the North-Western corner of the County,
which it separates from Buckinghamshire; at Longford
it is subdivided into several branches, by three of the
principal of which it enters the Thames at Staines,
while a fourth winds through the County till it reaches
that river at Sunbury, a fifth till it unites with the Cran,
and a sixth flows from Longford, over Hounslow Heath,
through Hanworth, Bushey, and Hampton Court Parks.
The Brent rises in Hertfordshire, enters Middlesex at
Finchley, and the Thames at Brentford. The Cran has
its source near Harrow, and in a winding course reaches
the Thames at Isleworth.

In the vicinity of London are various mineral springs, Mineral
the waters of which were once much used for their re- waters.
puted medicinal qualities. Islington Spa resembles the
waters of Tunbridge, and for that reason it has been
called New Tunbridge Wells. At Bagnigge Wells there
are both chalybeate and cathartic springs. Near Hamp-
stead are several strongly impregnated chalybeate springs,
which formerly were highly esteemed and much fre-
quented; and in the same neighbourhood are several
saline springs, said to bear an affinity to the Cheltenham
waters. St. Chad's Wells, near the bottom of Gray's-inn
Lane Road, possess both a diuretic and a purgative qua-
lity. Kilbourn Wells and Acton Wells are saline and
purgative, and were once regarded as possessing valu-
able medicinal qualities; there are also saline springs
at Shadwell. Except in the low clayey bottoms spring
water may be obtained in most parts of the County by
sinking to the depth of from five to twenty feet below
the surface.

The order of the strata observed on digging wells is, Mineral
immediately under the cultivated surface, from five to strata.
ten feet of flinty gravel, leaden-coloured clay from one
to three hundred feet in thickness, marine sediment
from three to five feet thick, consisting chiefly of oyster
and cockle shells, agglutinated together, and indurated
into a stony substance; and loose sand, gravel, and
water. In 1802, a bed of *fuller's earth* was discovered
at Paddington; and in 1798 a quantity of loose coals
were found at Chelsea fifty feet below the surface.
Marine exuviae, especially bivalve fossil shells, have been
met with in different places. The County has a fertile
and highly-cultivated surface, from which excellent crops
are obtained. Sand and gravel, intermixed with loam, Soil.
constitute the prevailing ingredients of the soil on the
summits of the hills; loamy sand, mixed with flints, on
a subsoil of brick clay, extends on either side of the
road from Hounslow to Colnbrook, and on the Eastern
side of the County from Tottenham to Enfield-wash the
soil is of the same light quality. A sandy loam, on a

MIDDLE-SEX. bottom of impervious clay, abounds in several districts bordering on the Thames, and in the North-Western part of the County. Strong loam abounds from Ryslip to Greenford, Apperton, and Harrow; also between Pinner and Northcote; about South Mims, and the level between Islington, Hampstead, and Hornsey: loamy clay prevails at Harefield, Hanger Hill, on the Hendon road, and other places. Strong, adhesive, unproductive clay occurs at different places; and all the hollows, bowls, and chinks are filled with gravel; peat is found in the meers near the river Coln, from Rickmansworth to Staines, on the borders of the river Lea, and in the Isle of Dogs. The deposit of still water, as it abounds with the richest parts of every soil, and with dissolved animal and vegetable substances, is especially fertile; the Isle of Dogs contains more than 1000 acres of such soil; most of the land on the flat borders of the rivers Lea and Coln, some of that on the sides of the Brent, many nooks and windings of the Thames, and all the small Islands in that river, are of this description.

Divisions. The County is divided into six Hundreds, exclusive of the City and Liberties of London and Westminster, and the Tower Hamlets. These are subdivided into 230 parishes, precincts, and extra-parochial places, of which 98 are exclusive of London and Westminster; 122 are within the City of London, and ten in the City and Liberties of Westminster. Eight Members of Parliament are returned within it; two for the County, two for the City of Westminster, and four for the City of London.

Population. In 1801 the inhabited houses, exclusive of those of London and Westminster, were

	77,712, and the inhabitants	535,329
In 1811 ...	95,645	670,282
In 1821 ...	117,097	837,012

Agriculture. The farms are in general small, many of them consisting of only a few acres, and none of them exceeding five or six hundred acres. Contiguous to London are many gardens and nurseries; meadows and pasture lands abound in the Eastern part of the County, while the Western division is mostly under tillage. Ploughing is an expensive process, as from three to six horses are yoked in length, with three men to guide them, besides the ploughman. Since the introduction of green crops fallowing has fallen into disuse, and is profitably superseded by a judicious rotation. The farming gardeners at Kensington, Fulham, and other places, raise first a succession of cabbages, then potatoes or turnips, and then wheat every two years. In the neighbourhood of Harrow and Uxbridge the course is beans, peas, and wheat, the former two twice hoed, and earthed up at the latter hoeing: the bean and pea crops are grown in rows fifteen inches asunder. In the light land between Longford and Sunbury the rotation is wheat, barley, hog-peas in rows, a few acres of beans, two or three acres of tares, then wheat, barley, and lastly clover. This mode of cropping, and the great command of manure of the best quality, keep the land in good heart, and free from exhaustion. The common white crops are wheat and barley, with smaller quantities of oats and rye. The green crops are more various; such as peas, beans, turnips, cabbages, white and red clover, rye-grass cut green, tares and barley as food for cattle, lucerne and buck-wheat on a small scale; potatoes, carrots, parsnips, and vegetables of all kinds. The meadow land is very productive, and the Middlesex

farmers excel in the art of hay-making. About 10,000 acres are annually sown with wheat, 4000 with barley; the grass lands exceed 10,000 acres; 1500 acres, lying chiefly near Chelsea, Brompton, Kensington, Hackney, Dalston, Bow, and Mile End, are laid out into nursery gardens; 10,000 acres are formed into kitchen gardens, and about 3000 acres, exclusive of those attached to private houses, are devoted to the growth of fruit. Licorice and hops are cultivated on a small scale in a few places.

Of the chief places in this County, ACTON, BRENTFORD, CHELSEA, and LONDON, are separately described.

Chiswick stands on the banks of the Thames, about five miles West from Hyde Park Corner. It is distinguished for a seat built by the Earl of Burlington, after a design by Palladio, and added to by the Dukes of Devonshire, to whom it now belongs. Hogarth long lived in the village, near a spot known as Chiswick Field, and he is buried in the Church-yard. Westminster School possesses an ancient house in the parish, built in the reign of Elizabeth, as a place of retirement during the Plague. The hamlets of *Turnham Green* and *Strand on the Green* are included in the Parish. The living is a Vicarage, in the gift of the Dean and Chapter of St. Paul's. Population, in 1821, 4236.

Ealing is divided into *Great* and *Little*, and contains the Hamlet of *Old Brentford*. It stands about seven miles West from London, a short distance Southward from the Uxbridge road. Castlebeare Hill, about a mile from the village, was the residence of the late Duke of Kent, as Gunnersbury was that of the Princess Amelia, aunt of George III. Population, in 1821, 6608, including Old Brentford. A Vicarage, in the gift of the Bishop of London.

Edmonton is distant seven miles North from London. Population, in 1821, 7900. A Vicarage, in the gift of the Dean and Chapter of St. Paul's.

Enfield, ten miles North from London, was a residence of Edward VI. and Elizabeth; one of the principal rooms of the Palace, richly ornamented with carved work, still remains. The Chase, lying on the North-West of the town, was disforested during the Great Rebellion. South Lodge, within its range, was a favourite seat of the great Earl of Chatham. Population of the Parish, which includes *Baker's Street*, *Four-tree Hill*, *Bull's Cross*, *Ponder's End*, *Enfield Highway*, and *Enfield Chase*, in 1821, 8827. A Vicarage, in the gift of Trinity College, Cambridge.

Fulham, four miles from Hyde Park Corner, includes the Hamlet of *Hammersmith*; it is an ancient village, known in Saxon times as *Fullonham*, the habitation of fowls, and the manor belonged to the Bishops of London before the Conquest. The oldest part of the Episcopal Palace is a quadrangle, built by Bishop Fitzjames, temp. Henry VII., the remainder was altered and almost erected in 1814; the site is low, and the grounds are surrounded by a moat. The gardens, once very rich in exotics, were laid out by Bishop Grindall, and received great attention from Bishop Compton. The Eastern side of the Church-yard contains monuments to several of the Bishops. Adjoining Hammersmith stood *Brandenburgh House*, which passed successively from Lord Melcombe to the Margrave of Anspach and the late Queen Caroline. Population of Fulham, in 1821, 6492; of Hammersmith, 8809. The Rectory is in the patronage of the Bishop of London, the Vicarage in that of the Rector.

MIDDLE-
SEX.

Hackney.

Hampstead.

Hampton.

Harrow.

Highgate.

Isleworth.

Islington.

Kensing-
ton.

Hackney, two miles North-East from London, includes the hamlets of *Upper and Lower Clapton*, *Darleston*, *Shacklewell*, *Kingston*, *Homerton*, and *Hackney Marsh*. Population, in 1821, 22,494.

Hampstead, four miles North-West from London, stands on a high elevation, and adjoins an extensive heath commanding very picturesque views of the Metropolis. An old building on the side of the hill, called the *Chicken House*, contains some curious stained glass, and is supposed to have been a hunting-seat of James I. Population, in 1821, 7263.

Hampton on the Thames, opposite the mouth of the Mole, is twelve miles West-South-West from London. The Royal Palace, for which it is best known, is fully described in our *Essay on ARCHITECTURE*, p. 349. *Bushey Park*, containing about 1100 acres, is attached to it. The Thames is crossed here by a wooden bridge to *Moulsey*. The Church, a Vicarage in the patronage of the Crown. Population, in 1821, 2288.

Harrow, ten miles West-North-West from London, stands on the highest hill in the County, rising abruptly from a rich vale, over which it commands on all sides very beautiful prospects. The Free Grammar School, now one of the chief Public Schools of England, was founded by John Lyon, a wealthy yeoman of the parish in 14th Elizabeth. In the Church, rebuilt for the most part in the XIVth century, the columns which separate the nave from the aisles, and a doorway on the Western face of the Tower, belong to a foundation of Archbishop Lanfranc, in the reign of the Conqueror. *Pinner*, *Harrow Weald*, and *Wimbly*, are hamlets of this Parish. Population, in 1821, 3017.

Highgate lies in the parishes of *Hornsey* and *Pancras*, four miles North from London. The steep acclivity of its hill, which once presented a formidable obstacle on the high North road, was cut through in 1812, and the road to *Hornsey* carried above it on a massive arch.

Isleworth, eight miles West from London, on the bank of the Thames, nearly opposite *Richmond*, is largely occupied by market gardeners. Within the parish stands *Syon House*, a Convent of *Bridgetines*, founded in 1414, and granted by Edward VI. to the Protector *Somerset*, who began the present mansion. On his attainder it passed to the Duke of *Northumberland*, and is known in English History as the ill-fated place at which Lady *Jane Grey* reluctantly accepted the Crown. Mary restored the Convent, but Elizabeth again granted the lands to the family of *Percy*. The present massive, unornamented quadrangular structure is attributed to *Inigo Jones*. The Church is a Vicarage; patrons, the Dean and Chapter of *Windsor*. Population, in 1821, 5269.

Islington, now a continuation of London, formerly more than a mile North from it, includes the hamlets of *Holloway*, *Ball's Pond*, *Battle Bridge*, *Kingsland Green*, and great part of *Newington Green*. *Canonbury House*, within it, was the residence of the Priors of *St. Bartholomew's* in *Smithfield*. *Highbury* belonged to the *Knights Hospitallers*. An ancient chapel at *Ball's Pond*, still remaining, belonged to a Hospital for Lepers, existing before the XVth century. The *New River* head and *Sadler's Wells*, so called from the discoverer of their chalybeate water, are in this Parish. Population, in 1821, 22,417.

Kensington, on the great Western road, about a mile and a half from *Hyde Park Corner*, is chiefly known for its Royal Palace, principally built by William III.

It is a dull brick pile, of irregular structure; till the reign of George III. a favourite residence of our Kings, and now chiefly appropriated to junior branches of the Royal Family. The gardens, originally consisting of twenty-six acres, are now extended to upwards of 300. *Holland House*, a venerable brick building, erected by Sir W. Cope in 1607, and now the seat of Lord *Holland*, stands in the West of this Parish. It has been successively the residence of *Henry Rich*, Earl of *Holland*, who married the founder's daughter, and who was beheaded during the Great Rebellion; of the Regicide *Lambert*; and of *Addison*, (who died there,) by right of his Lady, a Dowager Countess of *Holland*. *Brompton* and *Earl's Court* are hamlets of *Kensington*. The Church is a Vicarage, in the gift of the Bishop of London. Population, in 1821, 14,428.

Newington, or *Stoke Newington*, from the Saxon *Stoc*, Newington a wood, is three miles from *Shoreditch Church*. The Church is a Rectory, annexed to a Prebendal Stall in *St. Paul's Cathedral*. Population, in 1821, 2670.

Paddington, half a mile North from *Hyde Park Corner*, is connected with the Metropolis. Church, a Curacy, in the gift of the Bishop of London. Population, in 1821, 6476.

Pancras, now in great part an integral portion of the Metropolis, once one mile and a half North from it, includes the hamlets of *Kentish Town*, *Battle Bridge*, *Camden Town*, *Somers Town*, and *Tottenham Court Road*. The magnificent new Church of this Parish is described in our *Essay on ARCHITECTURE*. Population, in 1765, 60; in 1821, 71,838.

Staines, a market town on the Thames, which is crossed by an iron bridge; sixteen miles West from London. Population, in 1821, 1957.

Stanmore, Great, ten miles from London. The Church, which is a beautiful specimen of brickwork, was consecrated by Archbishop *Laud* in 1632; and that act was perversely made one of the charges in his impeachment. *Bentley Priory*, a seat of the Marquis of *Abercorn*, on the site of a former Religious House, adjoins the village, but belongs to the Parish of *Harrow*. Population, in 1821, 990. *Stanmore Little*, or *Whitchurch*, adjoining, containing Canons, a magnificent seat, built by James, Duke of *Chandos*, from money accumulated as Paymaster of the Forces in Queen Anne's wars. *Gibbs*, James, and *Sheppard* were the architects employed, and its cost exceeded £250,000. Although Pope denied the imputation, he is always believed to have satirized the pompous owner in the description of *Timon's Villa*, and the conclusion of his lines prophesied its demolition, which took place on the death of the founder. The Parish Church is the sole remnant of the former splendour of the establishment; it is a small brick building, much enriched in its interior. Distant nine miles from London. Population, in 1821, 712.

Tottenham, five miles North-East from London, was a manor once in possession of the Royal Scottish House of *Bruce*, and the father of the celebrated Robert resided in a Castle, the site of which, now converted into a school, retains his name. The Church, on an eminence, nearly surrounded by the little stream *Musel*, is a pointed building of the XIVth century. In the centre of the village stood one of the Crosses, marking the resting-place of Queen *Eleanor's* corpse; and on its dilapidation, two centuries since, a brick column was erected on its site, which has been repaired of late years in good taste. Hence *Tottenham* is often mentioned as *Tottenham High*

MIDDLE-
SEX.

MIDDLESEX. Cross. The Church is a Vicarage, in the gift of the Dean and Chapter of St. Paul's. Population, in 1821, 5812.

MID-RIFFE. Twickenham, on the bank of the Thames, eleven miles South-West from London, is perhaps the most classic ground in England. Pope's villa has been destroyed by its present tasteless owner, but his grotto and garden still remain. Strawberry Hill, and Lord Orford's collection of virtù in it are entire; and there is scarcely a spot in the neighbourhood which does not call to mind some agreeable Poetical or Historical recollection. The meadows on the banks of the river are eminently beautiful. The Church is a Vicarage, in the gift of the Dean and Chapter of Windsor. Population, in 1821, 4206.

Uxbridge. Uxbridge, the largest market town in the County, stands on the Coln and the Grand Junction Canal. It consists principally of one large wide street, and is memorable in English History as the place at which the Commissioners of Charles I. met those of the Parliament during the Great Rebellion, in the hope of adjusting a Treaty, which the exorbitant demands of the insurgent Commons frustrated. The house in which they assembled still exists as the Crown Inn, at the Western extremity of the town; it is known as the *Treaty House*, and a large room is shown in it, in which, according to a very probable tradition, the discussions occurred. Great quantities of flour are supplied to the Metropolis by the mills in this town. It is a Chapelry, in the Parish of Hillingdon. Population, in 1821, 2750. Distant from London fifteen miles, West by North.

MIDHURST, a Borough in the County of Sussex, pleasantly situated on the river Arun; it has returned two Members to Parliament since the 4th Edward III. Antiquaries have supposed it to be the *Milva* or *Meda* of the Romans, and from its Saxon name Midhurst, (Middlewood,) it must once have stood in a forest. From *Domesday Book* it appears to have been a place of consideration at the time of the Conquest. The Church is a small building containing some fine monuments of the Montague Family, the ruins of whose magnificent seat, *Cowdray House*, stand about a quarter of a mile Eastward from the town, in an extensive park distinguished by its noble chestnut trees. The house and domain originally belonged to the Countess of Salisbury, (daughter of George, Duke of Clarence,) one of the most pitiable victims of Henry VIII.'s brutal tyranny, and after her attainder and execution they were given by the Crown in exchange to the heir of the Marquess of Montague. The mansion was quadrangular, richly adorned with fresco Paintings, and presenting the choicest specimens in England of ancient domestic Architecture. It was destroyed by fire in 1793, about the same time that its owner was drowned while rashly descending the falls of Schaffhausen. Population of Midhurst, in 1821, 1335. Distant from London 31 miles S. W., from Chichester 12 miles N.

MIDRIFFE, A. S. *mid-hrife*; D. *middel-rift*, or *rif*. *Rif*, or *rift*, Kilian calls *involucrum*. The A. S. *hrife*, (Lye,) *venter*, *uterus*. It is most probably from the A. S. *reaf-ian*, to rive, to part asunder. See DIAPHRAGM.

The diaphragm; a long and round muscle, whereby the vital parts are separated from the natural, and the heart and lights from the stomach and nether bowels. Cotgrave.

The upmost inwards of a man, to wit, the heart and the lungs, are divided from the other entrails beneath, by certaine pellicles or

rimmes of the *midriffe*, which the Latines call *præcordia* (because they are drawne and set before the heart as a defence) and the Greekes *phrenes*. Holland. *Plinie*, vol. i. ch. xxv.

Here most men have placed the seat of laughter; it hath much sympathy with the brain, so that if the *midriff* be inflamed, present madness ensues it.

P. Fletcher. *The Purple Island*, can. 4. note 9.

MI'DWIFE, } In A. S. *thenian wifum*, is *muli-*
MI'D-WIFE. } *eribus administrare, obstetricare*.

Henshaw says, q. d. A. S. *med-wif*; "wife or woman hired, for *meed* or reward." Junius—that it is a word compounded of *meed*, reward, and *wife*. And Verstegan, (c. 7.) "*mede-wyf*, a woman of *mede*, or merit, deserving recompense."

To *mid-wive*, is to act as *midwife*; and consequentially, to help into the world; to help to bring forth or produce; to produce.

And miracles of *mydwyes*, and maken wymmen to wenen
That the lace of oure lady smok lighteth hem of children.
Piers Plouhman. Crede, sig. B. ii.

And as she was in paines of hyr laboure, the *mydwife* sayde vnto her: feare not, for ye shall haue this sonne also.

Bible. *Genesis*, ch. xxxv.

CADE. My mother a Plantagenet.

BUTCH. I knew her well, she was a *midwife*.

Shakspeare. *Henry VI. Second Part*, fol. 138.

Nor need I crave the Muse's *midwifry*

To bring to light so worthless poetry.

Hall. *Satire* 1. book i.

Which presbitery, though some call the rod of Aaron, yet it more resembles those rods of Jacob, as being designed to *midwife* a py-bald, mixt, ringstraked progeny of church governors into the world.

South. *Sermons*, vol. vii. p. 65.

Dr. Lloyd did afterwards labour much in *midwiving* a book into the world, entit. An Essay towards a real character, and a philosophical language.

Wood. *Athenæ Oxonienses*, vol. ii. fol. 1091.

So hasty fruits, and too ambitious flowers,
Scorning the *midwifery* of ripening showers,
In spite of frosts, spring from th' unwilling earth,
But find a nip untimely as their birth.

Stepney. *To the Earl of Carlisle*.

MIEN, n. Fr. *mine*; Ger. *mine*, from *meinen*, *significare*, to signify, to mean. Wachter. Skinner considers it to be a word newly introduced, and derives it from the Low Lat. *minare*, *ducere*, q. d. *ductus seu lineamentum faciei*, the draught or delineation of the face. Wachter may be right; but it is evidently used by Spenser as equivalent to *demean* or *demeanour*. See Demean. Such interchanges of a simple and compound term are familiar to our old Poets. *Mien* is applied to

The whole manner and appearance of behaviour or comportment; to the look, the countenance, with correspondent carriage of body.

Her whyles Sir Calidore there vewed well,
And mark't her rare *demeanure* which him seemed
So farre the *meane* of shepheards to excell,
As that he in his mind her worthy deemed
To be a prince's paragone esteemed,
He was unwares surpris'd in subtle bands
Of the blynd boy.

Spenser. *Faerie Queene*, book vi. can. 9.

The whiles that mighty man did her *demean*
With all the evil termes and cruell *meane*
That he could make.

Id. *Ib*. book vi. can. 7.

A *mien* compos'd of mildness and of state,
Not by constraint or affectation great.

Stepney. *To the Memory of Queen Mary*.

MIGRA'TION, } known Etymology. See EMIGRATE.
MI'GRATORY. } To depart, leave, quit or remove
from.

Wo is me, too too long banished from the Christian world, with
such animosity, as if it were the worst of enemies, and meet to be
adjudged to a perpetual *migration*.
Hall. Works, vol. iii. p. 953. The Invisible World. The Epistle.

The *migration* of birds from an hotter to a colder country, or a
colder to an hotter, according to the seasons of the year, as their
nature is, I know not how to give an account of, it is so strange and
admirable.
Ray. Of the Creation, part i. p. 149.

The Tuscans were a branch of the Pelasgi that *migrated* into
Europe not many Ages after the dispersion.
Langhorne. Milton's Epitaphium Damonis Translated, note 2.

On the other hand, let us suppose a colony upon its *migration* to
have settled itself in a warmer climate, where men would find little
or no occasion for clothes, houses, or the preparation of food by fire,
and where they were cut off from all communication with the rest
of the world.

Horne. Works, vol. iv. p. 145. Discourse 24.

This purpose is sometimes carried on by a sort of *migratory* in-
stinct, sometimes by the spirit of conquest; at one time avarice
drives men from their homes, at another they are actuated by a
thirst of knowledge; where none of these causes can operate, the
sanctity of particular places attracts men from the most distant
quarters.

vol. ii. p. 2.*

MIKANIA, in *Botany*, a genus of the class *Synge-
nesia*, order *Æqualis*. Generic character: calyx four or
six-leaved, equal, four or six-flowered; receptacle naked;
down pilose.

Ten species, natives of both Indies and South Ame-
rica.

M I L A N.

MILAN. **MILAN**, in conjunction with the Venetian territories, constitutes that portion of the Austrian dominions which bears the name of the **LOMBARDO-VENETIAN KINGDOM**. The Government of Milan includes, besides the ancient Duchy, the Valteline, the districts of Bergamo, Brescia, and Mantua, forming altogether a territory of 6240 square geographical miles, supporting 2,191,709 inhabitants. It is bounded on the North by Swisserland, on the East by the Government of Venice, on the South by Parma, Modena, and the dominions of the King of Sardinia, which extend also along the Western frontier.

Political divisions. The Government of Milan is divided into the Legations of

	Extent. Square Geogra- phical Miles.	Popu.ation.	Chief Town.	Population.
1. Milan	720 ..	428,551 ..	Milan . . .	129,037
2. Pavia	352 ..	142,664 ..	Pavia . . .	21,299
3. Lodi	512 ..	191,665 ..	Lodi	17,812
4. Cremona	448 ..	168,281 ..	Cremona . .	25,833
5. Como	912 ..	315,634 ..	Como	7,399
6. Sondrio	848 ..	77,523 ..	Sondrio . .	1,500
7. Bergamo	864 ..	300,225 ..	Bergamo . .	23,704
8. Brescia	880 ..	305,719 ..	Brescia . .	31,051
9. Mantua	656 ..	230,424 ..	Mantua . .	24,758

Physical features. This territory, terminated to the North by the Alps, is, with the exception of the Government of Sondrio and the Northern parts of those of Brescia and Bergamo, generally a plain so level that the Po falls but 190 feet from its source to its mouth. The soil is a light earth, very productive, and lying to a great depth on a calcareous bottom. Even in the mountainous districts, the ground, wherever its position admits of culture, is very fertile. The highest mountains are those which enclose the Valteline; of these, the Splügen and Legnone exceed the height of 8000 feet, though neither summit reaches the limits of perpetual congelation. The principal rivers are the Po, flowing with a broad, deep, and gentle current for 150 miles along the Southern frontier. Near Pavia it receives the waters of the Ticino, which forms the Western boundary of the Government, and is navigable throughout from its exit from Lago Maggiore. The Olono and Lambro flow from the Alps to the Po, the common channel for conveying all the waters of this region to the sea. The Adda rises in the Valteline, expands into the Lake of Como, where it becomes navigable, and continues so until it falls into the Po near Cremona. In like manner, the Oglio and Mincio rise in the Alps, and after passing, the former through Lago d'Isco, the latter through Lago di Garda, fall into the Po. The length of Lago Maggiore amounts to fifty miles, the breadth varies from four to nine; its depth is in some places 1800 feet. It is celebrated for the great beauty of its scenery, in which the Borromean Islands, three in number, are a principal object. They derive their name from the Family of Borromeo, whose favourite pursuit it has been to decorate them with the most costly embellishments of architecture and garden ing. Lago di Como, forty miles long, but nowhere exceeding four miles in breadth, is, like other Alpine lakes, of a great depth, amounting in some places to 600 feet. Its shores are delightful by the natural form and high cultivation; and among other towns seated on them

is Como, which attracts the notice of the traveller by its extent, the beauty of its buildings, and from having been the birth-place and favourite residence of Pliny the Younger. Paulo Giovio, and Volta the celebrated natural Philosopher, also were natives of Como. The Lago di Garda, so named from the town of Garda seated on its shore, is thirty miles long and twelve broad, so that having a superficial extent greater than any of the other lakes, it merits the epithet *Maximus*, as Virgil styles it when speaking of it under its ancient name *Benacus*.

teque
Fluctibus et fremitu surgens Benace marino.
Geor. 2. 160.

The agitation mentioned in this passage is produced by violent hurricanes rushing down from the ravines of the Alps, and raising the water into such mountainous and abrupt waves as are often destructive to the small vessels plying on the lake, though otherwise the navigation is safe, as the water is deep enough for the largest ships. The Lago di Lugnano pours its waters into those of Lago Maggiore over a high cascade, and their navigation is connected by means of a canal. The sides of Lago di Lugnano are so precipitous that in many places a landing cannot be made; the depth is very great, and in some parts has never been fathomed. The Lakes of Isco and Idro are of far less dimensions. In the lower parts of the Government springs are in general rare, though the climate is very moist, as the quantity of rain which falls annually on any given surface varies from 40 to 92 inches. This circumstance is attributed by Ebel to the prevalence of Westerly winds, which sweep the clouds from the Mediterranean along the Southern face of the Alps. The degree of cold is often very severe in Winter, descending considerably below the freezing point, and causing the small lakes and rivers to be covered with ice. Snow often lies above a foot deep on the ground for days or even weeks, as in 1784, when it covered the Country from the 4th of January to the 17th of February. The air is generally healthy, with the exception of the districts flooded for the cultivation of rice.

The soil of this territory is so fertile and so diligently cultivated that it yields two crops of corn, and four, or sometimes even six, of hay in the year. The fields are separated by rows of fruit trees, covered in the proper season with luxuriant produce. Much of this agricultural wealth results from judicious irrigation conducted by means of rills from extensive reservoirs skilfully constructed in advantageous situations. The principal objects of culture are wheat, rice, maize, millet, and other sorts of grain suited to the climate of the temperate zone; pulse in great profusion and variety; flax, cotton, hemp, the olive, the grape, and all fruits cultivated in Europe; though the apples and pears of this region are inferior to those of England, Germany, and other Countries which have cooler summers. The mulberry-tree is an extensive object of the agriculturist's care, as it annually produces two crops of leaves, the first of which serves to feed silk-worms, the second, as in the days of Virgil, to supply fodder for cattle. Cheese of excellent quality is produced in such quantity that Lalande

MILAN

Lago di Lugnano.
Isco and Idro.
Climate.

Agriculture.

MILAN. computes its annual value at a million of livres. The most esteemed is produced about Lodi, and its excellence is owing not only to the great richness of the pastures, but to the skill and watchful care employed in its preparation. As Parma is the principal mart for the disposal of this cheese, it is generally known through Europe under the name of Parmesan. Few cattle in general are reared, and the supply requisite for the demand of the population is principally drawn from Switzerland and the Tyrol. Vast quantities of swine are fed to supply the bacon and sausages which form so large and favourite a portion of the animal food of the Italians. The rearing of poultry also is a principal object with the farmer. The management of bees still continues, as when Virgil wrote, to be a favourite and lucrative employment, producing abundance of the finest honey, and wax sufficient to supply the profuse use of it in the ceremonies of the Roman Catholic ritual. The vine is every where cultivated to a great extent, in a manner which adds much to the beauty of the landscape; as the stocks are set in straight lines and the branches arranged in graceful festoons between the elm-trees which support them. To this mode of culture Eustace, however, attributes the inferiority of their wines, which are harsh and disagreeable, and contain so little spirit that they can seldom be kept beyond a year. The scarcity of wood is such that the demand is supplied principally by importation.

Manufac-
tures.

The inhabitants of the Duchy of Milan, celebrated in the Middle Ages for their enterprising and judicious operations in commerce, and their skill as artificers, are still considered the most frugal and industrious among the Italians. The various fabrics of silk are the principal objects of their manufacturing industry: next to these in importance is the woollen manufacture. The spinning and weaving of cotton have latterly become extensive, and are generally conducted in combination with the manufacture of flaxen goods. There is much paper manufactured, and some of excellent quality. The hardware manufactures still retain some of the excellence which marked them in the Middle Ages, when Milan steel was regarded as the best in the World. The principal seats of these manufactures are at present at Bergamo and Brescia, where great quantities of agricultural implements, arms, and similar sorts of the larger denominations of hardware are made. At Pavia there is a foundery for cannon, and at Milan an extensive and active factory for gunpowder. The principal articles of export are raw and manufactured silk, rice, bread-corn, cheese, hardware, glass, linen, and the returns are made in colonial produce, iron, copper, wool, leather, cattle, and wine. The principal marts are Milan, Brescia, and Bergamo, and communication is maintained through all parts of the Government by numerous and excellent roads, as well as by several canals. The Canal of the Ticino, or the *Navilio Grande* as it is sometimes called, forms a communication between the river Ticino and Milan: it was commenced 1179 and finished 1271, and has greatly aided both the agricultural and commercial operations of the inhabitants during the centuries which have elapsed since its formation. The other principal Canal of the Government is the *Navilio della Martesana*, which forms a communication between the *Navilio Grande* and the Adda. These Canals are extensively useful as affording means of irrigation; and numerous other water channels, too small to serve the purposes of navigation, intersecting the country in every direction,

afford the supply of moisture so essential to vegetation during the sultry summers of Italy.

Besides the chief towns of the Delegations, other important places are:—In the Delegation of Milan: Gallarate, population 3735; Marignano, or Melegnano, population 3000; Vimercate, population 3400; Legnano, population 3114; Leregno, population 3324; Magenta, population 3390. In the Delegation of Pavia: Abbiate Grasso, population 4000. In the Delegation of Lodi: St. Columbano, population 5008; Codogno, a town possessing a flourishing trade and adorned with a College and Theatre, population 7986; Concino, population 3824; Borghetto, population 2506; Lodi Vecchio, meriting notice rather from its former greatness than from its present state, which is one of poverty and insignificance. In the Delegation of Cremona: Casal Maggiore, population 4743; Pizzeghetone, a strong place, population 3814; Castelleone, population 4190; Castel Viadana, population 5314. In the Delegation of Como: Lecco, population 1868; Varese, population 3049. In the Delegation of Sondrio: Tirano, population 2740; Morben, population 2326; Clefen, population 2637; Conto, below which lay the town of Pleurs, overwhelmed by the fall of a precipice in 1618, when of a population of above 2500 but one person escaped; the site of this extinct town is at present a lake. In the Delegation of Bergamo: Breno, population 1800; Caravaggio, illustrious as the birth-place of Michael Angelo; Clusone, population 3077; Lovere, population 4000; Martinengo, population 3000; Pissogne, population 2600; Romano, population 3165; Treviglio, population 6185; Zogno, population 2500; Fontanella, population 2000. In the Delegation of Brescia: Bagnolo, 2644; Travagliato, population 2672; Calcinato, population 3207; Castenedolo, population 4411; Gussago, population 3099; Desenzano, population 3553; Carpenedolo, population 4370; Veduggio, population 4370; Lonato, population 5621; Calvisano, population 3502; Chiari, population 8034; Palazzato, population 3029; Novato, population 4831; Ozinuovi, population 4726; Pontevico, population 5038; Quinzano, population 3167; Verola Nuova, population 4057; Leno, population 4089; Bagolino, population 3644; Salò, population 4345; Gargano, population 3382. In the Delegation of Mantua: Revere, population 7527; Sabionetto, population 3151; Bozzolo, population 3610; Azola, population 3000; Castiglione delle Stiviere, population 1529; Ostiglio, population 3141; Monte Chiaro, population 5978.

MILAN, anciently **MEDIOLANUM**, the chief City as well of the Delegation as of the Government of the same name, and the Capital of the Lombardo-Venetian Kingdom, although now languishing under the Austrian sway, is still a wealthy and populous city. It is advantageously situated on the river Olona, and by means of the two navigable canals, the *Navilio Grande* and the *Martesana*, has a convenient commercial communication with the Ticino and the Adda, and derives from them an inexhaustible supply of water for irrigating the adjacent country. The extent is great in proportion to the population, which, although amounting to 129,037, occupies 4757 houses enclosed by a wall above ten miles in circumference. The eagerness with which its possession has for Ages been contested gave rise to a proverbial remark in Italian, that the destruction of Milan is essential to the tranquillity of Italy. Although the streets are narrow, crooked, and in general devoid of architec-

MILAN.
Places of
importance

City of
Milan.

MILAN.

Il Duomo.

tural embellishment, the public buildings are constructed for the most part on a vast scale and with much magnificence. By far the most striking and splendid of its structures is the Cathedral, *Il Duomo*, of which we have given some description in our *Essay on ARCHITECTURE*, p. 337. Although the foundation was laid so long ago as 1380, by Gian-Galeazzo Visconti, it is still unfinished; and as estates are from time to time bequeathed to forward the building, the Ecclesiastical Body intrusted with the fund is too sagacious to conclude a work which gives the people a motive for placing considerable sums under its control. Its walls are decorated by niches and consoles containing images, the number of which amounts, if we may credit Millin and Eustace, to above 4000; 400 is the more probable estimate of Lalande and some other writers. A gilt image of the Virgin, of colossal dimensions, is placed on the top of the spire, and forms a striking object visible in all parts of the city. Among the numerous donations which have been made to complete this edifice, the greatest was that of Piero di Carcano, who, in 1646, gave 230,000 crowns of gold for that purpose. Napoleon, ambitious of the glory which must result from finishing an undertaking which had been in progress through several centuries, expended on it large sums with such effect that what now remains to be done is but trifling. The walls are strengthened on the exterior by ninety-six buttresses each terminating in a spire, and amidst these rises the principal pinnacle of the building with its four beautiful staircases conducting the spectator to the summit; whence he enjoys the view of the magnificent edifice beneath him, as well as of the city and of the rich territory of Milan studded with villages, intersected by canals, and extending to the point at which the ridges of the Alps and Apennines unite. Internally, the appearance of the building is at once grand and beautiful, as the effect of its vast dimensions and architectural splendour is heightened by the peculiarity that it is not divided into separate chapels, each sacristy being separated by low partitions, which do not impair the sublimity of the impression. Its roof rises on 52 Gothic columns 90 feet high and 8 in diameter, fluted, and bearing at each angle a console surmounted by the image of a saint. In the centre the octagonal cupola springs from eight Gothic arches. Eustace, whose Religious opinions made him deeply susceptible of the impression resulting from such a structure, observes, "both in fretwork, carving, and statues, it goes beyond all churches in the world, St. Peter's itself not excepted. Its double aisles, its clustered pillars, its lofty arches, the lustre of its walls, its numberless niches all filled with marble figures, give it an appearance novel even in Italy, and singularly majestic. The dome is surmounted by a tower or spire and covered with blocks of marble united by a white cement, so that it appears one mass of white shining marble." The pavement consists of marbles of various colours arranged with great taste and admirable effect. The material of the building is throughout white marble, with the exception of a hard and close granite, of which a column at each side of the grand portal is formed; and these, the Jachin and Boaz, as they may be styled, of this Temple, command the admiration of the spectator by the high polish and enormous size of the shafts which are throughout without any joining. At the internal vertex of the cupola is suspended a relic which gives this Cathedral great importance to devotees. According to the legend, one of the three nails which

VOL. XXV.

had fixed Christ to the Cross was by St. Helena's orders forged into a bit for the bridle of her son Constantine the Great. From Constantinople this bit was by some chance conveyed to Rome, where St. Ambrose, warned in a dream in what place he should find it, drew it from among the lumber of an ironmonger's shop; and in order that no doubt might exist as to its identity, his eye was directed by a lambent flame in which the relic was enveloped. In its present state it is a small bar of iron cased in gold, and deposited on a silken cushion which is enclosed in an octangular shrine of crystal. Once a year this relic is reached by means of a machine called *la Nuvola*, (the cloud,) which, constructed with much mechanical skill, rises up by means of internal pulleys to the roof, and a Priest thus elevated takes down the shrine, with which he descends in the same manner as he rose. The Archbishop then takes it in procession to the Church of St. Sepulchre, and subsequently has it restored to its elevated station. Among the numerous statues dedicated to monumental and other purposes the most remarkable is that of St. Bartholomew, represented after he has been flayed, grasping his own skin in his hands. This figure is said to exhibit a proof of the intimate acquaintance which Marco Agrati possessed of the anatomy of the subcutaneous muscles, and is executed with a spirit and power which cause painful emotion in the spectator. The body of St. Carlo Borromeo, the enlightened, benevolent, and pious Archbishop of Milan, is deposited in a subterranean chapel below the Cathedral. The vault of the apartment is encrusted with eight bas-reliefs of silver representing the most remarkable passages in the life of the Saint, and the walls are hung with a tapestry richly wrought in gold. The altar is of solid silver. The shrine is of bronze plated with silver, and containing another of smaller dimensions, formed of the same precious metal, and bearing four golden escutcheons displaying the arms of Spain. Crystal panels give to view the body of the Saint clothed in his archiepiscopal robes richly ornamented with pearls and diamonds, whilst a crown of gold is suspended over his head. A silver urn, deposited beneath the altar, contains his entrails. Besides the statue of the Saint, of massive silver, there is a profusion of valuable offerings and utensils employed in the Service which celebrates his memory. The Cathedral contains also a silver statue of St. Ambrose as large as life. A meridional line, laid down by the Milanese Astronomers, in 1786, on the pavement, attracts the notice of scientific visitors. Of the other Churches, the most celebrated is the Basilica of St. Ambrose, as its antiquity is so great that it is supposed to ascend as high as the time of the Saint whose body, according to general belief, it contains. Among other rich offerings, it possesses an altar covered with plates of gold and silver.

MILAN.

Basilica of
St. Am-
brose.

Milan is remarkable for the number, size, and architectural magnificence of the buildings devoted to eleemosynary purposes. The *Ospedale Maggiore*, or Great Hospital, a noble building, which we have described in our *Essay on ARCHITECTURE*, p. 404, is of such dimensions as to afford accommodation for 1200 persons. The extent of the *Lazaretto* is a sad evidence of the dreadful Plagues which from time to time have desolated Milan. It is 1250 feet long, 1200 broad, and contains 500 chambers. The College of Boera, formerly belonging to the Jesuits, is an extensive and handsome building, capable of accommodating 1200 students, besides Professors and other essential Members of such an esta-

blishment. The *Ambrosian Library*, which has derived recent great celebrity from the learned labours of the Librarian Angelo Mai, contains 40,000 printed volumes, and 18,000 MSS. Among the various fragments of the classical writers which the researches of Mai have recovered after Ages of oblivion, the most important are some Orations of Cicero and the greater part of his *Treatise De Republica*.* On the wall of the Convent belonging to the Dominicans is painted the celebrated Last Supper by Leonardo da Vinci. That unrivalled production of the Painter's Art has long been almost totally effaced. A short time after its completion a violent inundation, which laid many parts of Milan under water, flooded the Refectory, for which it was painted, to the depth of many feet; and the dampness thus produced so much injured the Picture, that Vasari, who saw it in 1566, describes it as spotted to such an extent as to be one-half obliterated. The wall which supported the Painting was subsequently pierced for the purpose of opening a door between the Refectory and Kitchen of the Convent, and a portion of the central part was thus removed. Attempts made by unskilful artists to retouch the work hastened its ruin, which was completed when the troops of the French Republic occupied Milan, and the soldiers quartered in the Refectory, among other acts of devastation, amused themselves with making the figures marks for pistol-shots. Among the ornaments of Milan the *Foro Buonaparte*, as it was called during the French sway, deserves notice. The extensive esplanade of the citadel, formerly neglected, unsightly, and unwholesome, was by the orders of Napoleon adorned with buildings, laid out in walks, and judiciously planted, so as to become a delightful place of recreation for the people of Milan. Since the establishment of the Austrian power, this Park has been neglected and is returning to its former state. The people of Milan delight in theatrical exhibitions, which are performed in *La Scala*, the principal Theatre, on a scale of expense and with a degree of taste not surpassed in any Capital in Europe. *La Scala* is larger than the Opera House in London, and besides a spacious and well-arranged pit, contains six circles each consisting of forty-six boxes. Its decorations are splendid, its machinery extensive and ingenious, and such is the regard paid to costume that, if we may credit Lady Morgan, 1085 dresses were made for a single ballet. The superb Triumphant Arch commenced on the spot at which the road of the Simplon terminates in Milan, is a striking emblem of the fortunes of the Potentate at whose command it had been undertaken. "At the Re-

MILBORNE PORT, a Borough in Somersetshire, standing on a branch of the River Parret. *Port*, in Saxon, signifying a Borough, proves the antiquity and early high consideration of this town. It returned two Members to Parliament from the 20th to the 35th of Edward I., the right was then suspended, and not renewed till the 4th Charles I. The manufactures are coarse linens, stockings, and shoes. The Church is a very ancient cruciform building, a Vicarage in the gift of Winchester College. Population, in 1821, 1440.

* For an account of some of the works recovered by Mai, see his publication, *Scriptorum veterum nova collectio*, &c. 2 vols. fol. Rome, 1825.

storation (we quote the words of Lady Morgan) the work was suspended, and the Arch now remains as it was left in 1814, surrounded by masses of marble as they were drawn from Carrara, and blocks of granite torn from the acclivities of the Simplon. Pediments, shafts, basso-relievos, statuary, and trophies, are scattered on every side, the lichen and the moss already degrading their fine forms, while the surrounding workshops, full of unfinished work, are dark and silent." Milan lies in 45° 30' N. latitude, 9° 13' E. longitude.

The History of the City of Milan has been that of the Duchy of which it is the Capital. It was of Gallic origin, like most of its neighbours, and was probably first raised by Belovesus on his descent into Italy, *circa* u. c. 170. (*Liv.* v. 34.) It fell permanently under the Roman power after the victories of Marcellus, *circa* u. c. 532. During the invasion of Attila, A. D. 452, it was cruelly ravaged; and on the decline of the Western Empire it formed part of the Kingdom of Lombardy. Having rebelled against Frederic Barbarossa, he rased the City to the ground in 1162. The Duchy was created for the Visconti Family in the XIVth century, and passed to Francesco Sforza by marriage with an illegitimate daughter of the last of that line, on his decease in 1438. The descendants of Sforza inherited little of his talent and valour; and France, Spain, and Austria long contested Milan as their booty; till, in the latter half of the XVIth century, the Emperor Charles V. having mastered the Duchy, bestowed it as a fief on his son Philip II. of Spain. Under that Crown it remained till the War of the Succession, when Prince Eugene won it for Austria, with the exception of a portion annexed to Sardinia. After Napoleon's campaign of 1796, it was incorporated with the Cisalpine Republic; and at the Peace of 1814, Sardinia having obtained restoration of her share, the remainder was again transferred to Austria, as a constituent portion of the Lombardo-Venetian Kingdom. The City is now the chief seat of the Austrian Government in Italy, and the residence of their Viceroy.

 The light *militia* of the lower sky.

Pope. The Rape of the Lock, can. 1.

The common *military* sword is a heavy massive weapon, for close engagement; wielded by a strong and skilful arm, it stabs and cuts, opens dreadful gashes where it falls, severs limbs, lops the head, or cleaves the body.
Horsley. Sermon 7. vol. i. p. 124.

Definition. **MILITIA** is ordinarily used at the present day to denote the military force which is raised by the English Counties, as distinguished from the regular soldiery, which has no peculiar local connection; but in its wider signification it comprises the whole military force of the Empire both by sea and land, in which sense it was used in the disputes between Charles I. and his Parliament.

Origin. **Alfred.** The first establishment of a regular military force in this Country, like that of most of our other institutions, is involved in obscurity. It seems, however, to be universally admitted, that if Alfred the Great were not its actual founder, as some have supposed, yet at all events he effected many useful and important changes in it, so as to make it more serviceable for the protection of the Country than it had been before his time. The resources of our Saxon ancestors were too limited to enable them to support a standing army, which is found to be an oppressive burthen even to the most wealthy States of modern times; and a levy *en masse* of the population, however powerful a means of defence when there is sufficient time for preparation, was found to be no effectual safeguard against those sudden attacks to which the Kingdom was exposed from the predatory habits of the Tribes who inhabited the Northern parts of Europe. Alfred is said, under these circumstances, to have caused a register to be made of all the people, and to have appointed a regular rotation of duty, so that while a sufficient number were engaged on active service, the rest remained at home to cultivate the soil, and to perform those other services necessary for the well-being of the Kingdom; every man being liable to be called out in turn to take his share in the active duties of military life. He also built castles, and appointed certain places of rendezvous, where the people might muster on the approach of danger; so that the Historians represent the Kingdom as one great and well-regulated garrison, exposing no vulnerable point, and able to draw together a sufficient force for its defence, on whichever side it might be attacked, and however sudden the attack might be. Besides the above outline of the constitution of the Militia before the Conquest, it appears that the chief command in each County was vested in the Eorle or Ealderman, terms which are translated indiscriminately by the Latin words *princeps*, *subregulus*, and *dux*, from which last word the chief Nobility of those times are frequently called Dukes; a term which is apt to mislead, for the first creation of the rank which is now known by the name of Duke, did not take place till the reign of Edward III. when he

Constitu-
tion of An-
glo-Saxon
Militia.

made his son, Edward the Black Prince, Duke of Cornwall. So also the present title of Earl is of a date subsequent to that of Duke, and is distinct, though derived from the Saxon title Eorle, which had a nearer resemblance to the present office of Sheriff. It is also known that the obligation to serve in the Militia was by the Saxon laws imposed on all the landholders of the Kingdom alike, unless their lands were exempted by express charter, the *expeditio contra hostem* being one of the three obligations of the *trinoda necessitas*, of which the other two were *pontium reparatio*, and *arcium constructio*. In the reign of Ethelred, when the Kingdom was infested by Sweyne the Dane, a law was passed requiring the proprietors of every eight hydes of land to provide a man and horse with a suit of armour complete, and the proprietors of three hundred and ten hydes to equip a vessel for the defence of the coast; but in ordinary times the quota seems to have been one man for every five hydes, the number which, according to Selden, constituted the smallest landed estate that entitled the proprietor to the rank of Thane. How much a hyde of land contained is doubtful. Some have fixed it at one hundred acres. Selden supposed it to have been so much land as could be tilled by one plough, together with a competent portion of meadow, pasture, and wood, for the maintenance of the proprietor and his family. Spelman computed that there were 243,600 hydes in all England, and consequently, that the ordinary military force before the Conquest may have amounted to 48,720 men.

After the Norman Conquest a great change took place in the constitution of the military force, in consequence of the introduction of the Feudal tenures. It is generally said that William I. divided the Kingdom into 60,000 Knight's fees. It is matter of doubt whether the essence of a Knight's fee consisted in its annual value or in its size. The annual value varied, owing no doubt in a great degree to the different depreciations in the value of the coin. In the reign of Henry III. it appears to have been either £15 or £20; in the reign of Edward II. it was either £20 or £40, for there are authorities both ways. After the time of Edward II. it rose to £40, and continued to be reckoned at that sum until the time when Charles I. attempted to raise money by compelling the proprietors of Knight's fees to take upon themselves the burthensome honour of Knighthood. A Knight's fee is said to have contained twelve carucagia or carucatas (Anglicè *carves*) of land. But the extent of a carve is a matter of doubt; whether it was or was not the same as a hyde. Even so early as in the reign of Henry II. it was doubted by a writer, cited by Selden in his *Titles of Honour*, whether there ever had been so many as 60,000 Knight's fees. So that no faith can be placed in any of the above calculations. Each Knight's fee was charged with the obligation of providing a man of arms to attend the King in his wars during forty days in each year, and less than a Knight's fee had to provide a man for a number of days proportionally less.

One main distinction between the Saxon and the Feudal Militias appears to have been that in the former, as we have before observed, the right of commanding in each district was vested in the Eorle or Ealderman; the origin of which right is probably to be traced in the customs of the ancient Germans, who, according to Tacitus, were not commanded by their Kings in their military expeditions, but by Chiefs chosen by the people

MILITIA.

Ethelred.

Constitu-
tion.

Norman
command-
ers.

MILITIA. themselves *ex virtute*, i. e. on account of their individual merit; so that the Civil allegiance of the subject, and the military obedience of the soldier, were due to different persons. But in the Feudal Militia the case was different, for the chief Magistrate of each district had no military authority attached to his office, and the services of the Knights were due either to the King himself, if the lands were held immediately of him, or to the Mesne Lord, who again owed them to the King as Lord Paramount.

Commuta-
tion of
service for
money.

Henry IV. The next change was effected by the commutation of the personal services of the Feudal vassals into money payments. This change did not take place all at once, though it was probably not very long in being effected, as at first it was found to be attended with great advantages both to the vassal and the King. There is, however, a Statute of so late a date as the 4th year of the reign of Henry IV. which enacts, that none should be compelled to find men of arms, hoblors, and archers, other than those which did hold by such service, unless it were by common assent of Parliament. Hence we may conclude, that at that time personal service was not entirely abolished.

Edward I.
View of ar-
mour. As the Feudal Militia grew obsolete by the commutation of personal services into money payments, another system sprang up, which seems to have been a revival of that which existed before the Conquest, and the origin of the Militia as constituted at the present day. By the Statute of Winchester, 13 Edward I. c. 6. (a Statute of Henry II. not printed amongst the Statutes at Large) it was enacted, that "every man between fifty and sixty years of age should be assessed and sworn to armour according to the quantity of his lands and goods; that is to wit from fifteen pounds of lands and goods forty marks, an hauberke, a breastplate of iron, a sword, a knife and a horse; and from ten pounds of lands and twenty marks goods an hauberke, a breastplate of iron, a sword and a knife; and from five pounds lands, a doublet, a breastplate of iron, a sword and a knife; and from forty shillings lands unto one hundred shillings lands, a sword, a bow and arrows, and a knife; and he that has less than forty shillings yearly shall be sworn to keep gis-arms, knives, and other less weapons, and all that may shall have bows and arrows out of the forest, and in the forest bows and boults; and that view of armour be made every year two times, and in every hundred and franchise two constables shall be chosen to make the view of armour." By a Statute passed in the reign of Philip and Mary the above-mentioned arms were changed for others better adapted for modern warfare.

Edward III.
Militia con-
fined to
home ser-
vice. By 1 Edward III. stat. 2. c. 5. "No man was to be compelled to arm himself otherwise than he was wont in the time of former Kings, nor to go out of his own shire but when necessity required, and upon the sudden coming of strange enemies into the realm, in which cases it was to be done as had been used in times past for the defence of the realm." From c. 7. of the same Statute, it appears that Commissions, doubtless in the nature of Commissions of Array, had been issued by the Crown, requiring the Counties to furnish soldiers at their expense to attend him in his foreign wars. This was a grievance which the prerogative did not entitle the King to impose upon the people, and the Statute was passed to prevent its recurrence for the future. By Statute 18 Edward III. c. 7. the respective rights of the King and the Counties were still more accurately defined; it

being enacted by that Statute that the wages which the King was to pay to the soldiers should commence on the day when they left their own Counties, and cease on the day when they returned thither. Besides the regular view of arms required by the Statute of Winchester, Commissions, called Commissions of Array, were issued by the King into the different Counties, for the purpose of mustering and training the inhabitants. These Commissions, though apparently in their origin mere usurpations on the part of the Crown, do not appear to have excited any opposition so long as they were confined to an object in itself legitimate, namely, the training of the inhabitants within their own Counties; and accordingly in the reign of Henry IV. the form of the Commission was settled by Act of Parliament. But when the Crown attempted, under colour of those Commissions, to exact services from the people which the people were not legally bound to render, the Parliament interfered and attempted to redress the grievance, as appears from the above-mentioned Statute 1 Edward III. stat. 2. c. 7.

From the consideration of what is forbidden and what directed by the different Statutes alluded to above, the object and constitution of the Militia in the XIIIth and XIVth centuries may be ascertained with tolerable precision. Every man was bound to serve in it, and at his own expense to provide himself with arms suited to his means. No man was to be required to leave the County to which he belonged except on occasion of invasion or insurrection. No man was on any pretext to be compelled to go abroad. While the Militia belonging to any County remained therein, its expenses were to be borne either by the individuals or by the County, and not by the Crown. The High Constables, officers chosen by the people themselves, were originally the proper officers; but their command was occasionally superseded by the Commissions of Array, and in the 1st volume of the year books there is a Writ which was sent to all the Sheriffs requiring them to take a view of armour. The soldiers whom the King employed on his foreign expeditions were to be paid for by himself. It was usual for Noblemen and Gentlemen to agree with the King to serve him with so many men as might be agreed on. The following is the copy of such an agreement, taken from the appendix to the II^d volume of Sir James Mackintosh's *History of England*. "Indenture between Henry VII. and Earl of Kent, dated 9th May 1492. Witnesseth that said Earl is reteigned to serve as long as it shall please our Sovereign, with the retinue and number of six men of arms, his own person being comprised in the same, every of them having with them his crestal and his page.

Indenture
with Henry
VII.

xvi Launces. at ix^d a day.

xxi Archers on horseback . . . vid.

lx Archers on foot. vid.

(Men of armes xviii^d.)"

Sir J. Mackintosh gives under an indenture of the same kind, from which it appears that the relative proportions of the different kinds of soldiers stood thus:

Men of arms. 72.

Launces. 225.

Archers on horseback 345.

Do. on foot 970.

The above documents are curious as showing the mode of retaining soldiers, and the proportions of the different kinds of soldiers employed in an army in the time of Henry VII.

MILITIA. In the reign of Henry VIII. another change took place in the appointment of Lords Lieutenant. This was another encroachment on the part of the Crown, similar to that by which it had previously acquired the right of issuing Commissions of Array. Probably this encroachment originated in the wish of the King on some occasion of peculiar danger to place the military power of particular Counties in trusty hands. It does not appear to have excited any opposition; which may be accounted for first by the enormous power of that King, and secondly because it did not expose the people to any fresh duties to which they were not already subject.

Elizabeth. In the reign of Elizabeth Lords Lieutenant were generally appointed for all the Counties. So far as relates to the Militia the effect of this encroachment was, that it deprived the people of their right of electing the officers who were to command them, for it has already been stated that the Constables were elected by the people. The appointment of Justices of the Peace by Edward III. had in a similar manner deprived the people of their right of electing the conservators of the peace. Perhaps, however, it may be said that the Constables had long ceased to exercise this power, the Commissions of Array having superseded them. In the reign of James I. the Parliament seems tacitly to have acquiesced in the new system by repealing the Statutes of Arms, and making no provision in their stead.

James I.

Charles I.

Dispute respecting Lords Lieutenant,

and the power of raising the Militia.

Whatever may have been the private opinion of persons acquainted with the History and Constitution of the Country, yet no public question arose as to the legality of the powers exercised by the Lords Lieutenant over the Militia until the reign of Charles I. When that Prince made his ill-fated expedition to the North in the year 1639, the Lords Lieutenant, as a matter of course, exercised the usual powers which were supposed to be vested in them. Upon his return the Parliament, which circumstances compelled him to summon, soon began to attack this branch of the Royal Prerogative, and voted that the Lords Lieutenant, and all who had acted under their authority as their deputies during the late disturbances, were *delinquents*; a new term expressive of no ascertained crime, but still sufficient to warn individuals that if they should again venture to act in the capacity of Lieutenants in obedience to the Crown, they would expose themselves to the hostility of the Parliament. The matter remained on this unsatisfactory footing for some time. At length a motion was made in the House of Commons incidentally, as Lord Clarendon says, and by an obscure Member, "that the House should consider whether the power of the Militia was vested in any one, so that a sufficient army could be drawn together in case of invasion or insurrection." The King's party maintained that the power was already sufficiently vested in him: in answer to which the previous vote against the Lieutenants was made use of as an argument to show the necessity of interference on the part of Parliament, for no man, it was said, could act with safety under a Royal Commission in opposition to that vote; and Mr. St. John, the Solicitor General, was directed to bring in a Bill to settle the matter. It was, however, by no means the intention of the popular party to suffer the power to be vested in the Crown. Accordingly a Bill was introduced with blanks for the names of the persons in whom the power was to be vested; it being the design of the Parliament first to procure the King's assent to the outline of the scheme, and then to insist upon the insertion of the names of

persons devoted to its own interests. It is obvious that if the King had yielded this point, he would virtually have resigned his Sovereignty by depriving himself of the means of resisting any further demand which the Parliament might choose to make. If, on the contrary, the Parliament yielded, it would have armed the Sovereign with a power which, it might easily be foreseen, would on a fitting occasion be used by him for the purpose of regaining those branches of the Prerogative which he had so reluctantly consented to relinquish. Accordingly, as the power of the sword was too dangerous an instrument for either party to intrust to the other, this was the question which led to the final rupture between them and which proved a main obstacle to every accommodation. When the King refused his assent to the Bill for settling the Militia, the Parliament had recourse to an expedient which no one will now call legal. There is no principle of the Constitution more universally acknowledged than that the votes of the two Houses of Parliament have no legal efficacy until they receive the sanction of the King's assent: nevertheless as the King refused his assent to the Bill, the Parliament determined to act without it, and passed an Ordinance, that is, an Act of Parliament, to which the King was no party, vesting the power of the Militia in individuals selected on account of their hostility to the King, which Ordinance the people were required to obey. This measure on the part of the Parliament compelled the King to take some step for the purpose of counteracting it. But he was placed in an awkward position, for although the right of commanding the Militia was a branch of the Prerogative to which he considered himself clearly entitled, yet the means of exercising that right were not so obvious; for the powers of the Lords Lieutenant, as we have before observed, were originally mere usurpations; they had never received the sanction of the Legislature, and at that particular period they could not with any prudence be resorted to on account of the stigma of *delinquency* under which they were labouring. The View of Armour and the Commissions of Array were obsolete and forgotten. Nevertheless the King, in accordance with the line of policy which he now adopted in the hope of regaining the confidence of his subjects by strictly adhering to the letter of the law, determined upon reviving the Commissions of Array, which, though obsolete, he hoped to justify as being legal. The people, without entering into nice discussions as to the legality of the two courses of proceeding, obeyed the Ordinance of the Parliament or the Commissions of the King, accordingly as they were predisposed by their Revolutionary or Royalist principles. It is however worth recording, that Selden, than whom no man was better qualified to form a correct judgment on the question, was alike opposed to both the Commissions and the Ordinance. It is needless to recount with what success the Parliament exercised its newly usurped power in the overthrow of both Church and King.

After the Restoration, by Statute 13 Charles II. c. 6. and 13 and 14 Charles II. c. 3., it was declared, that within all his Majesty's realms and dominions the sole and supreme power, government, command, and disposition of the Militia, and of all forces by sea and land, and of all forts and places of strength was, and by the laws of England ever had been, the undoubted right of his Majesty, and of his Royal predecessors, Kings and Queens of England; and that both or either of the

The King revives the Commission of Array.

Charles II. Royal prerogative over Militia established.

MILITIA. Houses of Parliament could not, nor ought to pretend to the same; nor could, nor lawfully might raise, or levy any war offensive or defensive against his Majesty, his heirs, or lawful successors; and yet that the contrary thereof had of late years been practised almost to the ruin and destruction of the Kingdom; and that it was expedient to take measures to prevent the evil and rebellious principles which had been instilled into the minds of the people during the late usurped Governments from breaking out and disturbing the peace and quiet thereof. The Statute having laid down these general principles, which put a final close to all disputes as to the right being vested in the Crown, proceeds to point out the way in which the right is to be exercised. For this purpose the King was empowered to issue Commissions of Lieutenancy to such persons as his Majesty might think fit, which Lieutenants were to have full power to arm and array the Militia at such times and in such manner as thereafter directed; and in case of rebellion, insurrection, or invasion, to lead and employ it, or cause it to be led or employed, as well within the Counties for which they should be commissioned, as into any other Counties, for suppressing such rebellions or insurrections, or repelling such invasions, according as they should from time to time receive instructions from the King. The Lords Lieutenant appoint the Deputy Lieutenants in their respective Counties, and the Militia Officers: but the former, before they receive their deputations, must be approved of by the King; and as to the latter, the King may dissent to their appointment within fourteen days after their names are signified to him, but if he does not expressly dissent, their commissions are given to them as a matter of course.

George III. The Statute 42 George III. c. 90. is the principal Act now in force by which the Militia is regulated.

Numbers. The total number of men to be raised by the Counties for the Regular Militia is 40,963. Each County, in proportion to its population, furnishes a particular quota. But in case of invasion, or of imminent danger thereof, and of rebellion, the King may, by Proclamation, order an additional number, not exceeding one half of the regular number, to be raised and enrolled. The King must, however, first communicate the necessity of the occasion to Parliament if sitting, or declare it in Council, if no Parliament be sitting at the time. This additional number is called the Supplementary Militia.

Supplementary Militia. The Militia may be called out annually for the purpose of being trained and exercised, for any period not exceeding twenty-eight days, as his Majesty shall direct. In addition to this, in all cases of actual invasion, or upon imminent danger thereof, and in all cases of rebellion and insurrection, his Majesty may direct the Militia to be embodied, under the command of such General Officers as his Majesty may name, and may direct the said forces to be led by their respective officers into any parts of Great Britain, for the repelling and prevention of invasion, and for the suppression of any rebellion or insurrection within Great Britain.

Extent of service. The Statute 51 George III. c. 118. empowers his Majesty to employ the Militia of Great Britain in Ireland, and that of Ireland in Great Britain. The longest period for the British Militia to serve in Ireland is limited to two years; and one-fourth only of that force is to be there at one time, excepting in cases of invasion or rebellion. A regiment which has once served there cannot be again called upon until six years have expired

from the time of such service, except in cases of invasion or rebellion.

As it was thought expedient that the people generally should be taught how to defend themselves, an Act, called the Training Act, was passed in the 46th year of George III., a period of unusual danger, enabling his Majesty to direct his Privy Council to apportion any number, not exceeding 200,000, of persons qualified to serve in the Militia, among the several Counties, for the purpose of having them trained and exercised. On the apprehension of immediate invasion they may be embodied within their respective Counties for any period not exceeding twenty-one days, but they are not to be marched out of their Counties except in case of actual invasion, or of the appearance of an enemy in force on the coast. This force is not to be compelled to serve out of Great Britain; and though it can only be embodied for twenty-one days originally, yet if there be an invasion, or actual rebellion, it may be kept in service until one month after the repelling the enemy or driving him from the coast, or suppressing the rebellion, as the case may be.

The permanent establishment of the Local Militia owes its origin to the same period of danger. The Statute 52 George III. c. 38., which repealed the Statute of 48 George III., is that which now regulates that force. The quota which each County has to furnish towards it is four times the quota which it furnishes for the Regular Militia. The Local Militia may be trained annually, and in case of actual invasion of any part of the United Kingdom, or the appearance of an enemy in force upon the coast, and in all cases of insurrection and rebellion, may be marched to any part of Great Britain, and may be kept embodied for any period not exceeding six weeks after the enemy shall have been repelled or driven from the coast, or the rebellion or insurrection shall have been suppressed.

The Regular, Supplementary, and Local Militias, with the force that may be embodied under the Training Act, make altogether an army consisting of 425,296 men available in cases of invasion and insurrection: and this is exclusive of the Irish and Scotch Militias.

The details of the different Statutes relating to the appointment of the officers, the making of the lists for balloting, the ballot itself, the swearing and enrolling, the enlisting and beating up for volunteers, the forming and officering of the regiments, the training, the arms, the pay and allowances, the drawing out into actual service, the relief of the Militia men's families, the Courts martial, &c. are far too long for a Work of this description. They are to be found in Burn's *Justice of the Peace*, under the title Military Law. But the exemptions from serving in the Regular Militia are too generally interesting to be omitted. By Statute 42 George III. c. 90. sec. 43. No Peer of the realm, nor any person being a commissioned officer in his Majesty's other forces, or in any one of his Majesty's forts or castles, nor any officer on half-pay of the navy, army, or marines; nor any non-commissioned officer or private man serving in any of his Majesty's other forces, nor any commissioned officer serving, or who has served four years in the Militia; nor any person being a resident Member of either of the Universities; nor any clergyman; nor any licensed teachers of any separate congregation, whose place of meeting shall have been duly registered within twelve months previous to the general meeting appointed to meet in October for the purposes of this Act; nor any

Exemptions.

MILITIA. constable or other peace officer, nor any articed clerk, apprentice, seaman, or seafaring man, nor any person mustered, trained, or doing duty, or employed in any of his Majesty's docks or dockyards for the service thereof, or employed and mustered in his Majesty's service in the Tower of London, Woolwich Warren, the several gun wharfs at Portsmouth, or at the several powder mills, powder magazines, or storehouses belonging to his Majesty under the direction of the Board of Ordnance; nor any person being free of the Company of Watermen of the river Thames; nor any poor man who has more than one child born in wedlock; nor by 44 George III. c. 54. sec. 7, 8. any person enrolled and serving as an effective Member of any Corps of Yeomanry or Volunteers, and who shall be duly returned and certified as such, shall be liable to serve personally or by substitute; and no person having served personally or by substitute, according to the directions of any former Act or Acts relating to the Militia, or under this Act, shall be obliged to serve again, until by rotation it shall come to his turn; but no person who has served only as a substitute or volunteer in the Militia shall be thereby exempted from serving again, if he shall be chosen by ballot.

And by Statute 52 George III. c. 38. sec. 39. all persons who may be hereafter enrolled to serve in the Local Militia shall be exempt from service, and shall not be liable to be balloted to serve in the Regular Militia for one year from the expiration of their period of service in the Local Militia; but no person shall be entitled to claim any such exemption who shall not produce a certificate, signed by the commanding officer of the regiment of Local Militia to which he shall belong, or in case of his removal from the County in which he may have been originally enrolled, then by the commanding officer of the regiment in which he may have been subsequently serving, that he attended at the last period of annual training and exercise, or that he was prevented by illness or bodily infirmity, certified to his commanding officer at the last period of annual training and exercise, or that he was absent by permission of his commanding officer.

By Statute 19 George III. c. 44. every person dissenting from the Church of England, in Holy Orders, or

pretended Holy Orders, or pretending to Holy Orders, being a Preacher or Teacher of any congregation of Dissenting Protestants, who shall at the General Sessions of the place where he lives take the oaths of allegiance, supremacy, and abjuration, and subscribe the declaration against Popery of the 30 Charles II., and a declaration that he is a Christian and a Protestant, and believes the doctrine of the Old and New Testament, shall be exempt from serving in the Militia in this Kingdom.

By Statute 52 George III. c. 155. sec. 9. every person who shall preach or teach in any congregation or assembly for Religious worship of Protestants, as mentioned in the former clauses of that Act, who shall employ himself solely in the duties of a Teacher or Preacher, and not follow or engage in any trade or business, or other profession, occupation, or employment, for his livelihood, except that of a Schoolmaster, and who shall produce a certificate of some Justice of the Peace, of his having taken and made and subscribed the oaths and declaration specified in that Act, shall be exempt from being balloted to serve and from serving in the Militia, or Local Militia of any County or place in any part of the United Kingdom.

With regard to *substitutes* it is enacted by Statute

42 George III. c. 90. sec. 41. that every person chosen by ballot shall be enrolled (in a roll to be then and there prepared for that purpose) to serve as a private militia man for the space of five years; provided that if any such person shall produce for his *substitute* a man of the same County, riding, or place, or of some adjoining parish or place, whether in the same County or riding or not, able and fit for service, who shall have not more than one child born in wedlock, and who shall be examined and approved; such substitute shall be enrolled to serve in the Militia of such County, as a private for the space of five years; and also for such further time as the Militia shall remain embodied, if within the space of five years His Majesty shall order such Militia to be drawn out and embodied. And any balloted person for whom such substitute shall be so produced, approved, enrolled, and sworn, shall be exempt from service in the same manner as if he had personally served.

MILIUM, in *Botany*, a genus of the class *Triandria*, order *Digynia*, natural order *Gramineæ*. Generic character: calyx two-valved, one-flowered, ventricose; corolla two-valved, very short; stigma pencil-shaped.

Fifteen species, natives of the Northern hemisphere. *M. lendigerum* and *effusum* are natives of England.

MILK, *v.* } Also written *Milch*. D. *melck*; Ger. *milch*; A. S. *meolc*, from the verb *melcian*, *meolc-ian*, *mulgere*; Gr. *μέλγειν*, or *ἀμέλγειν*, which signifies, *ubera valde tractando et molliendo lac educere vel exprimere*, to draw or press out by handling or softening with the hand.

Milk is applied met. to softness, gentleness, effeminacy; hence a *milk-sop*, soft as a *sop*, or any thing sopped in *milk*.

To *milk*; to draw out or extract, to drop, or distil, the milk, the juices or moisture; to drain.

Hony & mylk þer ys muche.

— An hynde oþr while
To husselle seilde cam. and suffrede to be *milked*.
Piers Plouhman. Vision, p. 285.

As to litle children in Crist I ghaf to ghou mylk drynk not mete.
Wiclif. 1 Corinthians, ch. iii.

For lich a mother she can cherish
And milken as doth a norice.
Chaucer. The Romant of the Rose, p. 211.

"Alas," she saith, "that ever I was yshape
To wed a *milk-sop*, or a coward ape."
Id. The Monkes Prologue, v. 13916.

I gaue them a lad that floweth with mylck and hony.
Bible, Anno 1551. Ezechiel, ch. xx.

And to ayd the kynge in hys right must the commons be *milked*
till they bleede agayne.

Tyndall. Workes, fol. 365. The Practice of Popish Prelates.

For thou hast caught a proper paragon,
A theefe, a coward, and a peacocke foole,
An asse, a *milk-sop*, and a minion.
Gascoigne. Weedes. Farewel with a Mischiefe.

MILK.
—
MILL.

When from the boughes a savourie odour, blown ;
Grateful to appetite, more pleas'd my sense
Than smell of sweetest fennel or the teats
Of ewe or goat dropping with *milk* at even,
Unsuckt of lamb or kid, that tend their play.
Milton. Paradise Lost, book ix. l. 582.

It is by all confess'd, thy happy straines,
Distill'd from *milky* streames of native veines,
Did like the living source of Naso's song,
Flow to the eare, thence gently glide along
Downe to the heart.

Beaumont. An Elegy. To the Memory of Sir John Beaumont.

When she saw Pyrrhus make malicious sport
In mincing with his sword her husband's limbs,
The instant burst of clamour that she made
Would haue made *milche* the burning eyes of heauen,
And passion in the Gods.

Shakspeare. Hamlet, fol. 264.

Then at my farme
I haue a hundred *milch-kine* to the pale.

And they call him also the *milken-way*, and the Eliah of the Mes-
siah.

Bacon. New Atlantis, fol. 21.

GON. *Milke-luer'd-man*,
That bear'st a cheek for blowes, a head for wrongs,
Who hast not in thy browes an eye-discerning
Thine honour, from thy suffering.
Shakspeare. Lear, fol. 301.

While the plowman near at hand
Whistles o'er the furrow'd land,
And the *milkmaid* singeth blith.

Milton. L'Allegro, l. 65.

NOR. Tis but a sweat of honor—(alas) thou *milk-sop*,
Thou man of march-pain canst thou fear to see
A few light hurts, that blush they are no bigger.

Beaumont and Fletcher. The Knight of Malta, act ii. sc. 1.

Thou wilt not find my shepherdesses idly piping on oaten reeds,
but *milking* the kine, tying up the sheaves.

Gay. The Shepherd's Week. Proeme to the Reader.

His kine, with swelling udders, ready stand,
And lowing for the pail, invite the *milker's* hand.

Dryden. Georgics, book iii.

The *milky-way* being found to be (as was formerly conjectur'd)
nothing but great companies or swarms of minute stars singly in-
visible, but by reason of their proximity mingling and confounding
their lights, and appearing like lucid clouds.

Ray. Of the Creation, part i. p. 19.

Four *milk-white* bulls (the Thracian use of old)
Were yok'd, to draw his car of burnish'd gold.

Dryden. Palamon and Arcite, book iii.

Milk is the first support of our childhood. The component parts
of this are water, oil, and a sort of very sweet salt, called the sugar
of *milk*.

Burke. On the Sublime and Beautiful, sec. 22.

MILL, *n.* } A. S. *mylne* ; D. *meulen* ; Ger. *mule* ;
MILL, *v.* } Fr. *moulin* ; It. *mulino* ; Sp. *molino* ;
MILLER. } Lat. *mola*, from *mol-ere*, to grind ; Goth.
mal-an ; Ger. *mal-en*, *mulen* ; Sw. *maala*.

A *mill* ; that which grindeth ; an engine to grind, *sc.*
grain, pulse, &c. Also used in coining, hence to *mill*
money is

To coin, or stamp coin, by means of a *mill*.

In bargeis & galeis he set *mylnes* to go.

R. Brunne, p. 173.

And whoever schal sclaundre oon of these litil that bileven in me
it were betere to him that a *milne* stoon were doen about his necke
and he were caste into the sea.

Wiclif. Mark, ch. ix.

And whosoeuer shall offende one of these lytel-ons, that beleue
in me, it were better for hym that a *mylstone* wer hanged about hys
necke & that he were cast into the sea.

Bible, Anno 1551.

Jangling, is whan men speketh to moche before folk, and clappeth
as a *mille*, and taketh no kepe what he sayeth.

Chaucer. The Persones Tale, p. 153.

VOL. XXV.

— And with hir napron feir and white ywash
She wyped soft hir eyen for teris that she out lash
As grete as any *mylstone*.

The Pardoner and Tapestere. Imputed to Chaucer.

But al is one to you a horse *mill* & a *mill-horse*, drinke ere ye
goe, & goe ere you drinke.

Sir Thomas More. Workes, fol. 238. A Dialogue of Heresy.

What man, more water glideth by the *mill*
Then wots the *miller* of, and easie it is
Of a cut loafe to steale a shiue we know.

Shakspeare. Titus Andronicus, fol. 36.

— The which, once being burst,
Like to a great *mill-damb* forth fiercely gusht,
And powred out of her infernall sinke
Most ugly filth.

Spenser. Faerie Queene, book v. can. 11.

His legs, which creep out of two old-fashion'd knapsacks,
Are neither two *mill-posts*, nor yet are they trap-sticks.

Cotton. Epistle to Sir Clifford Clifton.

The *miller* was throwne one way, another man another way, one
towards the North the other South, a parte of the *mill* rooffe, and
halfe the *milstone*, on the like manner, throwne one way, the other
halfe another way.

Stow. Queen Elizabeth, Anno 1600.

He goes to market with twenty shillings in one pocket of this
new money, which are valued at 240 pence ; and in the other
pocket with four *mill'd* crown pieces, (or twenty *mill'd* shillings of
the present coin,) which are valued at three hundred pence, which is
one-fifth more.

*Locke. Works, vol. ii. fol. 80. Considerations of the Lowering of
Interest, &c.*

As I remember, suitable to this policy of the Mint, there was,
some two years since, a complaint of a worthy gentleman, not igno-
rant of it, that the *mill* in the Mint stood still ; and therefore there
was a proposal offer'd for bringing grist to the *mill*.

Id. Ib. vol. ii. fol. 89.

For lo ! the board with cups and spoons is crown'd,
The berries crackle, and the *mill* turns round.

Pope. The Rape of the Lock.

In a plain pleasant cottage, conveniently neat,
With a *mill* and some meadows—a freehold estate,
A well meaning *miller* by labour supplies
Those blessings, that grandeur to great ones denies.

Cunningham. The Miller.

Blondeau, after the Restoration, November 3, 1662, received
letters of denization, and a grant for being engineer of the Mint in
the Tower of London, and for using his new invention for coining
gold and silver with the *mill* and press.

Walpole. Anecdotes of Painting, vol. ii. ch. iii. p. 285.

Not so where, scornful of a check, it leaps
The *milldam*, dashes on the restless wheel,
And wantons in the pebbly gulph below.

Cowper. The Task, book v.

MILLA, in Botany, a genus of the class *Hexandria*,
order *Monogynia*, natural order *Liliaceæ*. Generic
character : corolla funnel-shaped, border six-parted ; flat
anthers inserted into the throat of the tube ; germen on
a foot-stalk ; capsule superior.

One species, *M. biflora*, a bulbous plant with large
white flowers, native of Mexico.

Z

MILL.
—
MILLE
NARY.

MILLE-NARY. Daniel, in the construction of the favourers of the *millenarian* opinion, is pretended to speak particularly of the tyrannical reign of anti-christ, of his destruction, of the happy deliverance and peace of the faithful under the Gospel.

MILLION. *Hall. Works*, vol. iii. p. 895. *The Revelation unrevealed.*

To what purpose should we ransack the grave, and rake in the ashes of an odious Cerinthus, or an unexploded Papias, for the long-since condemned conceits of old, and hitherto forgotten *millenarism*.
Id. Ib. vol. iii. fol. 921.

'Tis said that he [Sir W. Raleigh] wrote a tract of *millenianism*, he having for some time been much addicted to that opinion.

Wood. Athenæ Oxonienses, vol. ii. fol. 96.

When at your second coming you appear,
(For I foretell the *millenary* year,)
The sharpen'd share shall vex the soil no more,
But earth unbidden shall produce her store.

Dryden. Palamon and Arcite. Dedication.

MILLEPORA, in *Zoology*, a genus of *Zoophytes*.

Generic character. Stony, solid interiorly, polymorphous, branched or frondescant, furnished with simple pores, which are very minute, perpendicular to the surface, and giving to them a finely striated fracture.

Type of the genus, *M. complanata*, Lamarck, ii. 201. Several species, found in the Ocean; two of which, departing from the type, are natives of the coasts of Britain.

MILLERIA, in *Botany*, a genus of the class *Syn-genesia*, order *Necessaria*. *Generic character*: calyx three-valved; petals of the disk very short; receptacle naked; down none.

Two species, natives of South America.

MILLET, Fr. *millet*; It. *miglio*; Sp. *mijo*; Lat. *milium*; perhaps so called from the multitude of its seeds. See Vossius and Martinus.

As touching the *millet*, the head thereof bearing seed round about, is bent likewise and curbed, beset also with fringes (as it were) of hairie fillets.

Holland. Plinie, book xviii. chap. vii.

Some of his [Hook] friends (whose testimonials he desired) did affirm, that they had seen 10,000, others 30,000, others 45,000, little living creatures, in a quantity of water no bigger than a grain of *millet*.

Ray. Of the Creation, part i. p. 195.

— And there, if thou
Wouldst make the sand yield salutary food,
Let Indian *millet* rear its corny reed,
Like arm'd battalions in array of war.

Grainger. The Sugar Cane, book iv. l. 567.

MILLINER, so called from *Milaner*, one from *Milan*; or *Malineer*, from *Maline*; or *millenarius*, because he deals in a thousand articles. It is perhaps *mistlener*, from *mistlen* or *mestlin*, a medley or mixture.

One who deals in a *mixed* variety of articles. See the Example of *horse-milliner* in *v. HORSE*.

Lor. He hath songs for man or woman, of all sizes; no *milliner* can so fit his customers with gloues.

Shakspeare. Winter's Tale, fol. 293.

Tho' sometimes I injure the *milliner's* sight,
Still I add to her credit and store.

Cotton. To a Lady.

MILLION, } Fr. *million*; It. *millione*, *millone*;
MILLIONED, } a thousand-thousand; or the thou-
MILLIONTH. } sandth thousand.

Yet eft againe a thousand *million*,
Rejoycing loue, leading their life in blisse.

Chaucer. The Court of Loue, p. 371.

To be beloued better ywis,
Than she par cas that richest is,
And hath of golde a *milion*.

Gower. Conf. Am. book v. p. 143.

And but with fifteen hundred men do land,
Upon a land with many *millions* stor'd;
So much did high-presuming courage stand
On th' aid home-disobedience would afford.

Daniel. History of Civil Wars, book vii.

But reckoning time, whose *million'd* accidents
Creep in 'twixt vows and change decrees of kings,
Tan sacred beauty, blunt the sharp'st intents,
Divert strong minds to the course of altering things.

Shakspeare. Sonnet 115.

The *million'd* merchant seeks her [Honour] in his gold;
In schools the pedant, and in camps the bold.

P. Whitehead. Honour. A Satire, (1747.)

MILT, } Also written *melt*. The A. S. *milt*; D.
MILT'ER. } *mildt*; Ger. *miltz*; Sw. *melt*; It. and
Sp. *milza*; is the *spleen*. Kilian and Wachter agree to derive from *mild*, *mollis*; the former, because the spleen is soft; the latter, because it is the seat of mildness or gentleness.

Milt, as applied to the soft roe of a fish, is probably the same word.

And it [that carps breed several months in one year] is the rather to be believed, because you shall scarce, or never, take a male carp without a *melt*, or a female without a roe or spawn.

Walton. Angler, part i. ch. ix. p. 232.

That they might do so [by breeding] he had, as the rule is, put in three *mitters* for one spawner.

Id. Ib. p. 233.

MILTOGRAMMA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* incumbent, triarticulate, the third joint elongate, linear, compressed, the base furnished with a naked seta on its upper margin; mouth setose, tongue fleshy, wings divaricating, with a transverse nervure at the apex.

Type of the genus, *M. fasciata*; Meigen, *Zweiflugen*, *Ins.* vol. iv. p. 227. plate xl. fig. 26. Sixteen European species; two of which are indigenous.

Fr. *mime*; It. and Sp. *mimo*;
Lat. *mimus*; Gr. *μῖμος*.

To *mime* or *mimic*, is, to imitate, to counterfeit, the action, mode, or manner; to mock. See the first Quotation from **MILTON**.

In the fit

Of *miming*, gets th' opinion of a wit.

Ben Jonson. Epigram 115.

Nor yet doth he tell us what a *mime* is, wherof we have no pattern from ancient writers, except some fragments, which contain many acute and wise sentences. And this we know in Laertius, that the *mimes* of Sophron were of such reckoning with Plato, as to take them nightly to read on, and after make them his pillow. Scaliger describes a *mime* to be a poem, imitating any action to stir up laughter.

Milton. Works, vol. i. fol. 107. *An Apology for Smectymnus.*

And wheras he tells us that scurrilous *mime* was a personated grim lowring fool, his foolish language unwittingly writes Fool upon his own friend.

Id. Ib.

Anon this Thisbee must be answered,
And forth my *mimick* comes.

Shakspeare. Midsummer Night's Dream, fol. 153.

Of in her absence *mimic* Fancie wakes
To imitate her; but misjoining shapes,
Wilde work produces oft.

Milton. Paradise Lost, book v. l. 110.

True it is, indeed, which a great master (Aristotle) hath long before taught us, that man is of all creatures the most *mimical*, as a kind of near adjunct to reason.

Reliquiæ Wottonianæ, p. 83.

Next her the buffoon ape, as atheists use,
Mimick'd all sects, and had his own to choose.
Dryden. *The Hind and the Panther*.

In these she views the *mimickry* of man,
And smiles when grinning pug gallants her fan.
Gay. *The Toilette*.

Such are good for nothing, but either *mimically* to imitate their neighbours' fooleries, or to immerse themselves in a kind of lascivious and debauched living.

South. *Sermons*, vol. v. p. 362.

When full grown, it [vanity] is the worst of vices, and the occasional *mimick* of them all. It makes the whole man false.

Burke. *Works*, vol. vi. p. 31. To a Member of the National Assembly.

"Such whimsical wonders," (he [Wheatley] very justly adds,) "lose their effect, when represented in a picture, or *mimicked* in ground artificially laid."

Stewart. *Philosophical Essays*, essay 1. part ii. p. 335. On the Beautiful.

Such parts of it [Europe] as are divided into small territories are commonly governed by absolute princes, who ruin their people by a *mimicry* of the great monarchs, in the splendour of their court, and number of their forces.

Hume. *Essay* 11. vol. i. p. 395.

If I were composing a dialogue in the old *mimetical*, or poetic form, I should tell you, perhaps, the occasion that led us into this track of conversation.

Hurd. *Works*, vol. iv. p. 90. Dialogue 7. On the Uses of Foreign Travel.

For the best idea that can now be formed of the manner of this famous *mimographer*, we must have recourse, I believe, to the fifteenth idyl of Theocritus.

Twining. *Aristotle*, vol. i. p. 246. Treatise on Poetry, notes.

MIMETES, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*, natural order *Proteaceæ*. Generic character: corolla four-parted, regular; anthers immersed in the concavity of the apex; nut superior, smooth; receptacle flat, chaff deciduous.

Five species, natives of the South of Africa.

MIMOSA, in *Botany*, a genus of the class *Polygamia*, order *Monoecia*, natural order *Leguminosæ*. Generic character: calyx four or five leaved; corolla, petals four or five, funnel-shaped; stamens four to fifteen inserted into the bottom of the corolla; pod flat, jointed, each joint furnished with one seed.

Decandolle describes seventy-one species, mostly natives of the Southern hemisphere. *M. pudica*, the well-known Sensitive plant, is the most remarkable; the wonderful property of retreating from the touch, which the leaves and younger branches of this plant possess, and which has favoured the opinion that plants in general are endowed with sensation, is not confined to this species: there are about fifteen others of the genus that are sensitive, as *M. viva*, *M. casta*, *M. sensitiva*, &c.

MIMULUS, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*, natural order *Scrophulariæ*. Generic character: calyx prism-shaped, five-toothed; corolla ringent, the sides of the superior lip folded back; stigma thick; capsule two-celled, many-seeded.

Five species, herbaceous plants, natives of North and South America.

MIMUSOPS, in *Botany*, a genus of the class *Octandria*, order *Monogynia*, natural order *Sapotæ*. Generic character: calyx four-leaved; corolla, petals four; nectary sixteen-leaved; drupe acuminate.

Three species, natives of the East Indies.

MINARET, from the Arabic *menarah*, a lantern. See Menage; and the Quotation.

The *minaret* is a sort of steeple in the form of a column, ending toward the top in a cone; a little before it begins to take its conic figure it is surrounded by a gallery.

Cambridge. *The Scribleriad*, book iv. note 41.

MINATORY, Lat. *minatorius*, from *minari*, to threaten: threatening, menacing.

Y^e protector conceiv'd such indignacion, y^t he rejected y^e duke's request w^e many spitefull & *minatory* wordes.

Sir Thomas More. *Workes*, fol. 69. Kyng Richarde the Thirde.

The king also made a Statute in that Parliament, monitory and *minatory*, towards justices of peace.

Bacon. *King Henry VII.*, fol. 75.

In the *minatory* declarations of God's purpose, (because we know not what conditions may be secretly intended,) we may use what means we may for a diversion.

Hall. *Works*, vol. iii. fol. 675. *Satan's Fiery Darts quenched*, dec. iii. temp. 4.

MINCE, v. } A. S. *mins-ian*; Fr. *mincer*; It. *mi'ncing*, n. } *minuzzare*; to cut into small or *minute* *mi'ncingly*. } pieces.

To separate, to cut into small or *minute* pieces or parts; to shorten, or clip, or cut (the words in speech;) to shorten, *sc.* the steps in walking; to speak or walk with nicety, caution, with slow or small gradations, or progress.

An yⁿ shalte *mince* it small, and poure oyle thereon.

Bible, Anno 1551. *Leuiticus*, ch. ii.

And therefore shall the comen people take no harme, though themselfe concerning treason or heresy, fall not by suche bookes to the *mynce* of suche matters, and dyspute howe farre they maye goe foreward in them, without the extreme daunger and peryll of them.

Sir Thomas More. *Workes*, fol. 964. *The Debellacion of Salem and Byzance*.

Now shepherds lay their winter weeds away,

And in neat jackets *minsen* on the plains;

And at the rivers fishing day by day,

Now who so frolic as the shepherd swains?

Drayton. *Eclogue 7. Batte*.

And O! how this (deare prince) the people charmes,

Who flock about thee oft in ravish'd bands,

To see thee yong yet manage so thine armes,

Have a mercuriall *mince*, and martiall hands.

Daniel. *A Paraenesis to Prince Henry*.

With her dear daughter Dale, which her firm cheek doth lay

To her dear mother's breast, as *mincingly* she traces,

And oft embracing her, she oft again embraces,

And on her darling smiles, with every little gale.

Drayton. *Poly-olbion*, song 27.

Mincing of meat, as in pies, and buttered *minced* meat, saveth the grinding of the teeth.

Bacon. *Natural History*, Cent. i. sect. 54.

Break that goose, frust that chicken, spoil that hen, sauce that capon, *mince* that plover.

King. *The Art of Cookery*, let. 6.

With dimpling cheek, and snowy hand,

That shames the whiteness of his band;

Whose *mincing* dialect abounds

In hums and hahs and half-form'd sounds.

Lloyd. *Epistle to J. B. Esq.*

MIND, v.

MIND, n.

MI'NDFUL,

MI'NDFULNESS,

MI'NDLESS,

MI'NDEDNESS.

The noun is written in A. S. *ge-mynd*; Goth. and A. S. *mun-an*, *ge-munan*; D. *meyn-en*; Ger. *mei-nen*, to mean, *i. e.* to mark, to note or denote, to sign, to signify. And *mind*,

That which marks or notes; that which, the faculty or power which, thinks or receives, sensations or ideas; which perceives, conceives, collects, or combines; which keeps or retains, recollects or remembers; *sc.* sensations or ideas. And it is further applied to (collectively)

MINE, v.

MINE, n.

MI'NABLE,

MI'NER,

MI'NERAL, adj.

MI'NERAL, n.

MI'NERALIST,

MI'NERALOGY,

MINERA'LOGIST,

MINY.

Fr. *miner*, *mine*; It. *minare*, *mina*; Sp. *minar*, *mina*; D. *mijnen*, *mijne*; Ger. *mine*, which the Etymologists agree to derive from Lat. *minare*, a word of the Lower Ages, signifying *ducere*, to lead; Fr. *mener*, (see Skinner, Menage, Wachter,) whence the Latin *minare*. See Vossius in v. *Minor*, and Martinius in v. *Mino*: the

latter writes largely and learnedly.

To draw or lead; sc. a way or passage under ground, a subterraneous duct, course, or passage, whether in search of metals or to destroy fortifications, &c. Consequentially,

To destroy by secret or concealed ways or means the foundation upon which any thing, any person rests or stands; to ruin.

R. had *minoures*, þat *mynd*ed undere þe walle,
A pece with a grete cours at ons felle down alle.

R. Brunne, p. 179.

And after that his manhode, and his pine,
Made that love within her gan to *mine*.

Chaucer. Troilus and Creside, book ii. p. 242.

Min is the ruine of the highe halles,
The falling of the toures and of the walles,
Upon the *minour*, or the carpenter.

Id. The Knightes Tale, v. 2468.

First for to gette it out of *myne*,
And after for to trie and fine.

Gower. Conf. Am. book iv. p. 113.

The thirde stone in speciall,
By name is cleped *mineral*,
Whiche the metals of euery *myne*
Attempreth, till that they ben fyne.

Id. Ib. p. 114.

When the erle sawe that he coulede do no good with his engyns, he caused them to cease; then he called to hym his *myners*, to thyntent that they shuld make a *myne* vnder all the walles, the whiche was nat sone made.

Lord Berners. Froissart. Cronycle, vol. i. ch. 109. p. 132.

They perceyued well how they coude nat geat it by no assaute, nor none other wayes at their ease, without it were by *mynyng*; than they sette theyr *mynoures* a warke.

Id. Ib. vol. i. ch. 251. p. 372.

MIND.

MINE.

MINE. The enemy *mined*, and they countermined; imposing so much industry to his force, that he was driven to close them up, and seek to win by famine.
 — MINER-
 VA. Raleigh. *History of the World*, book v. ch. iii. sec. 19.

He began to *undermine* it (finding the earth all about very minable.)
 North. Plutarch. Camillus, p. 115.

Whose virtue shines
 On hills, when brightest planets are abroad;
 Thine privately, like *miners'* lamps in mines.
 Davenant. *Gondibert*, book iii. can. 5.

No good *miner* casts away his mattocke, because he finds a veine of tough clay, or a shelve of stone, but still delveth lower, and passing thorow many changes of soile, at last comes to his rich treasure.

Hall. *Works*, vol. i. fol. 55. *Meditations and Fows*, Cent. 380.

In a dark cave which never eye
 Could by his subtlest ray descry,
 It doth like a rich *minerall* lye.
 Habington. *Castara*, part i.

The sayd philosopher trauelled through many landes, and in this land taught the knowledge of *myneral* workes.
 Stow. *The Brytains*, Anno 1108.

There [are] also many authors that deny it, and the exactest *mineralogists* have rejected it.
 Sir Thomas Brown. *Vulgar Errours*, book ii. ch. i.

They are a rich *mine*, which the greatest wit and diligence may dig in for ever, and still find new matter to entertain the busiest contemplation with, even to the utmost period of the most extended life.
 South. *Sermons*, vol. iii. p. 238.

The reason why the *miners* are out of danger of damps when they come to water, I conceive is, because then presently the air that stagnated in the shaft sinks into the water, and fresh air descends, and so there is a circulation.

Ray. *Of the Creation*, part i. p. 87.

Unveil
 The *miny* caverns, blazing on the day,
 Of Abyssinia's cloud compelling cliffs.
 Thomson. *Autumn*.

I speak in other papers as if there may be a volatile gold in some

ores and other *minerals*, where the *mine-men* do not find any thing of that metal.

Boyle. *Works*, vol. iii. fol. 99. *Experiments touching the Origin of Qualities and Forms*.

All stones, metals, and *minerals*, are real vegetables; that is, grow organically from proper seeds, as well as plants.

Locke. *Works*, vol. iv. p. 590. *Elements of Natural Philosophy*, ch. viii.

The lofty lines abound with endless store
 Of *mineral* treasure and metallic ore.

Blackmore. *Creation*, book iii.

Again, the dropsy's bloated mask they steel;
 Or melt with *minings* of the hectic fire.

Grainger. *The Sugar Cane*, book iv. l. 305.

MINE, pron. See MY.

MINEHEAD, a Sea-port Town and Borough in Somersetshire, on the Bristol Channel, on the borders of Exmore Forest, is divided into three parts: the *Quay Town* on the shore under the brow of lofty rocks; the *Upper Town*, consisting of some mean buildings on the slope of one of those eminences, (the Headland,) richly cultivated on one side; and the *Lower Town*, about half a mile S. E. from the beach. The trade, which at the beginning of the XVIIth century was sufficient to employ forty vessels to Ireland alone, and to export more than 4000 barrels of herrings to the Mediterranean, is altogether extinct, and a very small traffic in coals, and a trifling woollen manufactory, are now the only occupations of the inhabitants. The neighbouring country is very beautiful, and the climate among the mildest in England, vegetation being for the most part a month in advance; the town therefore is much resorted to as a Provincial bathing place. It was incorporated by Elizabeth, and returns two Members to Parliament. Population, in 1821, 1239. Distant from London 163 miles W., from Bridgewater 24.

MINE.
 —
 MINER-
 VA.

MINERVA.

Derivations. MINERVA, so named, as Cicero tells us, because *vel minueret vel minaretur*; (*de Nat. Deor.* ii. 26.) on which passage the commentators sagely observe, that being a Martial Goddess, her power *minuendi* arises from the number of men whom she *diminishes* in War. Festus is equally pleasant, Minerva *quòd benè moneat*; and Vossius, in like manner, discovers an old verb *menervo pro moneo*. Isidorus is somewhat hard pressed, *Minervam vocatam quasi Deam et munus artium variarum*. (viii. 2.) Of the received opinion of her equivocal birth from the head of JUPITER, which Hesiod inculcates, we have already spoken in our account of her reputed Father. From that singular parturition is usually derived the name 'Αθήνη *quasi* ἀθήνη, one who has never sucked the breast. *Sed prudentiores et rem personificatam rectius introsipientes*, says one Lexicographer, who doubtless numbered himself among the Sages whom he thus describes, find a surer radix in ἀθρήνη, from ἀθρέω, I see deeply. The ancient name, indeed, appears to have been 'Αθηναίη; therefore, although in the elder writers 'Αθηναίος is commonly put for an Athenian man, 'Αθηναίη, as consecrated to the sole use of the Goddess, is never employed for an Athenian woman, who is styled γυνή 'Αττική; and when in progress of time 'Αθηναίη became of commoner acceptance for mortals, the Immortal was restricted to the trisyllable 'Αθηνά.

Hesiod. Hesiod, in other respects, makes but slight mention of this Goddess, telling us only that when Vulcan had

fashioned Pandora out of clay, Minerva assisted at her toilet; clothing her in a white vest, throwing a veil over her head, and crowning her with a chaplet of fresh-gathered flowers. (*Theog.* 573.)

Of the incidents in which Homer has engaged Minerva in the conduct of the *Iliad* and *Odyssey*, it is needless to speak; since they belong more immediately to the Poet himself than to the general mythology of the Goddess. Some of his epithets for her are γλαυκῶπις, blue-eyed, referring, probably, more to their keenness than their colour; φωσφόρος, as a leader and enlightener; τριτογένεια, not, as some have falsely believed, because she was born, or passed her infancy, or was peculiarly worshipped, near the lake or river Triton in Libya, but from her generation, ἐκ ΤΡΙΤΟΥΣ τοῦ Διὸς, τριτῶν, in the Cretan Dialect, signifying a head. That epithet of Minerva, and the name of Minerva itself, was affectedly applied by the Pythagoreans to an equilateral triangle, because, as they said, it is equally divided by three perpendiculars drawn from each of its angles; a reason partaking not a little of the hopeless mysticism of the Samian School. (Plutarch, *de Iside and Osiride*, p. 381. Ed. Xylander, 1620.) Throughout the *Iliad* and *Odyssey*, Minerva invariably appears in the character of the Goddess of Wisdom, the suggester of prudent counsels, and the improver of opportunities; (Plutarch, *de Pythiæ Oraculis*, 405.) and Homer has exhibited much dexterity and delicacy of flattery to his Countrymen when he

Homer.

MINER-
VA.

places them invariably under the protection and guardianship of Minerva, while he commits their Trojan enemies to the rude, headlong, and impetuous patronage of Mars. We do not think the Critics have been fortunate in their elucidation of Homer's meaning in his account of Minerva's arming herself. But we have nothing better to suggest.

Κρατὶ δ' ἀμφίφαλον κυνέην ἐπέτα τειραφάληρον,
Χρυσείην, ἱκατὸν πόλειον περλίεσσ' ἀραρυίαν.

E. 743.

The massy golden helm she next assumes,
That dreadful nods with four o'ershading plumes,
So vast, the broad circumference contains
A hundred armies in a hundred plains.

As Pope smoothly renders the passage with scarcely a trace of the original. The huge size of this enormous casque, it is said, either signifies that Minerva has brains enough to govern a hundred Cities, or else Crete, the Island of 100 Cities, is especially alluded to, and the *περλίεες* are some of the Corybantes whose images are embossed upon the helmet. Minerva, as is well known, changed that morion when she wanted to conceal herself from Mars, and borrowed Pluto's dog-skin cap, *κυνέην* "Αἰδὸς ἔδυνεν, (E. 845.) that is, we are told, physically she enveloped herself in a mist; allegorically she exercised profound dissimulation. The name *Παλλὰς*, it may be added, is derived from the quick movement (*τὸ πάλλειν*) of her wit.

Homer has left two short *Hymns* to Minerva; one a mere Battology of her epithets comprised in five lines; the other containing a splendid description of her birth. As the *Hymns* of Homer, strange to say, are comparatively little known or read, we shall transcribe the admirable passage which we have just noticed.

τὴν αὐτὸς ἐγείνατο μητιέτα Ζεὺς
σιμνῆς ἐκ κεφαλῆς, πολέμηϊα τέχε' ἔχουσαν,
χρυσέα, παμφανόωντα· σίβας δ' ἔχει πάντας δρωῶντας
ἀθανάτους. ἡ δὲ πρόσθεν Διὸς αἰγιόχοιο
ἰσχυμίνως ὄρουσιν ἀπ' ἀθανάτοιο καρήνου,
σίσας δ' ἔξω ἀκοντα· μέγας ἐλελίζετ' Ὀλυμπος
δινὸν ὑπ' οὐβροίμης γλαυκώπιδος· ἀμφὶ δὲ γαῖα
σμερδαλέον ἰάχεσεν· ἱκινήθη δ' ἄρα πόντος,
κύμασι πορφυρέοισι κυκώμενος, ἰσχετο δ' ἄλμη
ἔκαπνις· στήσεν δ' Ἰππεύονος ἀγλαὸς υἱὸς
Ἰάπων· ὠκύποδας δ' ἔρπον χρόνον, εἰσόκει κόρη
εἴλειτ' ἀπ' ἀθανάτων ὤμων θειοκίελα τέτυχεν
Παλλὰς Ἀθηναίη· γήθησε δὲ μητιέτα Ζεὺς.

Callima-
chus.

From Callimachus in his Doric *Hymn* upon the Ablution of the Statue of the Argive Minerva, we learn far more of that Goddess than from either Hesiod or Homer. It seems that on a stated anniversary, the maidens of Argos were wont to carry their sacred Images, together with the shield of their great national Hero Diomedes, and to wash them in the Inachus. The Pagan Idols were necessarily exposed to many accidental impurities: from dust; from the mutings of birds, which built in the Temples, as Aristophanes whimsically notices, when his Chorus of *Birds* advises the judges to protect themselves by lunettes, *μηνίσκους*, probably little moon-shaped canopies, lest, like the Statues, they be *πᾶσι τοῖς ὄρνισι κατιλόμενοι*, whenever they put on white cloaks; (1117.) from humidity of the air, which would peculiarly affect them if metallic; or from their own moisture, which would occasionally exude if they were of wood, and thus give rise to the legends of portentous sweating, so often recorded as the forerunner of calamity. It was in celebration of one of these necessary Washings, ΔΟΥΤΡΑ, that the *Hymn* of Callimachus was

written. It opens nobly with a summons to the Maidens to hasten, for that the Poet already hears the neighing of the sacred steeds which draw the Car of the Goddess. Her arms are then described as being large, *μεγάλως πάχεις*; less elegantly indeed than she is represented by others; among whom *εὐπηχός* is an epithet not of uncommon occurrence, which may be applied rather to beauty than to size. Her hands also are commended for delicacy (that certain test of gentle blood) by the Epigrammatist Rufinus, who, when he is selecting various charms from different Goddesses in order to complete the ideal perfection of his Melite, names the eyes of Juno, the bosom of Venus, the ancles of Thetis, and the *hands* of Minerva. Callimachus warns the Virgin worshippers not to bring to the Bath of Minerva any mixed perfumes, or richly compounded unguents; her taste is too pure and simple to be gratified by *μύρα*, *ἀλαβάστρως*, or *χρίματα μικτά*. In a fragment of the *Cretans* (a lost Drama by Sophocles) preserved by Athenæus, (xv. p. 687.) occurs a similar statement, *Τὴν Ἀθήναν, φρονήσιν καὶ νῦν ἔτι δὲ ἀρετὴν, ἐλαιῷ χρωμένην καὶ γυμναζομένην*; where *ἐλαιον* is plainly opposed to *μύρα*, with which Venus has been said just before to be delighted. Free from all the coquetry of her sex, Minerva rejects even a mirror. Neither she nor Juno, continues the Hymnist, before they descended on Ida to submit their charms to the criticism of Paris, gazed at themselves in the reflecting orichalc, or even in the bright wave of Simois; their Paphian rival, on the other hand, could not discard her mirror, and more than once adjusted by it the same straying ringlet, *πολλάκι τὰν αὐτὰν εἰς μετέθηκε κόμαν*. But there could be little necessity for the employment by Minerva of any costly preparation from the Perfumer's Laboratory; Callimachus assures us that after she has run more than thirty miles, *εἰς ἑξήκοντα διαύλως*, with as much speed as Castor and Pollux themselves, she needs only a simple *Botanical extract*, the produce of her own garden,

λίτὰ λαβοῖσα
χρίματα τᾶς ἰδίας ἐκ γονα φυταλιᾶς,

to rival the morning bloom of the Rose or the Pomegranate. In her comb, however, she is fastidious; this must be of solid gold, *παγχρύσειον*. The Poet then warns the Pelasgi carefully to avert their eyes during the mystic bathing of the Goddess; he who either profanely, out of curiosity, or even unwittingly from negligence, may permit his eyes to transgress the reverence due to her modesty, has already taken his last view of his native Argos. This caution is impressed more deeply by a digression to the story of Minerva and the Theban Chariclo, Mother of Tiresias. So strong was the attachment which linked the Goddess to her mortal favourite that in all visitations to her peculiar haunts, Chariclo received a place by her side; no dances, no *conversazioni* (*ᾄδοι*) of the Nymphs had any charm for Minerva in the absence of her friend. It chanced, however, one noonday, as they were bathing in Hippocrene, that the young Tiresias, engaged like Actæon in the chase, wandered to the fountain to quench his thirst; *οὐκ ἐθέλων δ' εἶδε τὰ μὴ θεμίδες*. The penalty of blindness was instantaneous, and as we are almost inclined to think, his eyes fell out of their sockets. To the tears and somewhat loud remonstrances of Chariclo, Minerva replied that to remit the punishment was beyond her power, for that it was enjoined by the necessary laws of Fate; but that she would compensate her son's calamity so

Tiresias.

MINER-
VA.

far as she could, by gifting him with the skill of a Diviner during life, with unusual length of days, and after death with higher honour for wisdom among the Shades, than any other mortal should ever attain: a distinction which, it will be recollected, Homer has noticed in some lines referred to by Cicero, (*de Div.* i. 40.)

τῷ δὲ τιθέντι νόον πόρρ' Περσιφόνια
οἷον πεπνύσθαι· τοὶ δὲ, σκιάδ' ἀΐσσουσιν.

Od. K. 494.

A passage which we do not pretend to explain, and which Broome, who translated it for Pope, clearly understood no better than ourselves, as may be perceived by a reference to his text, or yet more to his note. We need not mention that the received belief of the cause occasioning the blindness of Tiresias widely differs from this legend of Callimachus; but he is not without supporters. Pherecydes, a contemporary of Cræsus, and therefore a far more ancient writer than the Poet of Cyrene, is cited by Apollodorus, (iii. 6.) exactly to the same purpose. An anonymous Epigrammatist also assures Mars that he may securely look at Venus while bathing,

Δέρκεο νηχομένης, μὴ διδίδε' ἢ γὰρ Ἀθήνη
Παρθένον εἰσέρας, οἷα τὴ Τυρσεΐας.

Nonnius Dionysiacus writes at the end of his XXth Book,

Γύμνην Τυρσεΐας ἐθήσατο μῦθον Ἀθήναν:

and Sophocles is said by Joh. Malala, in his *Chronographia*, to have attributed the Prophet's well-known change of sex to this incident.

Great
power of
Minerva.

The Hymn concludes with a marked testimony to the great power of Minerva. After her promise to Chariclo she nodded, and whenever Minerva nods, her decree, it is said, is firm; to her alone among his daughters has Jove given a full participation of all his sovereignty, *πατρῴα πάντα φέρεσθαι*, for she was motherless. Whatever Jupiter fixes by a nod is irrevocable, and so it is with Pallas also. Thus in the *Œdipus Tyrannus* Minerva is the first of the Deities invoked by the Theban Chorus, (159.) and in the language of Horace she claims *proximos honores* to her Father. (*Od.* i. 12.) Great are the mysteries which the Commentators would derive from these expressions; so great that we dare not involve ourselves in them.

Pindar.

Pindar names Rhodes as the birth-place of Minerva. The Sun, it seems, admonished his sons, the Heliadæ, of the approaching marvel, in order that, if we may use such an expression, they might commemorate it by anticipation; and hence the Lindian rites were more ancient even than those of Athens. The King of Gods and men rained golden showers upon the happy Island, while under the brazen axe of Vulcan, Minerva springing forth from his head, shouted with so prolonged a cry that both Heaven and Earth shuddered at her voice. (*Olymp.* vii. 63.)

Herodotus.

The particulars respecting Minerva which we gather from Herodotus are, that in the Erechtheion on the Acropolis of Athens, were an Olive tree and a Well, into which sea-water was conveyed by Pipes, for such is the probable meaning of the single word *θάλασσα* used by the Historian. The Olive tree was said to be (Herodotus, as usual, precisely distinguishes legendary tradition from Truth, *τὰ λόγος παρὰ Ἀθηναίων, κ. τ. λ.*) a memorial of the contest of the Goddess with Neptune, and it was burned during the Persian invasion. The

Olive tree
in the
Erech-
theion.

Athenians, on the day after that calamity, were ordered by Xerxes to perform their customary sacrifices, and on entering the Temple they found to their astonishment that the stump of Minerva's Olive had sent out a shoot nearly a cubit in length; *οὔτοι μὲν νυν ταῦτα ἔφρασαν.* (viii. 55.) The marvel had increased in the days of Pausanias, who writes *two* cubits. (i. 27.) Pliny notices a tradition (*traditur*) of the existence of the same eternal Olive in his days, (xvi. 441.) and Pausanias states that it grew in a Temple of Minerva, not in the Erechtheion; (*ut sup.*) but the difficulty is easily reconciled, for a Chapel of Minerva Polias existed in the Temple called Erechtheion; and a like explanation may be applied to the assertion of Apollodorus, (iii. 13.) that the Tree stood in the Pandroseion. (See *ATHENS*, p. 72.) It was named *Μορία*, *Ἀστή ἐλαία* and *Πάγκυφος*.

The dedication of a Temple to Minerva was, it seems, no less efficacious in antiquity than a similar tribute to a Romish Saint has proved to be in later times. Alyattes, in a war with Thrasybulus and the Milesians, burned a Temple consecrated to the Goddess at Assesos; and afterwards falling grievously sick, he built two Temples on the same spot, and thereupon recovered his health. (i. 22.) The Feast of the Egyptian Minerva, who, there can be no doubt, was Isis, (Plutarch, *de Iside et Osiride*, 354.) was celebrated at Sais. (ii. 59.) The propylæa of her Temple, built by Amasis in that city, are described as most magnificent; surpassing all similar buildings in height, vastness, and the size of the stones employed, and distinguished by an abundance of Colossal Statues and Androsphinges. (175.) Amasis likewise sent to Cyrene a golden Statue and a Picture of Minerva, and to her Temple at Lindus two marble Statues and a linen corslet well worthy of being seen. (182.) Zosimus would persuade us that the Lindian Idol of the Goddess, a wooden effigy which was in after days transferred to Constantinople, and placed before the porch of the Senate House, miraculously escaped a fire which consumed every thing around it in the 476th year of the Christian Era, and that it was recovered unhurt from the ruins. (v. *ad fin.*) Unhappily for his credit, the lying Historian is contradicted by his more veracious brother, Zonaras, who specifically mentions the destruction of the Image in that very same Fire. (xiv.) When Herodotus arrives at Libya, he tells us that Minerva in that Country is believed to be the daughter of Neptune and the (Nymph of) the Lake Tritonis; and that having had some quarrel with her Father, she transferred herself to Jupiter, by whom she was adopted. (iv. 180.)

Her difference with her mother arose probably from a circumstance related by Apollodorus, and it involves us in an inextricable confusion. That writer says that Minerva was educated by Triton, a male personage; and having accidentally killed his daughter Pallas, her companion in martial exercises, she made an Image in her likeness and dressed it with the ægis, as some consolation for her grief. The passage altogether is most perplexed. (iii. 12. 3.) The Image afterwards falling from Heaven, became the real, old, original *Palladium* of Troy; for which Ilus, then founding Ilium, was instructed to build a shrine. (*Id. Ib.*) It was preserved with great mystery, and kept from mortal eyes with as much jealousy as the naked limbs of the Goddess herself; for Plutarch tells us, on the authority of Dercyllus, that Ilus once, during a fire in the Temple, having snatched up the consecrated log with the intention of saving it, was instantly stricken blind, nor did he

MINER-
VA.Egyptian
Minerva.The Palla-
dium.

MINER-
VA.

recover his sight till after full atonement had been made. (*Parallela*, 309.) Upon that Statue, as every Orator at a County meeting or an Election dinner thinks and asserts, depended the *liberty* of Troy; we should rather say her *safety*. Its subsequent History is very doubtful. Homer gives Diomedes and Ulysses the credit of abstracting it; yet this could not be so, if we believe a story very current, that during the sack of Troy, when Ajax ravished Cassandra in the presence of the Virgin Goddess, the Palladium raised her eyes to the roof of the Temple. (Strabo, vi.) None but the veritable Statue could have performed so great a miracle, consequently that which the Greeks carried off must have been a duplicate, added, like the false *Ancilia*, for the protection of that which was true. The Romans confidently asserted their possession of the Palladium, which they said Æneas brought with him to Italy, and which was transferred either from Alba Longa, or from Lavinium to their Capital. L. Metellus saved it when the Temple of Vesta was burning, and, like Iulus, he paid for his rash piety with the loss of sight. (Liv. *Epit.* xix. Pliny, vii. 43.) In later days the sanctity of that *penetrable* was violated by Heliogabalus with impunity. (Lampridius, vi.) In their claim the Romans, however, found numerous rivals; among them was the city of Liris, a Trojan colony in Lucania; Lavinia, Luceria, Daulis, Sparta, and Argos. Ilium herself, too, is in the number; her inhabitants declared that although Æneas might at first have removed the Image, it was soon restored; and Appian notices that during the wars between Sylla and Marius, when Fimbria, a Lieutenant of the former, sacked Ilium, and burned the Temple of Minerva, the Palladium, like the Lindian statue mentioned above, was dug out of the ruins uninjured. (*de Bell. Mithrid.* i. p. 346. Ed. Tollii Amstel. 1670.) This narrative is supported by St. Augustin, who refers in its behalf to a passage of Livy, no longer existing in his History as we now possess it, but which St. Augustin probably had seen at length, and to which we have a guide in the Epitome of the LXXIII Book. It should not be forgotten that one of the Priestesses of Minerva was exposed to a singular inconvenience. She who officiated among the Pedasians, a people living beyond Halicarnassus, whenever any calamity impended over her Countrymen or their neighbours, put forth a long beard, and this prodigy had occurred three times when Herodotus wrote. (i. 175.)

Diodorus
Siculus.

The Egyptians, according to Diodorus Siculus, worship the Air as Minerva, naming her a virgin and a daughter of Jupiter, because the Air is not liable to corruption, and occupies the highest regions of the Universe; hence also arises the fable of her birth from Jupiter's head. She is called *Τριτογένεια*, from the three changes of temperature in Spring, Summer, and Winter: *Γλαυκῶπις*, not from the blueness of her eyes, but from the azure tint of the sky. (i. 12.) In Libya she is believed to have nursed Bacchus, the son of Ammon, when his father sought to conceal him from the jealousy of Rhæa, soon after she herself had sprung from the Earth near the Lake Triton; to have devoted herself to perpetual virginity; and to have been the inventress of numerous Arts. One of her greatest deeds was the slaughter of the monster Ægis, *Ἀιγίδα*, a fire-breathing product of Earth, which had burned up Phrygia and the mountain region of Taurus and India; then bending back had ravaged Libanus, Phœnicia, and Egypt; and traversing Libya westward, had fallen at last upon the

Ceraunian Mountains. Minerva seems to have triumphed over this pestilent fiend, much after the same manner in which the redoubtable More of More Hall won his victory over the Dragon of Wantly, *τὰ μὲν συνέσει, τὰ δ' ἀλκῇ καὶ ῥώμῃ*, and she made a corslet of his skin. Earth, the mother of the deceased monster, enraged at his destruction, poured the Giants from her bosom, who waged war against Heaven till they were quelled by Jove, in conjunction with the other Gods, especially Bacchus and Minerva. (iii. 69.) Respecting the Ægis the confusion is remarkable. Diodorus expressly assigns that name to the monster killed by Minerva, although it is usually given to the shield, sometimes to the breastplate which she wore, and which was commonly supposed to bear the head of Medusa slain by Perseus. Euripides, in his *Ion*, (989.) says, that Minerva killed the Gorgon, and made a breastplate of her skin, which received the name of Ægis during the Gigantomachia. Apollo and Jupiter also sometimes bear an Ægis, and that of the latter was made of the skin of his four-footed wetnurse, Amalthæa; and the obvious derivation from *ἄιξ* seems indeed to afford Jupiter the best claim to the original Ægis.

Apollodorus mingles in one the many fables respecting Minerva's birth: Jupiter begat her upon Metis, and then, terrified at his own act, swallowed her mother. In process of time his head was split either by Prometheus or by Vulcan, and Minerva leaped forth in complete armour on the banks of the Triton. (i. 3. 6.) In the Gigantomachia she threw Sicily at Enceladus as he ran away; and having flayed Pallas, made a cloak for herself of his skin during the rest of the engagement; an adventure which, although it is not so written down, may have occasioned her name. (i. 6. 2.) She accompanied Perseus in his expedition against the Gorgons, and received from him Medusa's head, which she placed in the middle of her shield. (ii. 4. 3.) When Hercules attacked the Stymphalides, she borrowed either castagnets or cymbals, *χάλκεα κρόταλα*, from Vulcan, and lent them to the Hero. The fierce birds, terrified by the sound, took to the wing, and when they were thus flushed, they easily fell beneath the arrows of their pursuer. (ii. 5. 6.) On another occasion she gave Hercules a single brazen hair of Medusa, which he employed as we have already noticed in our account of the GORGONES, p. 674. The birth of Erichthonius we need not relate, although it is told with some humour by Apollodorus: Vulcan, visited at his smithy by Minerva, becoming enamoured of her because Venus had deserted him, and chasing his new mistress as well as he can with his lame leg, *πολλῇ ἀνάγκῃ, ἣν γὰρ χωλὸς*, offers an amusing picture, with which Apollodorus closes his notices of the Goddess of Wisdom.

Pausanias tells us, that the helmet of Minerva in a Statue, the work of Phidias, in the citadel of Elis, bore a Cock as its crest, because that bird was the readiest of all others to combat; (vi. 26.) the customary Owl of the Goddess therefore would have little chance with so martial an opponent. Her blue eyes, according to the same authority, are hereditary from Neptune, from whom and Tritonis, Pausanias asserts her descent. (i. 14.) It should be remembered that there are no less than three Tritons, in Bœotia, in Thessaly, and in Libya, respectively, and that each claims the honour of the connection. Minerva, no less than Venus, had to deplore a wound received during the Trojan war. While the Grecian fleet was detained at Aulis by contrary winds, some

thenon.

Cicero.

quarrel arose between Agamemnon and a petty chieftain Teuthis; on account of which the latter determined to withdraw his contingent. When the Goddess, having assumed the shape of Melas, a son of Ops, attempted to detain him, he angrily struck her in the thigh with his spear, and returned home: not long afterwards she showed him the wound, and from that moment he wasted away under a mortal disease. (viii. 28.) Of the celebrated Statue in the Parthenon, Pausanias speaks at length; it was of chryselephantine materials; the helmet was crested with a sphynx, supported on each side by griffins; the figure was in a standing posture, and clothed in a tunic falling to the feet; on her breast was an ivory Medusa, and a Victory four cubits in height; in her hand a spear, beneath which lay a dragon, probably Erichthonius; at her feet was a shield, which, during the calamities in Sicily in the Peloponnesian war, was pecked through by crows. (Plutarch, *de Pythiæ Oraculis*, 397.) On the base was sculptured the birth of Pandora. (i. 24.) Pausanias, as may be supposed, has countless other notices of different Temples and Statues of this Goddess.

Cicero has furnished a key to the many discordant legends concerning Minerva, by informing us that there were not less than five Divinities so named: 1. The mother of Apollo by Vulcan. 2. The daughter of the Nile, worshipped at Sais. 3. The daughter of Jupiter by equivocal generation. 4. The daughter of Jupiter and Coryphe, one of the Oceanides; the Arcadians call her Coria, and ascribe to her the invention of driving four-in-hand. (*quadrigarum*.) 5. The daughter of Pallas, whom she killed when he attempted her violation: the last Minerva is represented with foot-wings, *cui pinnarum talaria affigunt*. (*De Nat. Deor.* iii. 23.)

Lucian, from whom, laughter-loving as he is, we are on that very account likely to derive more truth than from any other Pagan writer when he touches on Mythology, does not speak much of Minerva. He has indeed one very humorous Dialogue, the scene of which is placed at the moment of Jove's anomalous accouchement. "Here I am," says Vulcan, "ready at your command, with an axe sharp enough to split a rock at one blow." "Split my skull, then, with it directly," replies Jupiter, to the great astonishment and consternation of the lame God. After a good many excuses on the one part and threats on the other, the operation is performed, and Vulcan is no longer surprised at the throes and agonies which the King of Gods and Men had been enduring. "What is this? an armed damsel! Well indeed may you have complained of a bad headache! well may you have been irritable, while nursing under your brains this live woman with her armour! why, you have carried a camp instead of a cranium! There she goes, dancing and pirouetting in her coat of mail, shaking her buckler, and brandishing her spear, like a mad woman. And, what is better than all, she is very handsome, and already in this short time quite marriageable, and her blue eyes are most bewitching. How the helmet becomes her! You must pay me for my pains; and as I have played the midwife so skilfully, I claim your daughter's hand as my reward." Jupiter tells him that his request is impossible, for that she is fated to be an old maid; if, however, he can manage matters otherwise, "I," adds the Thunderer, "make no objection." "That's all I ask for; leave the rest to me; *καὶ ἡδὲ συναρπάσω αὐτήν*," is the declaration with which the ardent Blacksmith concludes his conversation with Jove, and hobbles off to commence his wooing with Minerva.

MINIM. Fr. *minime*; Lat. *minimum*; the least.
The least part or portion; any very small thing.

Applied to that which was the shortest note in ancient music, and which now is equal to two crotchets.

Pardon thy shepherd mongst so many lays
As he hath sung of thee in all his dayes,
To make one *minime* of thy poore handmayd,
And underneath thy feete to place her prayse.

Spenser. *Faerie Queene*, book iv. can. 10.

Not all
Minims of nature; some of serpent kinde
Wondrous in length and corpulence involv'd
Their snakie foulds, and added wings.

Milton. *Paradise Lost*, book vii. l. 482.

MINIMENT, i. e. Muniment, q. v.

Upon a day, as she him sate beside,
By chance he certain *miniments* forth drew;
Which yet with him as reliicks did abide,
Of all the bounty which Belphebe threw
On him.

Spenser. *Faerie Queene*, book iv. can. 8.

MINISH, v. } Fr. *minuer*; Lat. *minuere*; to
MINISHING, n. } be, or cause to be less, (*minus*.)
MINISHMENT. } See to DIMINISH.
To lessen, to decrease, to weaken, to impair.

And the nombre of bricke which they were wont to make in tyme
passed, laye vnto their charges also, and *mynyshe* nothyng therof.

Bible, Anno 1551. *Exodus*, ch. v.

These thiges wer in dede not well done, but wer displeasunt to
God, & by him reputed as a *minishment*, & a withdrawing of the
honor dewe to himself.

Sir Thomas More. *Workes*, fol. 145. *A Dialogue concerning Heresies*.

The paw yett missed not his *minisht* might,
But hong still on the shield, as it at first was pight.

Spenser. *Faerie Queene*, book i. can. 11.

And much matter there was in that proclamation, deuised to the
slaunder of the lord chamberlaine, as that he was an euill counsellor
to the king's father, inticing him to many thinges highly redound-
ing to the *minishing* of his honour.

Stow. *Edward V. Anno* 1476.

MINISTER, v. } Fr. *ministrer*; Lat. and It.
MINISTER, n. } *ministrare*; Sp. *ministrar*; to
MINISTRY, or } act as the less (*minor*) or in-
MINISTRY, } ferior agent, in obedience or sub-
MINISTERIAL, } servience to another. See AD-
MINISTERIALLY, } MINISTER.
MINISTRANT, } To serve or subserve; to
MINISTRATION, } officiate, to contribute services
MINISTRESS. } or offices, to supply, to dispense,
to manage.

pei ordeynd a couent, to *ministre* in þat kirke.

R. Brunne, p. 80.

zit þei said him tille, his *ministres* wasted þe lond.

Id. p. 312.

For who is gretter: he that sittith at the mete or he that *mynys-
trith*? wher not he that sittith at the mete? and I am in the mid-
del of you as he that *mynysstrith*.

Wiclif. *Luke*, ch. xxii.

For whether is greater, he that sytteth at mete: or he that
serueth? Is it not he that sytte that meat? And I am amonge you,
as he that *mynistreth*.

Bible, Anno 1551.

And whanne he hadde closed the book he gaf agen to the
mynystre, and sat.

Wiclif. *Luke*, ch. iv.

And he closed the boke, and gaue it agayne to the *minister*, and
sat doune.

Bible, Anno 1551.

For if the *mynystracioun* of dampnacioun was in glorie, mych
more the *mynysterie* of rightwysnesse is plenteous in glorie.

Wiclif. 2 *Corynth*. ch. iii.

For if the *ministring* of condempnacioun be glorious; much more
doeth y^e *ministracyō* of rightwysnes exced in glory.

Bible, Anno 1551.

One alone is father of thinges: one alone *ministreth* all thinges.

Chaucer. *Baecius*, book iii. p. 426.

The destinee, *ministre* general
That executeth in the world over al
The purveiance, that God hath seen befor.

Id. *The Knightes Tale*, v. 1664.

Verely by this thing meaneth he none other, but the preaching of
the very hole corps and body of the blessed fayth of Christ, & the
ministring of the blessed sacramentes of our Sauyours Christ.

Sir Thomas More. *Workes*, fol. 310. *The Supplication of Soules*.

A man can but onely *ministratoriously* giue any temporall domi-
nion or gift perpetual, as well to his own natural sonne, as to his
sonne by imitation.

The Conclusions of John Wicliffe. *State Trials*, vol. i. p. 75.

For Ida selfe, in ayde of that fierce fight,
Out of her mountaines *ministred* supplies.

Spenser. *Virgil. Gnat*.

But this is a sure rule, that if the enuy upon the *minister* be great,
when the cause of it in him is smal, or if the enuy be generall in a
manner, upon all the *ministers* of an estate; then the enuy (though
hidden) is truely upon the state itselfe.

Bacon. *Essay* 9. fol. 48. *Of Enuie*.

Those churches that are zealous for souls must send into their
ministeries men so innocent, that evil persons may have no excuse to
be any longer vicious.

Taylor. *Sermons*, part ii. fol. 203.

Thou whose diviner soul hath caus'd thee now
To put thy hand unto the holy plow,
Making lay-scorings of the *ministry*,
Not an impediment, but victory;
What bring'st thou home with thee.

Donne. *To Mr. Tulman, after he had taken Orders*.

The fault ought to be laid on the remissness of the officers and
ministers, to whom it belonged; for it was his part to direct and order
well, but the part of others to perform the *ministerial* offices.

Baker. *Charles I. Anno* 1628.

I can at will, doubt not, as soon as thou,
Command a table in this wilderness,
And call swift flights of angels *ministrant*
Array'd in glory on my cup to attend.

Milton. *Paradise Regained*, book ii. l. 335.

This Bisi at length was so visited with sicknesse that he was not
able to exercise the *ministration*.

Holinshed, vol. i. book v. ch. xxxiv. fol. 629.

The Spring was in the prime; the neighbouring grove
Supply'd with birds, the choristers of love:
Music unbought, that *minister'd* delight
To morning walks, and lull'd his cares by night.

Dryden. *Theodore and Honoria*.

From the very beginning of the chapter we have Christ consulting
the propagation of the Gospel; and in order to it (being the only
way that he knew to affect it) sending forth a *ministry*, and
giving them a commission, together with instructions for the exe-
cution.

South. *Sermons*, vol. i. p. 89.

Ten thousand thousand! bright ethereal powers,
Ministrant round, their radiant files unfold,
Arm'd in eternal adamant and gold.

Broome. *Job*, ch. xxxviii. and xxxix.

Very solid and very brilliant talents distinguished the *ministerial*
benches.

Burke. *Works*, vol. vi. p. 80. *Appeal from the New to the Old
Whigs*.

MINIS-
TER.
—
MINOR.

Beside the caliph, waits on either hand
A mighty peer, the noblest of the land ;
This holds the seal, *ministrant* near the throne,
And bends his cares to civil rule alone.
Hoole. Jerusalem Delivered, book xvii.

Thus was beauty sent from Heaven,
The lovely *ministress* of truth and good
In this dark world ; for truth and good are one.
Akenside. Pleasures of Imagination, book i. l. 373.

MINNOW. The French *menuise*, Cotgrave says, is small fish of divers sorts ; or the small fry of fish cast into a pond, &c.

It is more properly the trivial name of a small Carp, the *Cyprinus Phoxinus* of Linnæus.

The *minnow* hath, when he is in perfect season—and not sick, which is only presently after spawning—a kind of dappled or waved colour, like to a panther, on his sides, inclining to a greenish and sky-colour.
Walton. Angler, part i. ch. xviii. p. 309.

Before one salmon, you shall take a number of *minnowes*.
Baumont and Fletcher. The Two Noble Kinsmen, act ii. sc. 1.

To snare the mole, or with ill-fashioned hook
To draw th' incautious *minnow* from the brook,
Are life's prime pleasures in his simple view.
Cowper. Retirement.

MINOA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Palpi* short, triarticulate ; *antennæ* simple in both sexes, slightly pubescent within in the male ; head small ; *thorax* slender ; all the wings of one colour, both on the upper and under surfaces, rounded, especially the posterior ones ; caterpillar naked, with the body tapering anteriorly, and generally of lively colours ; head small ; changes in a slight web.

Type of the genus, *Phal. Euphorbiata*, Fabricius, Hübner, *Geom.* pl. xv. fig. 78. Two species, both found in Britain.

MI'NOR, *adj.* } Fr. *mineur* ; It. *minore*, *mino-*
MI'NOR, *n.* } rare ; Sp. *menor*, *menorar* ; Lat.
MI'NORATE, } *minor*, (from Gr. *μῖνός*, Att. *pro*
MINORATION, } *μικρός*.) less. For *minor*, in Logick,
MINORITY. } see MAJOR, *ante*.

Less ; smaller, inferior ; one less than—below—who has not attained—a certain age.

To *minorate* ; Lat. of Lower Ages, *minorare* ; to minish or diminish ; to lessen. See MINISH, *ante*.

Tyndall would fayne wit in what figure it is made : he shal find it in the first figure and the third mode, sauing that y^e *minor* carrieth his prooffe w^e him.

Sir Thomas More. Workes, fol. 504. *The First Part of the Con- futation of Tyndall*.

But the first Act that passed in King Edward the Sixt, his time, was an Act of repeale of that former Act, at which time neuerthelesse the King was *minor*.
Bacon. King Henry VII. fol. 145.

Which it [sense] doth not only by the advantageous assistance of a tube, but by less industrious experiments, showing in what degrees distance *minores* the object.

Glanvil. The Vanity of Dogmatizing, ch. viii. p. 72.

We now do hope the mercies of God will consider our degenerate integrities unto some *minoration* of our offences.

Sir Thomas Brown. Vulgar Errours, book i. ch. ii. p. 6.

The generation of bodies is not effected, as some conceive, of souls, that is, by irradiation, or answerable unto the propagation of light, without its proper diminution ; but therein a transmission is made materially from some parts, and ideally from every one : and the propagation of one, is in a strict acception, some *minoration* of another.
Id. Ib. book iii. ch. ix. p. 157.

There may, I confess, from this narrow time of gestation ensue a *minority*, or smallness in the exclusion.

Id. Ib. book iii. ch. vi.

When stag and raven, and the long-liv'd tree,
Compar'd with man, dy'd in *minority*.

Donne. Anatomy of the World. The First Anniversary.

What mean all those hard restraints and shackles put upon us in our *minority*.
South. Sermons, vol. iv. p. 185.

In a democracy, the majority of the citizens is capable of exercising the most cruel oppressions upon the *minority*, whenever strong divisions prevail in that kind of polity, as they often must.
Burke. Works, vol. v. p. 231. *Reflections on the Revolution in France*.

MINORCA, the second in point of size and import- Situation.
ance of the Balearic Islands in the Mediterranean Sea, is situated about ten leagues to the North-East of Ma-
jorca, and about sixty to the South of the coast of Spain. It is crossed by the 40° of North latitude, and not far from its Western boundary, by the fourth meri-
dional line of East longitude. Its form is oblong, being concave on the South and convex on the North ; it stands amid a number of rocks, banks, and islands, and its coast is deeply indented by creeks and bays. Its extreme length is 13 leagues ; its circumference 38 ; and its area 240 square miles. The surface is rugged Surface.
and uneven, being diversified by low abrupt hills and long deep valleys. Mount Toro, near the centre of the Mountains.
Island, is the only height which attains a mountainous elevation, and its form is that of a cone cut flat at its summit. Mount Sta. Agatha rises to the South-West of Mercadal, and is surrounded by hills partly wooded. The streams are few in number and small in size ; and on the whole the Island is not copiously supplied with fresh water, except what is drawn from deep wells.

A considerable variety of shells and a large quantity of red coral are found in the sand on the sea-shore, and larger pieces of a white variety of this latter substance are occasionally brought up by the fishermen in their nets. Rock-crystals, though not common, sometimes occur. Iron and lead ores are met with in several places, Minerals.
but not in such quantity as to be mined with advantage. Slate of a bluish colour, mingled with white veins, and easily split for use, is found in sufficient quantity ; marbles of different colours are also found, but they are not used. Limestone of a grey colour, containing petrified fish, is common. Clay, fitted for making tiles and a coarse species of pottery, is plentiful in some places. *Guysch* and *perelle*, two gunmy substances, are met with, and the latter, which is white, brilliant, and brittle, is used to clarify wine. La Cava Perella, not far from the Western end of the Island, is an interesting natural grotto, of large dimensions, with many lateral chambers supported by stalactite columns.

In Summer, the heat is very great, and throughout the Climate.
year, even in Winter, the temperature is mild, so that a fall of snow is a rare occurrence. In Spring, the atmosphere is dry, pure, and salubrious ; in Autumn there are heavy falls of rain ; and the dry withering wind which blows from the North checks, shrivels, and destroys the vegetation on that side of the Island. The Produc-
soil upon the sides of the hills is brown, light, and fine, tions.
and though thinly spread over the rocks, is rich and fertile. The land on the sea-coast is more fertile than that of the inland valleys, which is argillaceous and thin, till enriched by the mountain *debris* washed down by the autumnal and winter floods. Wheat, barley, and maize are the crops chiefly cultivated, and harvest commences in the second week of June. Vines, olive trees, orange and lemon trees, fig trees, and kernelled fruit trees, are objects of care in the Island, and their culture might be greatly extended. Beans, peas, water-melons, capers,

MINOR.
—
MINOR-
CA.

MINOR- medicinal plants, and all sorts of vegetables and pot
CA. herbs are abundant and of excellent quality. Fish
around the coast is plentiful at all seasons, and of good
quality. Bees are numerous, and the honey, collected
from the myrtles which grow with peculiar luxuriance,
the orange trees, and a vast number and variety of
other flowering trees and shrubs, is peculiarly delicious
and highly valued.

Divisions. The Island is divided into four districts, called *Ter-*
Population. *minos*, and its population amounts to 35,000 indivi-
duals, distributed in the following manner :—

Mahon	19,000
Alayor	5,000
Civdadela.....	7,000
Mercadal	4,000

Commerce. The inhabitants have not any manufactures, and their
export trade consists in dairy produce sent to Italy, some
wool, salt, wine, honey, wax, olives, and fruits; and
their imports are corn, brandy, rice, sugar, tobacco,
coffee, spices, linen, fine cloths, boards, pitch, cordage,
and furniture. By industry and enterprise their articles
of export might be greatly increased or extended. While
the Island belonged to the English, it was enriched by
the high price which they paid for provisions of all kinds,
but the abstemious Spaniards have again deprived the
islanders of that advantage.

Mahon. *Mahon*, or *Port Mahon*, though not the Capital, is by
far the most populous town in the Island. It stands at
the Eastern extremity, on a rocky and elevated situation.
It contains a good Parish Church and three Convents.
The private houses are in general built with taste; many
of them have terraces in the Italian style; and most are
accommodated with cisterns. The streets are narrow,
rough, uneven, and paved with flints. The town was
once surrounded with walls, of which nothing now re-
mains but one of the gates. The Place of Arms is a
large square with a Barrack on one side, fitted up to
accommodate 1200 soldiers. The *Alameda* is a public
walk. The harbour is one of the finest in the Mediter-
ranean, having safe and convenient moorings for a large
fleet. The entrance is narrow, and rendered difficult
by shoals, but within, the ships are sheltered from all
winds. It is nearly a league and a half in extent, and
contains three Islands, King's Isle, the Isle of Quarant-
ine, and the Isle of Lazaret. The famous Fort of St.
Philip is now in ruins, the whole having been blown up
by the Spanish in 1805. The *Termino*, or district of
which Mahon is the head, comprehends the City, the
Borough of San Carlos, San Luis, Biniatop, and about
140 farms or manors, with a population of 19,000.

Civdadela. *Civdadela*, or *Jamna*, the Capital of the Island, is
situated at its Western extremity, eleven leagues from
Mahon, and is the residence of the highest Civil func-
tionary. It is built near the coast, and has a small
port, formed by a canal bounded by rocks. The town
is partly surrounded with walls constructed by the
Moors, and partly with more recently built bastions and
curtains. The streets are narrow and paved with large
unhewn stones; and the City contains a Cathedral, two
Churches, three Convents, a Hospital, and 700 houses,
some of which are very pretty.

Alayor. The Borough of *Alayor*, the chief town of the *Termi-*
no of the same name, is about four leagues and a half
from Mahon, on the left of the high road between the
two principal towns. The streets are narrow, crooked,

and uneven; but the houses are well built. The Parish
Church is ancient and of Gothic architecture. The
Monastery of the Cordeliers contains a handsome
Church; and there are besides in the town a Hospital
and a Barrack. The *Termino* contains 112 farms or
manors; and the neighbourhood of the town is adorned
with woods and plantations. In this district are some
Druidical stones, called Altars of the Gentiles.

Mercadal is near the middle of the Island, on the *Mercadal*
great road, a league from Alayor, and not far from the
mountains Toro and Sta. Agatha. It has narrow, wind-
ing, ill-paved streets, with an old Parish Church. The
climate is unhealthy, causing obstinate fevers, tertians,
and other diseases. The district belonging to the town
is about five leagues and a half in length, and four and
a half in breadth, and with it is joined the territory of
Ferarias, five leagues in length and two in breadth.
This part of the Island is inhabited by shepherds, who,
as the Country abounds in game, occupy themselves
much in hunting.

The History of Minorca is the same as that of Majorca
and the other Balearic Islands. In the 1st Punic War,
it was allied with Carthage and overrun by the Romans.
In A.D. 426 it was occupied by the Vandals, who in turn
were expelled in 728 by the Moors, who, with the ex-
ception of a short interval during the reign of Charle-
magne, maintained themselves till 1229. The Island
was subject to Spain till the War of the Succession, when
in 1708 it was captured by England, who received con-
firmation in it at the Peace of Utrecht, and retained it
till 1758; when, by the unfortunate occurrences which led
to the execution of Admiral Byng, it was taken by the
French. At the Peace of 1763, it was restored to Eng-
land; captured by Spain, in 1782; again by England,
in 1798; and finally assigned to Spain at the Peace of
Amiens, in 1802.

Cleghorn, *On the Climate and Diseases of Minorca*,
1751; Several curious Pamphlets descriptive of the
Harbours, Political importance, &c. of the Island, were
published in the years 1756 and 1757; *Philosophical*
Transactions, vol. xiv. 1776; Laborde, *A View of Spain*,
&c. London, 1809; Major Francis Maule, *A brief*
Description of Minorca, &c. London, 1816.

MINOTAUR, Fr. *minotaure*; It. and Sp. *mino-*
tauro; Lat. *minotaurus*, q. d. *Minois taurus*, the Bull
of Minos.

And by his banner borne is his penon
Of gold ful riche, in which ther was ybete
The *minotaure* which that he slew in Crete.
Chaucer. *The Knightes Tale*, v. 981.

Here I, enclos'd from all the world asunder,
The *minotaur* of shame, kept for disgrace;
The monster of fortune, and the world's wonder,
Liv'd cloist'ed in so desolate a case.
Daniel. *The Complaint of Rosamond*.

MINSTER, n. A. S. *mynster*, *mynstre*; Fr. *mon-*
steir, from *monasterium*, a monastery, q. v.

To riche dragones of golde he lette make anon,
And at þe *mynstre* of Wynchestre he offerede þat on.

MIN-
STREL.

MINSTREL, } Fr. *menestral*, *menestrier*, *mene-*
MI'NSTRELSY. } *strandier*; Sp. *menestril*, *ministrat*;
Low Lat. *menestrallus*, *ministrellus*. The various ways
in which this word was written have perplexed the Ety-
mology. It appears, however, to have been no more
than a consequential usage of the Fr. *ministre*; Lat.
ministri, (in the diminutive form of *menestral*, *minis-*
trelli), and applied to a class of persons, who were to
administer their skill in Poetry and Music for the
amusement of their Patrons. They are in Low Lat.
sometimes called plainly *ministri*; by Chaucer, in his
Dream, *ministers*; and in the Old paper Roll printed
by Leland, we find "*ministers*," who were appointed "*to*
syng." See Du Cange, *Gloss*.

Menestral he was gode ynnow, & harpare in eche poynthe.
To Apelstan paulyon myd ys harpe he wende,
And so wel wy poute harpede, þat me after hym sende.
R. Gloucester, p. 272.

And somme murpes to make as *mynstrals* conneþ.
Piers Plouhman. Vision, p. 3.

Alle sikenesses and sorwes. for solas he it takeþ,
And alle manere mischifs as *minstracie* of hevене,
Of deþ ne of derþe. drad was he nevere.
Id. Ib. p. 280.

Jhesus cam into the hous of the prince and saigh the *mynstrels*
and the puple makynge noyse. *Wiclif. Matthew*, ch. ix.

Jesus came into the reuelers house, and saw the *minstrels* and the
people ragynge. *Bible, Anno 1551*.

While that this king sit thus in his nobley,
Herking his *ministralles* hire thingis pley
Beforn him at his bord deliciously.
Chaucer. The Squieres Tale, v. 10392.

With ladies, knights, and squiers,
And a great host of *ministers*,
With instruments and sounes diuerse.
Id. Dreame, v. 2130.

The trompours with the loude *minstralcie*.
Id. The Knightes Tale, v. 2673.

For sorwe of which he brake his *minstralcie*,
Both harpe and lute, giterne, and sautrie.
Id. The Manciples Tale, v. 17214.

Thus wil I bringe the melody of thy songes, and the voice of thy
mynstrelsy to an ende, so that they shall no more be herde.
Bible, Anno 1551. Ezechiel, ch. xxvi.

Hark! how the *minstrils* gin to shrill aloud
Their merry musick that resounds from far,
The pipe, the tabor, and the trembling croud,
That well agree withouten breach or iar.
Spenser. Epithalamon.

PER. By Pan, and by the strife
He had with Phœbus for the mastery,
When golden Midas judg'd their *minstrelcy*,
I will not.
Beaumont and Fletcher. The Faithful Shepherdess, act iv. sc. 1.

Mean time the *mynstrels* play'd on either side,
Vain of their art, and for the mastery vy'd,
The sweet contention lasted for an hour,
And reach'd my secret arbour from the bower.
Dryden. The Flower and the Leaf.

The rolls of fame, I will not now explore;
Nor need I here describe, in learned lay,
How forth the *minstrel* far'd in days of yore,
Right glad of heart, though homely in array,
His waving locks and beard all hoary gray.
Beattie. The Minstrel, book i.

The name MINSTREL is peculiarly Norman, but the
profession appears to belong to all half-civilized states of
society; thus we read of *Aoidoi* and *Pavvodoi* in Greece,
of *Citharædi* among the Romans, of Scalds belonging
to the Northern Tribes, (who doubtless were the legiti-
mate predecessors of *Minstrels*), of BARDS in Wales,
and of Harpers and GLEEMEN among the Saxons; all
these were different species of one genus uniting in
a single individual, for the most part, the occupations of
Poet, Musician, and Actor, and probably in many cases,
several others not quite so reputable. Hence *Minstrels*,
besides their general name, were known by various titles
implying some particular branch of their craft, as *rimours*,
chanterres, *conteurs*, *jongleurs*, *jestours*, *lecours*, *trouba-*
dours, and *trouvers*; in Latin, *joculatores*, *scurræ*, *mimi*,
or, not quite so courteously, according to John of Salis-
bury, *salii vel saliares*, *balatriones*, *æmiliani*, *gladiatores*,
palæstritæ, *gignadii*, *præstigiatores*, *malefici quoque*
multi et tota jocularum scena. (*De Nugis Curialium*,
i. 8.)

The title Minstrel itself, although not introduced into
England till the Norman Conquest, had long been fa-
miliar to French ears. So early as the VIIth century,
the leader of the band to Pepin, father of Charlemagne,
was termed *Menestral*. (*Burney, Hist. of Music*, ii. 268.)
That the *Minstrels*, however, did far more honourable
service than merely giving assistance at the revelry of
the Great, is plain from the accounts which have reached
us of the first Norman professor of the *gai science* who
ever set foot on British ground. Taillefer was a brave
warrior as well as an expert songster; and having
obtained permission from Duke William to make the
first onset on the Anglo-Saxon host at the Battle of
Hastings, he chanted the animating strain of Roland,
[*cantilenâ Rolandi inchoatâ*, says William of Malmes-
bury, (lib. iii. p. 57.)] and after the song had been taken
up by his Countrymen, he rushed upon the enemy's line,
and fell combating valiantly. The scene is vividly
described in an extract from an old MS. French Ro-
mance, *De Vaces*, first cited by Du Cange, and copied
from him by almost every successive writer on the beaten
subject of *Minstrelsy*.

*Taillefer q̄ mont bien chantout,
Sur un cheval q̄ tost alout,
Devant le duc alout chantant
De Karlemaigne et de Roullant,
Et d'Oliver et des vassals
Q̄ moururent en Rencevals.*

Thus translated by Ritson, whose French citation also
we have taken in preference to that of others.

Telfair who wel could sing a strain
Upon a horse that went amain,
Before the Duke rode singing loud
Of Charlemagne and Rowland good,
Of Oliver and those vassals
Who lost their lives at Roncevals.

We have here adopted the common belief that Taille-
fer was a professed Minstrel, notwithstanding that we
have some misgiving as to his claim. It may indeed
appear supported by some feats of manual dexterity
which he practised in sight of the two armies. Casting
up his spear three times, he caught it as often by the

MIN-
STREL.

Hastings.

MIN-STREL.

iron head, and then hurled it among the English, one of whom he wounded. The same sleight of hand was practised with his sword also, so that—

*L'un dit al altre ki co vect,
Ke co esteit enchantement.*

When they saw that sight, each one
Said it was by magic done.

Song of
Roland.

Nevertheless, there can be no reason why a good Knight should not have been able to sing of Charlemagne and his Paladins equally well with a good Minstrel. The War *whoop* of utter Barbarians passes into the War *song* of a People more advanced in Civilization; and we know that the lay of *Roland* chanted by Taillefer, was employed by the common soldiers in the French armies so late as the XIVth century. When King John, at the Battle of Poitiers, reproached one of his men for singing it at a time at which no Rolands were left, he was answered with much readiness, that there would be Rolands enough if they could find a Charlemagne to head them.* Burney has printed the *Chanson de Roland*, as digested by the Marquis de Paulmy, from fragments which he found in the old Romances. Appended to it is a spirited English translation, and also the tune, but it is not stated from what source the latter is derived. (ii. 276.)

Attain-
ments of
Minstrels.

Of the gipsy attainments (if we may so speak) of Minstrels in the XIIth and XIIIth centuries, Burney has given an amusing specimen from a Romance of that period, *Les deux Menestriers*; a copy of which exists in the Bodleian Library. (MS. Digby, 86.) The disputants meet at a Baron's Castle, and each vaunts his own superiority. Besides the knowledge of countless stories and lays, one of them boasts that he is skilled in circling an egg, bleeding cats, blowing beef, and covering houses with omelets; the first and last of which acquirements were probably tricks of legerdemain. He adds also, that he can make goats' caps, cows' bridles, dogs' gloves, hares' armour, joint-stool cases, and scabbards for hedging-bills; moreover, that he is an excellent musician. The reader will be reminded by his latter accomplishments of the many uses to which the excellent Will Wimble, of later times, is made by Addison to direct his intellect. But the second Minstrel was not a whit behind his competitor; he played more instruments than we care to enumerate, or than even Burney could explain. Tales, Fables, Satires, Pastorals, Songs, and Ditties without number, waited upon his ready memory; and he possessed the eminently recommendatory art of conveying lovers' tokens, and mediating in intrigues. Lastly, as a Juggler.

*Bien sai joer de l'escambot,
Et faire venir l'echarbot
Vif et saillant dessus la table.
Et si sai meint jeu de table,
Et d'entregiet et d'artumaire
Bien sai un enchantement faire—
Ge sai joer des baasteaux,
Et si sai joer des costeaux,
Et de la corde et de la fonde.*

Thus rendered in Burney—

* Ritson gives a different version of this anecdote from Hector Boethius. (Scot. Hist. lib. xv. p. 339.) *Diss. on Romance and Minstrelsy*, xxxvii.

Joint-stool feats to show I'm able :
I can make the beetle run
All alive upon the table,
Where I show delightful fun.
At my sleight of hand you'll laugh,
At my magic you will stare ;
I can play at quarter-staff,
I can knives suspend in air,
I enchantments strange devise,
And with cord and sling surprise.

MIN-STREL.

Licentious for the most part as were the habits of Henry I. these caterers of pleasure to ears in which obscenity was wit, and to eyes which gloated on ludicrous gesticulation, one of our earliest Religious establishments after the Conquest, arose from the bounty of a person who is reasonably supposed to have been a Minstrel. Royer, or Raherus, is styled *Mimus Regis Henrici I.*, (Leland, *Collect.* i. 112.) and by him was founded the Priory and Hospital of St. Bartholomew, Smithfield, in 1102, of which himself was the first Prior; thus affording a proof not only that he could retain feelings of piety while practising an Art which has been soundly vituperated, but also that its pursuit was a source of wealth.

Royer
founded St.
Bartholo-
mew, Smith-
field.

One Norman Minstrel, indeed, in the same reign in which Royer flourished, encountered a savage revenge from the King whom he had satirized. The unhappy Luke de Barra fell into the hands of the offended Monarch. "This man," said Henry, "being a *Wit*, a *Poet*, and a *Minstrel*, composed many indecent songs against me, and sung them openly to the great entertainment of my enemies; and since it has pleased God to deliver him into my hands, I will punish him to deter others from the like petulance." He then ordered the prisoner's eyes to be plucked out; and the miserable victim for the freedom of song died a few days afterwards, in consequence of the wounds which he received in struggling with his executioners. (Struti, *Sports and Pastimes*, iii. p. 170, from Ordericus Vitalis, *Hist. Eccl.* p. 880.)

Cruel
punishment
of Luke de
Barra.

For their general evil fame we need not turn further than to the chapter by John of Salisbury, to which we have already referred, or the *Vision of Piers Ploughman*. The Satirist in that remarkable Poem speaks of them contemptuously as "japers and juglers and janglers of gestic," who haunt all houses, are teachers of idleness and the "Devil's discours." "He," says the angry Poet, "is worse than Judas that giveth a Japer silver," and "*qui histrionibus dat demonibus sacrificat*;" a sentiment in which the somewhat ascetic writer has been anticipated by some of the Fathers, and followed, as we shall presently see, by Stubbes.

Evil repute
of Min-
strels.

We do not willingly abandon the romantic story of Blondel, the discovery of Cœur de Lion, during his Austrian imprisonment, by his favourite Minstrel, Blondel or Blondeaux.* The adventure has been too often told to need repetition here, and we believe Claude Fauchet is the main authority on which it depends, when he says, *J'ay une bonne Chronique Françoise qui dit, &c. (Recueil de l'Origine de Langue et Poësie Françoise, lib. ii. c. 7.)* The song itself in the Provençal Language, of which Richard is said to have taken up the latter part, is printed by Burney (ii. 236.) from *La Tour Ténébreuse*, an old French Romance published at Paris in 1705, and professing to be *tirez d'un ancienne Chronique composée par Richard, surnommé Cœur de Lion, Roy d'Angleterre*. The late Editor of Warton's *History of*

* Fauchet distinguishes between the Blondeaux of Richard I., and Blondeaux de Nesle. (cap. 18.)

MIN-STREL.

Minstrel of Edward I.

Origin of the authority of the Dutton Family over Minstrels, A. D. 1212.

Minstrels of France.

Le Roi des Menestriers.

English Poetry, to dissent from whose opinions would require no inconsiderable hardihood, states, without assigning his grounds, that "there is too much reason to believe this story of Blondel and his illustrious Patron to be purely apocryphal," (i. 116. note,) and Mr. Sharon Turner also dismisses it as a "pretty story." Whatever may be the truth of that narrative, no doubt can be thrown upon the fidelity and attachment of another Minstrel who attended Edward I., at that time only Prince, during his expedition to the Holy Land in 1271. Walter of Hemingford, a contemporary writer, states that the Royal youth wrested a poisoned dagger from a Saracen who attempted to assassinate him, and struck him to the ground mortally wounded. His Minstrel, *Citharæda suus*, alarmed at the noise of the struggle, ran into the tent, and in order to make matters quite sure, beat out the assassin's brains with a trivet; not without some blame from his master for needlessly killing a dead man. (*Ap. Gale, Hist. Ang. Script.* vol. ii. c. 35. p. 591.) The persecution of the Welsh Bards (if that disgraceful massacre ever really took place) by Edward when he ascended the throne, arose solely from political motives, that he might exterminate the Tyrtæi who stimulated the mountaineers to resistance: of the Minstrel Art he appears to have been fond, and on all great public solemnities to have required the attendance of its Professors at his Court.

Before the reign of Edward I., however, certain Provincial English Minstrels, in consequence of their good deeds, had been incorporated into a kind of Society. A Fair held at Chester on Midsummer day, is traced up to the time of Edward the Confessor, and it was naturally the resort of many of those itinerant musicians. It so happened that in 1212, during the day of that Fair, Randal Earl of Chester was unexpectedly attacked in his Castle at Rhydland by a considerable Welsh force; and finding means of communicating with Lord de Lacy, the Constable of Chester, surnamed *Hell* for his fierce spirit, (*Ritson, ut supr.* clxxxiv. who impugns the story,) he was promptly aided by a band chiefly composed of Minstrels, who marched to his assistance under Dutton, the Constable's Steward and son-in-law. Dutton in consequence received a Charter, conferring upon him the *Magisterium omnium liccatorum et meretricum totius Cestrishire*. It is true that the Minstrels or *lecours*, as we have before seen them styled, are not here arrayed in very reputable company; but under the protection of the Dutton Family they obtained and continued to enjoy certain useful privileges. A sort of Court held for their regulation at the Midsummer Fair, is described by Sir W. Dugdale as existing when he wrote, (*Baronage*, i. p. 101.) and the right of the Duttons, "by reason of any ancient Charters of any Kings of this land, or by reason of any prescription, or lawful usage or title whatsoever," is recognised so late as in a Statute relating to Rogues and Vagabonds, among whom Minstrels are numbered, 17 George II. cap. 5. sec. 29. In the Vagrant Act of the subsequent reign this clause is omitted.

The Minstrels of France experienced many varieties of fortune. By Philippe Auguste they were banished on account of their licentiousness; but his successor having recalled them, they were united under the general name of *Menestraudise*, and governed by a Chief, upon whom was bestowed the honourable title of *Le Roi des Menestriers*. St. Louis is said, by the author of an *Essai sur la Musique Ancienne et Moderne*, (i. p. 415.) to have exempted them from the

customary toll paid on entering Paris, on condition that they would sing a song and make their apes dance before the tollman; to which usage is traced the French proverb, *payer en gambades et en monnoie de singe*. Mr. Douce has pointed to a legend in the *Dialogues* of Gregory the Great, which avouches the connection between Apes and Minstrels. Boniface Bishop of Ferentis, it appears, was one day sitting down to dinner at the house of a Nobleman named Fortunatus; when before he could say grace, *sicut quidam ludendi arte cibum solent quærere, repente ante januam cum simia vir astitit et cymbalâ percussit. Quem sanctus vir dedignatus audiens sonitum, dixit, Heu, Heu, mortuus est miser iste, mortuus est miser iste! Ego ad mensam refectionis veni, os adhuc ad laudem Dei non aperui, et ille cum simia veniens percussit cymbalâ*. The Bishop then ordered meat and drink to be carried out to the unwitting offender, who, by a punishment somewhat disproportioned to, as may be thought, his fault, was killed, according to the angry Bishop's prediction, by a stone falling on his head from the roof as he went out of doors. That no doubt may be entertained as to the profession of this unhappy leader of apes, the margin informs us, *Bonifacius Joculatori mortem prædicit.* (i. cap. 9.)

Towards the close of the XIVth century, the French Minstrels were restrained by a public ordinance from speaking, acting, or singing any thing indecorous or unfit for modest eyes or ears, upon pain of two months' imprisonment and living on bread and water. Great improvements were made in the Science of Music during the reign of Charles VI., and the Company of Minstrels, formed originally about the year 1330, was incorporated in 1401 by Royal Charter, under the title of *Joueurs des Instrumens tant haut comme bas*. Their chief residence was in a street still (as we believe) retaining the name of *St. Julien des Menestriers*; and the presentation of the Church of the same name was vested in the somewhat anomalous Patronage of the *Maîtres joueurs d'Instrumens* and the *Maîtres à danser*, who were associated together with them.

Du Cange has recorded a few names of these French mock Sovereigns; the earliest is Robert Caveron, in 1338. In an account of the expenses for the ransom of King John when prisoner to Edward III., is an item, *Pour une couronne d'argent qu'il donna le jour de Tiphaine* (Epiphany) *au Roy des Menestrels*. Burney mentions a King Constantin in the XVIIth century, who in 1630 was succeeded by Dumanoir I. Dumanoir II. abdicated in 1685; from which year, till 1741, an interregnum ensued. In 1741 Guignon was elevated to the Crown, but the long suspension of its dignities had diminished all reverence for its authority, and the new King finding himself a mere puppet, voluntarily resigned. Finally the office was suppressed and abolished by an edict of Louis XV. in 1773, and thus terminated the dynasty of the French *Rois des Menestriers*.

The license of English Minstrels was restrained by proclamation from Edward II. in 1315, by which it appears that many idle persons, under colour of the title, had claimed and received gifts and payment to which they had no right, in Lords' houses. Not more than three or four "Mynstrels of Honour," therefore, are for the future to be allowed to frequent a Lord's house in one day, without special invitation; none, unless desired, are to go to the houses of meaner men; and all are to be content with meat and drink and such courtesie as they can get, without asking for any thing. The

penalty for disobedience is, on the first offence loss of Mynstrellie, on the second, the culprit is "to forswear his craft, and never to be received for a Mynstrel in any house." Notwithstanding this injunction, we learn from Stow in the following narrative, which he has borrowed from Thomas of Walsingham, how much freedom of ingress even to the Royal presence was allowed to their profession, and what great personal immunities they were permitted to claim. It was in the year following the above ordinance that "Edward II. did solemnize his Feast of Pentecost at Westminster in the great Hall, where sitting royally at the Table with his Peers about him, there entered a woman adorned like a Minstrel, sitting on a great horse, trapped as Minstrels then used, who rode about the table showing pastime, (*quædam mulier ornata histrionali habitu, equum bonum insidens histrionaliter phaleratum, quæ mensas more histrionum circumivit*;) and at length came up to the King's Table, and laid before him a Letter, and forthwith turning her horse saluted every one and departed." (*ad ann. 1316.*) The Minstrel art had been practised by women among the Anglo-Saxons as well as the Normans; for the former we read of Glee-maidens; for the latter *Jeugleresses, Jocolatrices, Ministerialissæ, Fæminæ Ministeriales, &c.* The Letter above-mentioned contained a severe remonstrance against the King's maladministration; nevertheless the woman, although at first arrested, was dismissed freely after discovering the writer, who, upon his bold avowal of the Letter, was not only pardoned but largely rewarded; and the door-keeper, upon being reprimanded for the irregularity, answered in terms which sufficiently avouch the high privileges of the Minstrel brotherhood:—*Non esse moris domûs regiæ histriones ab ingressu quomodolibet prohibere, et præcipuè in tantis solemnitatibus et diebus festis.*

English King of the Minstrels.

A. D. 1381.

The inauguration of an English King of the Minstrels* is related at great length by Dr. Plot in his *History of Staffordshire*. (ch. x. sec. 69.) It occurred in the fourth year of Richard II. when John of Gaunt issued from his Castle of Tutbury a *Carta le Roy de Minstralx*, by which the fiddling Monarch might arrest all the Minstrels within the Honour and Franchise of the Duke of Lancaster, who refused to perform such services as appertained to their profession. The King was elected annually on the morrow after the Feast of the Assumption, (Aug. 16,) with great ceremony; and in later times the merriment of the day was summed up by a brutal diversion; which does not by any means appear to have scandalized Dr. Plot. He terms it, indeed, a "rustic sport," and hunts for its origin in the *Jeu de Taureau* at Valentia, Madrid, and many other places in Spain, (John of Gaunt having been King of Castile and Leon,) or "the *Ταυροκαθάψιων ἡμέραι* amongst the Thessalians."† The Prior of Tutbury anciently, latterly the Earl of Devonshire, turned out to the Minstrels at the Abbey gate a miserable Bull, with "his horns cut off, his ears cropped, his tail cut close by the stumple, all his body smeared over with sope, and his nose blown full of beaten pepper, in short, being made as mad as it is possible for him to be." If the Minstrels could take this wretched, mutilated animal

Cruel Bull-running at Tutbury.

* Burney calls this the first English King of the Minstrels, but Strutt has pointed to *Rex Robertus Ministrallus*, mentioned under Edward I. (*MS. Cott. Vesp. cxvi.*)

† See a learned Dissertation on the Bas Relief among the Arundel marbles, *Ταυροκαθάψιων ἡμέραι*, in Prideaux's *Marmora Oxoniensia*, p. 267.

before sunset of the same day within the County of Stafford, and hold him so long as to cut off only some small matter of his hair, and bring it, in token thereof, to the Market Cross, he was to become their property, and to be reserved for further torture; being led collared and roped to be baited in the High Street at three Courses, "the first being allotted for the King, the second for the honour of the Town, and the third for the King of the Minstrels; which after it is done, the said Minstrels are to have him for their own, and may sell or kill and divide him amongst them according as they shall think good." If the poor beast could cross the river Dove into Derbyshire, he continued the property of his first owner, the Earl of Devonshire. Dr. Pegge has maintained that this cruel exhibition did not form a part of John of Gaunt's institution, and might indeed be of much higher antiquity. (*Archæologia*, vol. ii. p. 86.) At whatever time the custom may have commenced, it continued through a long series of years; and although it was ordered by proclamation that no one but the Minstrels should presume to approach within forty feet of the Bull, but all else should "attend his or their own safeties every one at his peril;" latterly the general rabble of the neighbourhood mingled in the Bull-running, and a consequent jealousy for the prize was so far excited between the rival Counties of Derby and Stafford as to lead in many instances to bloodshed and fatal encounters. About half a century since, these outrages were terminated by an abolition of the custom. The Duke of Devonshire, as present owner of the Priory, pays the Minstrels four marks, and their King five nobles, in commutation for the Bull, which is fatted and killed for the poor at Christmas. The Minstrels' Court, however, is annually held at the Steward's House on a part of the site of the ancient Castle.

Eighteen Minstrels, with an allowance of *xiid.* a day, attended Henry V. on his expedition to France. (Rymer, ix. 255. 260.) A singular ordinance occurs in 1456, the 34th of Henry VI., for the impressment of youth to supply vacancies by death among the King's Minstrels, in which an express provision regards the elegance of their personal appearance. The wording of this most arbitrary Instrument is altogether very remarkable. *Sciatis quod Nos, considerantes qualiter quidam Ministralli Nostri jam tardè viam universæ Carnis sunt ingressi, aliisque loco ipsorum, propter solatium nostrum, de necesse indigentes, assignavimus vos conjunctim et divisim, ad quosdam pueros, membris naturalibus elegantes, in arte Minstrellatûs instructos, ubicunque inveniri poterint, tam infra Libertates quam extra, capiendum, et in servitio nostro ad vadia nostra ponendum.* (Rymer, xi. 375.) Edward IV., in 1469, upon complaint of abuses and disorders by persons falsely calling themselves the King's Minstrels, and collecting money under that pretext, erected certain Minstrels, specified by name, into "one body and cominality," to be governed by a Marshal, appointed for life, and two Wardens, elected annually. (*Id. Ib.* 642.) It must be confessed, however, that these Minstrels appear to have been no other than Choristers; they are said to be appointed *ad laudem et honorem Dei, et ut specialius exorare teneantur pro salubri statu nostro et Præcarissimæ Consortis nostræ Elisabethæ Reginæ Angliæ dum agimus in humanis, et pro animabus nostris cum ab hac luce migraverimus, necnon pro animâ carissimi Domini et Patris nostri Richardi nuper Ducis Eborum, et animabus inclitorum Progenitorum nostrorum, et*

omnium Fidelium defunctorum, either in the Cathedral of St. Paul, or in the Free Chapel Royal of St. Antony. In the same reign we read also of a "Sarjaunt of the Mynstrellis." (*Fragmentum ad calcem Sprotti Chron. a Hearne ad ann. ix Edv. IV.*)

In the *Liber Niger Domus Regis*, containing an account of the Household Establishment of the same King, a notice is contained of "Minstrelles thirteene thereof, one is Virger, which directeth them all Festyvall dayes in their statyones of blowings and pypings to such offyces as the offyces might be warned to prepare for the King's meats and soupers; to be more redyere in all services and due tyme; and all thes sytyng in the hall together, whereof some be trompets, some with the shalmes and smalle pypes." These attendants appear to have been permanently attached to the Court, and provision is made for occasional assistants also, certain "strange men" who are engaged "at fyve feastes of the year." Two of the established Minstrels are "to warne the King's ridyng householde when he goeth to horsebacke as oft as it shall require, and that his household meny may followe the more redyere astere by the blowing of their trompets." Then is added a very remarkable provision: "Yf any of thes two Minstrelles be lete bloode in Courte, he taketh two loves, ii messe of greate meate, one galone ale."

It is plain that the Minstrels here appointed are devoid of all the *poetical* character of their predecessors; they are nothing more than the King's household Band of Musicians. The same Ordinance regulates other parts of the Musical establishment, as "a Wayte that nightelye from Mychelmas to Shreve Thorsdaye pipethe watche withen this Courte fower tymes; in the somere nightes iii tymes, and maketh Bon Gayte (*bon guet*, good watch) at every chambere doare and offyce, as well for feare of pyckeres and pillers." The Christmas Wait has endured till our own times, and the custom of playing at every chamber door, is still practised during the festivities of Twelfth Night, in some of those few great Provincial mansions in which the extensive hospitality of our Ancestors at that season is not wholly forgotten. The air selected for each individual is generally contrived to be in some degree appropriate, and is often a source of much harmless pleasantry. The clause with which this Ordinance concludes regards "viii children of the Chappelle," for whose education, after they have ceased their original service, very honourable means are provided. "And when any of these Children comene to xviii years of age, and their voyces change, (the period assigned for such change appears somewhat late,) he cannot be preferred in this Chapelle the nombere being full, then yf they will assente, the Kyng assyneth them to a College of Oxeford or Cambridge of his foundatione, there to be at fyndyng and studye both suffy- cyently, tylle the King may otherwise advance them." The above document is printed at length by Burney. (ii. 431.)

Henry VIII., in 1520, renewed the Charter of Edward IV. (Rymer, xiii. 705.) But the real character of the original Minstrel was rapidly becoming extinguished; and we cannot but think that the following passage, which Bishop Percy (*Essay on the Ancient Minstrels*, prefixed to the *Reliques of Ancient English Poetry*) regards as proving that Minstrels, in the time of Elizabeth, "still retained a character far superior to any thing that we can conceive at present of the singers of old Ballads," proves instead, without any detriment

to the superiority asserted, that the character was extinct; and that an obsolete costume and profession was revived as a fitting part of a Masquerade, or "a ridiculous devise" as the narrative terms it. One of the personages who appeared before the Virgin Queen during her magnificent entertainment by Leicester at Kenilworth, is described thus in Robert Laneham's fantastical *Letter: whearin, part of the entertainment untoo the Queenz Maiesty, at Killingwoorth Castl in Warwick Sheer, in this Soomerz Progress 1575, iz signified*. We cite below from Percy. (xlix.) The original, with its quaint orthography, will be found in Nichols's *Progresses*.

"A Person very meet seemed he for the purpose, of a xlv years old, apparelled partly as he would himself. His cap off; his head seemly rounded Tonsterwise: * fair kembed, that with a sponge daintily dipt in a little capon's greace was finely smoothed, to make it shine like a mallard's wing. His beard smugly shaven: and yet his shirt after the new trink, with ruffs fair starched, sleeked and glistening like a pair of new shoes, marshalled in good order with a setting stick, and strut, that every ruff stood up like a wafer. A side [i. e. long] gown of Kendal green, after the freshness of the year now, gathered at the neck with a narrow gorget, fastened afore with a white clasp and a keeper close up to the chin; but easily, for heat to undo when he list. Seemly begirt in a red caddis girdle; from that a pair of capped Sheffield knives hanging a' two sides. Out of his bosom drawn forth a lappet of his napkin edged with blue lace, and marked with a true love, a heart, and a D for Damian, for he was but a batchelor yet.

"His gown had side [i. e. long] sleeves down to mid-leg, slit from the shoulder to the hand, and lined with white cotton. His doublet-sleeves of black worsted: upon them a pair of poynets† of tawny cham- let laced along the wrist with blue threaden points, a wealt towards the hand of fustian-a-napes. A pair of red neather stocks. A pair of pumps on his feet, with across cut at the toes for corns: not new indeed, yet cleanly blackt with soot, and shining as a shoing horn.

"About his neck a red ribband suitable to his girdle. His HARP in good grace dependent before him. His WREST§ tyed to a green lace and hanging by. Under the gorget of his gown a fair flaggon chain (pewter || for) silver, as a SQUIRE MINSTREL OF MIDDLESEX, that travelled the country this summer season, unto fairs and worshipful men's houses. From his chain hung a scutcheon, with metal and colour, resplendant upon his breast, of the ancient arms of Islington.

"This Minstrel," the same author tells us a little below, 'after three lowly courtesies, cleared his voice with a hem... and... wiped his lips with the hollow of his hand for 'filing his napkin, tempered a string or two with his WREST, and after a little warbling on his HARP for a prelude, came forth with a solemn song, warranted for story out of King Arthur's acts, &c.' "

Before Elizabeth closed her reign, the degradation of Minstrelsie was completed, and by a cruel and illiberal Statute, as Mr. Douce justly calls it, in her thirty-ninth year,

Minstrels
included in
the Vagrant
Act.

MIN-STREL.

Minstrels, together with Jugglers, Bearwards, Fencers, common players of Interludes, tinkers, and pedlers, were at one sweep included among Rogues, Vagabonds, and sturdy beggars, and adjudged to be punished accordingly. It was in consequence of that Statute, or one similar to it of later date, that Doctour Bull as Ritson tells us, wrote the following satirical verses, "which, though extant in one of the Harleian MSS., cannot be recovered."

When Jesus went to Jairus' house,
Whose daughter was about to dye,
He turn'd the Minstrels out of doors,
Among the rascal company:
Beggars they are with one consent,
And Rogues by Act of Parliament.

Stubbes's
coramina-
tion.

Encouraged, no doubt, by their decline in honourable repute, Stubbes had already thus bitterly denounced them in 1520.

they to graunt anye lycences to anie to do hurt withall, neither (if they would) ought any to take them.

they to graunt anye lycences to anie to do hurt withall, neither (if they would) ought any to take them.

"Giue ouer therefore your occupations, you pypers, you fiddlers, you Minstrelles and you Musitions, you drummers, you tabretters, you fluters, and all other of that wicked broode; for the blood of all those, whome you drawe to destruction thorow your prouocations and intysing allurementes, shal be powred vpon your heads at the day of judgement, but hereof enough, and perchaunce more than will like their humour."

Besides the Royal Minstrels, and their unappropriated itinerant brethren, many were entertained by the Nobles, and even by some Monasteries. These ancient appendages of state were preserved in the Northumberland Family even so late as the time at which Bishop Percy wrote. Three Minstrels, as he informs us, were retained—one for the Barony of Prudhoe, two for that of Rothbury; they attended the Court Leets and Fairs held for their Lord, and paid annual suit and service at Alnwick Castle, wearing the silver crescent on their right arm as the badge of the House, and carrying their instrument, the ancient Northumberland bagpipe. In earlier times, the tonsure, as with the Roman *Mimi*, appears to have been a distinctive mark of the Minstrel; and it occasionally gave rise to ludicrous mistakes. Strutt (173.) recounts an amusing incident (from *Hist. et Antiq. Oxon. lib. i. p. 67. sub ann. 1224.*) which occurred in consequence of this practice. Two Priests coming by night to a Benedictine Cell near Oxford, were admitted on account of their shorn crowns, under a supposition that they were Minstrels; but the Cellarer and Sacrist, on discovering that they were no more than poor spiritual brethren of their own profession, beat them soundly, and turned them out of the Monastery.

As a sequel to the History of Minstrels we may add, that the Musicians of the City of London were incorporated by James I. into a Company; which Burney assures us has ever been held "in derision by real Professors, who have regarded it as an institution as foreign to the cultivation and prosperity of good Music, as the Train Bands to the Art of War." This Charter was viewed with considerable jealousy by the tuneful Brethren at Westminster, who accordingly, in the 15th Charles I., obtained a Charter for themselves, modelled expressly upon the one which we have before noticed as granted by Edward IV. The Charter of Edward IV. indeed is expressly recited in the commencement of the new document, which then continues, in distinct illustration of the adage concerning two of a trade, that "certaine persons suggesting themselves to be freemen of a pretended Society of Minstrels in the Cittie of London, in prejudice of the preuiledges aforesaid, did by unlawful suggestions procure of and from King James of ever blessed memory, Letters Patent, to incorporate them by the name of Master, Warden, and Cominality of the Arte or Science of the Musicians of London; and amongst diuers other preuiledges to grant unto them the survey, scrutiny, correction, and government, of all and singular the Musicians and Minstrells within the said Cittie of London, suburbs, liberties, and precincts of the said Cittie, or within three miles of the said Cittee. By colour whereof they endeavoured to exclude the Musicians and Minstrells entertheyned into the King's service, and all others expert and learned in the said Arte and Science of Music, from teaching and practising the same within the said Cittie and three miles thereof, that would not subject themselves unto their said pre-

tended fraternity, or purchase their approbation thereunto, although great part of them were altogether unskilfull in the said Arte and Science of Music." Thus grounding their opposition upon the Charter of Edward IV., the King's Musicians obtained, by a decree of the Court of Chancery, a suppression of the Patent of James I., re-established their own rights throughout the whole realm of England, with the exception of the sovereignty of the Dutton family over the Minstrels in the Palatinate of Chester; and suffered no one to exercise and practise the science of Music, without a license granted to them by this Company, after trial of their abilities. (Burney, iii. 388.) A monopoly was thus founded over an Art contributing merely to pleasure, which the false liberality of our own times is prepared to deny to those upon which depend health, and even existence itself. The Company of Musicians was suspended during the anarchy of the Great Rebellion; and the Puritans, in 1656, repeated the Ordinance of Elizabeth yet more contemptuously: "If any of the persons commonly called Fiddlers or Minstrels, shall at any

time be taken playing, fiddling, and making music in any Inn, Alehouse, or Tavern, or shall be taken proffering themselves, or desiring, or intreating any to hear them play, or make music, in any of the places aforesaid, they are to be adjudged," &c. After the Restoration the Company was mischievously revived, and held its sittings in Durham-yard in the Strand, where in 1663 we find, among others, two such eminent composers as Matthew Lock and Christopher Gibbons fined ten pounds each for some violation of their laws. The minutes of the Corporation from 1661 to 1679 are extant in the British Museum. (*Harl. MS.* 1911.) In the latter year the meetings were discontinued, in consequence of the numerous lawsuits in which the Company became involved, and the little ability which they possessed of enforcing whatever penalties they ventured to inflict. (*Id. ibid.* 464.) Such was the close of the latest, though not very legitimate descendants of the Norman Minstrels, unless they may be held to survive in part in our still existing blind fiddlers and ballad mongers.

MINT, Fr. *mente*; It. *mint*; Lat. *mentha*; Gr. *μίνθη*.

The trivial name of the *Mentha* of Linnæus.

Woo to you Scribis and Farisees ypocritis that tithen *mynte*, anete, and comyne. *Wiclif. Matthew*, ch. xxiii.

Wo be to you Scribes and Pharises ypocrites, whych tyth *mynt*, anyse, and commin. *Bible*, Anno 1551.

Tho went I forth on my right hond,
Downe by a litel path I fond
Of *mintes* full, and fennel greene.

Chaucer. The Romant of the Rose, p. 176.

As for *mint*, men use it at the same time, of a young plant, so soone as they see it spurt and come up: but if it have not sprung, yet they let not to plant the spurnes of the root, knotted into an head within the ground.

Holland. Plinie, book xix. ch. viii.

MINT, v. } A. S. *mynetian*, *cudere*, to coin or
MINT, n. } *mint* money, Somner. Ger. *muntz-en*;
MI'NTAGE, } D. *munt-en*. The meaning of the word
MI'NTER. } is found in the A. S. *myne-gian*, to mark; whence Tooke forms it; *mineyed*, *minyed*, *min'd*, *mint*. (See MONEY.) *Mint*, in A. S. *mynet*, was applied to the coin marked or stamped; and upon this (*mynet*) the verb *mynetian* may have been formed. *Mint*, noun, is

The place where the marking or stamping is performed, where the coin is made: met. where any thing is coined, forged, or invented.

And also they of the towne to haue a *mynt* to forge money, bothe whyte and blacke, of the same form and alay as is in Parys. *Lord Berners. Froissart. Cronycle*, vol. i. ch. 304. p. 454.

When they do long
To strik out heroes from a mortal wombe,
And *mint* fair conquerours for the age to come.
Cartwright. To the Countess of Carlisle.

And so (vpon the matter) to set the *mint* on work, and to giue way to new coines of siluer, which should bee then *minted*. *Bacon. King Henry VII.* fol. 215.

Note that eleauen ounces two-pence ferting, ought to be so pure siluer, as is called leafe siluer, and the *mint* must adde of other weight seventeen-pence halfpenny farthing, if the siluer be so pure. *Camden. Remaines. Money*, p. 204.

Let me pour forth
My tears before thy face, whilst I stay here,
For thy face coins them, and thy stamp they bear;
And by this *mintage* they are something worth.

Donne. A Valediction of Weeping.

The next day he saw the Ordinance house, the *Mint* houses, and at last the lions. *Stow. King James*, Anno 1603.

Let such, as are to informe counsels out of their professions (as lawyers, sea-men, *mint*-men, and the like,) be first heard before committees. *Bacon. Essay* 20. p. 123.

ANSW. Setting aside the odd coinage of your phrase, which no *mint-master* of language would allow for sterling. *Milton. Works*, vol. i. fol. 84. *Animadversions on the Remonstrants' Defence*, &c.

Had all the money in King Charles II. and King James II.'s time been *minted* according to this new proposal, this rais'd money would have been gone as well as the other, and the remainder been no more, nor no less, than it is now. Though I doubt not but the *mint* would have coin'd as much of it as it has of our present mill'd money. *Locke. Works*, vol. ii. fol. 43. *Considerations of the Lowering of Interest*, &c.

The operations of the *Mint* were, upon this account, somewhat like the web of Penelope; the work that was done in the day was undone in the night.

Smith. Wealth of Nations, vol. ii. book iv. ch. vi. p. 378.

MINYOPS, in *Zoology*, a genus of *Colcopterous*
insects.

Generic character. *Antennæ* geniculated, twelve-
jointed, short, rather stout; the scape clavate, not touch-
ing the eyes; the basal joint of the funiculus obconic,
the rest short, subperfoliate, increasing in thickness out-
wardly; club short, ovate; head produced anteriorly
into a rather elongated, stoutish rostrum, which is
rounded and a little incrassated at the apex; eyes small,
oblong, immersed; *thorax* suborbiculate, rather flat
above; *elytra* united, subovate, above a little convex,
somewhat flat on the back, slightly emarginate anteriorly,
with the shoulders anteriorly prominent; legs moderate,
stout; *femora* subclavate, unarmed; *tibiæ* truncate at
the apex, furnished with a subhorizontal hook within;
tarsi narrow, slightly setose, not spongy.

Type of the genus, *Liparus carinatus*, Olivier. Na-
tive of Saxony; one species only.

MIRABILIS, in *Botany*, a genus of the class *Pen-
tandria*, order *Monogynia*, natural order *Nyctagines*.
Generic character: corolla funnel-shaped, superior;
calyx inferior; nectary globose, enclosing the germen;
stigma globose; nut below the corolla, striated.

This genus contains four species, natives of South
America. *M. dichotoma* is the Marvel of Peru of the
gardens.

MIRACLE, *n.*
MIRACLE, *v.*
MIRACULOUS,
MIRACULOUSLY,
MIRACULOUSNESS,
MIRABLE.
Fr. *miracle*; It. *miracolo*;
Sp. *milagro*; Lat. *miraculum*,
from *mirari*, which Martinus
derives from the Hebrew, and
explains, *intentè tueri*; to gaze
earnestly; (*sc.* with wonder or
astonishment; as new, strange, incomprehensible.) In
our old writers, exhibitions or entertainments contrived
to excite surprise, &c. were called *Miracles*. In popular
language,

Any thing astonishing, marvellous, wonderful, either
natural or preternatural.

In Theology: to such acts as those of Christ in at-
testation of his mission; contrary to the ordinary course
of nature.

For he herde of telle of miracles, þat come
þorow Christenemen al aboute, as wel as Rome.

R. Gloucester, p. 73.

And he shewith the firste myracle which God dide at the wed-
dyngis.

Wiclif. John. Prologue.

And whan that he this tale herde,
How wonderly this chaunce ferde
He thanked God of his myracle,
To whose might maie he none obsticle.

Gower. Conf. Am. book ii. p. 56.

HECT. Not Neoptolymus so mirable.

Shakspeare. Troilus and Cressida, fol. 98.

Ine not their father, yet who this should bee
Doth myracle it selfe, lou'd before me.

Id. Cymbeline, fol. 387.

A miracle, then, is the extraordinary effect of some unknown
power in nature, limited by divine ordination and authority to its
circumstances, for a suitable end.

Grew. Cosmo Sacra, book iv. ch. v. sec. 13. fol. 196.

Again, there is nothing in the world, but what is indeed doubly
miraculous, viz. in its own nature, and in the cast or project of its
relation to the universe; neither of which can we ever search out
into perfection.

Id. Ib. book iv. ch. v. fol. 195

The *miraculousness* of such appearances will be no longer used as an argument against their possibility.

West. On the Resurrection, sec. 13.

MIRA-
CLE.

MIRAGE.

M I R A G E.

MIRAGE. When distant objects are examined under proper circumstances, they are found to reflect images very differently directed, and always more or less altered in their figure. It is the appearance of these images, without the aid of an absolute reflector to produce them, which constitutes the phenomenon of Mirage.

Locality of
Lower
Egypt.

The soil of Lower Egypt forms a vast plain over which the waters of the Nile are spread at every inundation. Upon the borders of the river, and at great distances towards the Deserts, small eminences have been raised, upon which villages and edifices of different kinds have been built in order to preserve them from the rising waters. Upon the bosom of these waters the *images* of villages and other objects are, of course, frequently presented, according to the ordinary laws of reflection, and the natives, from their annual occurrence, are perfectly familiarized with them.

Principles
of the
Mirage.

Generally speaking, the air of Egypt is calm and pure, distant objects being distinguished with the most perfect distinctness at the first appearance of the sun, and the observer can then embrace a vast horizon in all directions around him. As soon, however, as the Earth begins to feel the influence of the solar heat, the lower stratum of the air partakes of the rising temperature of the ground. Innumerable currents are hence established, and an undulatory motion takes place in the air; distant objects presenting in consequence only ill-defined forms, which every moment seem broken and restored. If at the time at which these changes are going on an entire calm should prevail, and the mass of the atmosphere upon the plain should remain wholly at rest, while the stratum in contact with the ground acquires gradually additional increments of heat, the phenomenon of Mirage will be developed in all its magnificence. In such a case, the observer will be able distinctly to perceive villages and all other distant objects in their natural positions and forms; but *below* them, their images will be seen entirely reversed; and the spectator feels assured that he is looking at a reflection from the surface of a large mass of water. The sky also joins in completing the illusion, its image being every way reflected as from the surface of water. The whole visible appearances are indeed the same as those which water ordinarily presents. All the laws by which the observer has been accustomed to judge of the existence of water, when viewed at a distance, are here called into action, till he becomes persuaded of its identity, and the Philosopher and the unlettered man alike find themselves deceived.

Determined
by Monge.

Monge, a Member of the Egyptian Institute, and a Geometrician of the first order, who accompanied Napoleon in his expedition to Egypt, had the merit of disclosing the cause of this remarkable appearance; and his theory, as originally given in the *Décade Egyptienne*, vol. i. p. 39. we shall now briefly endeavour to explain.

The name *Mirage*, which the French Savans invented, is probably borrowed from *mirer*, and seems to answer pretty closely to the Anglo-Greek *Phenomenon*.

Let us suppose A B, fig. 1, to represent the horizontal surface of the soil, when strongly heated by the solar rays. The lower stratum of air will acquire, in such a case, an increasing density upwards to a certain height, where it will become nearly constant; but above that limit the density will diminish in the ordinary way. Let us next conceive a point H to exist at some elevation in the air, and inquire how a ray which proceeds from it will be modified, before it arrives at the eye P. It is at once evident, that the eye will perceive an image of the point H by means of the direct ray P H, though this ray will not reach him in an absolutely straight line, on account of the air between P and H having a variable density. This effect, however, will produce only a moderate irregularity in the outlines of the image.

But among the other rays which the point H on all sides sends out, some will be found following the route H I K L M N O P, and will consequently produce, in the direction P O Z, an inverted image of the object, as if it had been reflected from a mirror. Supposing, therefore, the line P C to represent the stratum of maximum density, its refractive power must be necessarily greater than the stratum immediately below it; and this diminution will go on till the lowest stratum be reached in contact with the ground. The ray H I penetrating obliquely the stratum C', will hence be removed further from a perpendicular than during its passage through the stratum C, and a similar increase of deviation will take place, as it passes from C' to C''. Thus an incessantly increasing obliquity will be produced, until the least refracting medium at length is reached in contact with the ground, where a deflection in its course takes place, and the path of the ray is continued in a series of nearly converse steps in the direction M N O P, until it finally meets the eye at P. Hence the observer perceives the point H in the direction H O Z, and an inverted image of any entire object becomes formed, below the original, producing the illusion of Mirage. Referring to the simpler figure 2, it may be remarked, that all objects situated above M S, transmit but one image to the eye; but those in the space L S T send two, one erect and the other inverted. Objects below the caustic M L T do not transmit any rays at all to D, and are therefore invisible. In this way, a moving object, a man walking, for example, will present successively the appearances represented in fig. 3.

Belzoni states that in spite of all his caution not to be deceived, he has frequently been led to conclude that a piece of Salt Desert was real water. The Mirage, he says, "generally appears like a still lake so unmoved by the wind that every thing above is to be seen distinctly

Belzoni.

MIRAGE, reflected by it. (*Researches and Operations in Egypt and Nubia*, p. 196.) In another place he describes it, as does Denon also, like a rolling sea. (*Ibid.* 343.)

Dr. Edward Clarke. Few writers have painted the phenomenon more vividly than Dr. Edward Clarke, in his journey from the wretched solitary village of Utko, near the muddy shore of the Lake Maadie to Rosetta. "Here we procured asses for all our party, and setting out for Rosetta, began to recross the Desert, appearing like an ocean of sand, but flatter and firmer as to its surface than before. The Arabs, uttering their harsh guttural language, ran chattering by the side of our asses, until some of them calling out '*Raschid!*' we perceived its domes and turrets, apparently upon the opposite side of an immense lake or sea, that covered all the intervening space between us and the city. Not having in my own mind, at the time, any doubt as to the certainty of its being water, and seeing the tall minarets and buildings of Rosetta, with all its groves of dates and sycamores as perfectly reflected by it as by a mirror, insomuch that even the minutest detail of the architecture and of the trees might have been thence delineated, I applied to the Arabs to be informed in what manner we were to pass the water. Our interpreter, although a Greek, and therefore likely to have been informed of such a phenomenon, was as fully convinced as any of us that we were drawing near to the water's edge, and became indignant when the Arabs maintained that within an hour we should reach Rosetta by crossing the sands in the direct line we then pursued, and that there was no water. 'What,' said he, giving way to his impatience, 'do you suppose me an idiot, to be persuaded contrary to the evidence of my senses?' The Arabs, smiling, soon pacified him, and completely astonished the whole party by desiring us to look back at the Desert we had already passed, where we beheld a precisely similar appearance. It was, in fact, the *Mirage*, a prodigy to which every one of us were then strangers, although it afterwards became more familiar. Yet upon no future occasion did we ever behold this extraordinary illusion so marvelously displayed. The view of it afforded us ideas of the horrible despondency to which travellers must sometimes be exposed, who, in traversing the interminable Desert, destitute of water, and perishing with thirst, have sometimes this deceitful prospect before their eyes." *Travels*, vol. ii. ch. ix. p. 295. 4to.

The *Mirage*, of course, is not peculiar to Egypt, but may be observed wherever the condition of locality and climate are favourable. Thus Elphinstone informs us, in his *Account of Caubul*, of one spot in which the travellers were astonished by observing a long lake enclosing several small Islands, in a district in which the Geological structure forbade their existence. So completely, however, was the party deceived, that one of the surveyors carefully noted the bearings of the water. On another occasion, the illusion was so perfect that the figures of two of the company who rode near it were distinctly reflected.

Of all the illusions of the kind, however, that to which the Italians have given the name of *Fata Morgana* is by far the most splendid. The phenomenon had been remarked by the Ancients, and many among the Moderns have described it; and we have already slightly touched upon it in our account of MESSINA. Minasi, in his very interesting account of it,* says, "When the rising

sun shines from that point whence its incident ray forms an angle of about 45 degrees on the sea of Reggio, and the bright surface of the water in the bay is not disturbed either by the wind or the current, the spectator being placed on an eminence of the city, with his back to the sun and his face to the sea, on a sudden perceives in the water, as in a Catoptric Theatre, various multiplied objects, that is to say, numberless series of pilasters, arches, castles well delineated, regular columns, lofty towers, superb palaces, with balconies and windows, extended groves of trees, delightful plains with herds and flocks, armies of men on foot and horseback, and many other singular images, in their natural colours, and proper actions, passing rapidly in succession along the surface of the sea, during the whole of the short period of time while the abovementioned causes exist. But if, in addition to the circumstances before described, the atmosphere be highly impregnated with vapour, and dense exhalations not previously dispersed by the action of the wind or waves, or rarefied by the Sun, it then happens that in this vapour, as in a curtain extended along the channel to the height of about thirty palms, and nearly down to the sea, the observer will behold the scene of the same objects not only reflected from the surface of the sea, but likewise in the air, though not so distinct or well defined as the former objects from the sea. Lastly, if the air be slightly hazy and opaque, and at the same time dewy and adapted to form the iris, then the above-mentioned objects will appear only at the surface of the sea, as in the first case, but all vividly coloured or fringed with red, green, blue, and other prismatic colours."

The author hence distinguishes three sorts of *Fata Morgana*; that is to say, the first at the surface of the sea, which he calls the *Marine Morgana*; the second in the air, called the *Aerial Morgana*; and the third only at the surface of the sea, which he calls the *Morgana fringed with prismatic colours*.

In a note on this chapter P. Minasi inquires into the etymology of *Morgana*; and he is less fortunate as a Philologist than as a Philosopher. After various remarks, he thinks the opinion of those who derive this word, which is so foreign to the Roman idiom, from *μωρος*, *stultus*, and *γάρω*, *lætitiâ afficio*, is not far from the truth, considering the great exultation and joy this appearance produces in all ranks of people, who on its first commencement run hastily to the sea, exclaiming *Morgana! Morgana!* He remarks that he has himself seen this appearance three times, and that he would rather behold it again than the most superb theatrical exhibition in the World.

In the II^d chapter, the author describes the city of Reggio, and the neighbouring coast of Calabria; by which he shows that all the objects which are exhibited in the *Fata Morgana* are derived from types on shore. Father Angelucci, in his account of the *Fata Morgana*, describes the sea which washed the Sicilian shore as swelling up, and becoming for twelve miles in length like a chain of dark mountains, while the water near the Calabrian coast grew quite smooth, and in an instant appeared as a vast polished mirror, reclining against the Sicilian ridge. On this glass was depicted, in *chiar' oscuro*, a string of several thousand pilasters, all equal in altitude, distance, and degree of light and

per lungo tempo ha sedotti i popoli, e dato a pensare ai dotti. A Sua Eminenza il Signor Cardinale de Zelada. Del P. Antonio Minasi Domenicano. In Roma, 1773.

MIRAGE.

Three kinds.

Account by Angelucci.

In Caubul. Elphinstone.

At Messina. Fata Morgana. Minasi.

* *Dissertazione prima sopra un Fenomeno volgarmente detto Fata Morgana: O sia apparizione di varie, successive, bizzarre immagini che*

MIRAGE. shade. In a moment they lost half their height, and bent into arcades, like Roman aqueducts. A long cornice was next formed on the top, and above it rose castles innumerable, all perfectly alike. These soon split into towers, which were shortly afterwards lost in colonnades, then in windows, and at last ended in pines, cypresses, and other trees, even and similar. "This," said the holy father, "was the *Fata Morgana*, which for twenty-six years I had thought a mere fable."

Referred to
Mirage.

These examples will be sufficient to give an idea of the singularly varied appearances which light undergoes in passing through successive beds of air having densities which rapidly change. In the simpler cases of Mirage we may limit the inquiry to strata uniform and plane; but in the boundless variety of Nature, there can be no difficulty in supposing them to be irregular and curved, and thus to produce images in every way deformed;—sometimes elongated and sometimes widened; sometimes thrown into situations that are oblique; and sometimes dispersed as if the object itself had been broken to pieces. To the active agency of innumerable causes of this sort are we to attribute the ever-changing picture of the *Fata Morgana*. Supposing we could analyze the scene, every individual object would be capable of ultimate reduction to some simple case of Mirage.

Some of the accounts which have been published respecting these splendid appearances may indeed have received a partial colouring from imagination; but it is not to be regarded as an argument against their authenticity that the descriptions of different authors are dissimilar. Such are the uncertain conditions under which phenomena of this kind are produced, that while the general resemblances exist, there may be innumerable diversities in minor parts. Descriptions derived from well accredited persons who reside constantly in a locality where remarkable appearances take place, ought by no means to be neglected; nor does it follow because a succession of travellers may visit a spot without once beholding a phenomenon that has been described, that therefore it never *does* happen. Every attentive observer of his own immediate locality is acquainted with phenomena which may escape an accidental visitor even more acute than himself; and the *Fata Morgana* is a splendid example of the value of descriptions, which, confined from their nature to a particular spot, are nevertheless to be regarded only as an extension of some general law.

Is there not room for supposing that to extraordinary appearances of this kind, and probably to others with which we are not yet acquainted, we may attribute certain long preserved traditions? The Swedish sailors perseveringly searched for a magic Island, which from time to time could be seen with distinct and visible boundaries, between the Islands of Aland and the coast of Upland; but the progress of knowledge eventually showed it to be a rock elevated by Mirage. The man also at the signal station in the Isle of France, who asserted that he saw vessels in the air when none could be seen on the sea, nor even in the furthest verge of the horizon, had, it is possible, his veracity unjustly impeached; but time has shown that appearances more remarkable than these may take place, which the sound principles of an accurate Philosophy will positively sanction, and which it is now the object of the most delicate and refined theories to teach.

In Polar
regions.

Captain, now the Rev. Mr. Scoresby, records more than one example of this kind which occurred in the Greenland Sea. On the 28th of June, 1820, he observed about eighteen or nineteen sail of ships at the

distance of from ten to fifteen miles. While at the mast-head he first remarked their forms to change. One appeared elongated in a vertical plane, while another was contracted in the same direction; a third had an inverted image immediately above it; and each of two ships had two distinct inverted images in the air. The broken ice surrounding the ships was elevated also in two strata in the air, the highest having an altitude of about 15'.

The appearance of ships when just beginning to rise above the verge of the horizon, very frequently presents some admirable examples of Mirage. A most interesting one was observed by Professor Vince on the 1st of August, 1798, when a ship appeared with its top-mast just above the verge of the horizon, as in fig. 3. Immediately above the summit of the mast, with only a small interval between, was a complete inverted image of the ship, with its masts inclined in an opposite direction to the actual inclination produced in the ship by the wind. Above this inverted image was seen another image of the vessel, inclined in the same quantity and direction as the real ship, and having all its parts clearly defined. The sea was distinctly visible between the two last-named images. As the real masts of the vessel gradually rose above the horizon, the upper image disappeared, the inverted image at the same time descending.

Ships on
verge of
horizon.

The sands at Dunkirk have afforded to Biot many admirable examples of the kind; and in his paper in the *Memoirs of the Institute* for 1809, he has shown that all the successive trajectories which pass from the eye of the observer, intersect on their second branches, so as to form a caustic, below which no object is visible. In fig. 4, the caustic is represented by A B, and the limiting trajectory touching the surface of the earth by C D E. All objects situated above D E, transmit only one image to the eye; but those in the space E A B send two, one of them erect, and the other inverted. Those under the caustic D A B transmit no rays to D, and are therefore invisible. "In this manner," says Biot, "a moving object, as a man, presents successively the appearances represented in fig. 5."

Biot's in-
vestiga-
tions.

Dr. Wollaston, with his usual ingenuity, succeeded in representing the phenomenon of Mirage artificially. Into a square phial containing a small quantity of syrup, he introduced about the same quantity of water, so as to float on the surface of the syrup without mixing. For a short time the stratum of union was so thin that nothing could be distinctly seen through it. Soon, however, by the mutual penetration of the water and the syrup, the effects represented at A, fig. 6, were produced. Through the syrup, a word written on a card placed behind, were seen erect, and in its proper place; but through the adjacent variable medium, an inverted image was visible above the true place; and also above that, a second image of the same object appeared erect.

Wollaston's
artificial
Mirage.

Over the surface of the water in the same phial Dr. Wollaston next put about the same measure of rectified spirit of wine. At the stratum in which the water and spirit united, the appearances were the same; but on account of the refractive power of spirit exceeding that of water, the true place of the object was seen uppermost, the inverted and erect images being below, as at B. In repeating these experiments, the appearances continued many hours with spirit of wine; with syrup two or three days; with acid of vitriol four or five, and with a solution of gum arabic much longer; but although their disposition to unite was so different, the resulting

MIRAGE. appearances were nearly the same. An oblique line viewed through a variable medium of either of these kinds, appeared bent into some form, resembling fig. 7 and 8.

Brewster's illustration. Dr. Brewster, to illustrate these phenomena, placed a mass of heated iron above a stratum of water bounded by parallel plates of glass. The heat produced a variation of density gradually diminishing from the bottom to the surface. If now a cold body be substituted for the heated iron, or the air alone be allowed to exert its influence, the upper surface of the water will give out its heat, and produce a decrease of density downwards. The appearance of Mirage may then be perceived through the medium in the most beautiful and perfect manner.

Wollaston's second method. Another ingenious device of Wollaston for illustrating more completely Mirage was that of looking at an object along a heated surface, such as a stove, or a red-hot poker. The rarefaction occasioned by a condition of this kind, caused a perceptible refraction to the distance of about three-eighths of an inch from the side of the poker. A letter seen more distant from it appeared as usual, but within that distance there was a faint image of it reversed, and still nearer the poker a second image direct, and as distant as the object itself, but somewhat smaller, was to be seen, as in fig. 9, which is a section of the atmosphere surrounding the poker. At the bottom and sides it is nearly circular; but upwards the circular form is lost in undulations occasioned by the rapid ascent of the rarefied air.

A common road in some cases affords good examples of Mirage. Wollaston remarks, that some degree of inversion is very frequently to be seen over extensive plains, but the inverted images are rarely well defined, unless over a very even surface. One of the best situations for this purpose is over a level open road, with a gentle breeze blowing across it. A current of air brings a cool stratum more closely in contact with the heated surface, and since refraction depends on the increment of density in a small given space, a very moderate breeze will thereby render inversion more perceptible; but a strong wind will reduce the temperature of the surface, and may make the heated surface too thin for any object to be seen through it from a distance. In one instance, when Wollaston saw a refraction of about nine minutes, at the distance of one-third of a mile, a thermometer in the sand was 101° , at four inches above 82° , and at one foot above 76° . Over water, the evenness of the surface is favourable to the production of such appearances; but since the action of the sun is weak on a body so transparent, a far greater extent of surface is requisite to produce any perceptible inversion.

Lateral Mirage. It sometimes happens, however, that these altered circumstances of refractive power take place *horizontally*, producing what has been called *Lateral Mirage*. Mr. Blackadder has described a case of its occurrence over an extensive bulwark at Leith, named King George's Bastion. When the weather is favourable, the top of the parapet has the appearance of a mirror, or rather of a sheet of ice; and if in this state another person stands or walks upon it, at a little distance, an inverted image is seen under him. If, while standing on the footway, another person stands on it also, but at some distance, with his face turned towards the sea, his image will appear opposite to him, giving the appearance of two persons talking or saluting each other. If, again, when standing on the foot-way, and looking in a direction from the tower, another person crosses the Eastern extremity of the bulwark, passing through the water-gate,

either to or from the sea, there is produced the appearance of two persons moving in opposite directions, first one is seen moving past, and then the other in an opposite direction, with some interval between them. In looking over the parapet, distant objects are seen variously modified, the mountains converted into immense bridges, &c.

On going to the Eastern extremity of the bulwark, and directing the eye towards the tower, the latter appears curiously modified, part of it being as it were cut off, and brought down so as to form another small and elegant tower, in the form of certain sepulchral monuments, as in fig. 10. At other times, it bears an exact resemblance to an ancient altar, the fire of which seems to burn with great intensity. At some distance beyond the tower, there is seen the chimney-top of a house for boiling pitch, or other purposes connected with the docks. When smoke issues from the chimney, the appearance represented in fig. 11 is produced. The black waved lines under the smoke have a rapid vibratory motion, while the motion of that which represents the fire of the altar is exactly similar (excepting in colour) to the flame of a strong fire.

MM. Soret and Jurine observed a beautiful example of Lateral Mirage on the Lake of Geneva, at ten A. M. in September, 1818. In fig. 12, A B C represents a part of the margin of the lake, and P a small vessel opposite Belle Rive, the observers being in the second story of a house, about two leagues from it. As the ship advanced slowly by successive tacks, and occupied the positions Q R S, a series of distinct lateral images became visible at Q' R' S', which advanced with the bark, and became further removed to the left of G P, as the bark itself was moved to the right of that line. When the Sun illuminated the sails, the image was sufficiently brilliant to be seen by the naked eye. A knowledge of the actual locality will at once prove this to have been a case of Lateral Mirage. The air on the right of G P had been in the shade during the morning, while on the left it had been heated by the Sun, a nearly vertical plane passing through G P, separating the two masses, to a small extent above the water. Such a condition of things is favourable to the appearance of Lateral Mirage.

It is plain that the appearances of Mirage have long been known and observed in the East, (indeed, how should it be otherwise?) although the attention of Philosophers has been directed to them but of late years. Bishop Lowth, in a note on his Translation of Isaiah,

xxxv. 6. 7.
In the Wilderness shall burst forth waters,
And torrents in the Desert,
7. And the glowing sand shall become a Pool,

speaks as follows:

"The glowing sand.] **שרב**. This word is Arabic as well as Hebrew, expressing in both Languages the same thing; the glowing, sandy plain, which in the hot Countries at a distance has the appearance of water. It occurs in the *Koran*, ch. xxiv. 'But as to the unbelievers, their works are like a vapour in a plain; which the thirsty traveller thinketh to be water, until when he cometh thereto he findeth it to be nothing.' Mr. Sale's note on this place is, 'The Arabic word *serab* signifieth that false appearance which in the Eastern Countries is often seen in sandy plains about noon, resembling a large lake of water in motion, and is occasioned by the reverberation of the sunbeams, ('by the quivering, undulating motion of that quick succession of vapours and exhalations which are extracted by the

MIRAGE

On the Lake of Geneva.

Biblical notice of Mirage.

MIRAGE. powerful influence of the Sun.' Shaw, *Travels*, p. 378.) It sometimes tempts thirsty travellers out of their way, but deceives them when they come near, either going forward, for it always appears at the same distance, or quite vanishes. Q. Curtius has mentioned it. *Arenas vapor æstivi Solis accendit—camporumque non alia quam vasti et profundi æquoris species est.* (vii. 5.) Dr. Hyde gives us the precise meaning and derivation of the

word. *Dictum nomen (Barca) הברקה, splendorem seu splendorem regionem notat; cum ea regio radiis solaribus tam copiosè collustratur, ut reflexum ab arenis lumen adeo intensè fulgens, a longinquo spectantibus, ad instar corporis solaris, aquarum speciem referat; et hinc arenarum splendor et radiatio, ex Linguâ Persicâ petito nomine, dicitur serab, i. e. aquæ superficies, seu superficialis aquarum species.* Annot. in *Peritsol.* c. 2.

MIRBELIA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Leguminosæ*. Generic character: calyx five-cleft, two-lipped; corolla pea-flowered, pod two-celled, sutures inflexed.

Two species, natives of New South Wales.

MIRE, v. } Skinner derives from the D. *moyer*,
MIRE, } *modder, lutum, limus*, mud. It may be
MIRY. } from the A. S. *myr-an*, *impedire*, to im-

pede, to stop or stay the steps; as it is commonly applied to

That thick, adhesive dirt, in which we are apt, not only to bedaub ourselves, but to stick fast.

His knyghtes vp him lyft & did him eft atire,
 William was oglyft, his helm was fulle of myre.
R. Brunne, p. 70.

He sette not his benefice to hire,
 And lette his shepe acombred in the mire.
Chaucer. Prologue to the Canterbury Tales, v. 510.

And of his slouth he dremeth ofte,
 How that he sticketh in the mire.
Gower. Conf. Am. book iv. p. 115.

Why had I not with charitable hand
 Tooke vp a beggar's issue at my gates,
 Who smeered thus, and mir'd with infamie,
 I might have said, no part of it is mine.
Shakspeare. Much Ado about Nothing, fol. 115.

— Jove thus bespake;
 Will never mortall thoughts cease to aspire
 In this bold sort to heaven claime to make,
 And touch celestiall seats with earthly mire.
Spenser. Faerie Queene. Of Mutabilitie, can. 6.

Onely these marishes and myrie bogs,
 In which the fearfull ewfies do build their bowres,
 Yeeld me an hostry mongst the croaking frogs
 And harbour here in safety from those ravenous dogs.
Id. Ib. book v. can. 10.

A number of them in the *mierie* and slipperie ground chauncing to slide and fall downe in the bloude of their fellows, although no weapon touched their bodies, were overwhelmed with the souldiors rushing and running over them by heapes and so killed.
Holland. Ammianus. Constantius and Julianus, book xvi. ch. xii. fol. 76.

Whereas houses built on plains, unless shaded with trees, lie bleak and exposed to the wind and weather; and all winter are apt to be grievously annoyed with *mire* and dirt.

Ray. Of the Creation, part ii. p. 251.

His passengers at length, are wafted o'er;
 Expos'd in muddy weeds upon the miry shore.
Dryden. Virgil. Æneid, book vi.

MIRIS, in *Zoology*, a genus of *Hemipterous* insects. Generic character. *Antennæ* setaceous, four-jointed, the second and following joints alike; head trigonate; neck not apparent; *thorax* elongate; body elongate, attenuated, soft; *tibiæ* pilose.

Type of the genus *M. fera*; *M. vagans*, Woolf, *Cimices*, fasc. 4. pl. xvi. fig. 158. About twelve species, found in Europe, and ten of them in Britain; frequenting high grass.

MIRK, or
MURK,
MIRKY,
MIRKSOME,
MIRKSOMENESS.

A. S. *mirce, tenebræ, carcer.*
 Lye. Sw. *moerk, obscurus*; Dan. *moriker*. The origin of this old word has not been traced. Somner thinks that *mirce* may mean *perditio, aut aliquid simile*; and it is not improbably *mirig, mirg, mirc*, from the A. S. verb *merran, mirran*, to mar.

Dark, dismal, gloomy.

It appears to be applied to that thickness or density of atmosphere, which overclouds, and thus *mars* or destroys the clearness of light.

A werreour that were wys, desceyt suld euer drede,
 Well more on þe nyght, þan opon þe day,
 In mirke withouten sight wille enmys mak affray.
R. Brunne, p. 176.

And þe wicke and þe warme fuyr. wol make a fayr flamme.
 For to murthen men with, þat in meerk sytten.
Piers Plouhman. Vision, p. 331.

In menynge þat man shal fro meorknesse beo drawe
 The while þis light and þis loem. shal Lucifer a bleynde.
Id. p. 346.

The shadow maketh her beames merke,
 And her hornes to shew darke.
Chaucer. The Romant of the Rose, fol. 210.

— Twice in murke and occidental dampe
 Moist Hesperus hath quench'd her sleepy lampe.
Shakspeare. All's Well that Ends Well, fol. 236.

So sented the grim feature, and upturn'd
 His nostril wide into the merkie air,
 Sagacious of his quarry from so farr.
Milton. Paradise Lost, book x. l. 280.

Then to her yron wagon she betakes,
 And with her beares the fowle wel-favour'd witch:
 Through mirkesome aire hir ready way she makes.
Spenser. Faerie Queene, book i. can. 5.

You can easily foord over all the depths thereof, [the question of free will] and clearly comprehend all the darkest *mirksomnesse* therein.
Mountague. Appeal to Cæsar, ch. viii. fol. 75.

While yet she spoke, a double darkness spread,
 Black clouds and murky fogs involve her head,
 While o'er th' unbury'd heaps her footsteps tread.
Rowe. Lucan, book vi.

— Ever learn
 Quick ether's motion: oft the scene is turn'd;
 Now the blue vault; and now the murky cloud,
 Hail, rain, or radiance.

Dyer. The Fleece, book i.

MIRROR, Fr. *miroir*. From Fr. *mirer*; It. *mirare*; Sp. *mirar*, to look, to view, to behold; Lat. *mirari*. It is applied to

A bright, lucid substance, in which may be seen the reflected images of objects; a looking glass; met. that in which men may see their own reflected image; and, consequently, order and regulate their actions and behaviour: hence, the reflected image; example, pattern.

MIRROR.

And in his *mirour* þow myst see. murthes ful menye.
Piers Plouhman. Vision, p. 192.

MISAD-
VEN-
TURE.

And we seen now bi a *myrour* in darkenesse, but thanne face to face.
Wiclif. 1 Corinthians, ch. xiii.

And with that word he caught a gret *mirroure*,
And saw that chaunged was all his colour,
And saw his visage all in another kind.
Chaucer. The Knightes Tale, v. 1401.

For thei be to the worldes eie
The *myrroure* of examplarie.
Gower. Conf. Am. Prologue, p. 11.

Whan Rome stooode in noble plite,
Virgile, whiche was tho parfite,
A *mirroure* made of his clergie,
And sette it on the townes eie.
Id. Ib. book v. p. 138.

And in her hand she held a *mirrhour* bright
Wherein her face she often viewed fayne,
And in her selfe-lov'd semblance took delight;
For she was wondrous faire, as any living wight.
Spenser. Faerie Queene, book i. can. 4.

Grammercy Socrates, that is good council indeed [to behold themselves in their looking glasses or *mirrors*] will your young gentlemen and ladies be ready to say, we like it very well, and we practise accordingly.
Ray. Of the Creation, part ii. p. 439.

Among the stores of old pictures at Somerset-house, was one painted on a long board, representing the head of Edward VI. to be discerned only by the reflection of a cylindric *mirroure*.
Walpole. Anecdotes of Painting, vol. i. ch. vi. p. 201.

MIS. See Miss.

MISACCEPTION, *i. e.* mis-takings, misunderstandings; aceptions or takings, wrong, erroneous.

The Apostle feares none of these currish oblatrations; but condemning all impotent *mis-aceptions* calls them what he finds them, a froward generation.
Hall. Works, vol. ii. fol. 341. Sermon Preacht to the Lords, Feb. 18th, 1634.

MISACCOMPTED, *i. e.* accounted, wrongly, erroneously.

He thought he *misacompted* had his day.
Chaucer. Troilus and Creseide, book v. p. 288.

MISADVENTURE, *v.* } Fr. *mesadvenir*, *mesad-*
MISADVENTURE, *n.* } *venture*; It. *missavvenire*,
misavventura; *mis*, and Lat. *adventurus*, from *advenire*, to come.

To come to, to happen, wrong, ill, unfortunately.

þe vnrygt ydo to pouere men to suche *mysauntre* turnde.
R. Gloucester, p. 375.

His nese & hys ine he carfe at *misauentoure*.
R. Brunne, p. 166.

"Pees, with mischaunce and with *misaventure*,"
Our hoste said, "and let him telle the tale."
Chaucer. The Freres Tale, v. 6914.

From forth the fatal loins of these two foes
A pair of star-cross'd lovers take their life;
Whose *misadventur'd* piteous overthrows
Do, with their death, bury their parents' strife.
Shakspeare. Romeo and Juliet. Prologue.

PRIN. What *misadventure* is so early vp,
That calls our person from our morning's rest?
Id. Ib. fol. 76.

We seldom or never find that any nation hath endured so many *misadventures* and miseries as the Spaniards have done in their Indian discoveries.
Raleigh. History of the World, book v. ch. i. sec. 10. fol. 575.

By the time here proposed of continuing at sea there might have now been thoughts of some course to qualify the *misadventure* of the mine, and enable them to reattempt it.

Oldey. Life of Sir Walter Raleigh, fol. 209.

MISADVICE, } *i. e.* advise, counsel, deliberate,
MISADVIS'DLY. } determine, wrongly.

I say not this by wives that ben wise,
But if it be whan they hem *misavise*.
Chaucer. The Wif of Bathes Prologue, v. 5812.

For then & neuer else is it y^e true fruit of preaching the gospel, if the teacher doe not presumptuously usurp to himself the gift of learning whiche he hath as a thyng committed to his credit, ne vndiscretely or *misadvisedly* shewe forth the same, as though it wer of his own: but yeld it vnto Christ to be made holy of him.
Udall. Luke, ch. ix.

MISAFFE'CT, } To have ill or wrong *affections*,
MISAFFE'CTIONS. } or dispositions; to dislike, to discontent.

Ans. We shall beseech the same God to give you a more profitable and pertinent humiliation than yet you know, and a less mistaken charitableness, with that peace which you have hitherto so perversely *misaffected*.
Milton. Works, vol. i. fol. 102. Animadversions upon the Remonstrants' Defence, &c.

Or if he be in a throng, middle of a church, multitude, where he may not well get out, though he sit at ease, he is so *misaffected*.
Burton. Anatomy of Melancholy, fol. 181.

How earthly and grosse with *mis-affections*, *præcedit carnem in crimine*, it ushers the flesh of sinfull courses.
Hall. Works, vol. iii. fol. 111. The Character of Man.

MISAFFIRM, *i. e.* to affirm, assert, or declare, wrongly, erroneously.

I suppose it no injury to the dead, but a good deed rather to the living, if by better information given them, or which is enough, by only remembering them the truth of what they themselves know to be here *misaffirm'd*, they may be kept from entring the third time unadvisedly into war and bloodshod.
Milton. Works, vol. i. fol. 361. An Answer to Eikon Basilike. The Preface.

MISALLE'GE, } *i. e.* to allege, to assert, to af-
MISALLEGATION. } firm, to declare, wrongly, erroneously.

As for those two *misalleged* authors to whom he ascribes us, his skill doth palpably faile him in both.
Hall. Works, vol. i. fol. 698. The Honour of the Married Clergie, sec. 10.

I had objected to them, *mis-allegations*, misinterpretations, misinferences, weak and colourable proofs.
Id. Ib. vol. iii. fol. 384. Answer to the Vindication of Smeectymnus. Preface.

MISALLIED, } *i. e.* allied, wrongly, erroneously,
MISALLI'ANCE. } improperly.

They are a *misallied* and disparaged branch of the house of Nimrod.
Burke. Works, vol. viii. p. 52. Letter to a Noble Lord.

Their purpose was to ally two things, in nature incompatible, the Gothic, and the classic unity; the effect of which *misalliance* was to discover and expose the nakedness of the Gothic.
Hurd. Works, vol. iv. p. 303. On Chivalry and Romance, let. 8.

MISALTERED, *i. e.* to alter, to change, wrongly, injuriously.

These are all (besides those which I fore specified) which have so *mis-altered* the leiturgy, that it can no more be known to be itself.
Hall. Works. Answer to the Vindication of Smeectymnus, sec. 2.

MISANTHROPE, } Fr. *misanthrope*; It. and
MISA'NTHROPY, } Sp. *misanthropo*; Gr. *μισάν-*
MISANTHROPIC, } *θρῶπος*, from *μισεῖν*, to hate,
MISA'NTHROPIST. } and *ἄνθρωπος*, a man. See
PHILANTHROPY.

MISAD-

MISAPPLY', } To *apply*, or to put, place, or
MISAPPLICA'TION, } lay to, to direct or address, wrong-
MISAPPLY'ING, n. } ly, erroneously.

Vertue itself turnes vice being *misapplied*,
And vice sometime by action dignified.

Shakspeare. Romeo and Juliet, fol. 61.

He brings me informations, pick'd out of broken words in men's common talk, which, with his malicious *misapplication*, he hopes will seem dangerous.

Beaumont and Fletcher. The Woman Hater, act i. sc. 3.

Thus kneaded up with milk, the new made man
His kingdom o'er his kindred world began:
Till knowledge *misapply'd*, misunderstood,
And pride of empire sour'd his balmy blood.

Dryden. The Hind and the Panther.

The meaning of which providence, should we misconstrue, we should frustrate our grand and last remedy, and perish, not for want, but for *misapplication* of the means of life.

South. Sermons, vol. xi. p. 67.

All deception is a *misapplying* of those signs, which by compact, or institution, were made the means of men's signifying, or conveying their thoughts.

Id. Ib. vol. i. p. 506.

MISAPPREHE'ND, } To *apprehend*, or to take
MISAPPREHE'NSION. } or seize, to take the meaning, to understand, to conceive, wrongly, erroneously; to mistake, to misunderstand, to misconceive.

When the conclusion is deduc'd from unerring dictates of our faculties, we say the inference is rational; but when from *misapprehended* or ill-compounded phantasms, we ascribe it to the imagination.

Glanvil. The Vanity of Dogmatizing, ch. xi. p. 98.

And what we have to say under this head [the causes of our ignorance] will be comprehensive both of the causes of that, and (which are the effects thereof) of our *misapprehensions* and errors.

Id. Ib. ch. vii. p. 64.

Patient sinners may want peace through mistakes and *misapprehensions* of God; for when there is a deep sense of sin, it is no easy matter to keep up the sense of God's readiness to forgive.

Stillingfleet. Sermon 3. vol. iii. p. 108.

But if the being liable to *misapprehension* and to misrepresentation be thought an objection to any doctrine, I know of no doctrine which is not liable to the same; or any which has not, in fact, been loaded, at various times, with great mistakes.

Paley. Sermon 23. part i. p. 350.

MISARRANGEMENT, *i. e.* to *arrange*, to rank, to put, to dispose, wrongly; in a wrong order.

Here glitt'ring turrets rise, upbearing high
(Fantastic *misarrangement*!) on the roof
Large growth of what may seem the sparkling trees
And shrubs of fairy land.

Cowper. The Task, book v.

MISASSAY, *i. e.* to *assay*, or to try, to attempt, wrongly, improperly.

Willie, why list thou (man) so wo-be-gon?
What! been thy rather lamkins ill apaid?
Or hath some drierie chance thy pipe *misdone*?
Or hast thou any sheep-cure *mis-assaid*?

Browne. Willie and Old Wennock. Eclogue.

MISATTENDED, *i. e.* *attended* to, observed, or regarded, not properly, insufficiently.

They shall recover the *misattended* words of Christ to the sincerity of their true sense from manifold contradictions, and shall open them with the key of charity.

Milton. Works, vol. i. fol. 213. *Doctrine and Discipline of Divorce.*

MI'SBEAR, } A. S. *mis-bær-an*, *misbor-en*; D.
MI'SBORN. } *mis-baeren*.

To *bear*, or to carry, to support, to conduct, wrongly or wrongfully; to misconduct, to misbehave.

Misborn, (in Spenser,) *born* or produced to ill; unluckily.

Bisshops, abbotes, and priours, þei had *misborn* þam hie.

R. Brunne, p. 333.

Dan Warýn he les tounes þat he held,

With wrong he mad a res, (rise,) and *misberyng* of scheld.

Id. p. 336.

Al be it so, that of youre pride and highe presumption and folie, and of youre negligence and unconning, ye have *misborn* you, and trespassed unto me.

Chaucer. The Tale of Melibeus, p. 120.

A poore childe, and in the name
Of thilke, whiche is so *misbore*,
We toke, and therto we be swore,
That none, but onely thou and wee
Shall knowe of this priuete.

Gower. Conf. Am. book ii. p. 52.

And drawing nigh him, "Ah, *misborn* elfe,
In evill houre thy foes thee hither sent
Another's wrongs to wreak upon thy selfe.

Spenser. Faerie Queene, book i. can. 6.

MISBECO'ME, } To *become*, or *come* toge-
MISBECO'MINGLY, } ther; or to convene or concur,
MISBECO'MINGNESS. } wrongly, to ill effect; to be unfit, indecent, unsuitable, inappropriate.

And as you are a king, speake in your state,
What I haue done, that *misbecame* my place,
My person, or my liege's soueraigntie.

Shakspeare. Henry IV. Second Part, fol. 97.

Those darker humours that
Stick *misbecomingly* on others, on them
Live in fair dwelling.

Beaumont and Fletcher. The Two Noble Kinsmen, act i. sc. 2.

There cannot be any thing so disingenuous, so *misbecoming* a gentleman, or any one who pretends to be a rational creature, as not to yield to plain reason, and the conviction of clear arguments.

Locke. Works, vol. iii. p. 85. *Of Education*, sec. 189.

Were it but one of these mere moral failings, whose unfitness or *misbecomingness* makes all the guilt, I should, possibly, counsel you to wean yourself of it by degrees, whose progress were scarce discernible before its end.

Boyle. Works, vol. vi. p. 24. *A Discourse against Customary Swearing*, direct. 5.

MI'SBEDE, } To wrong by word or deed, says
MI'SBODE. } Skinner. A. S. *mis-beodan*; to bid, command, exert command or authority over, wrongly or wrongfully.

MISAR-
RANGE-
MENT.
—
MIS-
BEDE.

MIS-
BEDE.

Whan Lowys herd þat sawe, þat Roberd was so dede,
Ageyn right & lawe, tille Henry he *misbede*.
R. Brunne, p. 104.

MIS-
BELIEVE.

He said bot tille a knyght, þat Thomas him *misbede*.
Id. p. 131.

Or who hath you *misboden* or offended?
Do tell me if that it may be amended.

Chaucer. The Knightes Tale, v. 911

MISBEFALL, *i. e.* to *befall*, or to *fall*, happen, come to pass, wrongly, unfortunately.

For elles but a man do so,
Him maie full ofte *misbefall*.

Gower. Conf. Am. book i. p. 20.

MISBEGE'T, } *i. e.* to *beget*, *get*, to acquire, to
MISBEGO'TTEN. } procure, to produce, to generate,
wrongly, unlawfully.

Laste yt geode out of kynde þorg child *mysbigere*.
R. Gloucester, p. 42.

Which [quarreling] indeede
Is valour *mis-begot*, and came into the world,
When sects and factions were newly borne.

Shakspeare. Timon of Athens, fol. 88.

In the deuotion of a subject's loue
Tendring the precious safetie to my prince
And free from other *misbegotten* hate,
Come I appealant to this princely presence.

Id. Richard II. fol. 23.

For ev'ry boy, with Prior, knows,
By accident she [Flattery] lost her clothes,
When Falsehood stole them to disguise
Her *misbegotten* brood of lies.

Lloyd. To David Garrick, Esq. (1760.)

MISBEHA'VE, } *i. e.* to *behave*, *have*, hold, bear,
MISBEHA'VIOUR. } conduct, or manage, wrongly, im-
properly, unbecomingly.

If anie one doo offend or *misbehaue* himselfe, he is to be corrected
and punished by the aduice and order of the residue of the house.

Holinshed. Ireland, vol. vi. p. 359.

But like a *misbehav'd* and sullen wench,
Thou pout'st upon thy fortune and thy love.

Shakspeare. Romeo and Juliet, act iii. sc. 3.

Lastly, the cause of this *misbehaviour* and unworthy deportment
was their not understanding the designs of mercy in the several in-
stances of it. They understood thy wonders in Egypt.

South. Sermons, vol. ix. p. 101.

We should remember that those good things alone are to be
greatly prized, and deserve our sincerest affection which, if we dili-
gently seek, we shall certainly find, and which we can never lose
except by our perversness and *misbehaviour*.

Jortin. Dissertation 4. p. 117.

MISBELI'EVE, } *i. e.* to *believe*, to acknowledge,
MISBELI'EVER, } allow, own, follow, a wrong or
MISBELI'EF. } erroneous, rule of *life*; or rule to
guide the moral and religious conduct in *life*.

þys þre byssopes bitueyne hem nom hem þus to rede,
þat hii mygte in her owe lond *holȝor lif* lede,
And wyþout peryl sykerore, þan to *byleue* þere
Among *mys byljuede* men.

R. Gloucester, p. 239.

ge prelates soffren
þat lewede men in *mysbyljue*, liven & deien.

Piers Plouhman. Vision, p. 6.

False reporte so loude range the bell,
That *misbeleefe* and false suspicion
Haue trouth brought to his dampnacion.

Chaucer. The Complaint of the Black Knight, p. 340.

It was wel proued that he was conuicte as well of dyuers other
heresies, as of *misbeliefe* towards the holy sacrament of the aulter.
Sir Thomas More. Workes, book iii. fol. 239. *A Dialogue con-
cernynge Heresyes*.

The author proueth y^t if the woorship of ymages wer ydolatrie
than y^e churche beleuing it to be lawful and pleasant to God, were
in a *misbelieve* & in a deadly error.

Id. Ib. book i. ch. xix. fol. 144.

Goe, goe into old Titus' sorrowful house,
And hither hale that *misbelieving* Moore.

Shakspeare. Titus Andronicus, fol. 51.

In the following ages of the Church men have been so curious to
signifie *misbelievers*, that they have invented and observed some
signs which indeed, in some cases, were true, real appendages of
false believers.

Taylor. Sermon 22. part ii. fol. 209.

And, comming to her sonne, gan first to scold
And chyde at him that made her *misbelieve*.

Spenser. Faerie Queene, book iv. can. 12.

My servant follow'd fast, and through a chink
Perceiv'd the royal captives hand in hand;
And heard the hooded father mumbling charms,
That make those *misbelievers* man and wife.

Dryden. Don Sebastian, act iii. sc. 1.

MISBESEEM, *i. e.* to *beseem*, to look, to appear,
inapt, unfit, unbecoming, inconvenient, unsuitable, im-
proper.

Xenophon pourtraying [in Cyrus] an heroical prince, thought an
intent so cruel fitter to be forgotten than rehearsed, as too much
misbeseeming a generous nature.

Raleigh. History of the World, book iii. ch. iii. sec. 4. fol. 389.

As for his [Perseus] honour in the cities of Greece, they not only
continued falling into neglect, but were abrogated by a decree of the
Acheans, as too unmeasured, *misbeseeming* them to give, and affected
by him beyond the proportion of his deservings.

Id. Ib. book v. ch. vi. sec. 5. fol. 791.

Neither in discoursing thus do we lay any *misbeseeming* imputa-
tion upon God, the author of that religion; the making so imper-
fect a revelation no wise being disagreeable to his wisdom, his
goodness, or his justice.

Barrow. Works, vol. ii. p. 210. *Sermon 15.*

MISBESTOW, *i. e.* to *bestow*, or to put, lay, or
place, to give, to grant, wrongly, wrongfully, im-
properly, uselessly.

I pray Godde hartely sende that younge man the grace to bestowe
his witte and lerning, such as it is, about some better busines then
Tindall *misbestoweth* it now.

Sir Thomas More. Workes, fol. 355. *The Confutation of Tyndall.
Preface.*

Remember (dear) how loath and slow

I was to cast a look or smile,

Or one love-line to *mis-bestow*,

Till thou hadst chang'd both face and stile.

Carew. To the Jealous Mistress.

There cannot be a better way than to take the *misbestowed* wealth
which they were cheated of from these our prelates.

Milton. Works, vol. i. fol. 89. *Animadversions upon the Remon-
strants' Defence*, &c.

MISCAL, *i. e.* to *call*, to name, to denominate,
wrongly, to denote by a wrong name.

Whom she with leasings lewdly did *miscall*

And wickedly backbite: her name men Schlaunder call.

Spenser. Faerie Queene, book iv. can. 8.

A fourth abused name or word, by which the faction is every day
practising upon the church, and the government of it is, their *miss-
calling* the execution of the laws made in behalf of the church, per-
secution.

South. Sermons, vol. vi. p. 28.

MISCALCULATE, *i. e.* to *calculate*, (*calculi*, small
stones used in computing) to count, compute, or reckon,
wrongly.

After all the care I have taken, there may be, in such a multitude
of passages, several misquoted, misinterpreted, and *miscalculated*.

Arbuthnot. On Coins.

MISCA'RRY, } *i. e.* to *carry*, to convey or bear
MISCA'RRIAGE. } along, wrongly, unluckily, unsuc-
cessfully; not as intended, not to the end or event hoped
for or aimed at, not to maturity; to fail, to be faulty or
deficient; to err.

For what *miscarries*

Shall be the general's fault, though he perform
To th' utmost of a man.

Shakspeare. Coriolanus, fol. 3.

MIS-
BELIEVE.MIS-
CARRY.

MIS-
CARRY.

But he excused himself, laying a great part of the miscarriage on the stubbornness of the Earl of Essex.

Baker. Charles I. Anno 1625.

MIS-
CHAL-
LENGE.

If the tempter *miscarries* in this his highest, his sharpest, and most violent attack, at that particular hour, or season, in which the temptation is come to an head, it is natural to conceive that he must surcease the conflict, draw off, and give it over, for that time at least.

South. Sermons, vol. vi. p. 233.

If he does not quit himself like a man, and make good his station against this principal assault of his spiritual adversary, a failure or *miscarriage* then will prove like an oversight in the day of battle, hardly to be recovered by any after-reparation.

Id. Ib. p. 254.

Without thus reflecting on our past *miscarriages*, and inquiring into their causes, we must for ever fall into the same mistakes, be deceived by the same appearances, surprised by the same artifices, and lose the only consolation (poor as it is) which our past follies and transgressions can afford us, experience.

Porteus. Sermon 4. vol. ii. p. 87.

MISCAST, *i. e.* to cast, to throw, wrongly, improperly; consequentially, to calculate erroneously.

It so befelle,
That I at thilke tyme sie
On me, that she *miscaste* hir eie.

Gower. Conf. Am. book iii. p. 73.

The number is somewhat *miscast* by Polybius.

Ralegh. History of the World, book v. ch. ii. sec. 8.

MISCASUALTY, *i. e.* a casualty, accident, or incident, any thing happening or befalling, wrongly, unfortunately.

Anguish of soul, troubles of mind, distempers of body, losses of estate, blemishes of reputation, *miscarriages* of children, *miscasualties*, unquietnesse, pains, griefs, fears, take up our hearts, and forbid us to enjoy, not happinesse, but our very selves.

Hall. Works, vol. iii. fol. 3. The Character of Man.

MISCATHOLICK, *i. e.* erroneous, blundering mass-priest.

Judge then, reader, whether the *catholike* bishop that wrote this, or the *miscatholike* masse-priest that reproves it, be more worthy of Bedleem.

Hall. Works, vol. i. fol. 741. The Honour of the Married Clergie, sec. 3.

MI'SCELLANY, *adj.* } Lat. *miscellaneus*; *mis-*
MI'SCELLANY, *n.* } *cellus*, *miscus*, from *miscere*,
MISCELLA'NEOUS. } to mix or mingle.

Pertaining, belonging, or relating to a mixture or diversity of things; mixed, mingled. A *miscellany*,

A mixture, a medley, of things of various kinds or sorts.

As a *miscellany*, madame, I would invent new tyres, and goe visite courtiers.

Ben Jonson. Cynthia's Revels, act iv. sc. 1.

Claudius Aelianus flourished in the reign of Trajan, unto whom he dedicated his *Tacticks*; an elegant and *miscellaneous* author.

Sir Thomas Brown. Vulgar Errours, book i. ch. viii. p. 33.

But being *miscellaneous* in many things, he is to be received with suspicion.

Id. Ib. p. 34.

Sprat, Carew, Sedley, and a hundred more,
(Like twinkling stars the *miscellanies* o'er.)

Pope. Imitation of Horace to Augustus.

The *miscellaneous* matter I propose to give in these sheets naturally coincides with the method I have taken of disposing them into distinct papers.

Observer, No. 1.

MISCENTRE, *i. e.* to centre or concentrate, to point, wrongly; to direct to or fix in, a wrong point or object.

They were confounded, because they hoped, says thy servant Job; because they had *misplaced*, *miscentred* their hopes.

Donne. Devotion, p. 134.

MISCHALLENGE, *i. e.* challenge, demand, summon, (to fight or encounter,) wrongly, wrongfully.

Lo! faitour, there thy meede unto thee take,
The meede of thy *mischallenge* and abet.

Spenser. Faerie Queene, book iv. can. 3.

MISCHA'NCE, *v.* } Fr. *mescheans*, *meschance*; *i. e.*
MISCHA'NCE, *n.* } to chance, to fall, to happen.
wrongly, unfortunately; to befall unhappily or dis-
tastefully.

Ouer Homber he fley a non, to wyte him from *mischance*.
R. Gloucester, p. 137.

Pees, with *mischance* and with misaventure,
Our hoste said, and let him tell his tale.

Chaucer. The Freres Tale, v. 6916.

But yet, I say, ariseth, let us daunce,
And cast your widdow's habit to *mischaunce*.

Id. Troilus and Creseide, book i. p. 239.

And still I hoped to be up advaunc'd,
For my good parts; but still it hath *mischaunced*.

Spenser. Mother Hubbard's Tale.

Massinissa coming to Cirta, 'before any news of the king's *mis-*
chance was there arrived, called out the chief of the city to parley.
Ralegh. History of the World, book v. ch. iii. sec. 18. fol. 690.

"For charity," reply'd the matron, "tell
What sad *mischance* those pretty birds befel."
"Nay, no *mischance*," the savage dame reply'd,
"But want of wit in their unerring guide,
And eager haste, and gaudy hopes, and giddy pride."

Dryden. The Hind and the Panther.

Farewell honour's empty pride!
Thy own nice, uncertain gust,
If the least *mischance* betide,
Lays thee lower than the dust.

Byrom. An Hymn on Simplicity.

MI'SCHIEF, } Fr. *meschef*.
MI'SCHIEVE, *v.* or } To *cheve* or *achieve*, to
MI'SCHIEF, } bring to an end, to finish, to
MI'SCHIEVOUS, } effect, to act, wrongly, injuri-
MI'SCHIEVOUSLY, } ously; to do injury, hurt, or
MI'SCHIEVOUSNESS. } harm; to injure, to hurt, to
harm.

Neuer bifor in Wales was don so grete grene,
Bi dounes & bi dales, þar folk at suilk *mischeue*.

R. Brunne, p. 91.

William Walies is nomen, þat maister was of theues,
Tipping to þe kyng is comen, þat robberie *mischeues*.

Id. p. 329.

Nothing ne may so much her please
As *mischiefe* and misaventure.

Chaucer. The Romant of the Rose, p. 173.

The great *mischiefes* hem assaileth. Id. Ib. p. 213.

Thus bryngeth he many a *mischiefe* in
Unaware, till that he be *mescheued*,
And maie not then be releued.

Gower. Conf. Am. book iv. p. 94.

Although in deede out of every flower the industrious bee maie
gather honie, yet by prooffe the spider thereout suckes *mischeuous*
poison

Gascoigne. To the Reuerende Deuines, p. 468.

Phy agony of age,
Phy ouerthrowe of youth,
Phy mirrour of *mischeuousnesse*,
Phy, tipe of al vntruth.

Id. The Complaynt of Phylomene.

He that kills me may be killed, and he that does injury may be
mischieved; he that invades another man's right must venture the
loss of his own; and when I put my brother to his defence, he may
chance drive the evil so far from himself, that it may reach me.

Taylor. Sermon 26. part ii. fol. 252.

And every one threw forth reproches rife
Of his *mischievous* deedes, and sayd that hee
Was the disturber of all civill life,
The enemy of peace, and authour of all strife.

Spenser. Faerie Queene, book iii. can. 6.

Tisaphernes circumventing the chief commanders by fine slights,
did *mischieuously* entrap them, to the extreme danger of the army.

Ralegh. History of the World, book iii. ch. x. sec. 6. fol. 435.

MIS-
CHAL-
LENGE.
—
MIS-
CHIEF.

MIS-CHIEF. Generally, in Scripture, it [temptation] denotes not only a bare tryal, but such an one as is attended with a design to hurt or mischieve the people so tried.

MISCON-CEIVE. But singularity is not sincerity, though too often and mischievously mistaken for it.

Enough for that, if rugged in its course,
The verse but rolls with vehemence and force;
Or nicely pointed in the Horatian way,
Wounds keen, like Sirens mischievously gay.
Hart. Essay on Satire. (1730.)

MISCHOOSE, i. e. to choose, to take, to select, wrongly, erroneously.

This mischance did not happen as any token that God was displeased with our enterprise, (as the sequel shewed,) but that we mischosed the daie, attempting so great a worke vpon his daie of rest.
Stow. Queen Elizabeth, Anno 1596

MISCIBLE, i. e. that may or can be mixed, from Lat. miscere, to mix.

These had kept the landed and monied interests more separated in France, less miscible, and the owners of the two distant species of property not so well disposed to each other as they are in this Country.
Burke. Works, vol. v. p. 205. Reflections on the Revolution in France.

**MISCITE, } i. e. to cite, to bring forward or
MISCITA'TION, } produce, to quote, wrongly, erroneously.**

If Satan have miscited the Psalme (hee shall give his angels charge over thee) for temptation, may not we make use of it for the comfort of protection?
Hall. Works, vol. i. fol. 687. The Honour of the Married Clergie, book i. sec. 1.

What a miscitation is this? "Moses commanded." The law was God's, not Moses's.
Id. Contemplations, book iv.

MISCOLLECTION, i. e. a wrong faulty, deficient collection or gathering.

In his words and yours, I find both a miscollection, and a wrong charge.
Hall. Works, vol. i. fol. 533. An Apology against the Brownists.

MISCOMFORT, i. e. the weakening, lessening, disheartening—of my cheer.

Than thought me, that loue gan a litel to heauy for myscomforte of my chere.
Chaucer. The Testament of Loue, book i. p. 471.

**MISCOMPU'TE, n. } i. e. the wrong compute; the
MISCOMPUTA'TION. } wrong, erroneous reckoning or calculation.**

Budeus de Asse correcting the mis-compute of Valla.
Sir Thomas Brown. Vulgar Errours, book vii. ch. xviii.

It was a general misfortune and miscomputation of that time that the party had so good an opinion of their own reputation and interest.
Clarendon.

**MISCONCE'IVE, } i. e. to conceive, to compre-
MISCONCE'IVER, } hend, take or hold, (met. within
MISCONCE'IT, } the mind,) to understand, to
MISCONCE'PTION. } think, wrongly, erroneously, falsely.**

He which that misconceiveth oft misdemeth.
Chaucer. The Marchantes Tale, v. 10284.

That through the helpe of his faire hornes on hight,
And misty dampe of misconceyving night,
And eke through likeness of his goatish beard,
He did the better counterfeite aright.
Spenser. Faerie Queene, book iii. can. 10.

No misconceyued, Jone of Arce hath beene
A virgin from her tender infancie.
Shakspeare. Henry VI. First Part, fol. 117.

Why I come now to put him in possession
Of his fair fortunes; what a misconceiver 'tis!
Beaumont and Fletcher. The Passionate Madman, act ii. sc. 1.

The next day, as he on his way did ride,
Full of melancholie and sad misfare
Through misconception.
Spenser. Faerie Queene, book iv. can. 6.

It cannot be, that our knowledge should be other than an heap of misconception and error, and conceits as impertinent as the toys we delight in.

Glanvil. The Vanity of Dogmatizing, ch. viii. p. 70.

The apostles beating upon that general misconceit of the Jews, about the kingdom of the Messiah, in the preceding chap. v. 6. asked Christ, whether he would at that time restore the kingdom to Israel.
South. Sermons, vol. vii. p. 40.

MISCONCLUSION, i. e. wrong, erroneous conclusion, determination, decision.

Away, then, with all the false-positions and misconclusions, all the fantastical, or wicked thoughts of the world.

Hall. Works, vol. ii. fol. 379. The Fashions of the World.

MISCONFIDENT, i. e. having or placing confidence, faith, or trust, wrongly, erroneously.

Brethren, your not omniscient eyes shall see that my eyes are so lyncean, as to see you proudly misconfident.
Hall. Works, vol. iii. fol. 394. Answer to the Vindication of Smeectymnus.

MISCONJECTURE, i. e. to conjecture, to guess, to divine, to imagine, wrongly, erroneously.

I find it to be ordinary, that many pressing and fawning persons do misconjuncture of the humours of men in authority.

Bacon. Works, vol. iii. p. 136. Of Church Controversies.

I hope they will plausibly receive our attempts or candidly correct our misconjunctures.
Brown. Vulgar Errours.

MISCONSECRATE, i. e. consecrated, hallowed, dedicated, devoted, to a wrong, to an evil, purpose.

Our prayers were the gale, yea the gust, that tore these misconsecrated flags and sayles; and scattered and drencht those presumptuous piles.

Hall. Works, vol. ii. fol. 428. The Defeat of Crueltie.

**MISCO'NSTRUE, } i. e. to construe, to explain,
MISCO'NSTRUER, } to interpret, wrongly, erro-
MISCONSTRU'CTION. } neously.**

But take this: that ye lovers oft eschew,
Or else done of good entention,
Full oft thy ladie woll it misse constrew,
And deem it harme in her opinion.

Chaucer. Troilus and Creseide, book i.

As if thei shold by misse construction of the scriptures brynge vp and beleue that Christ were one God, and egall with his Father and with the Hooly Goost, if the trouthe were otherwise indede.
Sir Thomas More. Workes, fol. 160. A Dialogue concernynge Heresyes.

Which those misconstruers are fain to understand of the distinct notifications given to the angels, concerning this almighty work.
Hall. Works, vol. iii. fol. 140. Cases of Conscience, dec. 3. case 10.

As though Burdet were forgotten, that was for a word spoken in hast cruelly beheaded, by the misconstruing of the laws of this realme for the prince's pleasure.

Stow. Edward V. Anno 1477.

The meaning of which providence, should we misconstrue, we should frustrate our grand and last remedy, and perish not for want, but for misapplication of the means of life.

South. Sermons, vol. xi. p. 67.

Although our apostle in his Epistle calls the Gospel the law of liberty, yet to prevent any misconstruction thereof, as though it allowed a liberty to sin, we no where find more strict and severe passages against it than in this Epistle, both with respect to sins of commission, and sins of omission.

Stillington. Sermon 10. vol. iv. p. 375.

When the apostle had been speaking of the righteousness of God displayed by the wickedness of man; he was not unaware of the misconstruction to which this representation was liable, and

MISCON-CEIVE.

MISCON-STRUE.

MISCON-
STRUE.

which it had, in fact, experienced: which *misconstruction* he states thus,—“We be slanderously reported, and some affirm, that we say, let us do evil that good may come.”

Paley. Sermon 20. p. 299.

MIS-
CREANT.

MISCONTENT, Fr. *mescontenter*, *i. e.* discontented, dissatisfied, displeased.

When they could not perswade the people to beleue this, they went to John, making theyr complaynte to hym, thinking that he would be *miscontented* therewith, & by some meanes to stay this their grieve and grudge.

Udall. John, ch. iii.

She was not *miscontente* that he seemed litel to regarde Jacob's welle, whiche she had in great reuerence, neither yet did she mocke the bold sayings of hym.

Id. Ib. ch. iv.

Although her highness is not *miscontented* that either her own face or the said king's should be painted or portrayed; yet to be joined with the said king or with any other prince that is known to have made any request in marriage to her majesty, is not to be allowed.

Walpole. Anecdotes of Painting, vol. i. p. 281. Extract from a Letter to the Lord Mayor of London, July 25, 1561.

MISCOPHUS, in Zoology, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* filiform, alike in both sexes, composed of thirteen articulations; mandibles unidentate, tuberculate within, and furnished with a spur without; eyes entire; *ocelli* distinct, equal; anterior wings, with the second submarginal areolet petiolated.

Type of the genus, *M. bicolor*, Jurine, *Hymenopt.* pl. xi. genus 25. One species only. Inhabits France and England; rare in the last Country.

MISCORDEN, *i. e.* to be discordant, to disagree.

Austen witnesseth of an heretike that in his firste beginninge, he was a man right experte in reasons, and swete in his wordes and the werkes *miscorden*.

Chaucer. The Testament of Loue, book ii. p. 497.

MISCOVET, *i. e.* coveting, wishing or desiring wrongfully.

She maketh folke compasse and cast
To taken other folkes thing,
Through robberie, or *miscoueting*.

Chaucer. The Romant of the Rose, p. 172.

MISCOUNSEL, Fr. *mesconseiller*, *i. e.* counselled, advised, designed, wrongly, erroneously.

For everie thing that is begun with reason
Will come by readie meanes unto the end;
But things *miscounselled* must needs miswend.

Spenser. Mother Hubbard's Tale.

MISCOUNT, (Fr. *mescompter*,) *i. e.* to count, to reckon, to calculate, wrongly, erroneously; to miscompute.

And if so be, that he *miscounteth*,
To make in his answer a faile,
There shall none other thyng auaile
The kynge saith, but he shall be deade,
And lese his goodes, and his head.

Gower. Conf. Am. book i. p. 41.

MISCREANT, } Fr. *mescreant*, *mescreance*; It.
MISCREANCE. } *miscredente*, *miscredenza*; believ-
ing, (*credens*,) wrongly, erroneously. Holinshed writes *miscredents*, *q. v.*

Misbelieving; *i. e.* believing, wrongly, erroneously; holding wrong principles of Religious Faith; applied opprobriously to Infidels as, consequently, unprincipled, wicked people.

This Robert by his manhode dyd many notable actes, and specially at the wynnyng of the cite of Acon vpon the *myscreantes* & Turkes, and was chosen Kynge of Jerusalem.

R. Brunne, p. 102. note.

I not what helpeth that clergie
Which maketh a man to do folie,
And nameliche of nicromance,
Which stont vpon the *miscreance*.

Gower. Conf. Am. book vi. p. 201.

This *miscreant* now thus baptised hath received this outward signe and sacrament, as well as the most faythful man beleuyng.

Frith. Workes, fol. 91. A Treatise vpon the Sacrament of Baptisme.

Make a dystynccion and seuerance betwene that one catholyque churche of one beliefe and faithe on the one parte, and al *miscreant* painyms, al false Jewes, al false heritikes and al sedicious scismatikes vpon the other part.

Sir Thomas More. Workes, fol. 774. The Confutation of Frere Barnes Church.

But through this and other their *miscreaunce*,
They maken many a wrong chevisaunce,
Heaping up waves of wealth and woe.

Spenser. Shepherd's Calendar. May.

For what I speake
My body shall make good vpon this earth
Or my diuine soule answer it in heauen,
Thou art a traitor, and a *miscreant*.

Shakspeare. Richard II. fol. 23.

Can any of these thriving *miscreants* be esteemed or called happy in such a condition? Is their mind clear, their conscience calm and quiet, and their thoughts generally undisturbed?

South. Sermons, vol. iv. p. 475.

Do you think it possible, that mere exhortation alone, or even the most awful denunciations of punishment, would ever have brought such *miscreants* as those to real repentance and reformation?

Porteus. Sermon 2. vol. ii. p. 87.

MISCREATE, *i. e.* to create, make, form, frame, give being to, wrongly, improperly, unlawfully, unnaturally.

Ests oones he tooke that *miscreated* faire,
And that false other spright.

Spenser. Faerie Queene, book i. can. 2.

And counsel'd him abstaine from perilous fight;
For nothing might abash the villein bold,
Ne mortall steele emperce his *miscreated* mould.

Id. Ib. book ii. can. 7

Whence and what art thou, execrable shape,
That dar'st, though grim and terrible, advance
Thy *miscreated* front athwart my way
To yonder gates?

Milton. Paradise Lost, book ii. l. 683.

'Twas thus great Nature's herald blazon'd high
That fair original impress, which she bore
In state sublime; e'er *miscreated* art,
Offspring of sin and shame, the banner seiz'd,
And with adulterate pageantry defil'd.

Mason. The English Garden.

MISCREDENTS. *Miscreants* is the common word, *q. v. ante*.

Your sermon to vs of a dungeon appointed for offenders and *miscredents*.

Holinshed. The Description of Ireland, vol. vi. ch. iv. p. 36.

MISDATE, *i. e.* to date, to give, mark, note, or fix the time, wrongly, erroneously.

In hoary youth Methusalems may die;
O how *misdated* on their flatt'ring tombs!
Narcissa's youth has lectur'd me thus far.

Young. The Complaint. Night 5.

MISDAUB, *i. e.* daubed, smeared over, covered over, wrongly, improperly.

All our claim, all our endeavour is, only the reforming and repairing of an old church, faulty in some mouldered stones, and *misdaubed* with some untempered and lately laid mortar.

Hall. Letter to a Worthy Knight.

DEEM.MISDE-
MEA-
NOUR.

MISDE'EM, v. } *i. e.* to deem or doom, to think,
 MISDE'EMING, n. } to judge, to determine, to decide,
 wrongly, erroneously.

He which that misconceiveth oft *misdemeth*.
Chaucer. The Squieres Tule, v. 10384.

Covered with darknes and *misdeeming* night
 Them both together laid, to joy in vaine delight.
Spenser. Faerie Queene, book i. can. 2.

Who, after that he had faire Una lorne
 Through light *misdeeming* of her loialtie.
Id. Ib. book i. can. 4.

That day returns, when Fortune's partial hand
 To his proud brother gave the whole command,
 How the revolting Gods against him join'd,
 When to a private state reduc'd, he pin'd,
 And saw his friends *misdeem'd* in crowds resort,
 To bask beneath the sunshine of the Court.
Lewis. Statius, book ii. l. 371.

With friendly arm, they rais'd us: nathles some
 Among our old and stubborn swains *misdeem'd*,
 And envy'd, who enrich'd them.
Dyer. The Fleece, book iii.

MISDEME'AN, } To demean, to conduct, to be-
 MISDEME'ANOUR. } have, to deport or comport, to
 manage, wrongly, improperly, criminally.

Neither did the townsmen of S. Albons and the tenants of other
 townes and villages thereabout that belonged to the abbie of S. Al-
 bons, thus outrageouslie *misdemeane* themselves.

Holinshed. Richard II. Anno 1381.

And [Bonosus] being hanged for some *misdemeanour*, they jeasted
 on him, *amphoram pendere, non hominem*, that a barrell or tankard
 hung there, not a man.

Hakewill. Apologie, book iv. sec. 5. fol. 371.

The consideration of this, that God takes a particular notice of
 our personal *misdemeanors*, should engage us to set about a particu-
 lar amendment.

South. Sermons, vol. ix. p. 359.

A crime, or *misdemesnor* is an act committed, or omitted, in viola-
 tion of a public law, either forbidding or commanding it.

Blackstone. Commentaries, book iv. ch. i.

MISDEMEANOUR, in *Law*, is a term generally used
 in contradistinction to *Crime*. Though in common
 parlance many Misdemeanours might undoubtedly be
 called Crimes, yet in Legal language the latter term is
 generally applied to more weighty offences than are
 known by the name of Misdemeanours. For instance,
 piracy, treason, murder, burglary, and every other
 species of felony, are called Crimes; while perjury,
 assault, libelling, and the like, are called Misdemeanours.
 As the two species of offences, that is, Crimes and Mis-
 demeanours, only differ in degree, it is impossible to give
 them distinct logical definitions; we are, therefore,
 driven to description, and the description which conveys
 to the mind the clearest idea of Misdemeanours in
 general is, *all indictable offences which do not amount
 to felony*. There are two principal modes of insti-
 tuting a prosecution for a Misdemeanour—by *in-
 formation* and by *indictment*. The former mode may
 be adopted by the Attorney General *ex officio*, but
 by no other individual, except with the previous as-
 sent of the Court of King's Bench, which assent is
 only given in cases of an atrocious character. See the
 title INFORMATION. The other mode, that by indict-
 ment, is more generally adopted. Indictments may be
 tried by the Judges on the Assizes under their commis-
 sions of *oyer and terminer*, but they are usually tried
 with the lighter felonies at the Quarter Sessions. The

VOL. XXV.

most common punishments are fine and imprisonment
 at the discretion of the Court, unless in any particular
 case the quantum be fixed by Act of Parliament. The
 punishment of the pillory, which was formerly inflicted
 for many offences, has been abolished by Statute 56
 George III. c. 138., except in cases of perjury and sub-
 ornation of perjury.

MISDEPART, *i. e.* to depart, to part, to distribute,
 wrongly, improperly.

Thou blamest Crist and sayst ful bitterly

He *misdeparteth* richesse temporal.

Chaucer. The Man of Lawes Tale, v. 4527.

MISDERIVE, *i. e.* to derive, to draw down, to
 deduce, to train, wrongly.

This practice of impropriation which was first set on foot by unjust
 and sacrilegious bulls from Rome, is justly offensive both to God and
 good men; as *mis-deriving* the well-meant devotions of charitable
 and pious souls into a wrong channel.

Hall. Works, vol. iii. fol. 831. Cases of Conscience, dec. 3. case 7.

MISDESERT, *i. e.* through my having *deserved*, or
 having merited, wrong, ill fortune; or not having me-
 rited good, or good fortune.

My haplesse case

Is not occasioned through my *misdesert*,

But through misfortune, which did me abuse

Unto this shame, and my young hope subvert.

Spenser. Faerie Queene, book vi. can. 1.

MISDEVOTION, *i. e.* wrong, erroneous *devotion*
 (to godliness;) misdirected piety.

In regard of that miserable blindness and *mis-devotion*, which it
 must needs draw in after it, it is so hainous, as may well deserve our
 utmost opposition.

*Hall. Works, vol. iii. fol. 30. The Old Religion, part ii. ch. xii.
 sec. 3.*

We cry out sacrilege and *misdevotion* against those who in zeal
 have demolish'd the dens and cages of her unclean wallowings.

Milton. Works, vol. i. fol. 130. An Apology for Smectymnuus.

MISDIET, *i. e.* to diet, to feed, wrongly, improperly,
 to excess.

Certainly this great body, by *mis-dieting* and willfull disorder,
 contracted these spirituall diseases under which we languish.

Hall. Works, vol. iii. fol. 534. The Balm of Gilead.

Full of diseases was his [Gluttony] carcas blew,

And a drie dropsie through his flesh did flow,

Which by *misdiet* daily greater grew.

Spenser. Faerie Queene, book i. ch. iv. sec. 23.

MISDIGHT, *i. e.* dight, prepared, provided, fur-
 nished, wrongly, unfitly.

Despised nature suit them once aright,

Their bodie to their coate, both now *mis-dight*.

Hall. Satire 7. book iii.

MISDIRECTED, *i. e.* directed, ruled, ordered,
 guided, wrongly, erroneously.

Does he resist their genuine force?

His temper takes some forward course;

Till passion, *misdirected*, sighs

For weeds, or shells, or grubs, or flies.

Shenstone. The Progress of Taste, part iv.

MISDISPOSITION, *i. e.* wrong, evil *disposition*,
 arrangement, direction, inclination.

Besides supernatural delusions, there is a deceit of the sight;
 whether through the *indisposition* of the organ or the distance of the
 object, or the *mis-disposition* of the medium.

Hall. The Deceit of Appearance.

Neither are his [the wicked man] *mis-dispositions* only sinful, but
 those his very actions and endeavours, which in another man would
 be harmless, are in him no other than sin.

Id. Hard Texts of Scripture. Proverbs, ch. xxi. ver. 4.

MISDO', v.

MISDO'ER,

MISDO'ING,

MISDE'ED.

A. S. *misdo-en, misdæd.*To do or act, to conduct or behave,
wrongly, criminally; to transgress, to
offend, to sin.Away! dogter Cordeille, wider schal ich now fle?
So much iche habbe þe mys do, þat y ne dar þe y se.

R. Gloucester, p. 35.

þo dradde he sore of þe deþ, & hys mysdede of þogte sore.
Id. p. 391.

I rede þou mak amendes of þat grete misdede.

R. Brunne, p. 291.

In that thing that thei bacbiten of you as of misdoeris, thei bi-
holden you of good workis.

Wiclif. 1 Petir, ch. ii.

Thei answeriden and seiden to him, if this were not a mysdoere,
we hadden not bitaken him to thee.

Id. John, ch. xviii.

For Salomon saith: He is more worth, that repreveth or chidith a
fool for his folie, shewing him semblaunt of wrath, than he that sup-
porteth him and preiseth him in his misdoing, and laugheth at his
folie.

Chaucer. The Tale of Melibeus, p. 118.

Yet held it more humane, more heavenly first,
At least to try, and teach the erring soul,
Not wilfully misdoing, but unaware
Mised.

Milton. Paradise Regained, book i. v. 225.

At length a maid might have passed through the land with a bag
full of gold, and not have met a misdooer to have bereft her of the
same.

Holinshed. William the Conquerour, Anno 1087.

Pandulph, a lawier, and Durant, a templer, comming vnto King
John, exhorted him, with manie terrible words, to leaue his stub-
borne disobedience to the Church, and to reforme his misdooings.

Id. King John, Anno 1211.

For malefactors, whilst that their misdeeds
Repentance expiates, made happy so,
Do (as from beds) to heaven from scaffolds go.

Stirling. Doomes-day. The tenth Houre.

Like catiff vile, that for misdeed
Rides with his face to rump of steed.

Butler. Hudibras, part i. can. 3.

MISDO'UBT, v.

MISDOU'BT, n.

MISDOU'BTFUL.

i. e. to doubt, to fear, to sus-
pect wrongly or without cause;
also, to fear or suspect wrong or ill.Therefore misdoubting least he should misguyde
His former malice to some new assay,
He cast to keepe himselfe so safely as he may.

Spenser. Faerie Queene, book vii. can. 3.

If ever heaven's high blessings met in one man,
And there erected to their holy uses
A sacred mind fit for the services,
Built all of polisht honor, 'twas in this man:
Misdoubt him not.

Beaumont and Fletcher. The Double Marriage, act iii. sc. I.

YORKE. Now Yorke, or neuer, steele thy fearful thoughts,
And change misdoubt to resolution.

Shakspeare. Henry VI. Second Part, fol. 133.

She gan to cast in her misdoubtful mynde,
A thousand feares, that love-sicke fancies faine to fynde.
Spenser. Faerie Queene, book v. can. 6.His leave thus taken, on his way he went
With heavy heart, and full of discontent,
Misdoubting much, and fearful of th' event.

Dryden. The Wife of Bathes Tale.

MISDRAWING, i. e. drawing or dragging, pulling
wrongly; the wrong way.Il mote nedes be so (quod I) for the realme ne should not seme
blisfull, if there were a yoke of misdrawynges in diuers partes.

Chaucer. Boecius, book iii. p. 433.

MISDREAD, i. e. dread, wrong, or ill.

Needs me then hope, or doth me need mis-dread.

Hall. Defiance to Envy.

MISE'ASE, } i. e. want of, destruction of, ease;
MISE'ASY. } pain, penury.

So þat he moste for myseise awei at þe ende.

R. Gloucester, p. 34.

Sipen he went aboute, kirkes vp to raise,
Abbeyes forto help, were fallen to misejse.

R. Brunne, p. 35.

Euery where, and in alle thingis, I am taught to be fillid, and to
hungre and to abound, and to suffre myseiste. (penuriam.)

Wiclif. Filipensis, ch. iv.

Standyng is me beste, ynneth maie I ligge for pure miscasie
sorowe.

Chaucer. The Testament of Loue, book i. p. 471.

I go without retorning to the londe of misese & darkenesse, wheras
is the shadowe of deth.

Id. The Persones Tale.

MISEDITION, a wrong edition, an edition errone-
ously printed.Thus saith the Lord the Holy One of Israel who hath made
things to come; following a mis-edition of the vulgar which perverts
the sense, by making a wrong stop in the sentence.

Hall. Works, vol. iii. fol. 840. Cases of Conscience, dec. 3. case 10.

MISELIA, in Zoology, a genus of Lepidopterous
insects.Generic character. Palpi short, porrected obliquely,
the two basal joints densely clothed with scales, the ter-
minal one exposed and truncate; basal joint above half
the length of the second and robust, slightly curved;
second elongate, more slender than the first, sublinear,
bent, obliquely truncate at the apex; third short, ovate-
truncate; maxillæ not very long; antennæ rather long,
pubescent beneath, robust, more or less subserrate, and
slightly pectinated in the males, simple in the females;
head with a frontal crest; eyes small, slightly pubescent;
thorax quadrate, large, crested; wings a little deflexed
when at rest; anterior with the hinder margin crenate;
posterior generally entire; abdomen elongate, robust, ca-
rinated, tufted at the apex in the males, sometimes very
acute in the females: caterpillar naked, the penultimate
joint gibbous or tuberculated; pupa folliculated.Type of the genus, *Phal. No. Oxyacanthæ*, Linnæus;
Donovan, *Britt. Ins.* vol. v. pl. clxv.Six European species, five of which are indigenous to
Britain.MISEMPLOY, } i. e. to engage, to occupy, to
MISEMPLOYMENT. } busy, to exercise, wrongly, use-
lessly, improperly, to an ill purpose.This year also he made proclamation to redress the mis-employ-
ment of lands, or goods given to charitable uses.

Baker. King James, Anno 1622.

For if God puts it in the prince's power to be able to preserve,
undoubtedly the same power, misemployed, will be as able to destroy
society.

South. Sermons, vol. x. p. 216.

If any leisure time he had from power,
Because 'tis sin to misemploy an hour,
His business was, by writing to persuade
That kings were useless and a clog to trade.

Dryden. Absalom and Achitophel.

The regrets of a Prince, for having lost a day, were noble and
generous; but had he intended to have spent it in acts of generosity
to his greedy courtiers, it was better lost than misemployed after that
manner.

Hume. Essays, vol. ii. part i. sec. 2. p. 219. Of Benevolence.

MISER,

MISERABLE,

MISERABLENESS,

MISERABLY,

MISERATION,

MISERY.

Fr. *miserable*; It. *miserabile*;
Sp. *miserable*; Lat. *miserabilis*,
from *miser*, (of uncertain origin.)
Miser (by our old writers) is ap-
plied generally to
A wretched, unhappy person,one in the deepest affliction or distress;—the common
usage is more restricted. One who afflicts or distresses
himself, denies himself the comforts and conveniences ofMIS-
EASE.

MISER.

MISER. life, through covetousness or parsimony; one who is covetous or parsimonious to excess.

MISERICORDE. *Miseration, i. e. commiseration, q. v.*

Thus must I *mijser* live
till shee by friendly ruth,
Doe pitie mee hir loouing thrall
whose deeds shall trie his truth.

Turbervile. The Louer declareth how first he was taken, &c.

Miserablenes

Hath brought in distress.

Skelton. Why come ye not to Court.

Driven I was to harnesse then againe,

Miserably my death for to desire.

Surrey. Virgil. Æneis, book ii.

God of his *miseration*

Send better reformation.

Skelton. Why come ye not to Court.

Go to nowe; ye ryche men: wepe, and howle for your *miserics*
that shall come vpon you.

Geneva Bible, 1561. James ch. v. ver. 1.

The *miser* threw himselfe as an offall,
Streight at the foot in base humilitee,
And cleped him his leige, to hold of him in fee.

Spenser. Faerie Queene, book ii. can. 3.

On me exercise not
Thy hatred for this *miserie* befallen,
On me already lost, mee than thyself
More *miserable*.

Milton. Paradise Lost, book x. l. 930.

For there mentioning happiness and *miserableness* after death,
(where he might have showed his skill, if he had any,) he plainly
betrays himself an arrant naturalist.

Hammond. Works, vol. iv. fol. 642. Sermon 12.

The King's exchequer,
Nor all his wealthy Indies, could not draw me
Through half these *miserics* this piece of pleasure
Might make me leap into.

Beaumont and Fletcher. The Chances, act i. sc. 10.

Our language, by a peculiar significance of dialect, calls the covetous man the *miserable* man.

South. Sermons, vol. viii. p. 155.

Their galleons, galleasses, gallies, urcas, and zabras, were *miserably* shatter'd, having their hulls pierced through and through, their oars and rudders cut away, their tackling all rent, and their masts broken.

Oldys. Life of Sir Walter Raleigh, fol. xlv.

Nothing does or can leave a more abiding impression upon the mind than *miserie* escaped.

South. Sermons, vol. ix. p. 30.

For the sake of collecting what is never to be used, and adding to his beloved heap, the *miser* will forego the comforts, the conveniencies, and almost the necessities of existence, and voluntarily submit all his days to the penances and austerities of a mendicant.

Horne. Works, vol. v. p. 10. The Duty of Self-denial, disc. 1.

I see a column of slow rising smoke
O'er top the lofty wood, that skirts the wild.
A vagabond and useless tribe there eat
Their *miserable* meal.

Cowper. The Task, book i.

In *Misery's* darkest cavern known,
His useful care was ever nigh,
Where hopeless Anguish pour'd his groan,
And lonely Want retir'd to die.

Johnson. On the Death of Mr. Robert Levet.

MISERECT, i. e. erected, or raised, wrongly, improperly.

And will cause those *miserected* altars to be beaten down to the ground.

Hall. Hard Texts of Scripture. Amos, ch. iii. ver. 15.

MISERICORDE, Fr. *misericorde*; It., Lat., and Sp. *misericordia*. *Misericors est cujus cor miseret*, whose heart feels or is sensible of the *miserie* or unhappiness of others, one who compassionates or sympathizes with them. See the description by Chaucer.

The spices of *misericorde* ben for to lene, and eke for to yeve, and for to foryeve and relese, and for to haue pitee in herte, and compassion of the mischief of his even Cristen, and also to chastise ther as nede is.

Chaucer. The Persones Tale, p. 163.

And sonne, if that thou wolt recorde

The vertue of *misericorde*,

Thou sighe neuer thilke place,

Where it was vsed, lacke grace.

Gower. Conf. Am. book iii. p. 93.

MISFALL, D. *mis-vallen*; i. e. to fall, happen, or come to pass, wrongly, injuriously, unfortunately.

Although thee ones on a time *misfille*,

Whan Vulcanus had caught thee in his las.

Chaucer. The Knightes Tale, v. 2390.

Thereat she gan to triumph with great boast,

And to upbrayd that chaunce which him *misfell*,

As if the prise she gotten had almost

With spightfull speaches, fitting with her well.

Spenser. Faerie Queene, book v. can. 5.

MISFA'RE, v.

MISFA'RE, n.

MISFA'RING.

A. S. *mis-far-an, deviare, errare*,
i. e. to fare, to go wrong, the wrong way, to proceed, to succeed, ill, unfortunately, unhappily.

I am forpouht fulle sore, pat he suld pore *misfare*.

R. Brunne, p. 62.

For þe Scottis *misfore*, men telle þe tale git nowe.

Id. p. 118.

Whan Kyng R. herd of þat *mischuos* tide.

& how his schippis *misferd*, he turned onto þat tide.

Id. p. 158.

This maiden, whan she it herde,

And sigh this thyng howe it *misferde*:

Anon she wist what it ment,

And all the cause howe it went.

Gower. Conf. Am. book v. p. 122.

And in his wide great mouth away her bear

Crying aloud to shew her sad *misfare*

Unto the knights, and calling oft for ayde.

Spenser. Faerie Queene, book vi. can. 3.

For all the rest do most-what far amis,

And yet their owne *misfaring* will not see.

Id. Colin Clout's come home again.

MISFASHION, i. e. to fashion, to form or make, to shape or mould, wrongly.

A thing in reason impossible, thorough their *misfashioned* preconceit, appeared unto them no less certain, than if Nature had written it in the very foreheads of all the creatures of God.

Hakewill. On Providence.

MISFEIGN, i. e. to feign, to invent, contrive, or pretend, (a likeness or resemblance,) wrongly, wrongfully.

But lo! the virgin comes; who all this while

Amased stands, herselfe so mockt to see

By him, who has the guerdon of his guile,

For so *misfeigning* her true knight to bee.

Spenser. Faerie Queene, book i. can. 3.

MISFORM, i. e. formed or framed, made, fashioned, or shaped ill.

But, when he saw his labour all was vaine,

With that *misformed* spright he backe returned againe.

Spenser. Faerie Queene, book i. can. 1.

**MISFO'RTUNE, } i. e. to fortune, to happen or
Misfo'rtuned. } cause to be or happen, wrongly,
unluckily, unhappily. And *misfortune*, noun,
ill luck, ill hap; calamity, affliction.**

The remnant of y^e captiuite are there in y^e lande in great *misfortune* and rebuke.

Bible, Anno 1551. Nehemiah, ch. i.

Forthy great care she tooke, and greater feare,

Least that it should her turne to fowle reprieft,

And sore reproch, whenso her father deare

Should of his dearest daughter's hard *misfortune* heare.

Spenser. Faerie Queene, book iii. can. 3.

MISERICORDE.

MISFORTUNE.

MISFORTUNE. The Queene, after mariage, was conceiued with childe, but it mis-
fortuned. *Stow. Preface, sig. D. 7.*

MISGO.

Dark shades become the portrait of our time:
Here weeps *Misfortune*, and there triumphs Crime!
Waller. To my Lady Morton.

Yet ev'n on this her load *Misfortune* flings,
To press the weary minutes' flagging wings;
New sorrow raises as the day returns,
A sister sickens, or a daughter mourns.

Johnson. The Vanity of Human Wishes.

MISFRAME, *i. e.* to form, to fashion, to shape,
wrongly, evilly.

Some other subtle shrew that is of his counsaile deceiued him in
the *misframing* of hys matter more towarde diction than vnitye.
Sir Thomas More. Workes, fol. 874. The Apology.

MISGET, *i. e.* to get, to procure, to produce, wrongly,
unlawfully, unjustly.

For of the false Moabites,
Forth with the strength of Amonites,
Of that thei were first *misget*,
The people of God was ofte vpset
In Isreal and in Judee.

Gower. Conf. Am. book viii. p. 251.

Leave, faytor, quickly that *misgotten* weft
To him that hath it better iustifyde.

Spenser. Faerie Queene, book vi. can. 1.

MISGI'VE, } *i. e.* to give or grant wrongly; to
MISGI'VING, n. } give way, to yield, to relax, through
doubt or fear of wrong or evil; to fail, through fearfulness
or timidity, want of courage or confidence.

But yet to let her go
His herte *misgave* him evermo.

Chaucer. Troilus and Creseide, book iv. p. 276.

Great joy he promised to his thoughts, and new
Solace in her return, so long delay'd;
Yet oft his heart, divine of something ill,
Misgave him.

Milton. Paradise Lost, book ix. l. 846.

But touching divination, and the *misgiving* of minds, we shall
speak more when we handle in generall the nature of mindes, and
soules, and spirits. *Bacon. Natural History, Cent. x. sec. 988.*

If we find differences in ourselves sometimes, it argues that
grace is not our owne. It is our frailty, that those services, which
we are forward to, aloofe off, we shrink at neere hand, and fearfully
missegive.

*Hall. Works, vol. i. fol. 833. Contemplations, book iv. Of the
Calling of Moses.*

No man should reckon every doubting or *misgiving* of his heart,
about the safety of his spiritual estate inconsistent with that confidence
towards God which is here spoken of in the text.

South. Sermons, vol. ii. p. 440.

There is nothing, I will venture to say, in the whole compass of
what is called natural religion or modern philosophy, that can in the
smallest degree tend to allay or remove these natural, these unavoidable
misgivings of the human mind.

Porteus. Lecture 9. vol. i. p. 268.

MISGO', } To go or wend, to move or pass
MISWE'ND. } along wrongly, the wrong way; to de-
viate, to err, *sc.* from the right way, path, or course.

And prest aþ ymade, vorto smyte men þat bet *myswende*.

R. Gloucester, p. 351.

I wot wel by the cradel I have *misgo*
Here lith the miller and his wif also.

Chaucer. The Reves Tale, v. 4253.

That fro the Holy Ghost was sent
To turne folk that ben *miswent*.

Id. The Romant of the Rose, p. 224.

And eche in his complainte telleth,
How that the worlde is *miswent*.

Gower. Conf. Am. Prologue.

Who likewise sought her lover long *miswent*,
The gentle Scudamour whose heart whileare
That stryfull hag with gealous discontent
Had fil'd, that he to fell reveng was fully bent.

Spenser. Faerie Queene, book iv. can. 5

MISGO'VERN, } *i. e.* to govern, to rule or re-
MISGO'VERNANCE, } gulate, direct, guide, or control; GOVERN
MISGO'VERNMENT. } to exercise power or authority; MIS-
wrongly or wrongfully, ill or evilly. GUIDE.

Had never worldly man so high degree
As Adam, til he for *misgovernance*
Was driven out of his prosperitee.

Chaucer. The Monkes Tale, p. 121.

For if there felle hym any shame
It was through his *misgovernance*.

Gower. Conf. Am. book v. p. 128.

Now if any (*misgouerning* their own wittes) do fortune to vse
that for a spur, which I had heere appointed for a bridle, I can
none otherwise lament it, but to saie that I am not the first which
hath been *misjudged*. *Gascoigne. To the Readers generally.*

If you see me sinke in distress (notwithstanding that you judge
me quick of capacitie) then learn you to mainteine your selues
swimming in prosperitie, and eschue betimes the whirlpoole of *mis-
gouernment*.

Id. To the Youth of England.

Where rude *misgouern'd* hands, from windowes tops,
Threw dust and rubbish on King Richard's head.

Shakspeare. Richard II. fol. 41.

The *mis-governance* of diet, whereto their liberty layes them open
in the weaknesse of their pupillage, cannot but be extremely preju-
diciall. *Hall. Works, vol. i. sec. 9. fol. 643. Quo Vadis?*

Besides the times, with all injustice fraught
Concurr'd with such confus'd *misgoverning*.

Daniel. History of Civil Wars, book i.

But then it is, when th' age (full fraught with crime)
Lies prostrate unto all *misgovernment*.

Id. A Panegyrick to the King.

And now I ask whether, with this map of *misgovernment* before
me, I can suppose myself bound by my vote to continue, upon any
principles of pretended publick faith, the management of these
countries in those hands?

Burke. Works, vol. iv. p. 83. On Mr. Fox's East India Bill.

MISGRACIOUS, *i. e.* ungrateful, disagreeable.

His [Vulcanus] figure
Both of visage and of stature,
Is lothly, and *misgracious*, [*i. e.* *mis*.]

Gower. Conf. Am. book v. p. 128.

MISGRAFF, *i. e.* grafted or graved, wrongly or
unsuitably; (the stock and scion not suiting;) mis-
matched.

The course of true loue neuer did run smooth,
But either it was different in blood.—

LYF. Or else misgrafted, in respect of years.

Shakspeare. Midsummer Night's Dream, fol. 146.

MISGROUND, *i. e.* to ground, to establish, fix, or
settle, wrongly, upon a wrong foundation.

Now that he only over-stayes the time of our *mis-grounded* ex-
pectation, he doth not slacken his pace, but correct our error.

*Hall. Works, vol. iii. fol. 647. Satan's Fiery Darts Quenched,
dec. 1. tit. 6.*

This question of yours is curious and *misgrounded*.

Id. Hard Texts of Scripture. Acts, ch. i. ver. 7.

From me, no pulpit, nor *misgrounded* law,
Nor scandall taken shall this cross withdraw,
It shall not, for it cannot.

Donne. Divine Poems, p. 325. The Crosse.

MISGUESS, *i. e.* to guess, to conjecture wrongly,
to make false or erroneous conjectures or suppositions.

Some false shrewes there be, hee *mysse gesseth* amonge and wen-
eth it were one, where in dede it was another, & so in stede of one
felony, to lyght there commeth twayne.

*Sir Thomas More. Workes, fol. 976. The Debellacion of Salem
and Byzance.*

MISGUI'DE, v. } *i. e.* to guide, to show or point
MISGUI'DANCE. } out the wrong way or path; to
direct, to conduct, to manage, wrongly, erroneously.

MIS-
GUIDE.

MISHAP.

Tho wist he wel he had himself *misgied*.
Chaucer. *The Monkes Tale*, v. 14450.

Let reason be thy *guyde*,
For he maie soone hym selfe *misguyde*
That seeth not the perill tofore.
Gower. *Conf. Am.* book viii. p. 272.

Let me obtain forgiveness of thee, Samson,
Afford me place to show what recompence
Towards thee I intend for what I have misdane,
Misguided.

Milton. *Samson Agonistes*, l. 912.

Whosoever deceives a man, does not only do all that he can to ruin him, but which is worse, to make him ruin himself; and by causing an error in the great guide of his actions, his judgment, to cause an error in his choice too; the *misguidance* of which must naturally engage him in those courses that directly tend to his destruction.

South. *Sermons*, vol. i. p. 530.

An ambitious, or rather a *misguided* prince, arose, who deemed all these privileges to be concessions of his predecessors, revocable at pleasure.

Hume. *Essay* 9. vol. i. p. 61.

MISHA'NDLE, } D. *mis-handelen*; i. e. to handle,
MISHA'NDLING. } or take by the *hand*, wrongly,
improperly; to manage, to treat, wrongly, improperly;
wrongfully, injuriously.

The wardes of the church keie,
Through *mishandlynge* ben *miswreint*.

Gower. *Conf. Am.* book v. p. 137.

For thoughe verye fewe be ouer *manye* to be so wrongefullye *myssehandeled* and punyshed, for onelye speakynge agaynste *mysseorder* and abusions, yet euermore this worde (*manye*) muste needes importe and sygnifie some greater nombre perde, than one or two or three.

Sir Thomas More. *Workes*, fol. 899. *The Apology*.

As the sorest and the moste cruell heynous point, in sondry places of his boke this pacifyer preacheth and preacheth vpon the *misshandling* of men in that cause of heresy.

Id. *Ib.* fol. 916.

MISHA'P, v. } D. *mis-happen*; i. e. to hap, to
MISHA'P, n. } come into our hold or possession, to
MISHA'PPEN, } fall or befall, to come to pass, wrongly,
MISHA'PPY. } unluckily, unfortunately, calamitous-
tously.

Why felle him suilk chance, & his ilk *mishap*?
For of Gode's ordinance he forsoke þe schap.

R. Brunne, p. 101.

Maný grete *mishappes*, many hard trauaile.

Id. p. 175.

Alle his *mishappynge* felle, he com in to Pountif.

Id. p. 68.

Boste & deignouse pride & ille avisement
Mishapnes oftentide, & dos maný be schent.

Id. p. 289.

On þo þat God lufes lest *mishappenyng* salle falle,
þat kepe not his bihest, þei ere vngacious alle.

Id. p. 290.

And Fortune *mishapynge*.

Chaucer. *The Romant of the Rose*, p. 211.

Sorweful and *mishappy* is the condition of a poure beggar, for if he axe not his mete he dieth for hunger, and if he axe, he dieth for shame.

Id. *The Tale of Melibeus*, p. 116.

For many a vice, as saith the clerke,
There hongen vpon slouthes lappe,
Of suche as make a man *mishappe*.

Gower. *Conf. Am.* book iv. p. 96.

What wit haue wordes so prest and forceable,
That may containe my great *mishappynesse*?

Wyat. *Complaint vpon Loue*, &c.

His fearefull freends weare out the wofull night,

Ne dare to weepe, nor seeme to understand

The heauie *hap*, which on them is alight,

Afraid, least to themselves the like *mishapen* might.

Spenser. *Faerie Queene*, book i. can. 3.

But what *mishap* thus long him fro myselfe removes.

Spenser. *Faerie Queene*, book iv. can. 8.

By such *mishaps* the prosperitie of the Danes so much flourish-
ing of late, began now manifestlie to decaie.

Holinshed. *History of Scotland*, vol. v. p. 219.

Ay me! what perils do environ
The man that meddles with cold iron!
What plaguy mischiefs and *mishaps*
Do dog him still with after claps.

Butler. *Hudibras*, part i. can. 3.

MISHEARD, D. *mis-hooren*; i. e. to hear wrongly,
erroneously. See MISSPEAK for example.

MISIMAGINATION, i. e. wrong *imagination*,
wrong fancy, wrong conception.

Who can without indignation looke upon the prodigies which this
mis-imagination produces in that other sex.

Hall. *Works*, vol. i. fol. 760. *The Righteous Mammon*.

MISIMPROVE, i. e. to *improve*, to enhance, to cul-
tivate, to increase, to strengthen, wrongly, to wrong
purposes, faultily. To fail in or neglect the improve-
ment.

God can continue worldly riches to men, even when they abuse
them; but if a spiritual talent be *misimproved*, it must be taken
away.

South. *Sermons*, vol. xi. p. 267.

Their neglect and *misimprovement* of that season, implied in
Christ's wish that they had known and *improved* it.

Id. *Ib.* p. 225.

MISINCLINE, i. e. to *incline*, to dispose, to affect,
wrongly, erroneously.

Our judgements are perverted, our wills depraved, and our affections
mis-inclined, and set upon vile and unworthy objects.

South. *Sermons*, vol. x. p. 8.

MISINFER, i. e. to *infer*, to induce, or deduce,
wrongly, erroneously; to make wrong or erroneous in-
ferences or inductions.

Nestorius teaching rightly that God and man are distinct natures,
did thereupon *mis-inferre* that in Christ those natures can by no
coniunction make one person.

Hooker. *Ecclesiasticall Politie*, book v. sec. 52.

MISINFO'RM, } i. e. to present to and impress
MISINFORMA'TION, } upon the mind wrong *forms* or
MISINFO'RMER. } ideas; to give or convey wrong
ideas; to convey or communicate, to tell or relate what
is false.

It nedeth of no bakbityng
That thou the lady *misinforme*.

Gower. *Conf. Am.* book ii. p. 48.

Least by som fair appeering good surpris'd
She dictate false, and *misinforme* the will
To do what God expressly hath forbid.

Milton. *Paradise Lost*, book ix. l. 355.

You *misinforme* against him for concluding with the papists.

Mountague. *An Appeale to Cæsar*, ch. xxii.

Let not such be discouraged if they deserve well, by *misinforma-
tion*, or for the satisfying the humours or ambition of others.

Bacon. *Works*, vol. ii. p. 271. *Advice to Sir George Villiers*.

Under how dark a cloud I was hereupon, I was so sensible, that I
plainly told the Lord Archbishop of Canterbury, that rather than I
would be obnoxious to those slanderous tongues of his *misinformers*,
I would cast up my rochet.

Hall. *Works*, vol. iii. fol. 19. *Some Specialities of his Life*.

"A grace, which if I could believe,
I've not the conscience to receive."
"That conscience," quoth Hudibras,
"Is *misinform'd*; I'll state the case."

Butler. *Hudibras*, part ii. can. 1.

That he might not through any mistake in point of memory *mis-
inform* me, he did me the favour, at my request, to look out the
notes he had written for his own and his prince's information.

Boyle. *Works*, vol. i. p. 681. *The Experimental History of Colours*.

MISHAP.

MISIN-
FORM.

MISIN-
FORM.

MISJOIN.

We do not say, that a man is always guilty of sin before God, when, upon a *misinformation* of judgment, he omits that which God's law hath commanded; or doth that which God's law hath forbidden. *Sharp. Works, vol. ii. p. 199. A Discourse of Conscience.*

MISINSTRUCT, *i. e.* to *instruct*, to teach, to guide, to direct, wrongly, erroneously.

Touching them from whom we craue that mercie which is not to be obtained, let vs not thinke that our Sauour did *mis-instruct* his disciples, willing them to pray for the peace euen of such as should be vncapable of so great a blessing.

Hooker. Ecclesiasticall Politie, book v. sec. 49. fol. 287.

So were they happy in working off the harms of their abused studies and labours, correcting by the clearness of their own judgment the errors of their *mis-instruction*, and were as David was, wiser than their teachers.

Milton. Works, vol. i. fol. 122. An Apology for Smectymnus.

MISINTEND, to *intend*, to design, to direct, wrongly, wrongfully.

When suddenly, with twinkle of her eye,
The damzell broke his *misintended* dart.

Spenser. Sonnet 16.

MISINTE'RPRET, } *i. e.* to *interpret*, to explain,
MISINTE'RPRETER. } to expound, wrongly, erroneously.

My selfe a prince, by fortune of my birth,
Neere to the king in blood, and neere in loue,
Till you did make him *mis-interpret* me.

Shakspeare. Richard II. fol. 33.

However infamy or envy may work in other men to do her fretful will against this discourse, yet the experience of your own uprightness *mis-interpreted*, will put ye in mind to give it free audience and generous construction.

Milton. Works, vol. i. fol. 163. The Doctrine and Discipline of Divorce.

Their *mis-interpretation* of the law alluded unto (Deuteronomy) urges no less.

Hall. Works, vol. iii. fol. 846. Cases of Conscience, case 2.

He is no better than a Pharisee, and understands not the gospel; whom as a *mis-interpreter* of Christ I openly protest against.

Milton. Works, vol. i. fol. 166. The Doctrine and Discipline of Divorce.

And saints have freedom to digress,
And vary from them as they please;
Or *misinterpret* them by private
Instructions.

Butler. Hudibras, part ii. can. 2.

Supposing there be some few obscure texts, which unstable persons may be apt to *misinterpret* to their own and others' disquiet; yet is it not fit that the whole tenour, the whole design and perpetual aim of scripture, should be the *interpreter* of particular passages?

Jortin. Dissertation 2. p. 29.

Mr. Hume's great principle with respect to the origin of our ideas, which (as I before hinted) is only that of Locke under a new form, asserts the same doctrine, with greater conciseness, but in a manner still less liable to *misinterpretation*.

Stewart. Philosophical Essays, p. 27. ess. i. ch. iii.

MISINTREAT, *i. e.* to *entreat* or *treat*, to deal with, evilly, injuriously, harmfully.

So that had a man done neuer so much harme (as Caxton reporteth in his story) if he might once come into the Temple, it was not lawful for any to *misintreate* him.

Grafton. Works, fol. 54.

MISJOIN, *i. e.* to *join*, to unite, to combine, to connect, wrongly, improperly, unsuitably.

Oft in her [Reason's] absence mimic fansie wakes,
To imitate her; but *misjoyning* shapes
Wilde work produces oft.

Milton. Paradise Lost, book v. l. 111.

And Luther, more mistaking what he read
Misjoins the sacred body with the bread.

Dryden. The Hind and the Panther.

MISJU'DGE, } *i. e.* to *judge*, to deem or doom,
MISJU'DGMENT, } wrongly, erroneously; to have,
hold, or give, wrong sentence or opinion: to sentence,
to determine, to distinguish, wrongly, erroneously.

MIS-
JUDGE.
MISLE.

Now if any (*misgouerning* their own wittes) do fortune to vse that for a spurre, which I had heere appointed for a bridle, I can none otherwise lament it, but to saie that I am not the first which hath been *misjudged*.

Gascoigne. To the Readers generally.

And therefore no more *mysse iudge* any manne determinatelye and in-certaine, than he that woulde say thus, as manye menne saye indeed.

Sir Thomas More. Works, fol. 952. The Debellacion of Salem and Byzance.

The *mis-judgment* in case of a pecuniary damage or banishment, may be afterwards capable of being reversed, and upon a new traverse the cause may be fetcht about at further leisure; whereas death once inflicted is past all power of revocation.

Hall. Works, vol. iii. fol. 811. Cases of Conscience, dec. 2. case 6.

This temper mixed of jealousy and malice is that which makes those two odious actions so familiar to men, to suspect and *misjudge*.

South. Sermons, vol. viii. p. 310.

That Clarendon might *misjudge* the motive of his retirement is the more probable because he has evidently mistaken the commencement of his poetry, which he supposes him not to have attempted before thirty.

Johnson. The Life of Waller.

MISKEEPING, *i. e.* wrong or insufficient *keeping*, retaining, or preserving.

To lese his loue by *miskeeping* therowe his owne doing.

Chaucer. The Testament of Loue, book iii. p. 507.

MISKINDLE, *i. e.* *kindled*, lighted, excited, wrongly erroneously.

Such is the *mis-kindled* heat of some vehement spirits.

Hall. The Mischief of Faction.

MISKNOW, to *know*, *i. e.* to perceive, to understand, wrongly, erroneously.

Thamyable fortune maiste thou sene alway wyndy and flowyng, and euer *misknowing* of her self.

Chaucer. Boecius, book iii. p. 422.

There is nothing in the world, that they do more *mis-know* than themselves.

Hall. The Wickedness of making a fruitful Land barren.

How apt are we, if thou dost, never so little, vary from our apprehensions, to *mis-know* thee, and to wrong our selves by our *mis-opinions*?

Id. Works, vol. ii. fol. 283. Contemplations. The Resurrection.

MISLAY, to *lay*, to put or place down, wrongly, wrongfully, inconveniently; to repose, to deposit, in a wrong place.

For travaille of his gost he groneth sore,

And oft he routeth, for his hed *mislay*.

Chaucer. The Milleres Tale, v. 3647.

The *mislaier* of a mere stone is to blame. But it is the unjust judge that is the capitall remover of land-markes, when he defineth *amisse* of lands and property.

Bacon. Essaie 56. p. 316.

The casualty of their *mis-laying* doth not alter their proprietie, they are still his that lost them.

Hall. Works, vol. iii. fol. 797. Cases of Conscience, case 9.

MI'SLE, *v.* } *D. mieselen, mislen; rorare tenuem*
MI'SLING, *n.* } *pluviam, Kilian; nebula pluere, Skin-*
ner. To rain a small rain, clouding or darkening, like
mist. See **MIST**.

Of Pliades he preached with their drowsy chere
Immoystred with *mislyng*.

Skelton. The Crowne of Laurell.

Oft use, doeth weare an iron cote,
As *misling* drops, hard flints in time doth pearse.

Gascoigne. A remembrance, &c.

MISLE. My doctrine droppe as doeth y^e rayne, and my speach flow as doeth the dew, and as the *myselyng* vpo the herbes, and as the droppes vpon the grasse.

MISLIKE. Bible, Anno 1551. *Deuteronomy*, ch. xxxii.

Up Colin up, ynough thou mourned hast,
Now ginnes to mizzle, hye we homeward fast.
Spenser. *Shepherd's Calendar*. November.

MISLE'AD, } A. S. *mis-læd-an*; D. *mis-leyden*;
MISLE'ADER. } *i. e.* to lead, guide, or conduct, wrongly,
erroneously, astray; to show the wrong way.

But in the last shoure, sooth to tell,
The folke of Troy hem selven so *miseden*,
That with the worse at night home they fleden.
Chaucer. *Troilus and Creseide*, book iv. p. 265.

Thou Boniface, thou proud clerke,
Misleader of the papacie,
Thy fals bodie shall abie
And suffer, that it hath deserued.
Gower. *Conf. Am.* book ii. p. 68.

Alas what can they teach, and not *mislead*,
Ignorant of themselves, of God much more,
And how the world began, and how man fell
Degraded by himself, on grace depending?
Milton. *Paradise Regained*, book i. l. 306.

Those poor souls therefore who doe zealously walk in a wrong way, wherein they are set by ill guides, may not be put into the same rank with their wicked *mis-leaders*.

Hall. *Works*, vol. iii. fol. 33. *Christian Moderation*, book ii. sec. 5.

My thoughtless youth was wing'd with vain desires,
My manhood, long *mised* by wand'ring fires,
Follow'd false lights.

Dryden. *The Hind and the Panther*.

The use of such a study [Moral Philosophy] depends upon this, that without it, the rules of life by which men are ordinarily governed, oftentimes *mislead* them, through a defect either in the rule, or in the application.

Paley. *Moral Philosophy*, book i. ch. i. part i.

As he [Falstaff] was to be the chief seducer and *misleader* of the heir apparent of the crown, it was incumbent on the poet to qualify him for that part in such a manner as should give probability and even a plea to the temptation.

Observer, No. 73.

MISLEARNED, *i. e.* who has taken wrong, erroneous conceptions or notions; who has been taught wrongly; who has gained or acquired useless knowledge.

Such is this [prodigious match] which you have here propounded in the behalf of your friend, whom it seems a *mis-learned* advocate would faine bear up in a course altogether unjustifiable.

Hall. *Works*, vol. iii. fol. 864. *Cases of Conscience*, add. case 1.

MISLEN. See MISCELLANE, MASTLIN.

MISLI'KE, v. } A. S. *mis-lician*; *i. e.* to have an
MISLI'KER, } ill will or inclination; to have no
MISLI'KING. } favourable will or inclination.

Now þe Sarazin *mislikes*, to Mahoun mad þei mone.
R. Brunne, p. 174.

For in his bed he lieth a night and siketh,
She asketh him anon, what him *misliketh*.
Chaucer. *The Legend of Dido*.

For wheras I am euil, to confesse myself vnto thee, is nothing els but *mislike* of my selfe.
Barnes. *Works*, fol. 370. *A Collection of the Doctour's Testimonies*.

And yet my people would not hear,
Nor hearken to my voice;
And Israel, whom I lov'd so dear,
Mislik'd me for his choice.
Milton. *Psalm* 81. l. 48.

KING. Setting your skornes, and your *mislike* aside,
Tell me some reason, why the Lady Gray
Should not become my wife, and England's Queen?
Shakspeare. *Henry VI. First Part*, fol. 163.

Going forth with the byshop, till they came to Windsore, hee MISLIKE.
entred the Castle, to the great *misliking* of the byshoppe.

Stow. Henry III. Anno 1264.

MISLI'VE, } *i. e.* to live, or pass, or spend their
MISLI'VING, n. } life, wrongly, wickedly.
In R. Brunne *mis-believed*, q. v.

In his elleuent gere com folk, þat *misteued*,
Aruyed on Brittrik, & sore þei him greued.
R. Brunne, p. 10.

Errid *misiguijng*, haunted maumetrie. Id. p. 320.

O old, unholosome, and *mislived* man,
Calcas I meane, alas, what eiled thee
To ben a Greek, sens thou art borne Trojan?
Chaucer. *Troilus and Creseide*, p. 268.

Trustyng, as God was angry for their wickednesse, euen so should he forgiue them of hys mercy if they repented and forsuke their *misseliuing*.

Tyndall. *Workes*, fol. 30. *Prologues made upon the Prophet Jonas*.

For if he *misliue* in leudness and lust,
Little bootes all the wealth, and the trust,
That his father left by inheritaunce.
Spenser. *Shepherd's Calendar*. May.

MISLOOK, *i. e.* to look, to see or direct the sight, wrongly, unluckily.

Ouide telleth in his boke
Ensample touchend of *misloke*,
And saith, how wilome ther was one
A worthy lorde, which Acteon
Was hote.

Gower. *Conf. Am.* book i. p. 19.

MISMAKE, D. *mis-mæken*; *i. e.* made, framed, fashioned, or performed, wrongly, erroneously.

But prouydeth that they [translations] shal not be read if they be *mis-se-made*, til they be by good examinacion amended.

Sir Thomas More. *Workes*, fol. 234. *A Dialogue concerning Heresies*.

MISMA'NAGE, } *i. e.* to manage, to guide,
MISMA'NAGEMENT. } direct, or conduct, wrongly, erroneously.

And indeed if it were not so, the debates of most princes' councils, and the business of assemblies would be in danger to be *mismanag'd*, since those who are rely'd upon, and have usually a great stroke in them, are not always such, who have the good luck to be perfectly knowing in the forms of syllogism, or expert in mode and figure.

Locke. *Of Human Understanding*, book iv. ch. xvii. sec. 4.

Secondly, I answer, such revolutions happen not upon every little *mismanagement* in publick affairs.

Id. *Of Civil Government*, ch. xix. sec. 225.

The falls of favourites, projects of the great,
Of old *mis-managements*, taxations new;
All neither wholly false, nor wholly true.

Pope. *The Temple of Fame*, l. 456.

The fault is in man himself, if a principle implanted in him for his good becomes by negligence and *mismanagement* the instrument of his ruin.

Horsley. *Sermon* 28. vol. ii. p. 352.

MISMARK, *i. e.* to mark, to sign, to note, wrongly, erroneously.

Howbeit of trowth I cannot denye, but y^e in a side after *mis-se marked* with the number of .249, which should haue been marked the number of .259; there we found the matter in that place.

Sir Thomas More. *Workes*, fol. 1135. *The Aunswere to the Poysoned Boke*, &c.

MISMEASURE, *i. e.* measured, meted, reckoned, or calculated, wrongly, erroneously.

With aim *mis-measur'd*, and impetuous speed,
Some darting, strike their ardent wish far off,
Through fury to possess it.

Young. *The Complaint*. Night 5.

MISMETRE, *i. e.* wrong metre or measure, sc. of syllables, or combinations of syllables.

MIS-
METRE.
—
MIS-
ORDER.

And for there is so great diversite
In English, and in writing of our tong,
So I pray to God that none *miswrite* thee,
Ne the *misse-metre*, for default of tong.
Chaucer. Troilus and Creseide, p. 293.

MISNA'ME, } D. *mis-naemen*; i. e. to name, de-
MISNO'MER. } nominate, wrongly, erroneously; to
give a wrong or false name.

Where hear-say knowledge sits on public names
And bold conjecture or extols or blames,
Spring party libels; from whose ashes dead,
A monster, *misnam'd* History, lifts its head.
Savage. On False Historians.

And refers to the lines above quoted from Homer,
Where mules, I conceive, is an arrant *misnomer*.
Byrom. Epistle 1. To G. Lloyd, Esq.

And that thing made a sound and show
Which mortals have *misnam'd* a beau.
Beattie. The Wolf and Shepherds.

Many of the changes, by a great *misnomer*, called Parliamentary
reforms, went, not in the intention of all the professors and sup-
porters of them, undoubtedly, but went in their certain, and, in my
opinion, not very remote effect, home to the utter destruction of the
constitution of this kingdom.

Burke. Works, vol. viii. p. 13. *Letter to a Noble Lord.*

MISNUMBER, i. e. to count, to reckon, wrongly,
erroneously.

Which might well make it suspected that the armies by sea,
before spoken of, were *misnumbered*.
Raleigh. History of the World, book v. ch. i. sec. 8.

MISOBSERVE, i. e. to observe, regard, remark,
wrongly, erroneously.

They understand it [reasoning] as early as they do language;
and, if I *mis-observe* not, they love to be treated as rational creatures
sooner than is imagined.

Locke. Works, vol. iii. p. 32. *Of Education*, sec. 81.

MISOLAMPUS. In Zoology, a genus of *Coleop-*
terous insects.

Generic character. *Antennæ* slightly thickening to
the apex, the third and fourth joints elongated, equal,
cylindric; the fifth, sixth, and seventh obconic-cylindric,
short; the three following rather stouter and subturbi-
nated, the apical one larger, ovate; *labrum* coriaceous,
exserted, transverse, entire; maxillary *palpi* porrect, with
the apical joint securiform; body oblong-ovate, convex;
head inflexed; *thorax* rather narrower than the *elytra*,
subglobose, anteriorly emarginate, and receiving the pos-
terior part of the head: *scutellum* very minute; *elytra*
united, with the sides rounded and inflexed beneath;
abdomen subovate, transversely truncated at the base,
rounded behind; legs slender; *tibiæ* elongated, narrow,
with obsolete spurs; *tarsi* heteromerous.

Type of the genus, *M. Hoffmansggii*, Latreille,
Gen. Crust. et Ins. vol. ii. plate x. fol. 8. One species, a
native of Portugal, and probably also of the South of
England.

MISOPINION, i. e. wrong or erroneous opinion,
thought, or notion. See MISKNOW, for another example.

But where the heart is forestalled with *miss-opinion*, ablative di-
rections are first needfull to unteach error, ere we can learne truth.

Hall. Works, vol. i. fol. 451. *Sermon*, 15 Sept. 1622.

MISO'RDER, v. } i. e. to order, to rule, or regu-
MISO'RDER, n. } late, to compose, or to arrange,
MISO'RDERLY. } wrongly, faultily, viciously.

In the increase of the vngodlye there is *mysorder*.

Bible, Anno 1551. *Prouerbes*, ch. xv.

But I mervle the lesse that theis *misorders* be amonges some in
the court; for commonly in the contrie also everie where innocencie
is gone, bashfulnesse is vanished.

Ascham. Works, p. 230. *The Schole-Master*.

Calphurnius being thus at quiet on that side, intended wholie to
reforme all *misorders* amongst the Britains.

Holinshed. History of Scotland, vol. i. p. 93.

He purged his court also in such wise of all vicious rule and *mis-*
ordered customes, that his whole familie was giuen onelie to the ex-
ercise of virtue.
Id. Ib. p. 292.

It was enacted, that all persons above the age of fourteene yeares,
being taken begging, vagrant & wandring *misorderly*, should be ap-
prehended, whipped, and brent through the gristle of the right eare.
Stow. Queen Elizabeth, Anno 1572.

MISOWN, i. e. owning, acknowledging, or avowing,
wrongly, erroneously.

He abiured all articles belonging to the crafte of negromancie or
missowning to the faith, in the presence of the Archb. of Canterbury.
Stow. Henry VI. Anno 1440.

MISPASSION, i. e. wrong passion or feeling.

But I say unto you, that not only the outward act of murder is a
breach of the law, but the inward *mis-passion* of the heart also.

Hall. Hard Texts of Scripture. Matthew, ch. v. ver. 22.

MISPAY, to dissatisfy, discontent, displease. See
APPAY.

Wele I wote alle frayed he went fro þat cite
Vnto Rome *mispayed* to þe pape's se.

R. Brunne, p. 323.

I can not of enueie finde,
That I mispoke haue, ought behynde,
Wherof loue ought be *mispaide*.

Gower. Conf. Am. book ii. p. 48.

MISPEND, i. e. to spend, to dispose of, to disburse,
to distribute, wrongly, improperly, extravagantly; to
waste, to exhaust.

And mucche wo worth hym. þat inwitt *mysspejneþ*.

Piers Plouhman. Vision, p. 175.

Alas how vnhappye was this woful hour,
Wherein is thus *mispended* my seruice,
For mine intent and eke my true labour,
To none effect may come in any wise.

Chaucer. The Lamentation of Mary Magdalen.

For if transported with a base repose,
Thou didst (as thou dost not) *mispend* thy prime,
Or what a fair occasion would'st thou lose,
Which after would thee grieve, though out of time.

Stirling. A Parænesis. To Prince Henry.

If your negligence, your riotous *mis-spence* had empaiied your
estate, then Satan had impoverished you.

Hall. Works, vol. i. fol. 282. *Epistle* 10. dec. 2.

— For the genial moisture, due
To apples, otherwise *mispendis* itself
In barren twigs, and for the expected crop,
Nought but vain shoots and empty leaves abound.

J. Philips. Cider.

MISPERSUA'DE, } i. e. to persuade, advise, so-
MISPERSUA'SION. } licit or prevail upon, wrongly,
erroneously.

Poor seduced souls they were taught it was piety to be cruel; and
were *misperswaded* to hate and condemn us for that, which have
procured their reverence and honour.

Hall. Works, vol. iii. fol. 490. *The Free Prisoner*.

Wherefore sith the world hath had in these men so fresh expe-
rience how dangerous such active errors are, it must not offend
you though touching the sequell of your present *mispersuasions*
much more be doubted, then your owne intents and purposes doe
haply ayme at.

Hooker. Ecclesiasticall Politie. Preface, sig. E. 3.

So that the whole point of sinning, or not sinning, in following
an erroneous conscience, lies here: whether the man that is thus
mispersuaded is to be blamed, or not blamed, for his *mispersuasion*.

Sharp. Works, vol. ii. p. 200. *A Discourse of Conscience*.

MIS-
ORDER.
—
MISPER-
SUADE.

MIS-PLACE. MISPLA'CE, v. } To place, put, or station, wrongly,
 MISPLA'CING. } erroneously; to put in a wrong
 place.

MIS-PRISE. ELB. Proue it before these varlets here; thou honourable man,
 proue it.
 Esc. Doe you heare how he *misplaces*.
Shakspeare. Measure for Measure, fol. 65.

John hath seiz'd Arthur, and it cannot be
 That whiles warme life plays in that infant's veines,
 The *misplac'd* John should entertain an houre,
 One minute, nay one quiet breath of rest.

Id. King John, fol. 13.

The cross falling of a little accident, the omission of a ceremony, or the *misplacing* of a circumstance, may determine all fortunes for ever.
South. Sermons, vol. iv. p. 92.

But, with much general reverence for the opinions of these learned commentators, I am persuaded that the stops have been *misplaced* in the Hebrew manuscripts by the Jewish critics upon the last revision of the text.

Horsley. Sermon 8. vol. i. p. 168.

MISPRINT, *i. e.* to print, to press, to mark, stamp or infix, wrongly, erroneously.

There might have bene some ouersight, either in himself or in the printer, by *misse writing* or by *misse pryntyng* those figures of algorisme.

Sir Thomas More. Workes, fol. 772. The Confutation of Frere Barnes Churche.

MISPRI'SE, or } Fr. *mespriser*, to *misprize*, is
 MESPRI'SE, } literally to *mistake*, and *misprison*,
 MISPRISION. } *sion, mistaking*. By old Statutes Justices have power to amend the *misprison* of clerkes or others in writing one letter or one syllable too much or too little. See Rastal, title *Amendments*. *Pris* is the past participle of the Fr. *prendre*, to take. A *prize* is something taken; and, consequently, valued; to *prize* is, thus, to value, to esteem highly: hence *misprize* is to set a wrong *price* or value upon, to value too little, to disesteem, to disregard, to disrespect, to neglect, to contemn. In English Law, besides the usage above mentioned, *misprisions* and contempts, in certain cases, were and still are considered as terms of equivalent import.

To *misprize*; to mistake, met. to misapprehend, to misunderstand; consequentially, to set a wrong or inadequate price or value upon, to disesteem, &c.

And see APPREHEND, APPRIZE, HAND, &c.

Where they haue hadde occasion to speake of hyghe *mysseprision* or of treason.

Sir Thomas More. Workes, fol. 964. The Debellation of Salem and Byzance.

And eke reward the wretch for his *mesprize*
 As may be worthy of his haynous sin.

Spenser. Faerie Queene, book iii. can. 9.

These cautions were exceeding weighty, if Xerxes's obstinacy had not *misprised* them.

Ralegh. History of the World, book iii. ch. vi. sec. 2.

To pluck his indignation on thy head
 By the *misprising* of a maide too vertuous
 For the contempt of empire.

Shakspeare. All's Well that Ends Well, fol. 241.

It is a foul *misprison* in those men that make account of themselves as their own, and therefore that they are the absolute lords of their life.

Hall. Works, vol. iii. fol. 816. Cases of Conscience, dec. 4. case 10.

See whither *misprison* of scripture may mislead us.

Id. Ib. vol. iii. fol. 864. Id. addit. case 1.

Who, for a few *misprisions* of wit,
 Are charg'd by those who ten times worse commit.

Butler. Upon Critics.

VOL. XXV.

MISPRISION, in Law, is defined, or rather described, by Blackstone as "every such high offence as is under the degree of capital but nearly bordering thereon." The word is derived from the old Law French *mespris*, a Contempt. Misprisions are of two sorts, Negative and Positive. Negative Misprisions consist in concealing something, which the public weal requires to be discovered. Misprision of treason and Misprision of felony are the two principal kinds. If the party assent to the treason or felony, he becomes either a principal or an accessory, but if without consenting he merely conceals the facts which are within his knowledge, he is then only guilty of Misprision. If he conceal high treason, he is liable to forfeit all his goods and chattels, the profits of his lands during life, and to be imprisoned for life; if he conceal a treason not amounting to high treason, he is punishable by fine and imprisonment; if he conceal a felony, he may be imprisoned for any period less than a year and a day, and fined at the discretion of the Court.

The concealment of *treasure trove* is a third sort of negative Misprision. This was once punishable by death, but now only by fine and imprisonment.

Positive Misprisions consist in the performance of some act, and are called *Contempts* and *High Misdemeanours*. They chiefly are Contempts against the King's prerogative, his person, his government, his title, his Palaces and Courts of Justice. For instance, the refusal to aid the King with one's personal service in the time of invasion, the publishing libellous stories of him or his government, the denial of his title to the crown in casual discourse, the striking another within his Palace or Court of Justice, are all Misprisions of a Positive character. The maladministration of a high public office, like that of a Judge, is also termed a Misprision. But the general character of Misprisions is that they are Contempts of the executive Magistrate, demonstrated by some undutiful behaviour towards the King and Government.

MISPROCEEDING, *i. e.* wrong proceeding.

All which errors and *misproceedings* they doe fortify and intrench by an addicted respect to their own opinions, and an impatience to hear contradiction or argument.

Bacon. Works, vol. iii. fol. 145. Of Church Controversies.

MISPROFESS, to profess, to declare, to avow, wrongly.

Keep me back, O Lord, from them who *misprofess* arts of healing the soul, or the body, by means not imprinted by thee in the church, or not in nature for the body.

Donne. Devotions, (1624,) p. 86.

MISPRONOUNCE, *i. e.* to pronounce, speak, utter, or articulate, wrongly, erroneously.

There while they acted, and over-acted, among other young scholars, I was a spectator, they thought themselves gallant men, and I thought them fools; they made sport, and I laugh'd; they *mispronounc'd*, and I mislik'd; and to make up the Atticism, they were out, and I hist.

Milton. Works, vol. i. fol. 110. Apology for Smectymnus.

MISPROUD, *i. e.* proud,—haughty, elated, wrongly, to excess.

And now I fall. Thy tough commixture melts,
 Impairing Henry, strength'ning *misproud* Yorke.

Shakspeare. Henry VI. Third Part, fol. 157.

MISQUEME, *i. e.* (A. S. *quæman*, placere, to queme, to please,) to displease, to offend.

2 E

MIS-PRISE.

MIS-QUEME.

MIS-
QUEME.MISRE-
MEMBER.

But if any man these *misqueme*,
He shal be baighted as a bere.
The Plowman's Tale, part iii. Imputed to Chaucer.

MISQUOTE, *i. e.* to quote or cite, wrongly, erroneously.

Looke how we can, or sad or merrily,
Interpretation will *misquote* our lookes.
Shakspeare. Henry IV. First Part, fol. 70.

[A new form of infidelity] scruples not to pronounce him not merely a man, but a man peccable and fallible in that degree as to have *misquoted* and misapplied the prophecies of the Old Testament.
Horsley. Sermons, vol. i. p. 207.

MISRAISE, *i. e.* raised, roused, or excited, wrongly.

Here we were out of danger of this *misraised* fury, and had leasure to pray for the quenching of those wild fires of contention and causeless malice.

Hall. Works, vol. iii. fol. 490. *The Free Prisoner*, sec. 5.

MISRATE, *i. e.* to rate, to estimate, or esteem, wrongly, erroneously.

There is no way, indeed, wherein we do not thus impose upon ourselves, either assuming false, or *mistrating* true advantages.

Barrow. Works, vol. iii. fol. 317. *Sermon* 29.

MISRECITE, *i. e.* to recite, to repeat, to rehearse, wrongly, erroneously.

I have too frequently found, that the alledgers of testimonies do either, through inadvertency, misapprehend, or *misrecite* the sense of the author they quote.

Boyle. Works, vol. ii. p. 477. *Preface to New Thermometrical Experiments*, &c.

The court will take notice of the true statute, and will reject the *misrecital* as surplusage.

Hale. History of Pleas of the Crown, ch. xxiv. p. 2.

MISRECKON, *D. mis-rekenen; i. e.* to reckon, count, or compute, to calculate, wrongly, erroneously.

But it is a familiar error in Josephus, to *misreckon* times, which in this point he doth so strangely, as if he knew not how at all to cast any account.

Ralegh. History of the World, book ii. ch. xvii. sec. 10.

We use to say that *mis-reckoning* is no payment.
Hall. Works, vol. iii. fol. 862. *Cases of Conscience*, dec. 4. case 10.

His heart *misreckons* him; and therefore when he comes to rectify his account by the measure God takes of things, he finds that in all his fastings and corporal austerities, he has done indeed a great deal of work, but little duty.

South. Sermons, vol. vi. p. 397.

MISREHEARSE, *i. e.* to rehearse, recite, or quote, wrongly, erroneously.

He woulde make you wene here, that I bothe *misrehearse* and misconstrue.

Sir Thomas More. Workes, fol. 1009. *The Debellation of Salem and Byzance*.

MIS-RELIGION, *i. e.* wrong, false Religion.

It is not for nothing that note is made of the countrey of this thankfull leper; he was a Samaritane; the place is knowne and branded with the infamy of a Paganish *mis-religion*.

Hall. Works, vol. ii. fol. 155. *Contemplations. The Ten Lepers*.

MISREMEMBER, (a common word with Boyle,) to remember, to recollect, or call to memory, wrongly, erroneously.

For of trouthe not the pacifier, but my selfe was ouersene in that place wyth a lytle hast, in *misre-membring* one worde of his.

Sir Thomas More. Workes, fol. 1139. *The Aunsweare to the Poysoned Boke*, &c.

That he who twice upon oath with time of recollection could not remember any thing of such a business, might well a third time *misremember* somewhat.

Baker. Charles I. Anno 1641.

Having enquired of an old experienced tradesman, of whom I bought an excellent mortar of lignum vitæ, how long he had kept

the wood in seasoning before I had the mortar, he answered me (if I much *mis-remember* not) twenty years.

Boyle. Works, vol. i. p. 449. *An Essay of the Intestine Motions of the Particles of Quiescent Solids*.

MISRENDER, *i. e.* to render, to restore, to represent, to translate, wrongly, erroneously.

They [the Psalms] must at least be allowed to contain polished and fashionable expressions in their own language, how coarsely soever they have been *mis-rendered* in ours.

Boyle. Works, vol. ii. p. 297. *Touching the Style of Holy Scriptures*.

MISREPORT, *i. e.* to report, to reconvey, to relate, wrongly, erroneously.

For here may a man see y^t misse vnderstanding maketh *misreporting*.

Sir Thomas More. Workes, fol. 238. *A Dialogue concerning Heresies*.

Yf they be such indeed, quod your frende, and that they bee not mistaken or *misreported*.

Id. Ib. p. 249.

The Duke of Gloucester should be declared publickly a loyal subject, and that none should *misreport* or dispute the actions of the Duke of York, or any in his company.

Baker. Henry VI. Anno 1459.

But we are not to be guided in the sense we have of that book, either by the *misreports* of some ancients, or the capricious of one or two neotericks.

Grew. Cosmo Sacra, book iv. ch. i.

MISREPRESENT, *i. e.* to represent, to exhibit, to show, wrongly, or wrongfully, erroneously, or injuriously, or unjustly; to give a wrong, a false account, or statement.

In slavish habit, ill-fitted weedes

O'er worn and soil'd;

Or do my eyes *misrepresent*?

Milton. Samson Agonistes, l. 124.

Nay, if the *misrepresentation* of the object makes the idolatry, certainly by how much the worse, and more scandalous the *misrepresentation* is, by so much the grosser and more intolerable must be the idolatry.

South. Sermons, vol. ii. p. 137.

Notwithstanding the general influence of ridicule on private and civil life, as well as on learning and the sciences, it has been almost constantly neglected or *misrepresented*, by divines especially.

Akenside. Notes to Pleasures of Imagination, book iii. ver. 57.

The Scriptures frequently forbid rash judgments, and censoriousness, and a *misrepresentation* of other men's actions, and hard thoughts concerning them.

Jortin. Dissertation 3. p. 95.

MISREPUTE, *i. e.* to repute, to reckon, to account, to estimate, wrongly, erroneously.

And in so doing let them not doubt but they shall vindicate the *misreputed* honour of God and his great Lawgiver, by suffering him to give his own Laws according to the condition of man's nature best known to him.

Milton. Works, vol. i. fol. 213. *The Doctrine and Discipline of Divorce*.

MISRU'LE, *i. e.* a wrong or unjust rule, or regulation, or government; perversion or destruction of rule; confusion, turbulence, tumult.

For an account of the *Lord of Misrule*, see the *Miscellaneous* notice of CHRISTMAS.

For as earth, so he the world

Built on circumfluous waters calme, in wide

Crystallin ocean, and loud *misrule*

Of chaos far remov'd.

Milton. Paradise Lost, book vii. l. 271.

On Munday, the fourth of January, the said Lord of Merry disports came by water to London, & landed at the Tower Wharfe, entered the Tower, and then rode through Tower streete, where hee was received by Sergeant Vawce, Lorde of *Misrule* to John Mainard, one of the Sherifffes of London.

Stow. Edward VI. Anno 1552.

MISRE-
MEMBER.MIS-
RULE.

MIS-
RULE.
—
MISS.

Shall the controller of proud Nemesis,
In lawlesse rage upbraid each other's vice,
While no man seeketh to reflect the wrong,
And curb the raunge of his *misruly* tongue.
Hall. Satire 1. book vi.

Otherwise we may be sure that their great Master of *Misrule*,
Oliver, would never have commissioned them to serve him in that
post.
South. Sermons, vol. iv. p. 63.

For loud *misrule*, the scourge of crimes,
Mix'd with the madness of the times,
And rous'd a rustic war.
Whitehead. Ode 15. For His Majesty's Birthday, 4th June, 1767.

MISS, *v.* } A. S. *miss-ian*; D. and Ger. *miss-en*.
MISS, *n.* } To want, to feel, see, or perceive, the
MISSING, *n.* } want of; to be wanting or deficient;
to fail, to err, to go wrong, aside, or astray.
And hence, *mis*, in Composition, is used as equivalent
to wrongly, erroneously, wrongfully, injuriously.

In that citty virtue shall never cease,
And felicity no soule shall *mis*se,
Magnifying the name of the Kinge of blisse.
R. Gloucester, p. 584. Appendix.

Euer in joy & blisse, in alle þat þei may do,
þei wene it salle neuer *mis*se, ne oþer dede com to.
R. Brunne, p. 228.

To gyue dome þorgh grace, to mende boþe þer *mys*.
Id. p. 303.

God wol nat lete hym sterue
In *mys*chef for lacke of mete. ne for *mys*singe of cloþes.
Piers Plouhman. Vision, p. 176.

He tourned on his pillowes oft,
And would of that him *miss*ed have ben eased.
Chaucer. Troilus and Creseide, book iii. p. 254.

O rakel hond, to do so foule a *mis*.
Id. The Manciples Tale, v. 17226.

As for the time yet it lesseth
To hym, whiche to other joye *miss*eth.
Gower. Conf. Am. book vi. p. 186.

But for a *mys*, an other *mis*
Was yolde, and so full ofte it is.
Id. Ib. book vi. p. 201.

Whether by fate, or *missing* of the way,
Or that she was by werinesse reteind.
Surrey. Virgil. Æneis, book ii.

For lo! in Heven, whereas all goodnes is
Emongst the angels, a whole legione
Of wicked sprightes did fall from happy bliss;
What wonder, then, if one, of women all did *mis*?
Spenser. Faerie Queene, book iii. can. 9.

The suddain wonder hath not dryed her eyes, nor charmed her
tongue; shee freely confesseth the cause of her grieve to be the
missing of her Saviour.
Hall. Works, vol. ii. fol. 282. Contemplations. The Resurrection.

CAM. Sir, it is three dayes since I saw the Prince; what his hap-
pier affayres may be are to me vnknowne: but I haue (*missingly*)
noted, he is of late much retyred from court.
Shakspeare. Winter's Tale, fol. 290.

Poore Jacke, farewell,
I could haue better spar'd a better man.
O, I should haue a heauy *mis*se of thee,
If I were much in loue with vanity.
Id. Henry IV. First Part, fol. 72.

Like her, who *miss'd* her name in a lampoon,
And griev'd to find herself decay'd so soon.
Dryden. An Essay upon Satire.

Miss, evidently a contraction of *mis-tress*. Evelyn
gives the earliest notice of one application. Perhaps
Miss Prue is contemporary with the first introduction of
the name into a Dramatis Personæ.

In this acted y^e faire and famous comedian, call'd Roxalana, from
y^e part she perform'd; and I think it was the last, she being taken
to be the Earle of Oxford's *mis*se, (as at this time they began to call
lewd women.)
Evelyn. Diary, 9th Jan. 1662.

Miss P. Mother, mother, mother, look you here.
MRS. FORESIGHT. Fie, *miss*, how you bawl!—Besides I have told
you, you must not call me mother.
Congreve. Love for Love, act iii.

Gay vanity, with smiles and kisses,
Was busy 'mongst the maids and *misses*.
Cawthorn. The Temple of Hymen.

Nor deems he wiser him, who gives his noon
To *miss*, the mercer's plague, from shop to shop
Wand'ring and litt'ring with unfolded silks
The polish'd counter, and approving none,
Or promising with smiles to call again.
Cowper. The Task, book vi.

MISSAL, *adj.* } Fr. *messel*; It. *messale*; Sp. *mis-*
MISSAL, *n.* } *sal*; quod summum missæ continet.
Minshew.

The *mass*-book.
Hall, in his *Old Religion*, ch. v. "On the Sacrifice of
the Mass," has a section on "the Newness of the *Mis-*
sal Sacrifice," and another that "the *Missal* Sacrifice is
against Reason."

And see LITURGY, p. 493.

Who would have thought a man could have thwackt together so
many incongruous similitudes, had it not been to defend the motley
incoherence of a patch'd *missal*?
Milton. Works, vol. i. fol. 85. Animadversions upon the Remon-
strants' Defence, &c.

Vertue met with a fine illuminated MS. of this age, a *missal* for
the use of Salisbury.
Walpole. Anecdotes of Painting, vol. i. ch. ii. p. 51.

MISSATE, A. S. *mis-setten*; *i. e.* to set or *sit*, to place
wrong, unfitly, unsuitably. It *missate* her naught; *i. e.*
it *sat* not ill upon her.

For she right there had in present
Unto a lady made present
Of a gold broche, full well wraught,
And certes it *missate* her nought.
Chaucer. The Romant of the Rose, p. 180.

If, therefore, that boundary of suits [an oath] be taken away, or
misset, where shall be the end.
Bacon. Works, vol. ii. p. 554. Judicial Charge.

MISSA'Y, *v.* } D. *mis-segghen*; *i. e.* to say or
MISSA'YER, } speak, wrongly, erroneously; wrong-
MISSA'YING. } fully, injuriously, unjustly.

Ne say nought for none euill will,
Thing that is holden still,
It is no worship to *missaie*,
Thou mayest ensample take of Kaie,
That was sometime for *missayeng*,
Hated both of old and yeng.
Chaucer. The Romant of the Rose, p. 187.

And if that any *missayere*
Despise women, that thou maist here,
Blame him, and bid him hold him still.
Id. Ib.

But, when in vaine to fight she oft assay'd,
She arm'd her tongue, and thought at him to scold:
Nathless her tongue not to her will obey'd,
But brought forth speeches myld when she would have *missayd*.
Spenser. Faerie Queene, book iv. can. 6.

It being the proper scope of this work in hand, not to rip up and
relate the misdoings of his whole life, but to answer only and refute
the *missayings* of his book.
Milton. Eiconoclastes. Preface.

MISSEEK, *i. e.* to seek, search, or look after, wrongly,
erroneously.

MISS.
—
MIS-
SEEK.

MIS-
SEEK.
—
MISSION.

Nor ye set not a dragge net for an hare;
And yet the thing, that most is your desire,
You do misseke, with more travell and care.
Wyat. Of the meane and sure Estate.

MISSE'EM, v. } i. e. to seem, look, or appear,
MISSE'EMING, n. } wrong, ill, unfit, unbecoming.

Sir knight, aread who hath ye thus aray'd,
And eke from whom make ye this hasty flight?
For never knight I saw in such misseeming plight.
Spenser. Faerie Queene, book i. can. 9.

The gentle squire, with faire Serene,
Met her in such misseeming foule array.
Id. Ib. book vi. can. 6.

In which him chaunced false Duessa meete,
Mine onely foe, mine onely deadly dread;
Who with her witchcraft, and misseeming sweete,
Inveigled him to follow her desires unmeete.
Id. Ib. book i. can. 7.

MISSEL-BIRD. See the Quotation, and MISTLETOE.

For certain it is, that some birds do feed upon the berries of this
vegetable, and we meet in Aristotle with one kind of trush called the
missel trush, or feeder upon *misseltoe*.
Sir Thomas Brown. Vulgar Errours, book ii. ch. vi.

MISERVE, i. e. to serve wrongly or wrongfully;
to neglect or violate the due service.

Of that the kynge his god *misserueth*,
The people taketh that he deserueth
Here in this worlde.
Gower. Conf. Am. book vii. p. 237.

You shall inquire whether the good statute be observed, whereby
a man may have what he thinketh he hath, and not be abused or
misserved in that he buys.
Bacon. Works, vol. ii. p. 559. Judicial Charge.

MISSHAPEN, D. *mis-schappen*, i. e. *shapen*, framed
or formed wrong, ill, unsightly; distorted.

per arn mo *misshapene* among suche beggers
Than of meny oþer men þat on þis molde walken.
Piers Plouhman. Vision, p. 156.

Her neather partes *misshapen*, monstrous
Were hidd in water, that I could not see;
But they did seeme more foule and hideous
Than woman's shape men would beleve to bee.
Spenser. Faerie Queene, book i. can. 2.

Else why should this rough thing, who never knew
Manners, nor smooth humanity; whose heats
Are rougher than himselfe, and more *misshapen*,
Thus mildly kneel to me?

Beaumont and Fletcher. The Faithful Shepherdess, act i. sc. 1.

Let not thy heart be hasty to utter any thing before God, that is,
in other words, let it not venture to throw out its crude, extemporary,
sudden and *misshapen* conceptions in the face of infinite perfection.
South. Sermons, vol. ii. p. 97.

O! I could better bear an old,
Ugly, diseas'd, *mis-shapen* scold.
Dorset. The Antiquated Coquet.

The sev'n Geræstians sworn to deeds of hell,
With Lamachus, of foul *misshapen* frame,
Attend the tyrant, spreading to rude storms
His banner fell. *Glover. The Athenaid, book xvi.*

MISSHEATH, i. e. to sheath or encase, wrongly, er-
roneously.

This dagger hath mistaine, for loe his house
Is empty on the backe of Mountague,
And is *misheathed* in my daughter's bosome.
Shakspeare. Romeo and Juliet, fol. 76.

MIS-SING, to sing wrong. See MISVALUE.

MI'SSION, } Fr. *mission*; It. *missione*; Sp.
MI'SSIONARY, } *mission*; Lat. *missio*, from *missus*,
MI'SSIONER, } past participle of *mittere*, to send.
MI'SSILE, } Applied not only to
MI'SSIVE, adj. } The sending; but to the persons
MI'SSIVE, n. } sent, deputed, delegated, to exe-

cute a purpose for which they are sent; to the commis- MISSION.
sion, or that wherewith they are sent; the dismissal or
sending away. MIS-
SPEAK.

His missile weapon was a lying tongue,
Which he far off like swiftest lightning flung.
P. Fletcher. The Purple Island.

He made nevertheless this ordinance; that every twelve years
there should be set forth out of this kingdome, two ships appointed
to several voyages; that in either of these ships, there should be a
mission of three of the fellows, or brethren of Salomon's House.
Bacon. New Atlantis, fol. 17.

And at once
All his great work to come before him set;
How to begin, how to accomplish best
His end of being on earth, and *mission* high.
Milton. Paradise Regained, book ii. l. 114.

Wherefore the *missioners* of France (who are living marks of a
true apostolical succession) seek to establish this practice in all
places where they teach, that persons of all conditions make some
short address to God at the striking of every clock.

Mountague. Devoute Essayes. Treatise 5. part ii. sec. 3.

Offering to them how much this might trench upon the liberty
and safety of the peers, to be in this sort discharged by a letter *mis-*
sive of any subject, without the king's hand.
Baker. Charles I. Anno 1626.

Whiles I stood rapt in the wonder of it, came *missives* from the
king, who all hail'd me Thane of Cawdor.
Shakspeare. Macbeth, fol. 134.

To raise the mast, the missile dart to wing,
And send swift arrows from the bounding string,
Were arts the Gods made grateful to my mind.
Pope. Homer. Odyssey, book xv.

And these the *missioners* our zeal has made.
Dryden. The Hind and the Panther.

Through the transparent region of the skies
Swift as a wish, the *missionary* flies.
Garth. The Dispensary, can. 4. l. 250.

The Trojan weapon whizz'd along in air,
The Cretan saw, and shunn'd the brazen spear;
Sent from an arm so strong, the *missive* wood
Sunk deep in earth, and quiver'd where it stood.
Pope. Homer. Iliad, book xiii.

The arrow is a light *missile* weapon, which in ancient times was
used to annoy the enemy at a distance, and particularly when put to
flight. *Horsley. Sermon 7. vol. 1. p. 125.*

A saying of a zealot in former times has been reported, that
"unarmed *missionaries* make few converts." Yet were the apostles
of our ever blessed Redeemer such *missionaries*; and they converted
the world at a time when the wit and the wisdom, the fashion and
the power of it were all in arms against them.
Horne. Works, vol. v. p. 289. Discourse 19.

MISSPE'AK, } i. e. to speak, to say, to utter, to
MISSPE'ECH. } tell, wrongly, erroneously, wrong-
fully, unjustly.

Now bete thy brest, and say to god of love,
Thy grace, lord, for now I me repent
If I *mispeake*.
Chaucer. Troilus and Creseide, book i. p. 235.

And therfore of detraction
In loue, that I have *mispoke*
Telle howe ye will it shal be wroke.
Gower. Conf. Am. book ii. p. 48.

And then, if that I fynde a lacke
Of any worde, that I *mispake*,
Whiche was to muche in any wise;
Anone my wittes I despise.
Id. Ib. book iii. p. 76.

And otherwise of no *mispeche*
My conscience for to seche,
I cannot of enuie finde,
That I *mispoke* haue ought behynde,
Wherof loue ought be mispaid.
Id. Ib. book ii. p. 48.

MIS-
SPEAK.
—
MIST.

Then as a mother which delights to heare
Her early childe *mis-speake* half utter'd words,
Or, because majestie doth never feare
Ill or bold speech, she audience affords.
Donne. Poems, p. 177.

Shall Lewes haue Blaunch, and Blaunch those provinces.
Is it not so—thou hast *mispoke*, misheard;
Be well aduis'd, tell o'er thy tale againe.
Shakspeare. King John, fol. 8.

MISSUCCESS, *i. e.* wrong or ill success, ill luck.

This is, as some shifting alchymist that casts all the fault of his
mis-success upon his glasse or his furnace.
Hall. Works, vol. iii. fol. 197. Sermon at Whitehall, August 8.

MISSUGGESTION, *i. e.* wrong or ill suggestion,
or intimation.

With so much more indignation must we needs think of these
cheaters, (for so I construe St. Paul's *κωβίται*,) that would fain win
you from us with mere tricks of *missuggestion*.
Hall. A Letter Parænetical.

MIST, *v.* } D. *mist*; A. S. *mist*, *mist-ian*, *cali-*
MIST, *n.* } *gare*, to darken.
MISTY, } That which darkens or dims the
MISTILY, } sight, met. the perceptions; a thick
MISTINESS, } reek or vapour darkening the air.
MISTHEAD. } See the *Essay on METEOROLOGY*,
p. 145, &c.

pow mygt bet mete ye *myst* on Melverne hulles.
Piers Ploukman. Vision, p. 8.

As wey may see a wynter
Isycles in evesynges thorgh hete of þe sonne,
Melteþ in a mynt while to *myst* and to water.
Id. lb. p. 331.

And anon *myist* and derkenesse felden down on him.
Wiclif. The Dedis of Apostlis, ch. xiii.

And immediately there fell on him a *myste* & a darcknes.
Bible. Anno 1551.

For I have sene of a full *misty* morow,
Folowen ful oft a mery somer's day.
Chaucer. Troilus and Creseide, book iii. fol. 259.

These philosopheres speke so *mistily*
In this craft, that man cannot come therby,
For any wit that men have now adayes.
Id. The Chanones Yemannes Tale, v. 16862

What meaneth this, what is this *mistiheed*.
Id. The Complaint of Mars and Venus.

Thus stant this worlde fulfilled of *miste*.
Gower. Conf. Am. book v. p. 137.

Ther was such a *myst*, that a man coude not se y^e length of a
spere before him.

Lord Berners. Froissart. Cronycle, vol. i. ch. lviii. p. 79.

Lend me a looking-glasse,
If that her breath will *mist* or staine the stone,
Why then she lues. *Shakspeare. Lear, fol. 309.*

KING. I blame you not
For hearing this, I must perforce compound
With *mistfull* eyes, or they will issue to.
Id. Henry V. fol. 88.

O my distressed lord, even such our griefs;
Here they're but felt and seen with *mistful* eyes,
But like to groves, being topp'd, they higher rise.
Id. Pericles, act i. sc. 4.

For the *mistiness* scattereth and breaketh suddenly.
Bacon. Natural History, Cent. i. sec. 91.

ROM. Not I.
Vnlesse the breath of hartsicke groanes
Mist-like infold me from the search of eyes.
Shakspeare. Romeo and Juliet, fol. 67.

Blind were those eyes, saw not how bright did shine
Through flesh's *misty* veil those beams divine.
Donne. On Mrs. Boulstred.

The angry billows rear their heads on high,
Dashing aloft the foaming surges fly
And rising, cloud the air with *misty* spray.
Rowe. To the Earl of Godolphin.

Where there is a giddiness in the head, there will always be a *mist*
before the eyes. *South. Sermons, vol. iii. p. 80.*

Dull are slow Ouse's *mist-exhaling* plains,
Where long, rank grass the morning dew retains:
Who pastures there in autumn's humid reign,
His flock from sickness hopes to save in vain.
Scott. Amœbean Eclogues.

The sable ensign of the night
Unfurld by *mist-impelling* Eurus veils
The last red radiance of declining day.
Mason. The English Garden, book iii.

MISTA'KE, *v.* } *i. e.* to take wrongly, errone-
MISTA'KE, *n.* } ously; to take the wrong course,
MISTA'KER, } (or as Mr. Tyrwhitt expresses it,)
MISTA'KING, } "the wrong part; to transgress."
MISTA'KEABLE. } To take, apprehend, accept,

perceive or conceive, wrongly, erroneously; to misap-
prehend, to misunderstand. To be *mistaken* has a two-
fold application:—

1. I am *mistaken*; *i. e.* taken, apprehended, wrongly,
erroneously; I am misapprehended, misunderstood.

2. I am *mistaken*; *i. e.* taken, led, drawn the wrong
course or path, astray; I am misled, misguided, be-
trayed; and, consequentially, I go wrong or astray, I
err, I misapprehend.

& if þe Scottis kyng *mistake* in any braide
Of treson in any þyng, ageyn Henry forsaid.
R. Brunne, p. 138.

Ladies I praye ensample taketh,
Ye that ayenst your loue *mistaketh*;
For if of hir death be you to wite,
God can full well your wile quite.
Chaucer. The Romant of the Rose, p. 182.

And therefore as concerninge myracles, in which your selfe will
agree, that I am not (by any *missetaking* of reason and nature) de-
ceyued.

*Sir Thomas More. Workes, fol. 128. A Dialogue concerning
Heresies.*

For me he did *mistake* that squire to bee;
For never two so like did living creature see.
Spenser. Faerie Queene, book iv. can. 8.

Would it not anger
A stoick, a coward, yea a martyr,
To see a pursuivant come and call
All his clothes, copes, books, primers, and all
His plate, chalices; and *mistake* them away,
And ask a fee for coming?

Donne. Satire 5.

Be sure to be drunke; you'll mis-reckon the better, and be lesse
asham'd on't; but your true tricke, rascall, must be, to be euer
busie, and *mis-take* away the bottles and cannes, in hast, before they
be half drunke off.

Ben Jonson. Bartholomew Fayre, act ii. sc. 2

For either
He never shall find out fit mate, but such
As some misfortune brings him, or *mistake*.
Milton. Paradise Lost, book x. l. 903.

And 'tis indeed a thing not very strange, to be at the difference of
a third part, in so large and collective an account, if we consider
how differently they are set forth in minor and less *mistakable* num-
bers. *Sir Thomas Brown. Vulgar Errours, book vi. ch. i.*

Whiles I thus sincerely pleade for truth, the well meaning igno-
rance of some *mistakers* hath passed as deepe, as unjust censures
upon mee.

*Hall. Works, vol. ii. part ii. fol. 49. An Apologeticall Advertise-
ment to the Reader.*

Tell me thou shadow of S. Peter, Didst thou take these French
Protestants for Malchus, whose eares while thou wouldst have cut
off, thy sword by a light *mistake* glanc't upon their throats?

Id. lb. vol. ii. part ii. fol. 195. To Pope Urban.

MIST.
—
MIS-
TAKE.

MIS-
TAKE.
—
MISTER.

Let us endeavour to advance the common good, that a pious zeal may not draw in confusion; and that we may not *mistakingly* rear up the walls of Babel while we intend Jerusalem.

Hall. Mystery of Godliness. Epistle prefixed.

It is the ennobling office of the understanding, to correct the fallacious and *mistaken* reports of sense, and to assure us that the staff in the water is straight, though our eye would tell us it is crooked.

South. Sermons, vol. ii. p. 56.

So, like the watchful traveller
That by the moon's *mistaken* light did rise,
Lay down again, and clos'd his weary eyes.

Dryden. Astræa Redux.

They [eclipses] may on divers occasions help to settle chronology, and rectify the *mistakes* of Historians that writ many Ages ago.

Ray. Of the Creation, part i. fol. 79.

Men of cold complexions are very apt to *mistake* a want of vigour in their imaginations for a delicacy in their judgments.

Young. On Lyric Poetry.

MISTEACH, A. S. *mis-tæc-an*, i. e. to teach, to instruct, wrongly, erroneously.

Because he that had *misteached* his wife and his children, were vnmete for a great cure.

Sir Thomas More. Workes, fol. 229. A Dialogue concerni Heresies.

And therbi blame the church for *misteaching* the people, as though the church taught theym to put lesse trust in God & in faith of Christ than they should do.

Id. Ib. book iv. ch. xi. fol. 263. Id.

REMONST. Multitudes of people they say distaste it [the Liturgy;] more shame for those that have so *mistaught* them.

Milton. Works, vol. i. fol. 85. Animadversions upon the Remonstrants' Defence.

MISTEMPER, i. e. *tempered*, ordered, regulated, wrongly; disordered, diseased, disturbed, confused.

"Happy was I," (the old queene said,)

"When as a maide vnweade,

Nor husband's weale nor children's woe

Mistempered my head."

Warner. Albion's England, book vii. ch. xxiv.

He customablie vsed to sit at supper till it were verie late in the night, hauing his banketting dishes and cuppes to come in one after another, till he were so *mistempered*, that being laid to sleepe, he would straight vomit, &c.

Holinshed, vol. v. p. 175. The Historie of Scotland.

MISTEP, i. e. to step, or move the foot, to go, wrongly, erroneously.

Where so as euer his loue go,

She shall not with hir litell to

Missteppe, but he seeth it all.

Gower. Conf. Am. book v. p. 127.

MI'STER, } Skinner says, from Fr. *mestier*; It.

MI'STERIE. } *mestiero*; the art or business by which any one supports himself. All, I believe, from the Lat. *mysterium*, because every art or craft, however mean, has its own secrets, which it discloses only to the initiated. Lye traces it from the Dan. *meistari*, a master; and Thomas Warton is of opinion that "*Mystery*, antiently used for a particular art or skill in general, is a specious and easy corruption of *maistry* or *mastery*, the English of the Lat. *magisterium*, or *artificium*; in Fr. *maistrise*, *mestier*, *mestrie*; and in Italian *magisterio*, with the same sense."—*History of English Poetry*, vol. iii. p. 37. Spenser uses the verb: It *mistreth* not; i. e. it needeth not, there is not need or occasion.

From the *mastery* or *skill* in a trade, necessary or needful, it was extended in its application to

The trade or occupation, art or craft; and further to Need, necessity.

Respons þei gaf hem þere, "þei were men of *mistere*."

R. Brunne, p. 169.

MISTER.
—
MISTION.

But telleth me what *mistere* man ye ben,
That ben so hardy for to fighten here
Withouten any juge, other officere,
As though it were in listes really.

Chaucer. The Knightes Tale, v. 1712.

In youth he lerned hadde a good *mistere*,
He was a wel good wright, a carpentere.

Id. Ib. v. 615.

He of meat hath no *mistere*.

Id. The Romant of the Rose, v. 5614.

Of hem that ben artificers,
Whiche vsen craftes and *misters*,
Whose arte is cleped mechanike.

Gower. Conf. Am. book vii. p. 217.

The redcrosse knight toward him crossed fast,
To weet what *mister* wight was so dismay'd.

Spenser. Faerie Queene, book i. can. 9.

Ne wone what *mister* maladie it is,
Whereby to seeke some means it to appease.

Id. Ib. book iv. can. 12.

As for my name, it *mistreth* not to tell;
Call me the squire of dames, that me beseemeth well.

Id. Ib. book iii. can. 7.

Shame light on him, that through so false abusion
Doth turn the name of souldiers to abusion,
And that, which is the noblest *mysterie*,
Brings to reproach and common infamy.

Id. Mother Hubberd's Tale.

I bidde thee teach hem, wost thou how?

By some generall signe now,

In what place thou shalt founden be,

If that men had *mister* of thee.

Id. Ib. v. 6078.

MISTERM, i. e. *termed*, named, called, wrongly, erroneously.

Hence banished, is banisht from the world,
The world's exile is death. Then banished,
Is death *mistearmed*.

Shakspeare. Romeo and Juliet, fol. 67.

MISTHINK, to think wrongly or erroneously; to have wrong thoughts or ideas or notions.

Whan they *misthinke*, they lightly let it passe.

Chaucer. The Court of Loue, p. 370.

Had she persever'd just, there would have been
Some that would sin, *misthinking* she did sin.

Donne. Funeral Elegies. On Mrs. Boulstred.

But I with better reason him aviz'd,

And shew'd him, how, through error and *misthought*

Of our like persons each to be disguiz'd,

Or his exchange or freedom might be wrought.

Spenser. Faerie Queene, book iv. can. 8.

Thoughts, which how found they harbour in thy brest,
Adam, *misthought* of her to thee so dear?

Milton. Paradise Lost, book ix. l. 289

MISTHROW, i. e. to throw or cast, wrongly, erroneously.

Tell me therfore if it be so

Hast thou thýne eie ought *misthrowe*?

Gower. Conf. Am. book i. p. 21.

MISTIDE, A. S. *mis-tidan*, i. e. to tide, to come to pass, to chance or happen, wrongly, unfortunately.

He that hath over hard an hirte, atte laste he shal mishappe and *mistide*.

Chaucer. The Tale of Melibeus, p. 118.

Nowe it is no doubt than, that these wayes ne ben a maner *mistidinges* to blisfulnes: *ad beatitudinem viæ devixæ quædam sint.*

Id. Boecius, book iii. p. 427.

MISTION, Fr. *mistion*, mixture. See MIX.

Unless his [Aristotle] opinion be admitted, there would be no true and perfect *mistion*, but only aggregates or heaps of contiguous corpuscles.

Boyle. Works, vol. i. p. 504. The Sceptical Chymist.

MISTLE-
TOE.MI'STLETOE, or } Junius writes it also *misselden*,
MI'SSLETOE. } and Skinner *missendine*; the lat-

ter, with Wachter, derives *mistel* from Ger. *mist*, (A. S. *mixen*,) dung; (see the Quotation from Pliny;) and *ta*, or *toe*, that part of the foot by which the bird is caught with the *viscus* or bird lime.

The trivial name of the *Viscum* of Linnæus.

Moreover, set or sow this *misselto* which way soever you will, it will never take and grow: it commeth onely by the mewting of birds, especially of the stockdove or quois, and the blackbird, which feed thereupon, and let it passe through their bodie. And this is the nature of it, unlesse it bee mortified, altered and digested in the stomacke and belly of birds it will never grow.

Holland. *Plinie*, book xvi. ch. xlv.

The fearless British priests under an aged oak
Taking a milk white bull unstained with the yoke,
And with an ax of gold, from that Jove-sacred tree
The *mistleto* cut down.

Drayton. *Poly-olbion*, song 9.

That *viscus arboreus* or *mistletoe* is bred upon trees from seeds which birds, especially thrushes and ring-doves, let fall thereon, was the creed of the ancients, and is still believed among us; is the account of its production, set down by Pliny, delivered by Virgil, and subscribed by many more.

Sir Thomas Brown. *Vulgar Errours*, book ii. ch. vi.

There, where the spreading consecrated boughs,
Fed the sage *mistleto*, the holy Druids
Lay rapt in moral musings.

Mason. *Elfrida*.

Pliny.

Pliny, like Virgil and many later authorities who ought to have known better, plainly considers the MISTLETOE to be a production *quod non sua seminat arbor*. In connection with the passage above cited, he adds, that in some sort Mistletoe kills trees; that there are three kinds of it; 1st, that engendered on the Fir and Larch, called *Stelis* in Eubœa and *Hyphear* in Arcadia. 2dly, That found on "the common Oke, the wild Robur, the Holme, wild Plumtree, and the Terebinth, and not lightly upon other trees. Howbeit in greatest plentie it is seen upon the Oke, and that is named *Dryos Hyphear*." 3dly, That which grows on evergreens, itself also being evergreen. But what Mistletoe, we may ask, is deciduous? He then states, as follows, almost all that we know with certainty concerning its employment by the Druids. "And forasmuch as wee are entred into a discourse as touching *Misselto*, I cannot overpasse one strange thing thereof used in France. The Druidæ (for so they call their Divinours, Wise Men, and the State of their Clergie) esteeme nothing in the world more sacred than *Misselto* and the tree whereupon it breedeth, so it be on Oke. Now this you must take by the way. These Priests or Clergiemen chose of purpose such groues for their divine Service, as stood only upon Okes; nay they solemnize no sacrifice nor perform any sacred ceremonies without branches and leaves thereof, so as they may seem to be well enough named thereupon *Dryidæ* in Greeke, which signifieth as much as the Oke Priests. Certes, to say a truth, whatsoever they find growing upon that tree over and besides its owne fruit, be it *Misselto* or any thing else, they esteeme it as a gift sent from Heaven, and a sure signe by which that very God whome they serve giveth them to understand, that he hath chosen that peculiar tree. And no marveile, for in very deed *Misselto* is passing geason, (scarce,) and hard to be found upon the Oke; but when they meet with it, they gather it very devoutly and with many ceremonies; for first and foremost, they observe principally, that the moon be just six daies old, (for upon that day they begin their moneths and new

Mistletoe
employed
by the
Druids.

yeares, yea and their severall ages, which have their revolutions every thirtie yeares,) because shee is thought then to be of great power and force sufficient, and is yet not come to her halfe light and the end of her first quarter. They call it in their language All-Heale, (*omnia sanans*,) (for they have an opinion of it that it cureth all maladies whatsoever,) and when they are about to gather it, after they have well and duly prepared their sacrifices and festivall cheare under the said tree, they bring thither two young bullocks milke white, such as never yet drew in yoke at plough or waine, and whose heads were then, and not before, bound by the horne: which done, the Priest, arrayed in a surplesse or white vesture, climbeth up into the tree, and with a golden hook or bill cutteth it off, and they beneath receive it in a white souldiour's cassocke or coat of armes: then fall they to kill the beastes aforesaid for sacrifice, mumbling many oraisons and praying devoutly. That it would please God to blesse this gift of his to the good and benefit of all those to whome he had vouchsafed to give it. Now this persuasion they have of *Misselto* thus gathered, That what living creature soever (otherwise barraine) do drinke of it, will presently become fruitfull therupon; also that it is a sovereign countrepoinson or singular remedie against all vermine. So vain and superstitious are many nations in the world, and oftentimes in such frivolous and foolish things as these."

The Druidical veneration for the Mistletoe is affirmed by Vallancy in his *Grammar of the Irish Language* to be connected with a reverence for the number three, upon which part of their obscure Creed many whimsical fancies have been rested. Not only the berries of the Mistletoe, but its leaves also, says the above-named writer, grow in clusters of three united to one stock.

The Celtic name for the oak was *gue* or *guy*, still retained for the Mistletoe in French; and we are told by Borlase, (*Ant. of Cornwall*, 91.) that as the end of the year approached, the Druids solemnly gathered the Mistletoe, saying, "the New year is at hand gather the *Miseltoe*," whence in parts of France the peasant boys still go about asking largesse, and crying *A guy, l'an neuf*. Almost all the writers who have touched upon the Druidical Mistletoe, and its connection with the New year, cite *unâ voce*, one after the other, a line which they attribute to Ovid,

Use of Mis-
tletoe at the
approach of
a New year.

At "*Viscum*," Druidæ, "*Viscum*!" cantare solebant;
or,

"Ad *Viscum*, Druides," Druides clamare solebant,

as Keysler writes it, adding with great truth, *Ausim tamen affirmare, Poetam hunc nunquam de eo versu cogitasse: atque, non nisi nimia oscitantia Autorum alios incogitanter exscribentium, versum Ovidio tribui nullibi in operibus ejus legendum.* (*Antiq. selectæ Septentrionales*, 306.) In the upper part of Germany, continues the same writer, wherein many Heathen customs abound, the common people, about Christmas time, run about the villages striking doors and windows with hammers, and shouting *Guthyl, Guthyl!* words which do not bear any reference to *Güt heyl, bona salus*, or to a fictitious Saint Günthilde, but are plainly the Druidical name of Mistletoe used by Pliny, when he calls it *omnia sanans*, or by Holland in his *All heal*. The people of Holstein name Mistletoe *Marentaken*, or the branch of *Spectres*, and regard it, especially if found on an oak, as a panacea for green wounds, and a sure charm to procure success in hunting.

MISTLE-
TOE.

MISTLE-
TOE.Mystical
explana-
tions.

The egregious folly into which the monomania of allegorical interpretation betrays its puzzle-pated votaries, has never been more strongly exemplified than in an instance which Keysler appends to his remarks on Mistletoe, and which we shall present in his own words. *Magis etiam insanit Seb. Rouillard, l. c. p. 51. qui Christum Cruci affixum eo indigitatum nugatur. Quemadmodum enim Viscum alieno arbori infixum brumali tempore legatur, candidâ veste excipiendum, fructuumque suavitate aves alliciat; ita Christum tempore Solstitii hyemalis natum, postea vili alienoque ligno adfixum, inde autem sublatum et albis linteis involutum, suâ sepulturâ et resurrectione omnes animos esurientes ad se pertrahere. Neque aliâ ex ratione quam odio erga Christianos Plinium suspicatur omisisse nomen Visci Panchreston, ejusque loco omnia sanans substitu-isse. (316.)* In a similar strain one Francis Meinard, a Frisian, spoke an Oration in the University of Poitiers, in 1609, to prove that Mistletoe adumbrated Jurisprudence. The following are among the parallels:

<i>Viscum e cælo demissum creditur.</i>	<i>Lex cælo demissa.</i>
<i>Viscum tempore hiemali matur- rescit.</i>	<i>Veteres hiemali tempore judicii vacabant.</i>
<i>Auræ falce demetitur.</i>	<i>Auræ falx stipendii sive hono- rarii Professorii significationem habet.</i>
<i>Viscum prodest contra omnia ve- nera.</i>	<i>Jurisprudentia prodest contra fraudem, dolum, furta, rapi- nas, latrocinia, adulteria, &c.</i>

Quæ quam frivola sint nemo non perspicit.

Julius
Cæsar
Scaliger.

Julius Cæsar Scaliger has written largely upon Mistletoe in his Commentaries on Theophrastus. In his *Exoticæ Exercitationes de Subtilitate*, addressed to Cardan, he maintains that it is an exudation from those Trees upon which it is found, *quasi cornua ex ossibus animalium*, an opinion which he supports by a *Griphus* of the Poet Ion, preserved by Athenæus.

δρῦς μὲν ἰδρῶς,
καὶ θαμνομήκης ῥάβδος, ἥ τ' Αἰγυπτίῳ
βόσκῃ λίνωλος χλαῖνα, θήραρος πίδα.

Lib. x. c. 19.

the sweat of oaks,
And a long withy rod afford me food,
And Egypt's flaxen cloak, fit toil for game.

By which the ingenious riddler means to state obscurely, that he limed twigs for birds, angled for fish, and spread nets for beasts.

Used in
Churches.

Stukeley, who published his *Medallic History of Carausius* in 1757—9, informs us that the veneration for Mistletoe is not peculiar to Druidism. "The custom is still preserved in the North, and was till lately at York. On the Eve of Christmas day they carry Mistletoe to the High Altar of the Cathedral, and proclaim a public and universal liberty, pardon, and freedom to all sorts of inferior and even wicked people at the gate of the City towards the four quarters of Heaven." (Book ii. p. 163.) We wish Stukeley had been more precise in stating what time he meant by "lately." Surely so profane a mummary as that which he describes above is not likely to have been practised since the Reformation. This abuse of the harmless Mistletoe, however, has sadly scandalized Brand, who would altogether exclude the unoffending plant, from ranking in company with "the bright Holly and Laurel green," to which Gay assigns it as a Christmas ornament for our Churches. "I am of opinion," says the Orthodox Antiquary, "although Gay mentions the Mistletoe among those evergreens that

To the
great horror
of Brand.

were put up in Churches, it never entered those sacred edifices but by mistake, or ignorance of the Sextons; for it was a heathenish and profane plant, as having been of such distinction in the Pagan rites of Druidism, and it therefore had its place assigned it in Kitchens, where it was hung up in great state with its white berries, and whatever female chanced to stand under it, the young man present either had a right, or claimed one, of saluting her, and plucking off a berry at each kiss. I have made many diligent enquiries after the truth of this. I learnt at Bath that it never came into Churches there. An old Sexton at Teddington in Middlesex informed me that some Mistletoe was once put up in the Church there, but was by the Clergyman immediately ordered to be taken away." (*Pop. Ant.* i. 408.)

The Scandinavians, no less than the Gauls, attributed a divine power to the Mistletoe; as may be seen from the following singularly wild legend, forming the 28th Fable of the *Edda*. "The dream which Balder had one night was something still more remarkable. This God thought that his life was in extreme danger: wherefore telling his dream to the other Gods, they agreed to conjure away all the dangers with which Balder was threatened. Then Frigga exacted an oath of Fire, Water, Iron, and other metals, as also of Stones, Earth, Trees, Animals, Birds, Diseases, Poison, and Worms, that none of them would do any hurt to Balder. This done, the Gods, together with Balder himself, fell to diverting themselves in their grand Assembly, and Balder stood as a mark at which they threw, some of them darts, and some stones, while others struck at him with a sword. But whatever they could do none of them could hurt him; which was considered as a great honour to Balder. In the mean time Loke, moved with envy, changed his shape into that of a strange old woman, and went to the palace of Frigga. That Goddess seeing her, asked if she knew what the Gods were at present employed about in their Assembly? The pretended old woman answered that the Gods were throwing darts and stones at Balder without being able to hurt him. Yes, said Frigga, and no sort of arms whether made of metal or wood can prove mortal to him, for I have exacted an oath from them all. What, said the woman, have all substances sworn then to do the same honour to Balder? There is only one little shrub, replied Frigga, which grows on the Western side of Valhall, and its name is Missilteen, (the Mistletoe,) of this I took no oath because it seemed to me too young and feeble. As soon as Loke heard this he vanished; and resuming his natural shape, went to pluck up the shrub by the roots, and then repaired to the Assembly of the Gods. There he found Hoder standing apart by himself without partaking of the sport, because he was blind. Loke came to him and asked him why he did not also throw something at Balder as well as the rest? Because I am blind said the other and have nothing to throw with. Come then, says Loke, do like the rest, show honour to Balder by tossing this little trifle at him, and I will direct your arm towards the place where he stands. Then Hoder took the Mistletoe, and Loke guiding his hand, he darted it at Balder, who pierced through and through fell down devoid of life; and surely never was seen either among Gods or men a crime more shocking or atrocious than this."

Sir John Colbatch, a Physician in the reign of George I., who published in 1719 a *Dissertation concerning Mistletoe*, recommending it as a specific in epilepsy,

Sir John
Colbatch.MISTLE-
TOE.Mistletoe in
Kitchens.Legend of
Balder from
the Edda.

MISTLE-TOE. gives the following account of that plant's production. "As far as I can learn, Mistletoe is commonly propagated after the following manner: There is a Bird generally known by the name of the Mistletoe Thrush, which name I suppose it derives from its feeding upon Mistletoe berries during the winter season. From the pulp of the berries it is nourished, but the seeds are discharged with the excrement undigested. Now the excrement being of a slimy nature, sticks fast to the branches of the trees upon which it falls, and if there be any crack in the bark, there the seed lodges itself and produces a plant the next year. The excrement being of the nature of birdlime, and birdlime, as it's said, being to be made of the berries of the plant, I suppose gave rise to that old saying, that *Turdus cacat in sui excrementum*. It has been often propagated by cutting a slit into the bark of a tree and sticking in a seed." (7.)

Mr. Borrel's explanation. Another explanation of the manner of growth of this Plant, is given in a Paper in the *Philosophical Transactions* for 1727, by the Rev. Edmond Borrel. That gentleman frequently endeavoured, without success, to graft Mistletoe berries in gashes in the upright sides of trees, for the seed always slipped out and adhered to the bark by its gluten. At length one seed fastened on the bare bark without any cutting, and in February gratified his wishes. "The viscous matter having stuck the seed on, and (as it dried) drawn the seed close and flat down to the bark of the tree, there began, in March and April, to spring out of that end of the seed which had been toward the eye of the berry, a small deep green shoot or twigg, very like a short piece of a little clasper of the vine. At first it arose upward from the bark, and then turning again, as it approached the tree, it swelled out somewhat bigger round about the end; yet leaving the very top or bottom quite flat, forming (as it were) a foot to stand upon; not unlike the bottom of some brass pestles. This foot when it came to the bark, which was about May or June, 1719, fixed itself thereon. Being thus fastened at both ends, it made a little arch, whose diameter was as long as the seed, or about $\frac{1}{10}$ th of an inch.

"In this condition it remained all that year, till about March or April, 1720, and then that part or end of our little seedling which was joyned to the bark, at the place where the seed first shot forth, let go its hold, and raising itself upwards, put forth leaves, and became the head of the plant: and at the other end, which sprung out first and had taken footing in another place, became the root of the plant.

"The strangest and most wonderful part is that the rooting end should first make its shoot in the open air, and then turn itself down to find a proper place to fix upon. Who could have supposed that a plant, whose berry is the most orbicular of any, and therefore the least likely to lie quiet in any situation, and whose proper place of growth is a round and wavering bough, or upright side of a tree, should, after it is once fixed, leave its first footing, and seek out a new point in the bark to grow upon.

"This is indeed the great secret of the matter, and seems to be the very thing that hath kept the world in ignorance about the growing of this seed. For by requiring a new smooth place of the bark whereon to fix the rooting part, it hath frustrated all attempts of sowing it in the usual way of other seeds."

It must be confessed that the above account of the growth of this remarkable plant is scarcely less marvel-

VOL. XXV.

lous than the ancient fable of its spontaneous generation; and so far as we know, Mr. Borrel's statement has not been noticed by any subsequent writer. It no doubt explains one of the greatest difficulties, the germination from the *under* part of a branch, in which position it is not possible that a falling seed could ever adhere. More concerning Mistletoe may be found in Martyn's Translation of the *History of Plants growing about Paris*, by Tournefort, ii. 348. and also in the *Voyage du Levant* of the last-named writer, *Lett.* xxi. vol. ii. p. 441.

MISTRRAIN, *i. e.* to *train*, draw, or lead, wrongly, erroneously.

Hoping thereby to have my love obtayned:
Yet can I not my love have nathë more;
For she by force is still fro me detayned,
And with corruptfull bribes is to untruth *mystrayned*.
Spenser. Faerie Queene, book v. can. 11.

MISTRANSLATE, *i. e.* to *translate*, bear, or convey, (the meaning,) wrongly; to interpret wrongly, erroneously.

It is more infidelitie to doe as Tyndall hath done, purposely *mysse-
trāslate* Christes holye gospell, to set furth heresies as euell as the Alchorane.

Sir Thomas More. Workes, fol. 340. *The First Part of the Confutation of Tyndall*.

There is an holy and decent modesty in all those which are worthy to serve at the altar, which teacheth them to give God his due times, with respect even of outward purity; which is all that Eusebius, by them *misse-translated*, and miss-alleged by him, requireth.

Hall. Works, vol. i. fol. 715. *The Honour of the Married Clergie*, book i. sec. 25.

MISTRANSPORTED, *i. e.* *transported*, carried, borne across, or away, (from one's self, or self-government,) wrongly, erroneously.

And can ye then with patience think that any ingenuous christian should be so farre *mis-transported* as to condemn a good prayer because as it is in his heart, so it is in his book too.

Hall. Works, vol. iii. fol. 203. *An Humble Remonstrance*.

MISTREADINGS, *D. mis-treden; i. e. treadings*, goings, wrong; misgoings.

But thou do'st in thy passages of life,
Make me belieue, that thou art onely mark'd
For the hot vengeance, and rod of heauen
To punish my *mistreadings*.

Shakspeare. Henry IV. First Part, fol. 62.

MI'STRESS, *v.*

MI'STRESS, *n.*

MI'STRESS-SHIP.

Anciently written *Maistress*, *q. v.*

As if their day were only to be spent
In dressing, *mistressing*, and compliment.

Donne. To Mr. Tilman.

Wonder not, sovrā *mistress*, if perhaps
Thou canst, who art sole wonder, much less arm
Thy looks, the heav'n of mildnes, with disdain,
Displeas'd that I approach thee thus, and gaze
Insatiate.

Milton. Paradise Lost, book ix. l. 532.

I know, this quest of yours, and free intent
Was all in honour and devotion meant
To the great *mistress* of yon princely shrine,
Whom with low reverence I adore as mine.

Id. Arcades, l. 36.

If any of them shall usurp a *mistress-ship* over the rest, or make herself a queen over them, and make them subjects and slaves to her; or a mother-hood to the rest, otherwise than in a priority and aid of conversation, and make them but daughters and punies to her: she shall be guilty of high arrogance and presumption against Christ and his dear spouse the church.

Hall. Resolutions for Religion.

WOMAN.

MITCH.

MIT-
CHELIA.
—
MITHRI-
DATE.

MITCHELIA, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*. Generic character : flowers in pairs on the same germen ; calyx four-toothed ; corolla funnel-shaped, tube cylindrical, border four-parted ; stigma four-cleft ; berry four-seeded.

One species, *M. repens*, native of North America.

MITE, Fr. *mite* ; D. *miite* ; contracted from the Lat. *minutum*. Cotgrave calls it
The smallest of coins.

And as much mede for a myte þat he offref
Ac þe riche man for al is moneye.

Piers Plouhman. Vision, p. 220.

But whanne a pore widowe was coman she keste tweie *mynutis*
(*minuta duo*) that is a farthing. *Wiclif. Mark, ch. xii.*

And there was a certayne poore widowe, and she threwe in two
mytes, whiche make a farthyng. *Bible, Anno 1551.*

MITE, A. S. *matha*, *mite* ; Fr. *mite* ; Ger. *made*,
matte, *motte* ; D. *maede*, *miite*. Wachter thinks from
Ger. *mæhen*, A. S. *maw-an*, *secare*, to cut ; (sc. with
the teeth ;) it is perhaps from the A. S. *met-ian*, to
eat. See **MOTH**.

The trivial name of the *Acarus* of Linnæus.

Thise wormes ne thise mothes ne thise *mites*
Upon my paraille frett hem never a del,
And wost thou why for they were used wel.

Chaucer. The Wif of Bathes Prologue, v. 6142.

Virginitie breedes *mites* much like a cheese.

Shakspeare. All's Well that Ends Well, fol. 231.

That cheese of itself breeds *mites* or maggots, I deny, and look
upon it as a great error and mistake ; and do affirm that all such
creatures are bred of eggs laid in such sordid places by some wan-
dering *mite* or maggot.

Ray. Of the Creation, part ii. p. 356.

For life is so high a perfection of being, that in this respect the
least fly or *mite* is a more noble being than a star.

South. Sermons, vol. iii. p. 394.

MITELLA, in *Botany*, a genus of the class *Decan-
dria*, order *Digynia*, natural order *Saxifragæ*. Generic
character : calyx five-cleft ; corolla, petals five, inserted
into the calyx, feathered, capsule one-celled, two-valved,
valves equal.

Four species, natives of the North of Asia and North
America.

MITHRIDATE, antidotes or counterpoisons ; also
a plant, so called from Mithridates.

Cratevas hath ascribed the invention of one hearbe to King
Mithridates himselfe called after his name *Mithridation*.

Holland. Plinie, book xxv. ch. vi.

But as in *mithridate* or just perfumes,
Where all good things being met, no one presumes
To govern, or to triumph on the rest.

Donne. Of the Progress of the Soul. The Second Anniversary.

Were it not strange, a physician should decline exhibiting of
mithridate, because it was a known medicine, and famous for its
cures many ages since ?

*Boyle. Works, vol. ii. p. 288. Touching the Style of the Holy
Scriptures.*

Pliny.

Pliny has given a full history of **MITHRIDATE**, which
we shall transcribe as usual in the words of Holland.
Before the times of M. Cato and Valgius, he says, "the
onely man among our Latines (as far as ever I could
find) who wrote of simples was Pompeius Lenæus, the
vassall or freedman of Pompey the Great. And this
was the first time that the knowledge of this kind of
Learning was set on foot and professed at Rome. For
Mithridates (the most mightie and puissant King in
that Age, whose fortune notwithstanding was to be van-

quished and subdued by Pompey) was well knowne
unto the world, not only by the fame that went of him,
but also by good prooffe and evident arguments, to have
been of all other before his time a Prince most addicted
to the publicke benefit of all mankind : for the only man
he was who devised to drinke poison every day, (having
taken his preservative before,) to the end that by the
ordinarie use and continuall custome thereof, it might
be familiar unto his nature, and harmless. The first
he was also who devised sundrie kinds of antidots or
contrepoisons, wherof one reteineth his name to this
day. He it was also, and none but he, (as men thinke,)
who first mingled in the said antidots and preservatives,
the blood of ducks bred in his own realm of Pontus, for
that they fed and lived there of poisons and venomous
hearbs. This noble Prince (among many other singular
gifts that hee had testifying his magnanimitie and in-
comparable wit) addicted himself particularly to the
earnest studie of Physicke ; and because he would be
exquisite and singular therein he had intelligence from
all parts of his dominions, (and those tooke up no
small part of the whole world,) who upon their know-
ledge exhibited unto him the particular natures and pro-
perties of every simple. By which means, hee had a
cabinet full of an infinit number of receipts and secrets set
down together with their operations and effects, which he
kept in his said closet, and left behind him with other rich
treasure of his. But Pompey the Great having under his
hands the whole spoile of this mightie Prince, and meet-
ing in that saccage with those notes above said, gave
commandement unto his vassall or enfranchised servant,
the above-named Lenæus, (an excellent Linguist and
most learned Grammarian,) to translate the same into
the Latine Tongue : for which act of Pompey the whole
World was no lesse beholden unto him than the Com-
mon-wealth of Rome for the foresaid victorie." (Book xxv.
ch. ii.)

Whether the poison which Mithridates took after his
fall was too weak to destroy him, or whether his use
of antidotes really enabled him to resist its effects, may
be a matter of doubt, but a general belief seems to have
prevailed that he possessed a certain alexipharmic.
How little is known respecting its composition, and
with how great readiness credulity supplied the place
of knowledge, will be seen from some of the following
statements, which we borrow from modern writers on the
subject.

Nicolas Houel, a Parisian Apothecary, published in 1573 a *Traité de la Theriaque et Mithridat* in two Books. From his dedication to Charles IX. this writer appears to have wanted practice, and to have hoped for the appointment of State Chemist to the benevolent King whom he selected as his Patron. He would have consulted his own interests better, perhaps, by instructing Charles in the composition of secret poisons rather than in that of antidotes. *A la mienne volonté*, he writes, *qu'à l'exemple et imitation de ces braves Roys et Empe-
reurs il pleust à vostre Majesté faire dispêcher en vostre
ville de Paris, ces tant célèbres Antidotes de la Theriaque
et Mithridat, lesquels serviroient grandement à éterniser
la memoyre de vostre Majesté, et d'ailleurs cela appor-
teroit un profit inestimable à vostre personne, et à vos
subjects : et pour ce faire choisir des hommes de bon
entendement, bien versez en la Pharmacie et congnois-
sance des Plantes, et libéralement survenir aux frays
qu'ils cōuiendroient faire, &c.*

It would be unjust to the Sieur Houel's memory if

MITHRI-
DATE.

Nicolas
Houel.
A. D.
1573.

MITHRIDATE. we omitted to extract one stanza from a commendatory Ode *par C. P. P.* prefixed to his volume. After declaring that his friend is not a whit inferior to Æsculapius and Apollo, whose Medico-Botanical researches obtained them the reputation of Gods, the Poet adds,

*La Theriaque et Methridat
Pleins d'une vertu singulière,
Convienent bien à ton estat,
Salubre estat d'appoticaire.*

Our present business, however, is with Mithridate only, which is far more ancient than Theriaca. Mithridates, in the eyes of the French Apothecary, was one of the greatest and most magnanimous Kings in the world, not on account of those qualities which are usually reputed worthy of a Crown, but because *il avoit cela de particulier qu'il s'adonoit fort à la Medecine*. It was Andromachus, the Physician of Nero, who many years afterwards composed Theriaca, by certain deviations from the prescription of Mithridates, and especially by the addition of a great quantity of viper's flesh, whence indeed the name, from the Greek *θηρίον*, a venomous beast. For Mithridate there are countless receipts. That given by Nicolaus Præpositus, which contains 108 simples, is declared by Houel to be naught; and he prefers the following less complicated formula, which indeed seems most generally received, transmitted to us by Galen (*de Antidotis*, ii. 2.) from Andromachus and Damocrates, by the latter of whom it was done into Greek Iambics.

Galen's
Receipt for
Mithridate.

R. *Acori*,
 Phu pontici,
 Hyperici,
 Acaciæ,
 Gummi,
 Scinci drach. duas, obolos duos.
 Anisi drach. tres.
 Folii nardi Indicæ et Celticæ,
 Rosarum siccarum,
 Fœniculi seminis,
 Mei Athamantici,
 Cardamomi,
 Gentianæ,
 Opii drach. quatuor, obolos duos.
 Petroselinî drach. quatuor, ob. tres.
 Cassiæ nigræ et veræ,
 Polii,
 Seseleos, Costi,
 Gallii drach. quinque, obo. tres: alii drach. sex.
 Styracis drach. quinque, obo. quatuor.
 Myrrhæ,
 Castorii,
 Thuris,
 Hypocistidis succi,
 Spicæ nardi,
 Opopanax,
 Schæmianthos,
 Resinæ Terebenthinæ,
 Scordii et CYPHEOS,
 Dauci seminis drach. sex, obolos tres.
 Opobalsami,
 Thlaspeos,
 Galbani drach. septem.
 Croci,
 Cinnamomi,
 Zingiberis,
 Glycyrrhizæ drach. septem et dimid. et obolos quatuor.
 *Vini Chii quod satis sit.**

* A pleasantly indefinite allowance. Indeed a bon vivant would

Mellis Attici cocti quantum sufficit.
It must not be dissembled, however, that even in the above comparatively simple receipt, one ingredient, *Cypheus*, itself is framed from not less than fourteen elements, as below:

R. *Uvæ passæ, pinguissimæ*
 (a quâ cortex ac semen
 totum sint exempta)
 carnis levigatæ probè,
 Therebēthinæ repurgatæ,
 Myrrhæ,
 Scæmianthos,
 Cinnamomi drach. 4.
 Bdellii lachrymæ,
 Spicæ nardi,
 Cassiæ bonæ et puræ,
 Cypary,
 Baccarum juniperi grandium et
 pinguium,
 Calami odorati,
 Aspalathi drach. duas et dimidium.
 Croci drach. 1.
 Mellis et vini modus sit mediocris.

This Cypheus is said to have been the perfume ordinarily used by the Priests of Egypt in their Religious services.

A much more elaborate Work than that of Houel on the same subject appeared at Jena in 1620, under the title of *ΜΙΘΡΙΔΑΤΕΙΟΤΕΧΝΙΑ*, embracing the *Collectanea* of Mutoni, enlarged and illustrated by Dr. Doringius, a Physician of Breslau, who, (alas, for medical fame!) appears to have been entirely ignorant that the *Sieur Houel* had ever existed. *De Mithridatio*, he remarks in his Dedication, *qui aliquid hactenus in publicum emisit præter Mutionum et Marantum mihi visus est nemo*. Of the two writers here named, Mutoni was the elder, and indeed ought, in chronological strictness, to precede Houel, for his Work originally issued from the Milanese Press in 1551. In the outset he notices the many existing Recipes for this great antidote, and cites the lines of Q. Serenus Sammonicus, which restrict the real composition of the King of Pontus to four ingredients.

*Antidotus vero multis Mithridatica fertur
Consociata modis; sed MAGNUS scrinia Regis
Cum raperet victor, vilem deprendit in illis
Synthesin, et vulgata satis medicamina risit.
Bis denuum Rutæ folium, Salis et breve granum,
Juglandesque duas, totidem cum corpore Ficus.
Hæc oriente die parco conspersa Lyæo
Sumebat, metuens dederat quæ pocula Mater.*

Mutoni and his Editor then advance to the consideration of various mixtures ascribed to Mithridates, among which is mentioned the *Antidotus Diæmaton* noticed above by Pliny, and also by Aulus Gellius, (xvii. 16.) as containing a portion of the blood of ducks. On the whole the learned writers, in conjunction with Houel, appear to prefer Galen's recipe to any other; and they next carefully lay down rules for the selection of the various simples composing it. The full concoction of the medicine can scarcely be completed under twelve months

be almost tempted to swallow a dose of Mithridate if it were but for the glowing description of the Wine in which Maranta recommends that it should be conveyed. *Vinum sit vetus, quod diu duraverit, vinosum, dulce, non austerum, neque fumosum, incorruptum, semper idem manens, colore flavo, claro, pellucido præditum, non crassum vel turbidum, odoris aromatici, quale est imprimis Malvaticum antiquum, non adulteratum.*

MITHRIDATE.
Receipt for
Cypheus.

Mutoni's
Collectanea

Q. Serenus
Sammonicus.

MITHRI-
DATE.

from its first mixture; and it ought to be well triturated and levigated by a strong man, and shaken and poured from one vessel into another every day for two months after its composition. So greatly are certain practitioners deceived who affirm that Mithridate one month old is in possession of its highest virtues. The dose for adults is a piece not larger than the size of a chestnut. (*Nux Pontica*.) If the recipient is free from fever, he may take it in wine, neat, spiced, or honeyed; but the feverish must restrict themselves to water as their sole vehicle. It is an admirable Gout Cordial, and it should on no account be omitted during intervals between the fits, as a preventive: *maximè vero prodest quando quis ipsum sanus adhuc frequenter accipit*. No medicine, therefore, was more likely to be in favour with the Apothecaries than one which suited alike, the sick, the convalescent, and the healthy.

Maranta.
A. D.
1570.

Maranta wrote at Naples in 1570. His first Book, like Houel's, treats of Theriaca, the second of Mithridate, and he greatly exceeds the French Apothecary in rapturous expressions of belief that the fame of the King of Pontus depends solely upon his Antidote. *La Fortuna quasi mossa à pietà della miseria di quel Rege, che da sì alto stato era caduto in così estrema calamità, volse questa sua afflittione recompensare con l'immortalità del suo nome; la quale fece ella acquistargli non già dall' avere egli signoreggiato molti vicini e lontani Popoli, non dall' essere stato fortunatissimo in tutte le imprese per gravissime che fussero, che gli conviene fare con molti bellicocissimi Popoli; non dal sapere mantenere i suoi Regni securissimi dagli assalti de' nemici: non da altri fatti egregii e degni di sempiterna historia, ma dalla eccellenza e valore di questo antidoto*. It is but just to add, that Maranta's Treatise is far more luminously arranged, and more plainly and scientifically written, than those of the other authors on the same subject whom we have noticed. That he believed Mithridate to be a Panacea was the fault of his Age; that he wrote upon its virtues distinctly was his own peculiar merit.

London
Treacle.

Theriaca, in yet more modern times, was revived as *London Treacle*, the monopoly of which in the XVIIth century was permitted to a single Apothecary, and the receipt being most carefully concealed, in order to preserve it from deterioration, and from falling into equally sore disrepute with "that filthy and unwholesome baggage composition termed commonly Triacle of Geane." This fact, and many others, may be learned from a very laudatory Pamphlet, entitled *London Tryacle, being the enemy to all infectious diseases, as may appeare by the discourse following*. A dread of the Plague may have rendered fashionable both the Antidote and its advertisement; for there cannot be a doubt that the former was very largely taken, and the latter was printed twice in the short period of three years, by Edward Alede, in 1612 and 1615. Mithridate was also as much used as Theriaca, either under its own name or as *Confectio Damocratis*.

Dr. Heber-
den's Anti-
theriaca.
A. D.
1745.

The delusion, it seems, continued to a much later date; for even in 1745, so eminent a name in Medical Annals as that of Dr. Heberden appears to have been necessary for its correction. In his *ANTIÖHPIAKA, an Essay on Mithridatium and Theriaca*, Dr. Heberden contests the authenticity of all the prescriptions, save "that trivial one, consisting of 20 leaves of rue, 1 grain of salt, 2 nuts, and 2 dried figs," which we have already transcribed from Serenus Sammonicus; "so that there is some reason

to suspect that Mithridates was as much a stranger to his own antidote, as several eminent Physicians have since been to the Medicines that are daily advertised under their names." Dr. Heberden continues to show the manifold errors which have always existed respecting poisons and antidotes; and he remarks the unreasonable number of ingredients producing contradictory effects, which are jumbled together in every known receipt for Mithridate. Without adopting the opinion of Junck, who, treading in the steps of Pliny, (xxix. 1.) refers the invention of Mithridate to the especial anger of Providence, (*Hinc ad justa Dei judicia referendum videtur quod falsæ de his remediis traditiones universo ferè terrarum orbi imposuerint. Med. Pract. 587.*) Dr. Heberden recommends in conclusion, that it should no longer be prepared, as it still continued to be in nearly all the great Cities of Europe; and particularly that it should be banished from the *Pharmacopæia* of the London College of Physicians. In this good work, he did not immediately succeed, for the receipt for Mithridate defaced every copy of that official publication, till the edition of 1788; in the Preface to which may be found a statement that *portentosa quædam et enormia antidota, quæ profecto in se neque consilium neque modum habent ullum, quippe ex rebus collectis undique et inter se pugnantibus conflata, nunc demum moventur loco*. So slow is the progress of amendment even in admitted folly, if it be once sanctioned by antiquity, that it required the course of three and forty years to induce a Body of the most learned and accomplished men of their times, to abandon, in their corporate capacity, the propagation of an error, to which every one of them would have felt heartily ashamed to afford his individual support.

MITHRIDATEA, in Botany, a genus of the class *Monandria*, order *Digynia*, natural order *Urticæ*. Generic character: receptacle many flowered, four-cleft; no calyx or corolla; seeds solitary, immersed in the fleshy receptacle.

One species, *M. quadrifida*, native of the Islands in the Indian Ocean.

MI'TIGATE, } Fr. *mitiguer*; It. *mitigare*; Sp.
MITIGA'TION, } *mitigar*; Lat. *mitigare*, from *mitis*,
MI'TIGATIVE, } soft, mild.
MI'TIGABLE. } To soften or mollify, to soothe, to
assuage, to alleviate, to moderate.

Falconer. *The Shipwreck*, can. 2. note 6.

To defraud his own son proves him an unnatural rascal; and, if I had him here, I would hang him at the *mizen-yard*.

Observer, No. 15.

MIZZEN.
—
MNEMONICS.

MNASIJUM, in *Botany*, a genus of the class *Hexandria*, order *Monogynia*. Generic character: spathe two-valved, many flowered; calyx three-parted; corolla, one petal, tube short, three-toothed; stigmas three, spirally contorted.

One species, *M. padulosum*, native of Guiana.

MNEMONICAL, Gr. *μνημονικός*, that can or may remember, or retain in memory.

To the clauses 3, 4, 5, 7, note, that the characters are not written in the peculiar places of the table; for that would engage and fix the memory of those characters alone, and thereby hinder the further use of the *mnemonical* table.

Boyle. *Works*, vol. vi. p. 326. Letter from Dr. John Beale to Mr. Boyle.

M N E M O N I C S.

MNEMONICS, the Principles of Artificial Memory; a Science much vaunted not many years since as a new and important discovery, but which plainly was known both to Cicero and Quintilian; and has been often treated by the Moderns, and as often again neglected, because its Professors have unwisely directed themselves more to the excitement of ignorant wonder, than to rest their claims upon the positive utility which it may fairly be avouched to present.

Cicero.

Mnemonics
invented by
Simonides.

The great Master of Roman Eloquence has been pointing out in his *Tract de Oratore*, (ii. 86.) the necessity under which a public speaker lies of cultivating his powers of Memory, and he then states that Simonides, the Poet of Ceos, (A. C. 535,) was the first person who reduced the tuition of that faculty to an Art. Simonides, it seems, had introduced the common-place of Castor and Pollux in some Ballad laudatory of Scopas, a rich Thessalian victor at the Olympic Games; and the Patron, angry that he did no more than share with the twin Gods that praise which he had bargained for to receive entirely as his own, told the Poet that he should pay him but half price, and that he must look to his friends the Tyndaridæ for the rest. The legend adds, that Simonides was soon afterwards called out from the feast given by Scopas, by two youths at the gate, who earnestly pressed to see him, but who disappeared before his arrival. Meantime the roof of the Banqueting chamber which he had just quitted, falling in, killed Scopas and all his company; so mutilating their corpses under its ruins that no individual could be recognised apart from his neighbour. Simonides, however, recalling to mind the places in which the several guests were seated at table, distributed their remains to the full satisfaction of their friends: and hence his attention was first directed to the great assistance afforded to Memory by order and arrangement. *Itaque*, continues Cicero, *iis qui hanc partem ingenii exercerent locos esse capiendos, et ea quæ memoriâ tenere vellent effigenda animo, atque in his locis collocanda; sic fore ut ordinem rerum locorum ordo conservaret; res autem ipsas rerum effigies notaret, atque ut locis pro cerâ, simulacris pro litteris uteremur.*

The Author
of the *Tract*
ad Herennium.

The uncertainty respecting the Authorship of the Four Books *ad Herennium*, prevents us from ascribing to Cicero the full detail respecting *μνημονικά* which they contain. Even however if, as may be affirmed almost

with certainty, those Books were not the production of Cicero himself, they are unanimously admitted to belong to his Age, perhaps to be the Work of one of his Freedmen; and the last eight Chapters of the III^d Book presents a system of Mnemonics, to the general plan of which but little has been added by later writers. We need not cite from a Tract to be found in every Library, a passage which would occupy a very considerable space.

Quintilian, after relating the above story of Simonides, which, to his credit be it remarked, he considered altogether fabulous, adds as follows:—"For exercising Memory many make choice of a spacious place remarkable for a great variety of things, as suppose a large house, divided into many apartments. Whatever in it is worth notice they carefully fix in the mind, that the thought without delay or hesitation may be able to run over all its parts. The first material point is to be at no loss in recollection, for that Memory ought to be very good which is to help another. Then what they have written down or meditated upon they mark with another sign to keep them in mind of it; and this sign may be for the matter they are to speak of, as of Navigation, Warfare, or for some word; because in case of forgetfulness they may recover themselves by recollecting only a single word. The sign for Navigation may be an Anchor, for Warfare something belonging to Arms. They dispose then these particulars thus: the first complete sense or place they assign to the porch or threshold; the second to the hall; next they range about the galleries, parlours, bed-chambers, and the like, annexing some idea to each of them, and observing always a certain order. This done, when they are to make trial of Memory, they begin with passing in review all these places; and what they reposit in each of them, they demand back, and are reminded by their images; so that how great soever the number of things be they are to remember, they are all so connected, as in the figuring in of a company of dancers, that they cannot err joining the foregoing with the following, by the trouble only of getting by heart. What I have said of a house may be applicable to any public structure or work, to what may be observed on a long journey, or in making the tour of Cities, or in viewing a piece of Painting. If such places afford no proper images they may be framed according to Fancy.

"It is therefore necessary to have places, either ficti-

Quintilian

MNEMONICS. tious or real, and a number of images or signs which may be imagined at pleasure. By images I understand marks which direct to the things that are to be got by heart; or as Cicero says, places may be imagined to be as the wax we write upon, and images as the letters impressed upon the wax. But it is best to quote his own words. 'We ought to make use of a great number of places, all full in view, very remarkable, and of a moderate distance from each; and of images having life and motion, strong, well specified, and such as may easily present themselves and strike it in a moment.* I therefore am the more surprised how Metrodorus could find 360 places in the twelve signs of the Zodiac; a strange piece of vanity indeed in this man, who by priding himself on his Memory, chooses rather to give the honour of it to his industry than to Nature.

"To declare my sentiments concerning this method, I will not deny but it may be of service in some respects, as when many names of things are to be remembered in the same order in which they have been heard. For by assigning these names to their respective places, as the table to the porch, the bed to the hall, and so of other things, and then passing them in review, they are found where they were placed. And perhaps it is in this manner that the Memory of those have been helped, who at the close of an Auction could give an account of every article they had sold to different persons, as might appear from the entry made of the same in the cashier's book. This it is said has been done by Hortensius.† But this method will be of less service for retaining a whole discourse. Thought cannot have a prescript for the same images as things, the image of thought being purely arbitrary, though indeed a framed or real image may equally put us in mind. But suppose that the meaning of a discourse could be signified by certain images, how shall the copulations and order of words be pointed out by the same Art? At least certain conjunctions will never admit of being marked out by any images. We may have, it is true, as short-hand writers, (*qui notis scribunt*), certain marks for all things, and as it were infinite places to represent, suppose, all the words contained in the V Books of the second pleading against Verres, in order to remember them all as set down: but to repeat these as Cicero did, shall we not be puzzled by the double effort of attention in the Memory? For how should words chained together flow, if for every word we were to attend to its mark? Wherefore Carneades and the above-mentioned Metrodorus, who had used, as Cicero says, this exercise, may with all my heart keep to themselves their method." (Book xi. c. 2. Patsall's translation.)

After this somewhat bald translation, it is due to the reader that he should be indulged with a few words from the eloquent and suffering original. We cannot do better, therefore, than to offer him Quintilian's own brief receipt for strengthening memory. *Si quis tamen unam maximamque a me Artem Memoriae quærat, exercitatio est, et labor; multa ediscere, multa cogitare, et, si fieri potest, quotidie vel potentissimum est. Nihil æquè augeatur curâ, vel negligentia intercidit. Quare et pueri statim, ut præcepi, quam plurima ediscant, et quæcumque ætas*

* *De Oratore*, ii. 87.

† Hortensius, on being challenged to it by Sisenna, sat a whole day at an Auction; and when it was over gave an account of the things sold, the names of the buyers, and the different prices, in the same order as each article was disposed of. (Seneca, in *Proam. Controv.*)

operam juvandæ studio Memoriae dabit, devoret initio lædium illud et scripta et lecta sæpius revolvendi et quasi eundem cibum remandendi.

Upon the above basis of *Topical Memory* have been erected a great variety of modern systems between the XIVth Century and our own. A very extensive and entertaining Bibliographical notice of the chief Writers who have treated on Mnemonics is given in a volume which appeared in 1812, *The New Art of Memory founded upon the Principles taught by M. Gregor von Feinaigle*. From that Appendix we shall borrow a few particulars; and having very honestly inspected for ourselves every volume which we shall notice, we shall add somewhat of our own also.

The earliest modern Mnemonical Work, and we mention it only on account of its date, for not much information can be obtained from its three pages and a half of small duodecimo, is entitled *Thomæ Bradwardini Ars Memorativa*, a MS. No. 3744 of the Sloanian Collection in the British Museum. Bradwardine flourished in the time of Edward III., to whom he was Confessor. Few Prelates have left behind them a more exalted character for piety and learning than that amiable and unambitious Churchman; who was eminent as a Preacher, a Theologian, and a Philosopher, and dignified by his own title-giving Age, as *Doctor profundus*. The victories of his great Master were ascribed by many contemporaries to the favour with which the virtues of Bradwardine were regarded by Heaven; by others, with greater probability, in part to the exalted spirit with which his addresses inspired the Camp when he attended Edward in his expeditions. The Monks of Canterbury twice elected him their Archbishop, and the King in the first instance refused assent. Perhaps no finer tribute to character was ever paid than that which we shall cite in the words of Godwin. *Cum essent qui mirari se dicerent electionem de illo factam Regem non probare, respondisse dicitur Rex prædictus, non libenter se tali Confessore cariturum, cariturum tamen libentissimè si illum Archiepiscopatum cupere persperisset.* (*De Præsulibus Angliæ*, p. 112.) On the second occasion he was consecrated at Avignon, and died at the Palace of the Bishop of Rochester, within six weeks afterwards, on his progress to Canterbury.

Petrus Ravennas, Professor of Canon Law in Padua, published his *Fænix* in 1491, and thus modestly accounts for his title, *Cum una sit Fænix et unus sit iste libellus, libello placet Fænicis nomen imponatis*. He notices the arrangement and combination of places and images, and he gives one rule which may have entitled him to the commendation of Burton, who recommends his volume as an antidote to melancholy. It respects the formation of an alphabet. *Ego*, says the grave and open-hearted Canonist, *communiter pro litteris formosissimas puellas pono: illæ enim multum memoriam meam excitant, et frequentissimè in locis Juniperam Pistoriensem, mihi charissimam dum essem juvenis, collocavi. Et mihi crede si pro imaginibus pulcherrimas puellas posuero facilius et pulchrius recito quæ locis mandavi. Secretum ergo habe utilissimum in artificiosâ Memoria, quod diu tacui de pudore. Si citò meminisse cupis, virgines pulcherrimas colloca; Memoria enim collocatione puellarum mirabiliter commovetur; et qui vidit testimonium perhibuit. Hoc autem utile præceptum prodesse non poterit illis qui mulieres odiunt et contemnunt; sed isti Artis hujus fructum difficiliter consequentur.* Then, fearful that he

MNEMONICS.

may have outstripped the gravity of his age and office, the amatory Professor thus apologizes for his precept. *Veniam tamen mihi dabunt Viri religiosissimi et castissimi; præceptum enim quod in hac arte mihi honorem et laudem attulit tacere non debui, cum successores excellentissimos relinquere totis viribus nitor.* Fired by the remembrance of the fair Junipera, Ravennas performed wonders; often repeating verbatim every sermon which a Divine had preached throughout a whole Lent, to the great astonishment, perhaps not much to the satisfaction, of the Orator. Once while he sat by two friends, of whom the first was playing chess, the other dice, Ravennas dictated two letters during the games, and at the end of them, repeated every cast and move on each table, as correctly as it had been noted down at the moment. In a Monastery at Piacenza, having twice walked up the Dormitory, and read the names of the Monks written over their respective cells, so soon as they were called together, (their arrangement always being in the order of their cells,) although a perfect stranger, and never having seen one of them before, he addressed each of the marvelling recluses by his right name. Altogether, under 19 letters of the alphabet, Ravennas assures us that he preserved, readily arranged for prompt citation, 20,000 passages of Civil and Canon Law, 7000 of Scripture, 1000 lines of Ovid, 200 authorities from Cicero, 300 from other Philosophers, great part of Valerius Maximus, and the qualities of every animal described by Natural Historians.

John Romberch de Kyrpse.

A. D.
1533.

In the *Congestorium Artificiosæ Memoræ* of John Romberch de Kyrpse, 1533, the student is instructed to divide the walls of different rooms into separate spaces, and to attach a symbol to each. Several symbolical alphabets are given, one of them formed entirely from birds. In the attainment of Languages, "a naked man is to personate the singular number; the nominative case is to be placed on the head of this man, the genitive in his right hand, the dative in his left, the accusative on his breast, the vocative on his middle, and the ablative on his knees. A man clothed gives the plural number, and the cases are to be disposed in the same manner, as on the naked man."

In three chapters dedicated to Gaming, this system is applied to dice, to cards, and to chess.

Gratarolus.

A. D.
1544.

The rare book of "Gulielmus Gratarolus of Bergamo, Doctor of Artes and Physike," was originally composed in 1554, and it was "Englyshed eight years afterwards by William Fulwod," under the title of "*the Castel of Memorie*." It contains, in the first place, certain medical precepts, and among them are the following "meates forbidden the pacient."

"Let them also forbear Marow (which is in bones,) Cranes fleshe, fishe, especially if it be clammy and nourished in diches or holes, colde pot herbes, milke, cheese, especially much, or naughtie; fruites moist and not ripe, or often, but sometimes they maye eate sharper or tarter meates, chiefly in the winter, as Garlike, Peniroyall, or Calamint, Capers being watered; mustard is praised of Pithagoras, they must eate little, and speciallye at supper: they must drink no water; except it be sod with hony, or cinnamon, or some other pleasant spices. They must abstain from ouer much sleepe, and not to sleepe in the daye time, nor upon the noddle of the head, nor upon to much fulnes of meate: let them also take heede of ouer great watchinges, for it weakeneth the spirite, and resolueth it, and stuffeth the head."

There is also a receipt for "an odoriferous or sweet

smelling aple for the Memorie," and another for "a comforting Water or Le for the washing of a cold and moist head, also it helpeth the Memorie, and it must be of the ashes of Twigges or of an Oake." But the VIIth Chapter, which "entreeteth in fewe woordes of locall or artificiall Memorie," contains the whole pith of Mnemonics.

MNEMONICS.

"Artificiall Memorie is a disposyn or placing of sensible thinges in the mynde by imagination, whereunto the naturall memorie hauing respect, is by them admonished, that it may be hable to call to mind more easely and distinctly suche thinges as are to bee remembred: and (as Cicero sayth in hys seconde to Herennius) it consisteth of places, as it were of waxe or tables, and of images, as of figures and letters. For so it commeth to passe that such thinges, as we haue heard or learned, we reherse agayne, euen as though we read them. Nor it skilleth not much whether we begynne at the first, or at the laste. The places themselves must be set in order, for yf there be a confusion in them, it foloweth of necessitie, that al the reste must be disordred. And it behoueth also that there be many places, that manye thinges maye be placed by the same exercise and practise. Cicero judged that there should be an hundreth in number. Thomas Aquinas thought it good to have mo. For these places many have searched by diuers and sundry artes. Metrodorus found oute three hundred and sixtie places of the XII signes in the whiche the sunne goeth his course; because the Astrologers do deuyde the Zodiacke into so manye degrees.

"Cicero inuented a certayne familiar house, seuered or parted into manye places, and he thought it good that we shoulde deuise after euerye fyfte place, either a golden hande or some other distinction, wherby the one might be discerned from the other, and also in them to obserue a stedfast and unmouable order, that wee might always enter in and go out at the right syde. Another Author, not unskillful, fayned places by certayne lyuing creatures, and deriued their order out of the Latyne alphabet, in suche sorte that euery one of their names shoulde beginne with some one of euery letter: euen as if these were the names: an Asse, a Beare, a Cat, a Dogge, an Elephant, a Foxe, a Goate, a Horse, a Jaye, a Kyte, a Lyon, a Mule, a Nyghtingale, an Oule, a Partridge, a Quaile, a Rabbet, a Sheepe, a Throstle, a Unicorne, Xystus the Philosopher (who wrote of these) Yena, Zacheus. He deuyded all these into fyue places: into the heade, into the fore feete, into the bealye, into the hynder feete and the tayle, for this order nature herself ministreth, neither can the wit be confounded in counting or reckenning them. Hauing thus gotten then an hundredth and fyftene places, he graued in them the Images of thinges worthy of memorie, and also he commaunded that many thinges should bee written by the mynde or wit in the face of him that speaketh, in the heares, in the forehead, in the eyes, and so to descend downewarde to the feete. But me thynketh it a verrye easye thinge to deuise and imagine not onelye an hundreth but also infinite places, seeing no man is ignorant of the situation of the citie where he was borne, or in the which he hath long dwelled.

"Therefore when the mynde entreth in at the gate, whiles it considereth the diuersitie of wayes, directing and leading to diuers countreyes, and whiles it remembreth frendes houses, publike dwellinge places, palaces, or common places of Judgment, it shall fynde out a maruelous number of places. Hereto also it maye imagine great courtes, or places of larger rounge, wherein

MNEMONICS. it may devise as great a number of places as it listeth, so that euery thing may be written therein that he will have.

"And because the teaching by examples is briefe and effectually, nowe will I put forth some examples, to the end that therby the matter may be the better perceiued. I will put forth an example of tenne, and consequently by the proportion thereof shall be deuised the example of a thousand.

"And therefore I take or choose a greate and emptie house, to the which you must not go often but seldome, and appointe or sette the fyrst place which is at the doore, three foot distant from the doore. Let the seconde place be twelve or fyfteen foot distant from that, as for example let there be one corner or angle. Let the thyrd place be distant from the seconde even as many or twelve foot, and there may be perchance, another corner, or a middest betwene the first and the second corner. The fourth shall be a corner. The fyft shall be a corner, distant by as much. The syxte likewise: and the hall beyng finished, you shall enter into one chamber, and immediately within the doore you shall note or appoynte the seuenthe, and afterwarde, in the fyrst corner of the chamber the eyght, and in the second corner the nynth, and in the thyrd the tenth with his distaunce. And yf you wyll haue any more places, goe out of the chamber, and so marke or note the other chambers proportionally.

"But yet remember that the dystaunce which is geuen is moderate and conuenient, but yf there be not found so great dystaunce, but a lesser euen unto eyghte, or to lesse euen unto fye foote, yet should it be tolerable. As concernynge the temple, it ought to be such a one as must not be much frequented, especially of yourself, to the ende that you be not confounded or troubled with the multitude of the fygures or Images. These places ought to be memorable and remouable with ones hand, for the corners are not places, but fyxed images sette and placed in the corners, uppon the which (euen as upon paper) are painted other fygures, which may be put out euen as letter upon paper. As for example, the firste place is marked or known by a urinal, in setting a urinal in his place. The second by a salue boxe, setting there also a salue boxe. The iii by a mortar putting it there. The fourth by a pestle. The fyfte by a pair of writing Tables. The sixte by a hares foote. The seuenth by a Searcer. The eight by a bagge. The ninth by a lofe of waxe. The tenth by the Canes of *Cassia*. And these names must be kepte alwaies in mynd and the places from fye to fye, that the quinaryes or fyfte places may alwaies be had in memorie. Of the distance there is enough spoken. Yet note that you may pass to fye and thirtie, and not beyonde, lest there should chaunce a negation in the Images.

"And bee it spoken euen likewise of the quantitie as touching the height, that there be not manye of a height, but from fyue euen unto eleun foote. And let euery fyfte place be marked, as it is sayde of the order. The qualitie also must be noted, that they be not to light, nor to darke, nor to much frequented. Let us come to the Images which are the thynges that must be places: the Images whiche bee known unto us ought to be so set in these places with such mouinges, that by them we may call thynges to remembrance. For example, I would remember twentye names, I will do thus: in the fyrste place, I will set the Images of Peter, one whom I well knowe, with a urinal full of water in hys hande, the whiche he shall power upon James, one also

well known unto me: and so by this notable act, I shall remember these twoo, and so place in my remembrance these twoo names."

"In the seconde place I wyll put Henrye who is unto mee verye well knowen (for these fygures must be exactly knowen that they maye quickely come into ones Memorye) who shall put his hande into a Boxe and pull out the salue, and therewithal to besmyer Steuen, one also whom I do very well know.

"In the thyrd place I will set Wylliam, one whome I knowe also, who shall take out of the mortar a playster, and shall put it upon Fraunces face: or inuentyng some other mad jestes and toyes, whereby the memorye may be confirmed to beare awaye suche lyke names.

"And so in lyke manner proceede with the rest.

"Likewise if I would remember any man and also his acte, I will imagin him and the doying of his acte; as if I would remember one eating of figges, then I will imagine that with a figge, he did some mery or strange thing."

Gratarolus next treats of figures, and gives the five following rules concerning them.

"The *fyrste* is that the fygure do moue either to laughter, compassion, or admiracion, for one may soone fynde a figure that styre up and moue the affection of the Soule.

"An example hereof is this, if I should sette or place in the mouthe of a mad Ass, the head of Antonye to be almoste bytten in pieces, the blood to gushe out of him, and that he asketh helpe, and holdynge up his handes cryeth out: for it cannot bee but that when I would, I shoulde see him with the eyes of my mynde, and declare or express Antony to him that should ask or enquire for him.

"Another is, that we should represent eyther the lyke by the like, or by the contrary, or else by the propriete thereof. An example of the fyrst is, as if I were about to place the name of *Galene*, I should write the name of some other excellent physition, whose authoritie (as neere as may be) is eyther equall or lyttle inferiour.

"An example of the *seconde* is, if I writ the name of an unlerned physition, if I describe *Thersites*, by *Achilles*, and the good for the euill; or the foule by the fayre.

"An example of the *thyrd* is, yf I represent *Ouidius Naso*, by a great nose; *Plato*, by large shoulders; *Crispus* by crysped or curled yeares; and *Cicero* by *Ge-lasinus*.

"The *thyrd* is, that wee accustome ourselues to place thynges, euen from our very youth, and that we encrease with dayly exercise: although that the teaching therof may helpe and profit euen them also that be elder.

"The habite, the perfectnes and dexteritye (I meane to practyse these thynges) is muche the more, if they doe so place all thynges, whiche they shall either saye or do, and also whatsoever they heare in communication or talkinge. And they must likewise paynt and graue the maners, gestures and tymes. For in so doynge they shall in a shorte space be notably well exercised. It profyteth also to playe one with another, and to goe about to excell hym that shall recyte many thynges, more clearlye, orderlye, and spedely then other.

"The *fourth* is that (in euery quinary or fyfte number of those thynges that are to be marked) we repeat agayne from the beginninge all such thynges as are alreadye noted, for the repeticion of thynges commonlye bryngeth greate utilitie and profyte.

"The *fyfte* is, that wee should represent thynges

MNEMO
NICS.

compounde with the scimilitude of simple thynges. As for example. Hee that will remember this sentence: *Cicero* contendeth with *Hortensius*, shall imagine the pease called *Cicer* whiche complayneth of the barenes of the garden: for so doth *Cicer* resemble *Cicero* and the Garden called *Hortus* doth represent *Hortensius*, and the complaynte the contention, etc. etc.

"Agayne you shall not forget that in placynge or setting of the images or fygyres in their places the thyng is alwayes to bee placed with a merye, a merueylous or cruell acte, or some other unaccustomed maner: for merye, cruell, iniurious, meruelous, excellently fayre, or exceedingly foule thynges do chaunge and moue the senses, and better styrrer uppe the memorye, when the mynde is muche occupied about suche thynges.

"Also the images are varied by the transposition and transumption of the letters: as if I woulde remember *Nep*,* I shall place a pen, and for a tyran, a rauening wolf. It sufficeth therefore, that we have expressed a methode or compendious waye, the whiche whosoever foloweth shall easelye (so that exercise be not lackynge) get and attayne the certeine and sure remembrance, of manye and sundrye thynges, as due occasion shall require: but as for the sluggish, and ydle, let them slugge and sleepe still, to whom all thynges are displeasing."

Fulwood wrote such verse as his genius permitted, and he might have been a useful coadjutor of our authorized translators of the Psalms. Nothing from Dean Whittingham's pen can exceed the Dedication of the volume to Lord Robert Dudley, which begins with the two following stanzas:

Sith noble Maximilian,
Kinge of Boemia,
Defenden hath this worthy worke
In Latin tongue (I say.)
Sith that also the Godly Prince
Edwarde our late good King,
In French the same accepted hath
As a right needful thing.

Marafortius.

A. D.
1602.

Marafortius, a Calabrian Ecclesiastic, published an *Ars Memoriae* in 1602, in which forty-four images, contained in the palms and fingers of the two hands, supply every necessary reminiscence. In his Dedication the excellent author recommends his system on Scriptural authority. *Scriptum est enim apud Salamonis Ecclesiasten "Manum suam aperuit inopi et palmas suas extendit ad pauperem," quod satis aptatum credimus theorema in hoc opusculo quod de Arte Reminiscendi inscribere duxi.*

Baptista
Porta.

A. D.
1602.

Baptista Porta, in his *Ars Reminiscendi*, 1602, appears to have been the first inventor of an alphabet, still very common in our Print-shops, formed by various positions of the human body, and also of that mode of ciphering in which letters and symbols are conjoined; e. g. he thus writes the following lines:

*Dove son gli occhi e la serena forma
Del santo allegro et amoroso aspetto.*

ove son occhi serena forma
D two eggs, a trumpeter g^r two eyes e la a syren, a shoemaker's last.
santo a(t)le gru-e (h)amo ros a petto.
Del, a saint, two wings, a crane t-a fishhook, a rose, s-a woman's breast.

Lambert
Schenckel.

A. D.
1609.

About the beginning of the XVIth Century, Lambert Schenckel, son of an apothecary at Bois le duc, became an itinerant teacher of the Mnemonic Art, and excited great astonishment among all classes by his exhibition in France, Germany, and the Netherlands. He was

* A Herbe so called."

permitted by the Rector of the Sorbonne to lecture in that University, and obtained from the *Maître des Requêtes* the monopoly of Mnemonics throughout France. An hour's practice during nine days was advertised as a complete course of study, and the pupils were engaged on the comfortable terms of not only a return of premium in case of failure, but moreover of an addition to it. He appears to have been well practised in the useful art of puffing, as may be determined from a little volume entitled *Copia Speciminum Artis Memoriae Bruxellæ, Leodii Tomasi et alibi editorum*, accompanied with numerous testimonials from Ecclesiastics and Civilians.

"On the 29th and 30th of Sept. and on the 1st of Oct. 1602, Schenckel exhibited some specimens of his art at Marburg in Hesse. The first experiment took place on the 29th of Sept. at eight o'clock in the morning, before a large assemblage of Divines, Lawyers, Physicians, and Philosophers. Schenckel having requested some one to dictate 25 Latin sentences, wrote them down with a pen, and numbered them. He next read them aloud twice, with scarcely any pause, and having sat for a short time in silence, he repeated the whole, from beginning to end, backwards and forwards, and in any order desired, without the slightest hesitation. It happened, however, that once or twice, Schenckel substituted one word for another, as, *limits* for *ends*; but being reminded of this, he immediately gave the word required. Afterwards, any particular number being given, he repeated its appropriate sentence; and, on the first word of a sentence being named, gave the proper number. Schenckel being asked to repeat 25 doctrinal sentences, replied, that he thought 15 would be sufficient; and, accordingly, that number having been dictated, written down, and read, he united them to the former 25 sentences, and answered to the whole 40 in any order desired.

"On the 30th of Sept. another meeting was held at the house of a medicine-vender, when fifty words were given and numbered from 1 to 50. Schenckel having considered for a short time, repeated the whole from beginning to end, in regular order,—from the last to the first, and in any order required. On any number being given, he named the appropriate word,—and *vice-versâ*. Having asked the persons present to double the number of words, some of the *literati* replied, that he had given sufficient proof of his abilities, and that they had no doubt he would be able to repeat many more words by the same method. A learned auditor expressed his regret to Schenckel, that he was not allowed to repeat fifty sentences, and a hundred words, being fully persuaded that he was capable of greater things.

"Schenckel having presented to his auditory two hundred sentences, in which a pupil of his, taken from the last meeting, had been exercised, together with the 40 sentences then given, the pupil, on any number being asked, repeated the appropriate sentence, and *vice-versâ*, to the astonishment of all present:—more especially at the unconnected manner in which the numbers were proposed; as 235, 27, 9, 240, 128, 19, 184, 3, 225, 2, 176, 36, 7, etc. etc. This same pupil offered to the assembly 250 written words, which he had learned by some tuition from Schenckel, and by his own application. To these 250 words were added 50 others; and in a short time, the pupil answered to the whole 300, in the same manner as had been done before by the Professor himself. In repeating the sentences, the pupil, once or twice, did not give the words regularly:—when this was intimated to

MNEMO
NICS.

MNEMONICS. him, he immediately corrected himself, and repeated the words in their appropriate order.

"On the following day, the 1st of October, similar experiments were tried, greatly to the satisfaction of all present; and in consequence, Schenckel received (without asking for it) a certificate of approbation, under hand and seal, from a learned Physician and some Professors. This certificate concludes by observing, that 'the deponents' were present at the different examinations,—that there was not a possibility of fraud or collusion—that they thought it but justice, thus unsolicited, to express their approbation,—and to bear witness to the truth of the facts stated in the document."

Schenckel's system is contained in the *Gazophylacium Artis Memoriae*, 1610, but it is purposely displayed only so far as to be serviceable to a pupil who is at the same time receiving oral instruction from a master; for even his *Clavicula*, a key, is couched in gibberish, which itself needs unlocking. On the revival of Mnemonics by Feinaigle, a thrifty German, Klüber translated Schenckel's volume under the title of *Compendium de Mnemonik*. We need scarcely add that the concealment enjoined to the learner during the initiation is a sure proof of quackery; and that the repetition of unconnected numbers, backwards or forwards, is a very common and easy, although to the *ἀσυνέτοι* a most wonder-stirring and marvellous trick, which any reader may acquire in a few minutes; and perhaps may also attain, by its exhibition, the reputation assigned by Muretus (*Var. Lect.* iii. 3.) to a Corsican Boy, who repeated in that manner 36,000 barbarous and incoherent words, whom the auditors in general believed to be inspired by the Devil, and whom the great Critic himself does not scruple to call *ὁ δαιμόνιος ἐκείνος*.

John Willis.

A. D.
1618.

John Willis, Batchelor in Divinity, in his *Mnemionica*, first published in Latin in 1618, and translated in 1661, proceeds upon the recognised principle of adapting different compartments to different associations, and instructs the pupil to call up before his fancy a "Repository for Ideas," of which he gives the following minute description.

"A Repository is an imaginary fabrick, fancied Artificially, built of hewen stone, in form of a Theater, the form whereof followeth; suppose the edifice to be twelve yards in length within the walls, in breadth six yards, and in height seven yards, the roof thereof flat, leaded above, and pargetted underneath, lying wholly open to view, without any wall on that side supposed next us: Let there be imagined a Stage of smooth gray Marble, even and variegated with a party-coloured border, which Stage is to be extended over the whole length and breadth of the building, and raised a yard high above the Level of the ground on which the said Edifice is erected: Let all the walls, that is, the opposite wall, and two ends be wainscotted with Cypress boards, so artificially plained and glewed, that the joynts be indiscernable; suppose also a Groove or Gutter cut in the middle of the Marble Stage, three inches broad, extended from the opposite wall to the hither side of the Stage, whereby it is exactly divided into two equal parts, and that upon the further end of the said Groove, there is erreared a Column, a foot and half thick, arising up to the Roof of the building, almost touching the opposite wall, and deviding it into two equal parts, as the Groove divideth the Stage; so that by the Groove, and the Pillar, the whole Repository is parted in train, and consisteth of two Rooms, siding each other, each of them being six yards long, six yards broad, and six yards high."

He then introduces a Diagram of his Ideal Magazine, and adds, "A Repository according to this fashion is to be represented before the eyes of our minde, wheresoever we are, as oft as we intend to practise this Art; supposing ourselves to stand about two yards distant against the midst thereof." Within this Repository, Ideas, as they arise, are to be "reposed," according to their intrinsic qualities, their quantities, positions, and colours. Supposing that we employ a given number of these Repositories, *e. g.* ten; each is to be distinguished by the different colours of its central pillar, which is of importance in its application, as will be seen below.

"An Example of remembering a History.

"Diogenes the Cynick entering Plato's hall, when he saw the table covered with a rich carpet, the shelves glittering with silver, gilt cups, vessels, and other sumptuous furniture, laid hold of the carpet with all his might, threw it to the ground, and trod thereon with his feet, saying, *I tread upon Plato's pride: to whom Plato replied, But with greater pride.*

"The Idea of this story is not so great, but that it may admit reposition in its equal quantity: therefore I suppose in the place of the Repository where it is to be bestowed, that there is a table covered with a rich carpet, which a sordid fellow in beggarly raiment throws on the ground, a grave man clothed in honest sober apparel looking on. The attribution of the colour of the Repository is not to be forgotten: if therefore it be the first Repository in which this Idea is to be placed, I imagine the carpet to be imbellished with a fringe or border of gold: if in the second, of silver: if in the third, of black: if in the fourth, of blew, and so forth in the rest.

"An Example of a Sentence to be remembered, the subject being visible.

"An ant is a small insect, the coldest and dryest of all creatures, and therefore the wisest; for cold and dry do chiefly contribute to wisdom. The Idea of this sentence ought to be augmented; for the magnitude of an ant is so inconsiderable, that being bestowed in a memorable place, it escapeth sight: therefore I suppose an ant-heap in the middle stage of the memorial-place, seeming almost black with ants, swarming hither and thither; as for assignation of colour if this Idea be placed in the third Repository, the colour of the Repository is sufficiently noted by the blackness of the ants; if in the seventh, by the greenness of the ant-hill; so that there needeth no addition of colour, if placed in the third or seventh Repository: But if it be designed to the first Repository, let a triangular golden streamer be supposed fixed in the ant-hill, a foot high; if in the second, a silver streamer; if in the fourth, a streamer of blew silk; if in the fifth, of red; if in the sixth, of yellow; if in the eighth, of purple; if in the ninth, of white; if in the tenth, of cinnamon-colour."

For the connection of two Ideas placed in different rooms of the same Repository.

"Suppose that a man in a Gown sitting at a Table, and overlooking some Books of Accounts, with Counters lying ready to compute the total sum, be an Idea disposed in the first place of a Repository; and the Idea to be placed in the second room of the Repository, be a Farryer giving a horse a Drench with a Horn: In this case, that the action of the latter may have some dependence on the former, imagine that the Horse (as soon as the drench is poured into his mouth) leaps back and

MNEMO-
NICS.

disturbeth the man in his reckoning, who sits at the Table in the first place of the Repository. This mutual Relation of Ideas placed in the same Repository, is as it were a linking of them together, and doth admirably conduce to the remembrance of both."

Willis, like Gratarolus of Bergamo, concludes with some Medical precepts—Bad air, bad water, repletion, and too much sleep, are among the deterioratives of Memory. Wholesome air, sweet scents, particular meats, such as the brains of sparrows, hares, conies, &c., bathing the feet in warm decoctions of camomile, and exercise in delightful places not subject to wind, are, on the contrary, powerful corroboratives. "Finally, your apparel close fitted, walk leisurely abroad if the winde breathe a gentle gale, otherwise within doors." As a "prescript order of life" the reader is advised to pray frequently, "to comb his head every day backward, fasting;"—"to abstain from all evacuation by virtue of Physick, except upon necessity;"—"to eat twelve raisins of the sunne, stoned, every morning without drink, instead of breakfast;"—"to let his supper be larger than his dinner;"—a precept in opposition to every College either of Old Women or of Physicians;"—"to observe accustomed hours of eating;"—"to refrain from labour after meates;"—"to shut all the windows at bed-time"—"not to sleep under the moon-beams,"—and "not to lie out all night in the open air."

Henry
Herdson.
A. D.
1651.

Henry Herdson, "late Professor by publick authority in the University of Cambridge" in 1651, lodging "at the Green Dragon, over against Saint Antholin's Church in London," and probably, therefore, a Puritanical expounder at that pestiferous Mother of all Lecturers, reproduced "Repositories and Ideas" in his *Ars Memoriae*. The Tyro on entering the Repository is to "move as the Sun moveth," the first three walls are to be hanged respectively (we need not say in Imagination) with cloth of gold, the purest white Linen or Taffety, and rich Tapestry, and "the fourth Paries which is North, 10 yards four square, also hanged with an hanging beset full of diamonds, rubies, sapphires and all manner of precious stones." These distinctions appear to answer to the various colours in the system of Willis. Two specimens of Herdson's method may suffice.

"*De Memoria Concionum, To remember Sermons heard.*"

"When wee heare a Sermon, foure Rules are to be observed. 1. Diligent attention. 2. Carefull observing the Division of the Parts. 3. Methodicall Collocation of the Parts in the Places of the R. 4. serious Meditation on the Ideas. If there be but two parts of the Text, place the first in the Center of the South, and the second in the Center of the North; if three parts, place them in the three Center Tables of the East, South, and North; if 4 in the fourth Center Tables of the fourth Paries. If five Parts, place the fifth Part of the Text in the Center of the flore; if yours be six Parts, Place the sixth Part in the Center Table of the East W. of the second R. if seven Parts, place the seventh in the Center T. of the South Paries, in the second R. and so on: after this manner, if there should bee more Parts, leaving the matter of every part to be expressed, first with its part, so far as the places will reach in the Center Table, which being filled, proceed unto the four Tables of the four Angules, according to their place and number.

"*De Memoria Citationum; to remember Scripture-Quotations.*"

"Take for every book of the Bible some friend or acquaintance of the name, near the name, or for the name, as one *John* for the Gospel of Saint *John*; one *Genne* for *Genesis*; some patient pious man for the book of *Job*, if you place not one *Job* you know, &c. Then alwayes take the right hand for the Chapter, and left hand for the Verse."

Sundry Receipts are contained in the *Art of Memory* of Marius d'Assigny, 1697. "All such motions of the body," he assures us, "as cause giddiness and swimming in the head are destructive to the Memory. Therefore we should have a special care to avoid falling from high places, turning round, or blows upon the hinder part of the head." The following are very important formulæ.

"*Plaisters to prevent a decay of Memory.*"

"Divers Plaisters, when we find a decay in Memory, may be useful for helping the Brain: As a Plaister made of Mustard-seed, and clapt to the hinder part of the Head, or the Oil of Mustard seed when apply'd to that part. Or if you please to be at greater Expence, take Florentine Lillies, the Herbs *Hermodactyle* and *Pyrethrum*, leaves of the wild Vine, Pigeon-dung, Mustard-seed, of each an Ounce; mix them with *Moschata* Nuts, Spice, Cloves, Cinamon, and Pepper, and make a Plaister; which you may likewise apply to the hinder part of the Head, and you will find it increase and help Memory. And a certain famous Author assures us, that the Gall of a Partridge anointed about the Temples does wonderfully strengthen the Seat of Memory; as also the Brains of Birds and Fowls roasted, and chiefly of Hens, are not useless for the same purpose.

"*A powder for the Memory.*"

"Take the Seed or Leaves of *Orminum*, and every Morning take a small quantity of a Glass of Wine. And they say that the Shavings or Powder of Ivory produce the same effect, namely, the corroborating of the Brain and Memory; as likewise a Grain of white Frankincense taken in a Draught of Liquor when we go to bed, dries up the offensive Humours of the Brain. And it has been observ'd, that the Application of Gold to that *Sutura* which divides the seat of Memory from the other Closets of the Brain, strengthens the weakness of the Head, drives away all Pain, and has a wonderful Effect on the Faculty of Memory.

"*An ointment.*"

"A famous Author tells us, that for a firm and constant Memory, and quick Apprehension, many great Men have used this Medicine. Take Roots of wild Bugloss, Roots of Valerian, or Setwall, of each four ounces; Roots of Rue two Ounces; reduce them to very fine Pouders: then take Juice of Ey-bright, Clary and Vervain, of each four Ounces: strain the Juices well through a Cloth; then mix the Juices together, and the Pouders apart: afterwards take the Essence of Anacardi, or Cassia-nuts one ounce, and make a Powder as before. Also take Bird's Tongue, i. e. Ash-keys, and make a very fine Powder: Then mix all the foresaid things together, viz. the Pouders and the Juices, and take an Earthen Pot glaz'd, and set it on the Fire, putting into it some Bear's Fat, and suffering it to melt by degrees; then throw in the same Pouders, mixing them with the

MNEMO-
NICS.Marius
d'Assigny.
A. D.
1697.

MNE-
MO-
NICS.

Juices, always adding some of the foresaid Fat, till a very thin Ointment be made; with which anoint the Temples, Forehead, and top of the Head towards the Nape. And this do three or four times a year, and continue anointing more or less as there is occasion.

"A perfumed Apple for comforting the Brain and Memory.

"Take Laudanum, Lignum Aloes, Storax, of each a Dram; Cloves, Nutmegs, sweet Basil-seed, of each half a dram; with Rosewater, in which a small quantity of Mosch and Ambergrise has been dissolv'd, make an Apple.

"To strengthen the Memory or restore it when lost.

"To strengthen the Memory, or restore it when lost; or against giddiness: Take Rosemary, Borage, Chamomile, Violets, Roses, of each an Ounce; the Leaves of Laurel, Marjoram, Sage, of each two Ounces; chop them all together, and put them in the best Wine, and after a day's time distil thro a glass Alembic, and keep the distilled Liquor; in which put of sweet-scented Turpentine a Pound, white Frankincense eight Ounces, Mastic, Myrrh, Bdellium, Anacardi, or Cassia nuts, of each four Ounces: beat them altogether, and so let them stand for five days, mix'd with the Distillation in a cover'd Vessel. Afterwards distil with a quick Fire till you get an Oyl out of them, which keep close shut up in a glass Bottle well stopp'd with Wax and Parchment. For use, take as much of it as would ly in a large nut-shell down the Mouth, and anoint also the Memorial parts, viz. the hinder part of the Head, and all the Parts before-mention'd. You will find it to be very good."

Morhof.

Morhof has an admirable Dissertation *de Memoriae Subsidiis*, in which he enumerates several of the writers whom we have mentioned above, and many others also. His judgment upon the utility of artificial Memory in general is especially sound. *De Arte omni Mnemonica ita ego judico, in iis disciplinis in quibus e bene ordinatis et connexis principiis omnia deducuntur, supervacuum esse hujus usum; qui enim hic imaginibus juvare velit Memoriam, duplici onerabit conceptu, cum simplex cognitio e recte deductis principiis proveniens per ipsum illum ordinem Memoriae se ingerat. Per imagines autem verus rerum nexus confunditur ac quasi nebulis quibusdam involvitur.* (Polyhistor. lib. ii. c. 6. sec. 47.) And again, *Tenendum est in rebus quæ ad Memoriam propriè pertinent, Historiis, Factis, lectione librorum, Orationum recitatione, insignem posse esse hujus Artis usum: in disciplinis vero firmiorem ab ipso rerum nexu et ordine Memoriam expectandam.* (Ib. sec. 96.) In Logic, Metaphysics, Ethics, and Politics, he altogether rejects the use of Mnemonics. In the arrangement of Theology, Jurisprudence, and Medicine, in the acquisition of Languages, and in the delivery of Speeches, he recommends their employment. Morhof adds, that Jacob Lectius, in an Oration *de Memoria*, states, on the authority of others, which however he rejects, that there is still extant at Florence a direct Treatise by Cicero *de Memoriae Arte*.

Grey's
Memoria
Technica,
A. D.
1730.

Grey's *Memoria Technica*, a very useful book in its way, is too well known to need exposition here. It was first published in 1730, and still continues to maintain its ground; but its system materially differs from the Topical and Symbolical Arts of Memory of which we are now treating; and we therefore proceed at once to the

most recent Professor of Mnemonics, Gregor Von Feinaigle, who first appeared at Paris in March, 1807, when one of his pupils, at a public exhibition, excited great astonishment by repeating, in their order, 1000 unconnected words, and naming the respective places of each. In 1811 Feinaigle visited England, gave Lectures, and taught the application of his system to Chronology, Geography, History, Languages, memoriter Recitation, Systematic Tables, and Arithmetic.

MNE-
MO-
NICS.
Feinaigle.

We cannot be expected to enter into details, nor are we quite sure that we shall be intelligible in a brief outline. The student is first instructed to divide the floor and walls of any room most approaching to a square, with which he is well acquainted, into fifty imaginary, equal, square compartments. In arranging these squares he should place himself uniformly in one position: e. g. we will suppose he faces the North; then the first square on the floor is to be at the uppermost left-hand corner, or on the extreme North-East; and the whole floor is to be divided into nine squares, three in a row. No. 10 is to be placed on the ceiling above the left-hand wall; Nos. 11 to 19 will occupy the left-hand wall by threes as the Numbers on the floor; No. 20 will be on the ceiling above the front wall, which is filled with Nos. from 21 to 29. A similar process is followed on the two remaining walls, and No. 50 is placed in the centre of the ceiling. The mind, after a few minutes' attention, will become familiarized with the position of these ideal squares, so as readily to name the spot which each occupies. Squares also, or *τόποι*, may be obtained *ad libitum* by pursuing a similar method through any number of rooms, dividing the second from 50 to 100, the third from 100 to 150, and so on. But the pupil at the beginning will do well to content himself with one, or at furthest, two apartments.

The second step is to assign some particular hieroglyphic to each of these fifty compartments, which shall become indelibly associated with it, and form, as it were, its picture in the mind; a far easier process in reality than it may seem to be, when thus described. Nothing can at first appear more ludicrous than the Hieroglyphics with which we are furnished; but they are for the most part well adapted to their purpose, and can scarcely fail to produce the desired effect; the picture exciting the idea of the number, the number that of the picture. We give below the received list for the first two rooms, premising that the student will not find them of much use without the accompaniment of an engraved plate, (given in the printed Book on the system, to which we have already referred,) which effectually enlists the eye in the service of association.

Most of the Hieroglyphics, it will be remarked, are chosen from some fancied resemblance to the number of the square which they occupy. Thus, the Tower of Babel, a lofty insulated building, may typify the figure 1; a Swan, with its arched neck and elongated body, reminds us of 2; and so on. Perhaps the resemblance in all cases may not equally strike all imaginations; but for the most part it is quite enough to act as a prompter, and no more is wanted. If, therefore, we are asked to repeat any given number of unconnected words in regular succession upon their being once read to us, and to have the particular place of any one or more of them, we form some association (it matters not what it be) in our own minds between the word itself and the figure of the square to which it belongs; e. g. we will suppose the first three words to be "owl, cap, lute." In order to refer *owl* to the first square, we imagine to ourselves an *owl* standing on the top of the *tower of Babel*. For the second word we place a *cap* on the *Swan's* head; for the third, we fancy *Apollo* playing on the *lute* on *Mount Parnassus*; and, by thus quartering the words on the Hieroglyphics, we shall find them (perhaps at first much to our surprise) mustered in precise order, and ready for service at the first call.

The substitution of letters for figures is common to Feinaigle's Mnemonical System with most others, but he employs *consonants* only, each to be remembered by an easy association.

"The letters appropriated to the figures are not merely arbitrary, but are adapted as nearly as possible to the form of the figures.

"*t*, like the figure 1, is a perpendicular, or down stroke, and differs only from it, in the addition of the small horizontal line drawn across the upper part of it; *t* is more like the figure 1 than any other consonant, if perhaps, we except the letter *l*. An additional reason

for assigning the letter *t* to 1 is, that it occurs in the word unit.

"*n* is the appropriate letter to represent 2, there are two down strokes in it.

"*m* furnishes us with three down strokes, it will then give the idea of 3: if we place a 3 thus ∞ , it will form a tolerable outline of the letter *m*.

"*r* is to represent 4: *r*, when written, resembles somewhat a 4. The letter *r* occurs also in our word *four*; in the German *föhr*; in the Dutch *vier*; in the Latin *quatuor*; in the French *quatre*; in the Spanish and Portuguese, *quatro*; in the Italian *quattro*; in the Greek *τέσσαρες*; in the Russ, *chetýre*; and in a variety of other Languages.

"The English *L* was borrowed from the Romans; they had it from the Greeks, and they again from the Hebrews, whose *lamed* is much like our *L*, excepting that the angle is somewhat more acute. *L* was used as a numerical letter for *fifty*, and may therefore be assigned to the figure 5.

"*d*, in writing, is the reversed form of 6.

"*c, k, g, q*. The figure 7, with a slight curvature, may be made to resemble a crooked stick; and as we shall remember this stick the better if something be hung upon it, a *cage* shall be suspended there. In the word *cage* we obtain the consonants *c* and *g*: *k* also is added to the number, for *c* is more frequently pronounced hard (*ka*) than it is soft (*se*); *q* being a guttural and a crooked letter, shall go along with the *cage* and the stick. For the figure 7 there are then *c, k, g*, and *q*.

"*b, h, v, w*. In the figure 8 there are two noughts, or two round things; these may be converted into *bee-hives*, and if one be placed upon the other, there will be a tolerably accurate idea of the figure 8. In the word *beehive* are obtained *b, h, v*; and *w* may be added, for it is compounded of *vv*.

"*p, f*. The figure 9 is not unlike a *pipe*, and as a pipe is seldom used without a *puff* of smoke issuing from it, we have the *p* and *f* in these two words; they are inseparably connected, and cannot easily be forgotten.

"*s, x, z*. The 0 being a round body, it may be compared to a wheel or grinder in a mill; this wheel, when in swift rotation, gives out a hissing sound, and the hissing consonants *s, x, z* are attached to the cipher. *x* is formed from two half *circles*; and *z* is the first letter of the word *zero*."

Any word containing the consonants wanted for our purpose in *their order*, is to be chosen and associated with the particular Hieroglyphic—how fancifully or ridiculously is of little importance. The application cannot be more readily explained than by citing the Chronology of the Kings of England as thus taught; and, if the reader be prepared to smile at its apparent absurdity, we trust he will also take sufficient trouble to convince himself of its practical utility. M. Feinaigle perhaps might have found, every reader may find for himself, less forced associations; but we question whether they will answer the purpose at all better in the end.

"1. WILLIAM THE CONQUEROR. A word must be now made from William; the first half *wil* is taken, and to this is added *low*, by which *willow* is obtained; this enables us to remember *William*. The willow is fixed upon the *Tower of Babel*, our first symbol; we have then *William I.*, but another circumstance remains; he was the *conqueror*:—we hang some *laurel*, the reward of valour, and the crown of conquest, upon the willow tree. The *date* is yet wanting; we say the laurel is

MNE-
MO-
NICS.

MNEMO- dead ; in the word *dead*, are *d, d*, for 66 ; the 1000 being
NICS. understood through the whole series.

" 2. WILLIAM RUFUS, or WILLIAM II. There must be *two willows*, one on each side of the *swan* ; the swan is put into a red (*bag*) ; by making the bag *red*, we preserve the meaning of the Latin word Rufus.

" 3. HENRY I. There is *one hen* upon the *mountain* tossing up the ground ; (*toss*.)

" 4. STEPHEN. The *looking-glass* is very much *stiffened* ; there is a watch placed before the glass ; this is (*timely*.) The word *stiffened* will recall to the mind the name of *Stephen*.

" 5. HENRY II. A (*taylor*) sitting upon the *throne*, with *two hens*, one under each arm.

" 6. RICHARD I. This was the *first rich* man,—the *horn of plenty* is before him. The first rich man, probably, pilfered from other people ; he must have been a (*thief*.)

" 7. JOHN. The *glass-blower's* name was John (*Taffy*.)

" 8. HENRY III. *Midas*, or the man with the long ears, has just received a present of *three hens* ; he puts one in each ear, and one in his mouth, the hens are so near to each other, they are almost (*united*.)

" 9. EDWARD I. To fix the name of Edward, we convert the verb to *ward*, that is, to watch, into a substantive, and say here is one *ward*, guard, or soldier, watering *Narcissus*, or the flower, with an (*engine*.)

" 10. EDWARD II. There are *two wards*, or guards, behind *Goliath*, each in a (*mask*.)

" 11. EDWARD III. Three soldiers as guards between the *Pillars of Hercules*, playing with a (*monkey*.)

" 12. RICHARD II. This is the second rich man, who meets *David putting his hand into the lion's mouth* ; David is mocking at the lion's strength. (*mock*.)

" 13. HENRY IV. We take a (*muff*), put *four hens* in it, and place it on the *pyramid*.

" 14. HENRY V. *Diogenes* has *five hens* in his lantern ; they are very noisy and troublesome,—(*rout'em*.)

" 15. HENRY VI. *Æsculapius*, or the doctor, is very much annoyed by *six hens*, which are (*running*) round the serpent.

" 16. EDWARD IV. Here are *four* soldiers taking away poor *Ceres*, and putting her in a (*redoubt*.)*

" 17. EDWARD V. *Archimedes*, or the carpenter.

" 18. RICHARD III. *Apollo*.

" As these two kings are of the same date, one word will be sufficient to fix it. Here are *five guards* preparing to rob the *third rich* man ; *Apollo* is looking on, and amusing them with a tune on his lyre ; in the mean while, *Archimedes*, or the carpenter, vociferates (*rob'em*.)

" 19. HENRY VII. *Robinson Crusoe* is seen to shoot *seven hens*, in a (*rebellion*.)

" 20. HENRY VIII. There is a *Peacock*, with *eight hens* in her nest ; they are young and cannot speak,—they are (*lisping*.)

" 21. EDWARD VI. We have here the *vaulter*, or rider ; one man is a sufficient weight for a horse ; but our horse must carry seven. There are *six guards*, or wards, upon this horse, besides the vaulter, who are all scrambling for a piece of a (*lark*.)

" 22. MARY. There must be some rejoicings where there is a *cock-fight* ; it is very possible that the town may be (*illuminated*.)

* "As the *b* is not sounded in pronunciation, the *r, d, t* are the letters which give the date."

" 23. ELIZABETH. This queen had so flourishing a reign, that she is (*allowed*) to ride upon *Pegasus*.

" 24. JAMES I. The word *chains* sounds somewhat like *James* ; we will, therefore, put the *Elephant* in chains : what (*dismal*) chains.

" 25. CHARLES I. Poor *Sancho Panza* upon his ass ! Poor fellow, he met with many (*denials*.)

" 26. CHARLES II. The *charioteer* is running a race ; the (*odds*) are against him.

" 27. JAMES II. *Don Quixote* must be put in *chains* ; he must have two sets of chains ; he shall have (*double*) chains.

" 28. WILLIAM III. The patient *packhorse* travelling along the accustomed road, arrives at that part where *three willows* have been planted : how melancholy it is to see so many willows ! (*do weep*.)

" 29. ANNE. The *Standard Bearer* is just arrived on a visit to (*cousin*) Anne.

" 30. GEORGE I. *Sisyphus* is rolling up the hill 'his huge round stone,'—but he stops and listens to some one who is playing on the (*guitar*.)*

" GEORGE II. This sovereign is a (*king*) between two kings of the same name.

" GEORGE III. has had some important concerns with (*Cadiz*.)"

Tabular View of the Chronology of the Kings of England from the Conquest.

Numerical Order.	Name of the King.	Symbol.	Word giving the Date.	Date.
1	William the Conqueror.	Tower of Babel.	DeaD.	1066

To have space to speke.

Piers Plouhman. Vision, p. 49.

And after dinner gonnen they to dance,
And sing also, sauf Dorigene alone,
Which made alway hire complaint and hire mone.

Chaucer. The Frankeleines Tale, v. 11232.

Than they of the towne began to mone, and sayd, this dede ought
nat to be suffred nor consented vnto.

Lord Berners. Froissart. Cronycle, vol. i. ch. 348. p. 556.

For needlesse feare did never vantage none;
And helplesse hap it booteth not to mone.

Spenser. Faerie Queene, book i. can. 4.

Lys. She hath spyed him already with these sweet eyes.

DEM. And thus she meanes.

Shakspeare. Midsummer Night's Dream, fol. 163.

But soon as life recovered had the raine,
She made so piteous mone and dreare wayment.

Spenser. Faerie Queene, book iii. can. 4.

— Their moans
The vales redoubled to the hills, and they
To Heav'n.

Milton. Sonnet 18. l. 8.

In coasting back from new-built Troy,
He saw a monefule sort
Of people, clustering round about
Their yet unconquered port.

Warner. Albion's England, book i. ch. iv.

That nothing perfectly sound, nothing safe, nothing stable, nothing serene is here to be found; this with one sad voice all mankind resoundeth; this our Poets are ever moanfully singing, this our philosophers do gravely inculcate.

Barrow. Works, vol. iii. fol. 91. Sermon 8. On Contentment.

How oft your birds have undeserving bled,
Linnet, or warbling thrush, or moaning dove,
Pheasant with gaily glistening wings
Or early-mounting lark!

Warton. Ode. On Shooting.

— Thus, the warbler of the morn,
To the sick wretch, who moan'd the tedious night,
Brings balmy slumber, ease, and hope, and health!

Smollett. The Regicide, act iii. sc. 2.

Ye walls, that echo'd to his frantic moan,
Guard the due records of this grateful stone.

Hayley. Inscription on the Monument to Collins in Chichester Cathedral.

Kaleidoscopes, Velocipedes, and some other reigning prime movers of the public mind, which it may be prudent not to name so openly. But it would be unjust to consign it altogether to oblivion, because it has once been overrated. Strip it of mystery and quackery, and, to a certain extent, it may no doubt be employed with great ease and considerable advantage.

MNEMONICS.
MOB.

MOAT, *v.* } Minshew and Somner (see LYE) derive from the Fr. *moite*, moist, wet.
MOAT, *n.* } But see *mota*, in Du Cange. The word is applied to
A ditch or trench containing water, of such width and depth, as to be a defence.

It is an over-rigorous construction of the workes of God, that in moating our island with the Ocean hee meant to shut us up from other regions.

Hall. Works, vol. i. fol. 639. Quo Vadis? sec. 1

— This little world,
This precious stone, set in the siluer sea,
Which serues it in the office of a wall,
Or as a moate defensiuie to a house,
Against the enuy of lesse happier lands.

Shakspeare. Richard II. fol. 28.

Or who that rugged street would traverse o'er,
That stretches, O Fleet ditch, from thy black shore
To the Tower's moated walls?

Gray. Trivia, book ii. l. 247.

While the portcullis huge, or moated fence,
The sad reverse of savage times betray—
Distrust, barbarity, and Gothic rule.

Jago. Edge-hill, book i.

She's drawn along unwilling to be seen,
Until at length appears the ruin'd hall,
Within the grass-green moat and ivy'd wall.

Jenyns. The Modern Fine Lady.

MOB, } Fr. *mobile*; It. *mobile*; Sp. *mo-*
MO'BILE, *adj.* } *bil*; Lat. *mobilis*, (contr. *movibilis*),
MO'BILE, *n.* } that can or may be moved. "The
MOBILITY: } *mobil* people" is an expression as old
as Chaucer; the *movable*, unsteady, inconstant people; *mobile* was then used alone, (*sub. people*), and subsequently contracted into *mob*. Dryden uses both *mobile* and *mob*, the latter as if not long introduced; the former (in the Stage directions) as the common word.

Mob; the *movable* people or populace; the crowd, the multitude.

Mobile, that can or may be moved; *movable*.

The vnder hydde malice and rancoure of purposinge enuie forne-
cast and ymagined, in distruction of *mobil* people, shewed openly.

Chaucer. The Testament of Loue, book i. p. 474.

To treate of any star
Fyxt or els *mobil*
His Latin tonge doth hobbyl.

Shelton. Why come ye not to Court.

Thou mortall Tyme euery man can tell,
Art nothyng els but the *mobile*,
Of sonne and mone chaungyng in euery degre.

Sir Thomas More. Workes, sig. D iii. Verses written in his youth.

Whose ingenuity hath been so bold not only to proceed below the account of minutes, but to attempt perpetuall motions, and engines whose revolutions (could their substance answer the design) might out-last the exemplary *mobility*, and out-measure time itself.

Sir Thomas Brown. Vulgar Errours, book v. ch. xix.

So, long experience has found it true of the unthinking *mobile*, that the closer they shut their eyes the wider they open their hands.

South. Sermons, vol. ii. p. 256.

MOB.

MOCK.

Which exciting the *mobile*, headed by Tomaso Anello, commonly called Masaniello, a fisherman, all things in Naples were for some time turned topsy turvy.

Wood. *Athenæ Oxonienses*, vol. ii. fol. 384.

MUF. (Making up to the *mobile*.) Good people, here you are met together.

Dryden. *Don Sebastian*, act iv. sc. 1.

This is all address'd to you, sir: she singled you out with her eye, as commander-in-chief of the *mobility*.

Id. *Ib.*

To gratifie the barbarous party of my audience, I gave them a short rabble scene, because the *mob* (as they call them) are represented by Plutarch and Polybius with the same character of baseness and cowardice which are here described.

Id. *Cleomenes*. *The Preface*.

He shrunk from the dangers that threatened him, and sacrificed his conscience and his duty to the menaces of a *mob*.

Porteus. *Lecture 22*. vol. ii. p. 319.

If these commonwealths, formerly so warlike and ambitious, maintain'd each of them a small city guard, to prevent *mobbish* disorders, it is all they had occasion for.

Hume. *Essay 11*. vol. i. part ii. p. 443.

MOB, v. } Ray says, that to *mob* is to dress care-
MOB, n. } lessly. *Mobs* are slatterns. See the
MO'BLED. } Commentators on Shakspeare and Mr. Nares, who produce other instances of *mobled*. Our Lexicographers do not notice the word: it appears to have had the same origin with the preceding, and to have been applied to an article of dress for the head—*thrown on or thrown off*—as convenience required it to be worn or laid aside; moved or removed.

Swarms of men that went gossiping up and down, telling odd stories to the people, as old wives and nurses do to children, having most of them chins as smooth as women's, and their faces *mob'd* in hoods and long coats like petticoats

More. *On the Seven Churches*, (1669.) *Preface*, book ii.

I PLAY. But who, O who had seen the *inobled* (*mobled*) Queene.

HAM. The *inobled* (*mobled*) Queene?

POL. That's good: *inobled* (*mobled*) Queene is good.

Shakspeare. *Hamlet*, fol. 264.

She could harangue with wond'rous grace,
On gowns and *mobs*, and caps, and lace.

Lloyd. *The Spirit of Contradiction*.

Now Mary's *mobs*, and flounces you approve,
Now sharpe-disguising sacks, and slippers love.

Warton. *Fashion*. *A Satire*.

MOCK, v. } Fr. *mocquer*, which the Etymolo-
MOCK, n. } gists agree to derive from the Gr.
MOCK, adj. } "*Græci μωκάσθαι, proprie dicunt de*
MO'CKABLE, } *his, qui ore vultuque distorto et valgis*
MO'CKAGE, } *labii aliquem derident.*" Junius. The
MO'CKER, } Dutch have *mocken*, "*Buccam ducere*
MO'CKERY. } *sive movere.*" See BEMOCK.

To deride, to scoff at; to jeer or gibe; to ape or imitate, scoffingly, jestingly; to render or cause to be or appear ridiculous or contemptible, feeble or ineffectual.

v. In this place, looe is taken for *mocke*, & soundeth as much as that we are wont to say in our commune talke whē we luste to *mocke* one that standeth wel in his owne conceit. Looe (say we) this man wyl not learne at y^e proudestes of us al.

Bible, Anno 1551. *Genesis*, ch. iii. note.

Thus speaketh the Prophete by an ironye, that is, in derision, or *mockage*.

Id. *Ib.* 2 *Cronicles*, ch. xviii. note.

Wherefore heare the worde of the Lorde, ye *mockers*, y^e rule the Lordes people, whiche is at Jerusalem.

Id. *Ib.* *Esaye*, ch. xxviii.

And sayd in *mockery*, sirs, demaunde of your messanger where he founde there of Derby.

Lord Berners. *Froissart*. *Cronycle*, vol. i. ch. 106. p. 128.

When he hadde begonne his raygne the — day of June, after this *mockishe* eleccion, then was he crowned the — day of the same moneth.

Sir Thomas More. *Workes*, ch. i. fol. 67. *Richard III.*

— We must be ris'n,
And at our pleasant labour, to reform
Yon flowrie arbors, yonder allies green,
Or walk at noon with branches overgrown,
That *mock* our scant manuring.

Milton. *Paradise Lost*, book iv. l. 628.

And otherwhiles with bitter *mockes* and mowes,
He would him scorne, that to his gentyl mynd
Was much more grievous than the other's blowes.

Spenser. *Faerie Queene*, book vi. can. 7.

But, soone as they this *mock-king* did espy,
Their troublous strife they stinted by and by,
Thinking indeed that it the lyon was.

Id. *Mother Hubbard's Tale*.

— Those that are good manners at the Court, are as ridiculous in the Countrey, as the behaviour of the Countrey is most *mockable* at the Court.

Shakspeare. *As You Like It*, fol. 195.

Song, by Junius, and Petillius, after him in *mockage*.

Beaumont and Fletcher. *Bonduca*, act ii. sc. 1.

The forlorne maiden, whom your eyes have seene
The laughing stocke of Fortune's *mockeries*,
Am th' onely daughter of a king and queene.

Spenser. *Faerie Queene*, book i. can. 7.

PAIN. It is a pretty *mocking* of the life.

Shakspeare. *Timon of Athens*, fol. 80.

"Let's meete," quoth Eccho *mockingly*:

Which, hearing, he with speed,
(Beleeuing that his shadow was
A nymph, and spake in deed,)
Did leap into the fountaine.

Warner. *Albion's England*, book ix. ch. xlv.

Philip, the brother of Aminander's wife, was taken by the consul; made a *mocking-stock*; and sent away prisoner to Rome.

Ralegh. *History of the World*, book v. ch. v. sec. 7. fol. 765.

Let them have a care how they intrude upon so great and holy an ordinance, in which God is so seldom *mocked*, but it is to the *mockers*' confusion.

South. *Sermons*, vol. ii. p. 291.

'Twas then that Peter, standing up to show
Th' absurd reproach, gave all of them to know
That, what these *mockers* call'd a drunken fit,
Was God's performance of what Joel writ.

Byrom. *Remarks on Dr. Middleton's Examination*, &c. l. 525.

And many a fane he rear'd, that still sublime
In massy pomp has *mock'd* the stealth of time.

Warton. *Ode 21*. *On his Majesty's Birth-day*, June 4, 1788.

Mockery and ridicule, when exercised upon the scriptures, or even upon the places, persons, and forms set apart for the administration of religion, fall within the mischief of the law which forbids the profanation of God's name.

Paley. *Moral Philosophy*, vol. ii. book iv. ch. ix. p. 99.

MODE, or } Fr. *mode*; It. and Sp. *modo*; Lat.
MOOD, } *modus*; which (Vossius thinks) means
MO'DAL, } *μέτρον*, measure. See COMMODIOUS. It
MODA'LITY, } is applied in English as the Fr.
MO'DISH. } *Mode*; "Manner, sort, fashion, guise,
use, custom, way, means." Cotgrave.

The *mode*, is the fashion; the style of fashion. It is also used in Music, see the Quotation from Sir W. Jones; in Logick, see the Quotation from Wilson; and in Metaphysics, see the Quotation from Locke.

Tindall would be fayne wit in what figure it is made: he shal finde in the first figure and in the third *mode*.

Sir Thomas More. *Workes*, fol. 504. *The First Part of the Confutation of Tyndall*.

A *moode* is a lawful placing of propositions, in their dewe qualitie or quantitie.

Wilson. *The Arte of Logike*, fol. 26.

For all my reigne hath beene but a scene
Acting that argument. And now my death
Changes the *moode*.

Shakspeare. *Henry IV. Second Part*, fol. 95.

MOCK.

MODE.

MODE.
—
MODEL.

Our Saviour lifting up his eyes beheld
An ample space under the broadest shade
A table richly spread, in regal mode.
Milton. Paradise Regained, book ii. l. 340.

If they finde a determinate intellection of any modes of being,
which were never in the least hinted by their externall or internall
senses; I'll beleieve that such can realize chimæras.
Glanvil. The Vanity of Dogmatizing, ch. iii. p. 23.

When we speak of faculties of the soul, we assert not with the
schools their real distinction from it but only a modal diversity.
Id. Scep sis.

Modes I call such complex ideas, which, however compounded, con-
tain not in them the supposition of subsisting by themselves, but are
considered as dependencies on, or affections of substances.
Locke. Works, vol. i. fol. 62. *Of Human Understanding*, book ii.
ch. xii. sec. 4.

O what a midnight curse has he, whose side
Is pester'd with a mood and figure bride!
Let mine, ye gods, (if such must be my fate,)
No logic learn, nor history translate.

Dryden. Juvenal. Satire 6.

No wonder therefore, if these men, discoursing of the nature and
substance of God, in a language neither warrantable nor apprehen-
sible, have by their modalities, suppositivities, circuminceptions,
and twenty such other chimæras, so misrepresented this adorable
article of the Trinity to men's reason, as to bring them first to loath,
and at length to deny it.

South. Sermons, vol. iv. p. 318.

Rail on, ye triflers, who to Will's repair
For new lampoons, fresh cant, or modish air.
Smith. To the Memory of Mr. John Philips.

Our grandames' modes long absent from our eyes,
At your all powerful bidding duteous rise.

Warton. Fashion.

These are the several modes in which we may weaken or even de-
stroy the moral and religious principles of every sincere christian, or,
in the words of scripture, may make our brother to offend.

Porteus. Lecture 16. vol. ii. p. 85.

A series of sounds relating to one leading note is called a mode,
or a tone, and as there are twelve semitones in the scale, each of
which may be made in its turn the leader of a mode, it follows that
there are twelve modes; and each of them has a peculiar character,
arising from the position of the modal note.

Jones. Essay 2. On the Imitative Arts.

Hence the tonsile box
Wove, in mosaic mode of many a curl,
Around the figur'd carpet of the lawn.

Mason. The English Garden, book i.

MO'DEL, v. } Fr. *modelle*; It. *modello*; Sp.
MO'DEL, n. } *modelo*; Lat. *modulus*, a diminutive
MO'DELLER. } of *modus*. See MODE, ante.

To form or fashion, after a certain mode, example,
pattern; to delineate, to plan, the mode or manner, form
or fashion; to copy. A model,

"That whereby a whole work is measured; propor-
tioned or squared." *Cotgrave.*

That which has, which represents or resembles, the
mode or manner, fashion or form of any other thing; the
copy, the image, the representation.

In cartes, in mappes, and eke in models made.

Gascoigne. Hearbes. Voyage into Hollande, 1572.

O would I could my father's cunning use!
And souls into well-modul'd clay infuse.

Sandys. Ovid. Metamorphoses, book i. p. 4.

When thy affliction serv'd me for a book
Whereby to model Egypt's misery.

Drayton. Moses His Birth and Miracles, book ii.

They proposed, first, to have the army settled and modelled in a
way of unity before they determined upon the government.

Baker. Charles II., Anno 1659.

Some limb or model dragg'd out of the ruinous mass,
The richness will declare in glory whilst it was.

Drayton. Poly-olbion, song 1.

Now while my friend, just ready to depart,
Was packing all his goods in one poor cart;

He stopp'd a little at the conduit-gate,
Where Numa model'd once a Roman State.

Dryden. Juvenal. Satire 3.

MODEL.

MODENA.

One thing receives another not according to the full latitude of
the object, but according to the scanty model of its own capacity.
South. Sermons, vol. x. p. 46.

But he [Lilbourne] being naturally a great trouble-world in all
the variety of government became a hodge-podge of religion, the chief
ring-leader of the levellers, a great proposal-maker, and modeller of
state, and publisher of several seditious pamphlets.

Wood. Athenæ Oxonienses, vol. ii. fol. 172.

He [God] moulded or modelled him [man] as a potter doth; we
see the work, as it were upon the wheel, rising and growing under
the hands of the divine artificer!

Horne. Works, Discourse 1.

MODENA, a Dukedom of Italy, bounded on the Boundaries,
North by the Lombardo-Venetian Kingdom and Guas- extent, and
talla; on the East by the State of the Church and Tus- population.
cany; on the South by Tuscany and Lucca; on the
West by Parma. Its superficial contents are 1974 square
miles; its population amounts to 348,000.

The part which borders on the Po is low, level, and Physical
well-watered either by streams or canals. Further features.
Southward the territory extends up the Apennines in
a succession of narrow plains, resembling terraces, well
cultivated and fertile, but the crest itself of the moun-
tains is broken, rocky, bare of earth, irreclaimably barren,
and incapable of affording support even to any sort of
timber. The district Garfagnana, in the South, is an
extensive valley, ill cultivated and unproductive. The
highest summits which the Apennines have within the
Dukedom are Monte Cimone, 6548 feet, and Doccia, 4138
feet high. The soil of the plain is a rich, deep, moist vege-
table mould, lying on a substratum of clay. The
streams descending the Northern slope of the Apennines
empty themselves into the Po; those flowing South-
ward fall into the Mediterranean. They are all of
insignificant size: the most considerable is the Secchia,
which flows Northward, and after giving supplies to
innumerable canals, which in every direction intersect
the country for the purpose of irrigation, falls into the
Po. The Crostolo and Panaro also flow Northward
and fall into the Po. Of the streams flowing South-
ward the only one of any note is the Serchio. There
are a few small lakes among the ridges of the Apen-
nines, the largest are Lago Santo and Lago di Fron-
tignano.

Some Geological phenomena in the territory of Modena Spallan-
have attracted the attention of Spallanzani, who gives zani's re-
a judicious though rather prolix account of them in his marks on
Essays on the Geology of the Apennines.* He de- the Geology
scribes the Rock de Carli, situated near Fanario, as 60 of Modena.
feet high and 300 in circumference. When the sun
shines it becomes a most brilliant and striking object, in
consequence of the reflection of the rays from the sur-
faces of innumerable crystals of quartz, of an aggregate
of which this singular mass is formed. It lies on an
earthy bed remote from any other stony formation. Of
the Lake of Scaffajolo, in the same neighbourhood, Boc- Boccaccio's
caccio gives the following account. "It is a little lake legend of
of the Apennines between Pistoia and Modena, less re- the Lake of
markable for the extent of its water, than for the singu- Scaffajolo.
larity attested by the unanimous evidence of the people
of the country, that if any one throw a stone or similar
body into it, so as to produce an agitation of the surface,

In the VIth volume of the French translation of his *Travels in
the two Sicilies*, by Faujas de St. Fond.

MODENA. the air thickens and furious winds rush forth which rend or tear up the largest and most firmly rooted oaks. Woe to those men or beasts exposed to the fury of the hurricane, which sometimes lasts for a day, and causes certain destruction to every being that encounters it." Such too was the general belief of the people at the time of Spallanzani's visit, and he mentions the amazement of his guides, when, after he had tried the experiment, no consequences resulted. The strange tradition attaching to this lake may perhaps justify its mention here, when no other circumstance connected with it distinguishes it from any other rocky basin filled with water. Such is the height and central position of Cimone, that a spectator standing on its summit can, without change of place, see both the Adriatic and Mediterranean. Though it does not rise to the limit of perpetual congelation, Spallanzani found it covered with snow which had lain on it so late as the 24th of August. Its form is conical, and totally devoid of vegetation, which, according to the account of the mountaineers, when at any time it may have taken root, is presently swept away by the violence of the winds which continually rage on some side or other of the mountain. The fires of Barigazzo are flames which, near the town of that name, play continually over the surface of a dry piece of ground, being fed by a gas exhaling from the earth: they are sometimes extinguished by violent storms, but burn again on the application of a lighted torch. The combustion is attended by a noise which may be heard at the distance of fifty yards; and so violent is the heat that it is employed for the purpose of reducing to lime the calcareous stones abounding in the neighbourhood. The Salsa of Maina is about fifteen miles from the city of Modena, in a level country. It consists of a great cone surrounded by several smaller, and the tops of the cones, depressed into the shape of funnels, continually throw forth masses of mud, about the size of ostriches' eggs, and consisting of great bubbles of gas enveloped in moist earth. The temperature of this liquid mud is not sensibly greater than that of the water and earth in the vicinity. Sometimes these bubbles are thrown up to the height of five or six feet, and the sound of the explosion may be heard at the distance of a mile and a half. The disturbance of the earth in this district appears formerly to have been much more terrible; as Pliny relates that the year before the Social War a volcano burst out near Modena and destroyed several houses with a great number of men and beasts. The Salsa of Sassuolo sometimes produces alarming effects, sending forth flames, shaking houses in the neighbourhood, and throwing stones, in some instances above one hundred pounds weight, to the distance of twenty feet. Another Salsa is situated at Quersuola, about five miles from Reggio. It is subject, at considerable intervals, to eruptions, when it casts forth mud to the height of fifty feet, and shakes the adjacent ground. Innumerable wells, sunk throughout the city of Modena and the surrounding country, afford a never-failing and abundant supply of water. In excavating for this purpose, the workmen, at the depth of twenty-three feet, meet with the ruins of ancient buildings; lower down a dense earth, and below that a marshy soil interspersed with reeds and rushes; then to the depth of about forty-five feet they dig through strata containing the trunks, branches, and leaves of trees mixed with a muddy water, which they carefully exclude from the shaft by means of a lining of brick; below this is a layer of chalk, eighteen feet thick, and full of sea-shells; then at the depth of

about sixty-five feet commences another stratum of marshy earth three feet thick, and below it to the depth of eighty-five feet a stratum of chalk; the marshy and chalky strata then alternate several times to the depth of about one hundred and five feet, where commences a bed, eight feet thick, consisting of gravel mingled with sea-shells and the trunks of trees. On boring this stratum the water gushes up with violence, and mounting above one hundred feet flows in abundance from the mouth of the well. There are several mineral springs, of which the most celebrated is that of Acquaria, and some sources of rock-oil or petroleum, whence that mineral fluid flows abundantly, in some instances of a red, in others of a yellow colour, and is used extensively for fuel, paint, and medicine. Iron mines are worked in the Vale of Garfagnana, and amber occurs in various parts of the territory. The quarries of Carrara supply the beautiful white marble, known every where under the name of that district. The demand has decreased since Architecture has been less attended to in Italy; and the exportation at present is principally to the Levant and the British Isles. The climate of the Dukedom resembles that of Lombardy in the severity of the winters, but in the milder seasons of the year vegetation is quick and luxuriant.

Modena is mainly an agricultural district, and in the low region displays a rich and varied prospect of corn-fields and meadows, divided by rows of elms, mulberry-trees, and chestnut-trees, between which the vines stretch in luxuriant festoons. The declivities of the Apennines are in many places covered with oaks, which afford a large supply of mast for feeding swine. The crops generally consist of bread-corn, rice, maize, pulse in great variety and profusion, and hemp, which gives material to the most important manufacture of the Dukedom. The farmers also turn their attention much to the cultivation of the vine, and send to market large quantities of a red wine, which, by a defect of strength usual in the products of the vintage throughout the North of Italy, can seldom be kept long. Olive-oil is produced in considerable quantity, but of a poor and inferior quality; nor is the silk much esteemed, though forming an important object of industry. The manufactures are limited to a few insignificant articles of hempen fabrics, silks, leather, pottery, and glass, and the demand of the inhabitants is almost entirely supplied by importation. The return is made by the exportation of wine, raw-silk, hempen cloth, black-cattle and hogs.

The Government of Modena may be defined an un- limited sovereignty, vested in the Duke, a Member of the House of Austria, who derives his title by the inter-marriage of an ancestor with a female of the House of Este. He claims the visionary right of being totally independent of any other Power. The Family of Este acquired Modena in 1290, when Obizzo, Marquis of Este, was made Lord of Modena and Reggio by the free choice of the People. In 1452, Borso, the Head of the family, was created Duke of Modena and Reggio by the Emperor Frederic III. In 1741, Duke Ercole III. married a member of the Family Cibo Malespina, and heiress of the Duchy of Massa and Carrara. Beatrice, the sole offspring of this union, became wife of the Archduke Ferdinand, brother of the Emperors Joseph II. and Leopold II., and from this marriage has descended the present Duke Francesco IV. The House of Austria claim the reversion of the territory in case the reigning Family should become extinct. The style of the Duke is, "Francis, by the grace of God, Prince Royal of

MODENA. Hungary and Bohemia. Archduke of Austria, Duke of Modena, Reggio, Mirandola, Massa, and Carrara, Prince of Correggio and Carpi, Marquis of Concordia, Count of Habsburg and Rivolo." The Government is absolute, the Duke possessing both the executive and legislative power. His dominions at present are divided into:

	Extent sq. Br. m.	Popul.	Chief towns.	Popul.
Dukedom of Modena	966	166,468	Modena	26,814
Dukedom of Reggio	756	161,612	Reggio	23,276
Vale of Garfagnana	231	10,580	Castel Nuovo	2,700
Dukedom of Massa Carrara	99	26,927	Massa	9,826

The other towns of importance are—in the Dukedom of Modena: Mirandola, population 8180; Concordia, population 3000. In the Dukedom of Reggio, Novellara, population 4070; Correggio, population 2166. In the Dukedom of Massa Carrara: Carrara, population 4076. The Duke, besides considerable private possessions in Austria and elsewhere, has an income of about 1,500,000 florins, and maintains an armed force of 1200 infantry, and 100 cavalry. Besides other men of eminence, this territory has given birth to Ariosto, Montecuculi, Spallanzani, and the celebrated Painter Antonio Allegri, better known by the name of Correggio.

City of
Modena.

MODENA, Capital of the Dukedom, and a Bishop's See, is situated in a pleasant plain between the rivers Secchia and Panaro. It is in general well built of stone, and has a broad and handsome street, the Strada Maestra, extending from one side of the town to the other. The streets have porticoes or covered ways on each side, so that passengers can walk without being incommoded by the wettest weather. The principal building is the Ducal Palace, constructed of marble in a handsome style, and standing alone amidst agreeable gardens. In the centre of the building is an extensive court surrounded by colonnades in a good style of architecture, and the grand staircase is singularly beautiful and magnificent. It contains a large collection of Pictures by the first masters, as well as a number of valuable antiques. The Library, containing 80,000 volumes and 1500 MSS., has been under the care successively of Muratori and Tiraboschi, who composed here their most esteemed Works. The Cathedral is a heavy Gothic building unworthy of notice except for its tower, which is built of marble, and is one of the loftiest in Italy. In the vault beneath the tower is preserved the bucket taken, 1325, by the citizens of Modena from a well in Bologna, and famous for being the subject of Tassoni's mock-heroic Poem *La Secchia Rapita*. Modena, though of insignificant size and population, contains nine Parish Churches, besides forty-one other Churches. There is also in it a University and a Hospital. The inhabitants, devoid of trade or manufactures, derive resources for their maintenance principally from the expenditure of the Court. 44° 40' North latitude, 10° 57' East longitude.

MODERATE, *v.* Fr. *moderer*; It. *moderare*; **MODERATE**, *adj.* Sp. *moderar*; Lat. *moderari*, from *modus*, measure, to set a measure. **MODERATION**, To set or fix a measure, or measurable bounds or degrees; to retain or restrain,

(from excess,) to abate, to allay, to temper, to mitigate, to regulate.

Mine herte for thee is disconsolate,
My pains also nothing me moderate.
The Lamentation of Mary Magdalen, p. 536. Imputed to Chaucer.

The chief blisse that in earth to living man is lent,
Is moderate welth, to nourish life, yf he can be content.
Surrey. *Ecclesiastes*, ch. v.

I say as I said before it may peradventure in some thinges doe wel to consider the causes of Gods commandmēt so it be done moderately and with reverence.

Sir Thomas More. *Workes*, fol. 361. *The First Part of the Con- futation of Tyndall*.

Moderation in the lymttes and boundes, whiche honestie hath appoynted in speakyng and doynge: like as in rennyng, passyng the goale is accounted but rashnesse, so rennyng halfe way is re- pproved for slownesse.

Sir Thomas Elyot. *The Governour*, book iii. ch. xx.

Such musicke is wise words with time concented,
To moderate stiffe mindes dispos'd to strive.
Spenser. *Faerie Queene*, book iv. can. 2.

If every just man, that now pines with want
Had but a moderate and beseeming share
Of that which lewdly-pamper'd luxury
Now heaps upon some few with vast excess,
Nature's full blessings would be well dispens'd
In unsuperfluous even proportion.

Milton. *Comus*, l. 769.

But the milde ayre with season moderate
Gently attemper'd, and disposed so well,
That still it breathed forth sweet spirit and holesom smell.
Spenser. *Faerie Queene*, book i. can. 12.

What goodnesse can there be in the world without moderation, whether in the use of God's creatures, or in our own disposition and carriage? Without this, justice is no other than cruell rigour; mercy, unjust remisnesse; pleasure, brutish sensuality; love, frenzy; anger, fury; sorrow, desperate mopishnesse; joy, distem- pered wildnesse; knowledge, saucy curiosity; piety, superstition; care, wracking distraction; courage, mad rashness.

Hall. *Works*, vol. iii. fol. 1. sec. 1. *Christian Moderation*.

But let Moses be the moderator and judge of this dispute, who teacheth us directly, that these cities are not seated in so divers and distant regions.

Ralegh. *History of the World*, book i. ch. x. sec. 2.

Yet when his profit moderated,
The fury of his heart abated.
Buller. *Hudibras*, part iii. can. ii.

So corn in fields, and in the garden flow'rs
Revive and raise themselves with moderate showers,
But overcharged with never-ceasing rain,
Become too moist, and bend their heads again.
Waller. *Instructions to a Painter*.

And what is all virtue but a moderation of excesses? A mean that keeps the balance of the soul even, neither suffering it to rise too high on one side, nor to fall too low on the other.

South. *Sermons*, vol. vi. p. 31.

For my part I shall always be more fond of promoting modera- tion than zeal; though perhaps the surest way of producing modera- tion in every party is to increase our zeal for the public.

Hume. *Essay* 3. vol. i. p. 22.

MO'DERN, *adj.* Fr. *moderne*; It. and Sp. **MODERN**, *n.* *moderno*; Low Lat. *modernus*; **MODERNISM**, which Skinner derives from *modò*, as *sempiternus* from *semper*; and **MODERNIST**. Vossius, (*de Vitiis*), *qui vivat modò*, h. e. nunc. One who now (in this our time) is living.

Now living or being, not long ago, lately, recently: opposed to ancient.

Yet was much taxed by that age precise,
For faults which modern times not strange have thought.
Stirling. *Doomes-day*. *The sixth Houre*.

Wakefield. Mem. p. 75.

MO'DEST, } Fr. *modeste*; It. and Sp. *modesto*;
MO'DESTLY, } Lat. *modestus*, q. d. *modum servans*,
MO'DESTY. } preserving the *measure*, sc. of what
is decent or becoming. Consequentially,

Decent, becoming; bashful; chaste. See the Quotations from South and Cogan.

———— I ment no more, but *modestly*
To warne the wise, that they such faults do flie
As put downe peace by couine or debate.

Gascoigne. The Fruites of Warre.

The farther I looke backe into those former tymes of Tyndall, Frith, and others lyke, more simplicitie, wyth true zeale, and humble *modestie*, I see with lesse corruption of affections in them.

John Foxe. Preface to Tyndall's Workes, sig. A. ii.

Modestie: which worde not being knowen in the Englyshe tongue, ne of all them whiche vnderstonde Latine, excepte they had red good auctours, they improperly named this vertue dyscrecion.

Sir Thomas Elyot. The Governour, book i. ch. xxv. fol. 88.

And, that augmented all her other prayse,
She *modest* was in all her deedes and words,
And wondrous chaste of life, yet lov'd of knights and lords.

Spenser. Faerie Queene, book iv. can. 3.

I loue Benedicke well, and I could wish he would *modestly* examine himselfe to see how much he is vnworthy to haue so good a lady.

Shakspeare. Much Ado about Nothing, fol. 109.

But he sad eyes, still fast'ned on the ground,
Are governed with goodly *modesty*,
That suffers not one look to glaunce awry,
Which may let in a little thought unsound.

Spenser. Epithalamion.

Modesty is a kind of shame or bashfulness, proceeding from the sense a man has of his own defects compared with the perfections of him whom he comes before.

South. Sermons, vol. ii. p. 129.

There is a degree of pain in *modest* diffidence; but it is amply recompensed by the glow of satisfaction, derived from the favourable opinion of others, and by the encouragement thus inspired, that the deficiency is not so great as was apprehended, or too great to be surmounted.

Cogan. On the Passions, vol. iii. p. 51. Virtue of Personal Prudence, ch. i.

She indirectly and *modestly* suggests, that were Christ to make it his request to God that Lazarus might revive, Christ's request would be granted.

Horsley. Sermon 36. vol. iii. p. 124.

True *modesty* proceeds from a just discernment of propriety, and is frequently connected with exalted ideas of genuine merit.

Cogan. On the Passions, vol. iii. p. 49. Virtue of Personal Prudence, ch. i.

MO'DIFY, v.

MO'DIFIER,

MODIFI'ABLE,

MODI'FICATE,

MODIFICA'TION.

Fr. *modifier*; It. *modificare*; Sp. *modificar*; Lat. *modificari*, to measure; to reduce or bring within measure (*modus*.) See MODE.

To bring within *measure* or *measurable* bounds; to shape or fashion; to reduce the *measure*; to limit, to temper, to qualify.

The xvi. statute doth me great greuaunce,
But ye must that releasse or *modifie*.

Chaucer. The Court of Loue, p. 375.

A kinge after the reule is holde
To *modifie*, and to adresse
His yestes vpon suche largesse,
That he measure nought excede.

Gower. Conf. Am. book vii. p. 221.

The kingdoms of this world are become the kingdomes of the Lord, and of his Christ, and he shall reign for ever and ever, not only to the *modified* eternity of his mediatorship, so long as there shall be need of regal power to subdue the enemies of God's elect; but also to the complete eternity of the duration of his humanity, which for the future is coeternal to his divinity.

Pearson. On the Creed, art. 6.

The use hereof, [of sense,] being only to minister to the *modification* of life in the vital principle, wherein the essence of sense doth consist.

Grew. Cosmo Sacra, book ii. ch. iii. fol. 41.

If it [the soul] be neither matter, nor any *modification* of matter, then (though you are pleased to affirm somewhat rashly, and without offering any reason for your affirmation) that such reasoning is far from being self-evident, yet it is really as notoriously self-evident as any thing in nature, that it cannot possibly depend upon matter, as to its being and preservation.

Clarke. Works, vol. iii. fol. 730. Letter to Mr. Dodswell.

How much more natural, therefore, is it, that a limited Deity, who at first is supposed only the immediate author of the particular goods and ills in life, should in the end be represented as sovereign maker and *modifier* of the universe.

Hume. Essays, vol. ii. p. 412. The Natural History of Religion, sec. 7.

MODIOLA, in Zoology, a genus of *Acephalous Mollusca*.

Generic character. Shell subtransverse, equivalve, regular, with the posterior side very short; beaks almost lateral; hinge without teeth, lateral and linear; ligament somewhat interior, in a marginal furrow; muscular impression sublateral, elongated.

Type of the genus, *Mytilus modiolus*, Linnæus, Brown, *Illust.* pl. xxix. fig. 1—4. Several species, inhabiting the seas of all quarters of the globe; two or three are found on the coast of Britain, and others in a fossil state.

MO'DULATE, v.

MODULA'TION,

MO'DULATOR,

MO'DULE.

Fr. *module*, *modulation*; It. *modulazione*; Lat. *modulatio*, from *modulari*, to measure.

To measure, to regulate the *measure* or proportion, the harmony, the concord.

That charmer of the night
That *moduleth* her tunes so admirably rare,
As man to set in parts at first had learn'd of her.

Drayton. Polyolbion, song 13.

In all vocal musick [the tongue] helpeth the windpipe to *modulate* the sounds.

Grew. Cosmo Sacra, book i. ch. v. sec. 16. fol. 26.

The rings of the wind-pipe are fitted for the *modulation* of the voice.

Id. Ib. sec. 10. fol. 25.

MODUS.

For the various *modulations* of the voice, the upper end of the wind-pipe is endued with several cartilages and muscles, to contract or dilate it as we would have our voice flat or sharp.

Ray. Of the Creation, part ii. p. 313.

What an abridgment of art, what a variety of uses hath nature laid upon that one member, the tongue, the grand instrument of taste, the faithful judge, the centinel, the watchman of all our nourishment, the artful *modulator* of our voice, the necessary servant of mastication, swallowing, sucking, and a great deal besides?

Derham. Physico-Theology, book v. ch. v. p. 306.

The poets of Elizabeth had attained an art of *modulation* which was afterwards neglected and forgotten.

Johnson. Life of Waller.

May the nightly pow'r,
Which whispers on my slumbers, cease to breathe
Her *modulating* impulse through my soul.

Thompson. Sickness, book v.

Real Com-
position.

MODUS, in *Law*, signifies an exemption from the payment of tithes, and is of two kinds: first, a partial exemption, when it is called a *Modus decimandi*; secondly, a total exemption, when it is called a *Modus de non decimando*. There is a third species of exemption called a *Real Composition*, of which it is necessary to say a few words, as it bears a strong analogy to the *Modus decimandi*, and is indeed the source from which that *Modus* originated. A *Real Composition* is where an agreement is made between the owner of lands and the Parson or Vicar, with the consent of the Patron and Ordinary, that the lands specified shall be exempt from tithes on such considerations as are contained in the stipulation, such as land or other real recompense given in lieu and satisfaction of the tithes to be relinquished. Previously to the Statute 13 Eliz. c. 10. such a composition was binding, not only upon the incumbent by whom it was made, but also on all those who succeeded him; because it was presumed at Common Law that no agreement could be injurious to the temporal interests of the Church which required the joint consent of the Ordinary, the Patron, and the Incumbent. However, the variations in the value of money and other causes tending to show that this Common Law presumption was not supported by facts, the above-mentioned Statute of 13 Eliz. c. 10. was passed to restrain Parsons and Vicars from making any conveyance of the tithes or other possessions of their churches, except on leases for twenty-one years, or three lives. Therefore all *Real Compositions* which are relied on at the present day must have existed previously to the passing of that Statute, or they cannot be sustained.

Modus deci-
mandi.

The *Modus decimandi* is that which is generally meant when the term *Modus* is used. It is defined to be a custom of tithing in a particular manner, different from that which the general law prescribes, which custom must have existed from time whereof the memory of man goeth not to the contrary, that is from the commencement of the reign of Richard I. A. D. 1189, a period which for these purposes is fixed as the limit of legal memory. The modes of tithing established by these customs are exceedingly various; sometimes it is a compensation in work and labour, as that the Incumbent shall have only the twelfth cock of hay, and not the tenth, in consideration of the landowner's making it for him; sometimes it is a less quantity of tithe in a more perfect, in lieu of a larger quantity in a crude and imperfect, state, as a couple of fowls in lieu of tithe eggs; sometimes, and more frequently, it consists in a pecu-

niary compensation, as two-pence an acre for the tithe of land. These customs are supposed to have originated in compositions made, with the assent of the Patron and Ordinary, between the landowner and the Incumbent, all traces of which have been long since lost, except the customs themselves which they established. It is necessary to bear this in mind for the better understanding of the rules or tests by which the validity of a *Modus* is to be ascertained. The principal of these tests are six in number. 1. The *Modus* must be *certain* and *invariable*; for it is to be presumed that the compounding parties would fix what the Incumbent was to receive by way of composition, and therefore payments of one sum at one time and of another at another time will be evidence rather of temporary arrangements, than of any definite agreement. 2. The thing given in lieu of tithes must be for the benefit of the person who is to receive them: therefore, as the Parson or Rector is only bound to repair the chancel, a *Modus* to repair the body of the church in lieu of Rectorial tithes would be bad, for why should a Rector relinquish his tithes for the purpose of obliging one or more of his parishioners to do that which of common right ought to be done by the parish at large? 3. It cannot be a smaller quantity in lieu of a larger quantity of the same thing, as one load of tithe hay in lieu of all tithe hay, for this would be simply an abandonment of all tithe hay over and above one load, without any recompense for the tithe so abandoned. 4. Payment of one kind of tithe cannot be discharged by the payment of a *Modus* for another, when both are due of common right: thus the payment of a penny for every milch cow will not discharge the tithe of barren cattle. The reason of this is not so obvious as that of the preceding rules, because it may be argued that the compounding parties would fix on a higher payment for the one tithe, in consideration of the other being altogether relinquished. It may, however, be defended on the ground that it is impossible to prove that the *Modus* was originally intended as a satisfaction for both kinds of tithe: because the mere nonpayment of the one kind during the past is by itself no discharge of that kind for the future; and there is no reason why we should presume that the *Modus* payable for the other kind was in fact intended as a satisfaction for both, the only evidence that we have to guide us being the fact of the payment. 5. The recompense must be as durable as the tithes discharged by it; that is an inheritance certain; and therefore a *Modus* that every *inhabitant* of a house shall pay four-pence a year in lieu of the *owner's* tithes, is not good, because sometimes the house may stand unoccupied, and then nothing would be payable. 6. The *Modus* must not be *rank*, that is to say, the sum payable for the tithe must be such as would not have exceeded the fair value of the tithe previously to the year 1189. For suppose that the landowner claims to pay £20 as a *Modus* for the tithe of hay, and that upon calculating the quantity of hay that can be raised on the land, and the price which hay bore before the year 1189, it appears that the value of the tithe could not at that time have exceeded twenty shillings, this will be unanswerable proof to show that the supposed *Modus* is of a later origin. With additional evidence it might be supported as a *real composition*; but the mere proof of payment of the £20 will not support it as a *Modus*; though there be no proof of any other sum having ever been paid, or of the tithe ever having been taken in kind. The difficulty of supporting

MODUS.

MODUS. the payment as a real composition arises from the necessity of producing some evidence to show that a Deed establishing the composition once existed. This difficulty is obviously increased in proportion to the length of the time which has elapsed since the period when the Deed may be supposed to have been made. So that prescription and lapse of time, which in almost every other case strengthen the title to property, and which on every principle of fairness and policy ought to have that effect, do not, in the instance of the landowner who claims title to be exempt from tithes, give him any additional security, but on the contrary, are continually rendering it more and more difficult for him to substantiate his claim. The Commissioners on the Law of Real Property have, in their 1st Report, recommended that where the tithes are in the hands of *lay* impropiators, the nonpayment *as of right* of tithes for twenty years shall be conclusive in favour of the exemption; that undisputed payment of a Modus for twenty years shall be conclusive in favour of the Modus against those who have received it, and those who claim under them; and that a Deed establishing a real composition shall be presumed from long usage without further evidence. There can be no doubt that these or similar provisions will before long be adopted by the Legislature; and although in the words of the Commissioners, "we are deeply impressed with the conviction that the property of the Church should be held sacred," still with them "we conceive that the Clergy might derive benefit from regulations that might lessen the litigation to which the claim to tithes now too frequently gives rise, and might rescue that species of property from the odium which is sometimes unjustly cast upon it."

Modus de
non deci-
mando.

The *Modus de non decimando* is an absolute exemption from tithes. It exists in four cases: 1. The King may prescribe that he and his progenitors have never paid tithes for ancient Crown lands, and this prescription will be good. It is a prerogative privilege, no other layman being able to rely on non payment of tithes as a prescriptive exemption from them; and even if the King aliens lands, which in his hands were protected by prescription, they do not continue exempt in the hands of the alienee; but the privilege is lost, and so entirely so, that if the lands again become the property of the King, the exemption does not revive. 2. The Vicar does not pay tithes to the Rector, nor the Rector to the Vicar, according to the rule that *ecclesia ecclesie decimas solvere non debet*: and it appears that the lessee of each has the same exemption as his lessor; nevertheless, the Rector may claim the Rectorial tithes from his own lessee, unless there be an express agreement to the contrary, which rule also applies to the Vicar and his lessee. 3. An Ecclesiastical person, as a Bishop, may prescribe to be exempt from paying tithes, on the ground that the lands belong to the Bishopric, and that neither he nor his predecessors have ever paid them. 4. The Abbays and Monasteries at the time of their dissolution were possessed of large estates of land, a great part of which was held tithe-free, either by *prescription*, for we have just seen that Ecclesiastical persons might prescribe to be exempt for lands which had always been in spiritual hands, or by *unity of possession*, which was, in fact, no more than prescription; for, if a Monastery were possessed from time immemorial of a Rectory and of land within the Rectory, it could not pay tithes to itself, and therefore there was an apparent prescriptive non-payment of tithes; or by the Pope's *Bull of exemption*, or by a *Real Compo-*

VOL. XXV.

sition. When the smaller Abbays were dissolved by the Statute 27 Henry VIII. c. 28., their lands were vested in the King, and as no provision was made in the Act to the contrary, they became subject to tithes in the hands both of the King and of his grantees. But the Statute 31 Henry VIII. c. 13., which dissolved the larger Abbays, enacted that all persons who should come to the possession of the lands of any Abbey then dissolved should hold them tithe-free in as ample a manner as the Abbays themselves had formerly held them. In order, therefore, to support this last species of *Modus de non decimando*, it is necessary to prove that the lands belonged to one of the Abbays dissolved by 31 Henry VIII. c. 13., and also that the Abbey had them tithe-free. The lands which belonged to the Order of the Knights of St. John of Jerusalem, and to the Order of the Cisterians are within the protection of the Statute 31 Henry VIII. c. 13.; and those of them, consequently, which were tithe-free before they came into the hands of the King, still continue tithe-free, in whosoever hands they may now be. Some lands have been made tithe-free by Act of Parliament, but the great bulk of tithe-free lands throughout the Country are so by virtue of the above-named Statute.

See Blackstone, *Commentaries*, vol. ii. p. 28; Wooddeson, *Lectures*, vol. ii. p. 98; Selden, *History of Tithes*, ch. xiii; Cruise, *Digest*, vol. iii.; Burton, *Compendium of the Law of Real Property*, p. 367 *et seq.*

MOEHRINGIA, in *Botany*, a genus of the class *Oclandria*, order *Digynia*, natural order *Caryophyllæ*. Generic character: calyx four-leaved, corolla, petals four; capsule one-celled, four-valved.

Two species, natives of the South of Europe.

MOENCHIA, in *Botany*, a genus of the class *Tetrandria*, order *Tetragnia*. Generic character: calyx four-leaved, conniving, segments acute-lanceolate; corolla short, petals entire; capsule valveless, one-celled, bursting in five divisions at the apex; seeds kidney-shaped, scabrous.

One species, *M. glauca*, native of Europe. The *Sagina erecta* of English Botanists.

MOIETY, Fr. *moitié*, from *moyen*, *moien*, the mean or middle; *dimidia pars*, the half part; but it was used for any part or division. See the Commentators on Shakspeare.

They were faire ladies till they fondly striv'd

With the Heliconian maides for maystery;

Of whom they over-comen were depriv'd

Of their proud beautie, and the one *moyity*,

Transform'd to fish for their bold surquedry.

Spenser. *Faerie Queene*, book ii. can. 12.

ASSIST. Your brother hath deserv'd all.

HEN. And shall share

The *moitie* of my state.

Beaumont and Fletcher. *The Spanish Curate*, act v. sc. 2.

A friend shares my sorrow and makes it but a *moiety*; but he swells my joy and makes it double.

Taylor. *Sermon* 25. part ii. fol. 235.

The love I dedicate to your lordship is without end; whereof this pamphlet, without beginning, is but a superfluous *moiety*.

Shakspeare. *Rape of Lucrece*. Dedication.

MOIL. See MULE.

Ever after they made a proverb of it, and called such as were painfull and willing to do that which they were commanded without grudging, *Marius moils*.

Sir Thomas North. *Plutarch*, fol. 354. *Caius Marius*.

MOIL, v. } See BEMOIL, ante. Fr. *mouiller*, to
MOIL, n. } wet.

To wet; to cover with wet, to splash or bespatter with wet, with mire, to bemire, to soil or assoil, to dirty.

MOIL.
—
MOIST.

For the word as used by Chapman, Bacon, and Gay, a different origin has been given, *sc. moil*, a mule, (*instar muli laborare*,) to labour like a mule; and this seems countenanced by the passage quoted above from North's *Plutarch*; it may, however, merely be

To soil or bemire with sweat and dust; to toil laboriously and wearisomely.

A monk that took the spryngill with a manly chere,
And did as the manere is, *moilid* al their patis
Everich aftir othir, righte as they were of statis,
The Pardonere and Tapstere. Imputed to Chaucer.

A simple soule much like myselfe dyd once a serpent find,
Which (almost dead with cold) lay *moyling* in the myre,
When he for pittie tooke it vp, and brought it to the fyre.
Gascoigne. The Constaunce of a Lover, &c.

Then rouze thyselfe, O Earth, out of thy soyle,
In which thou wallowest like to filthy swyne,
And doest thy mynd in durty pleasures *moyle*.
Spenser. Hymne to Heavenly Love.

Moil not too much under-ground for the hope of mines is very uncertain.

Both fil'd with dust, but starting up, the third close they had made,
Had not Achilles selfe stooode vp; restraining them, and bade,
No more tug one another thus nor *moyle* your selues, receiue
Prise equall; conquests crownes ye both; the lists to others leaue.
Chapman. Homer. Iliad, book xxiii.

Whilom with thee 'twas Marian's dear delight
To *moil* all day, and merry-make at night.
Gay. The Shepherd's Week. Tuesday.

MOISON, Fr. *moisson*; Lat. *messio*, reaping or mowing, used in Low Lat. as *messis*, the harvest.

And some ther been of other *moison*,
That drowe nigh to hir season.
Chaucer. The Romant of the Rose, p. 183.

MOIST, from Lat. *musteus*, new. Not only wine but any thing new, is with propriety called *mustum*. Nonius in Vossius. And see Tyrrwhitt.

Hire hosen weren of fine scarlet rede
Ful strait yteyed, and shoon ful *moist* and newe.
Chaucer. Prologue to the Canterbury Tales, v. 459.

By *corpus domini* but I haue triacle
Or else a draught of *moist* and cornie ale
Or but I here anon a mery tale,
Myn herte is loste for pitee of this maid.
Id. The Pardoneres Tale, v. 12249.

For were it win or old or *moisty* ale,
That he hath dronke he speketh in his nose.
Id. The Manciples Tale, v. 17009.

MOIST, *v.* Fr. *moite*, anciently, Skinner thinks, written *moist*, and derived (perhaps) from the Lat. *mustum*. (See MOIST, *ante*.) The French Etymologists (see in Menage) from *matus*, for *madus*, contracted from *madidus*. See Vossius, *de Vit. lib. iii. c. 498*. In Spanish it is *moiado*, which appears to supply an intermediate step in the progress from *madidus*, to *moite*.

To wet, to damp, to bedew; met. to refreshen (as with dew or rain.

Matrimonye a *moiste* frut. pat multiplieþ þe peple.
Piers Plouhman. Vision, p. 308.

And sche stood behynde besides hise feet: and bigan to *moiste* hise feet with teeris, and wypide with the heeris of hir heed.
Wiclif. Luke, ch. vii.

I chaunge my mirthe into melancoly,
Which is the mother of all pensiveness,
Thy *moyster* and thy herte, into cold and dry.
Chaucer. The Complaint of Creseide, p. 296.

— The fire in his degree
Whiche enuironeth tother three
And is without *moyste* all drie.
Gower. Conf. Am. book vii. p. 206.

Moisted with teares, thus wretched gan she playne.
Surrey. Virgil. Æneis, book iv.

Out of whiche proceedeth suche false doctrine as dryeth vp the *moystnes* of the soule in trifling out y^e trueth.
Bible, Anno 1551. Job, ch. xv. notes.

Who deuidenth the aboundance of the waters into riuers, or who maketh a waye for y^e stormy wether, that it watereth and *moystureth* the drye and baren ground.
Id. Ib. ch. xxxviii.

And in everye one of these tymes, the weather altereth, as sometime windy, sometime caulme, sometime cloudey, sometime cleare, sometime hot, sometime coude, the wynde sometime *moystye* and thicke, sometime drye and smoothe.
Ascham. Works, p. 168. Toxophilus.

The miste which the *moystie* hilles did cast forth, took not away clerely the vse of the prospect.
Brende. Quintus Curtius, book iv. fol. 87.

So they all drank heartily except himself who being the last that came down, did no more but a little *moyst* his mouth without, and so refreshed himself.

Sir Thomas North. Plutarch, fol. 34. Lycurgus.

By this th' eternall lampes, wherewith high Jove
Doth light the lower world, were half yspent,
And the *moist* daughters of huge Atlas strove
Into the ocean deepe to drive their weary drove.
Spenser. Faerie Queene, book iii. can. 1.

Ne doe they need, with water of the ford
Or of the clouds, to *moysten* their roots dry
For in themselves eternall *moisture* they imply.
Id. Ib. book iii. can. 6.

It pleased God to open the windowes of heaven for the *moistning* and nourishing of their seedes.
Hakewill. Apologie, book i. ch. v. sec. 3. fol. 57.

Her *moistful* temples bound, with wreaths of quivering reeds.
Drayton. Poly-olbion, song 18.

Some cloudes giue snow, that lights and lies
A *moisture* *moystles*: so
Doe those that say, alas, God helpe,
And nothing els bestoe.
Warner. Albion's England, book viii. ch. xxxix.

You know the king is a good husband, and but a steward in effect for the publike, and what comes from you is but a *moisture* drawne from the earth, which gathers into a cloud, and falls backe vpon the earth againe.
Bacon. King Henry VII. fol. 60.

For *moistie* blasts not half so mirthfull bee,
As sweet Aurora brings in spring-time faire
Our joyes they dimme, as winter dampes the aire.
Mirroure for Magistrates. Induction.

Why were the *moist* in number so outdone
That to a thousand dry, they are but one?
Blackmore. Creation, book i.

There shall we find, that when the world began,
One common mass compos'd the mould of man;
One paste of flesh on all degrees bestow'd,
And kneaded up alike with *moistning* blood.
Dryden. Sigismonda and Guiscardo.

Did not the vapours, by the solar heat
Thinn'd and exhal'd, rise to their airy seat,
Or not in wat'ry clouds collected fly,
Then, form'd to pond'rous drops, desert the sky;
The fields would no recruits of *moisture* find.
Blackmore. Creation, book ii.

MOLAR, Lat. *molares*, *sc. dentes*; Fr. *les dents molares*.

The cheek teeth or grinders.

The teeth are, in men, of three kinds: sharp, as the fore-teeth; broad, as the back-teeth, which we call the *molar*-teeth, or grinders; and pointed-teeth, or canine, which are between both.
Bacon. Natural History, Cent. viii. sec. 752.

MOIST.
—
MOLAR.

MOLASSES. **MOLASSES**, Fr. *mallece*; It. *melazzo*; and this *a melle*, from honey, which it resembles much in sweetness and consistency. Skinner. The Low Lat. *mellatium* is applied to *must*, boiled down to half. Cotgrave calls *melasses*.

The dregs or coarsest of sugar; and Boyle—black, coarse sugar.

The raw flesh of goats, capons, and the like, together with rice and *molasses* (or black coarse sugar) they put into a quantity of water, and distil it in an alembic till the liquor be stronger than brandy.

Boyle. *Works*, vol. ii. p. 108. *The Usefulness of Natural Philosophy*, part ii. ess. 4.

Or, planter, if the coction they prolong
Beyond its stated time; the viscous wave
Will in huge flinty masses crystalize,
Which forceful fingers scarce can crumble down;
And which with its *melasses* ne'er will part.
Grainger. The Sugar Cane, book iii. l. 438.

Boundaries. **MOLDAVIA**, the most Northern portion of the Turkish Empire, is a small Principality, separated on the West and North from Transylvania and Bukovina by a part of the Carpathian chain of mountains, on the North and East from Bessarabia by the Prút, on the South and West from Bulgaria by a small part of the Danube, and by the Seret and its affluent the Milkov from Vallakhia. The Southern part, in the Districts of Fokshani, Galachi, and Falchi, is an open, level country; the remainder is not quite level, being traversed by chains of low hills in every part, which follow the course of its principal rivers, the Seret or Sirét, and the Prút. The former has likewise three considerable tributaries, the Moldava, the Bistritza, and the Trotush. There are no rocks or mountains, except on the confines of Hungary and Transylvania. It is evidently from the course of its rivers on a gradual declivity, but every part of it, from the severity of its Winters, must be at a considerable elevation: the mercury in the thermometer sometimes sinking so low as 21° of Réaumur (— 15° of Fahrenheit.) The heat in Summer is proportionably great; the grapes begin to ripen in July, and the vintage is finished in September. A rich soil and abundance of water secure large crops of every kind of produce, and the hilly tracts contain rich veins of minerals, some of which were formerly worked. At Okna,* on the declivity of a branch of the Carpathians, there are salt-works producing 1,500,000 quintals. At Grosheti, in the same neighbourhood, there is a large isolated mass of rock-salt, (Sulzer, i. 146.) and some sulphureous springs; others occur also between Bakov and Roman, near the Siret; there is a chalybeate source in the neighbourhood of Nyamtz; and gold-sand is brought down by the Bistritza. Wheat and barley are more cultivated than rye; and oats are little used, barley being, as in the rest of Turkey, the grain usually given to horses. Millet (*Sorghum*) is substituted, when roasted, for coffee, and maiz, first introduced by Prince Nicolas Mavrokordato in 1710, as well as buck-wheat, (*Polygonum fagopyrum*), form, when made into a kind of potage called *mamaliga*, the principal food of the lower orders. Few esculent vegetables are cultivated; the egg-plant (*Solanum melongena*, called *potlushelya* by the Moldavians) and the esculent hibiscus, (called *bamia*, as in Turkey,) though most in request, are neither peculiarly palatable nor nutritious. Wine, one of the most valuable productions of Moldavia, is

made when there is a tolerable vintage, to the amount of 4,200,000 *eymers* or buckets, (55,860,000 gallons.*) The wines of Husht, Nikoreshti, and Yassi are esteemed; but that of Kotnar, resembling Champagne, is the second best, and the best of all that of Odobeshti. A kind of purl is also made with a black raisin and brandy; but neither in the art of making wine nor in the culture of the vine do the Moldavians possess any skill. Their extensive meadows and forests afford shelter and pasturage to vast herds of swine, and according to Wolf (i. 53.) those of the district of Orhei, have undivided hoofs. This peculiarity was noticed by the Ancients, (Aristotle, *Hist. Anim.* ii. 7. p. 167. Plinii *Nat. Hist.* xi. 106.) and is not unexampled in the North of Europe. (Linnæi *Amœnit. Academ.* v. 451.) The Moldavian horses are much used by the Prussians and Austrians for their light cavalry; but it is principally in the plains of Bessarabia, to the East of Prút, now a part of the Russian Empire, that the strongest horses are bred. Horned cattle, goats, and sheep are reared in great number; the latter to the amount of between three and four millions. The great extent of the woods is favourable to the increase of game, the trade in skins and furs is therefore another considerable branch of commerce; and the bees, which are kept in great numbers without much trouble or expense, produce a vast abundance of honey and wax, which become articles of export to a considerable extent. The latter is peculiarly esteemed, being green and having an aromatic odour.

The Principality is divided into the Upper and Lower Provinces, each of which contains a certain number of *Kádíliks* (Jurisdictions) or *Tzinutz*. (Subdivisions.)

Bessarabia and the *Kádíliks* of Khotin, called Khóchim (Choczim) by the Poles, Sucháva and Charnautz, (Chernovitz, also spelt Csernowicz, or Czernowitz,) which of old formed a part of Moldavia, were ceded to Russia and Austria by some of the latter Treaties between Turkey and those Powers.

The principal towns are, 1. *Yasi*, in 47° 8' 30" North Towns. and 27° 30' 24" East, the Capital of this Principality, Jassy. on the left bank of the Bakhluí, about nine miles to the West of its confluence with the Prút. All its buildings, except some churches and a few mansions of noble families, are wretched huts, formed of mud and wood; and even the Monasteries are little better. The suburbs are filled with hovels, thatched with reeds, and even in the middle of this metropolis, say the Thesalian Priests, Daniel and Gregory, (Γεωργ. Νεωτ.

* *Oena* in Arrowsmith's Map of the Environs of Constantinople.

* Supposing the Tokay *eymer* to be meant, but one-third more if it be that used in Upper Hungary.

- MOLDA-
VIA. p. 363.) many similar ones are seen. Its position, they observe, is almost the worst in all Moldavia. Placed between hills on uneven ground, it is almost encircled by the little river Bakhluī, (ὁ ῥύακι Μπαχλουΐ,) the water of which stinks, and in many places makes stagnant pools, which infect the air of the town. The Churches, according to Mr. Thornton, (ii. 363.) are heavy and inelegant, bedecked internally with wretched daubs of Saints and Martyrs, which may defy the wrath of the most rigorous iconoclast, so little resemblance do they bear to any being endowed with life. There is an extensive and well-supplied bázár; and abundance of wine-houses and cellars, in which the common people "are familiarized with the practice of every kind of debauchery." Instead of being paved, the streets are floored with thick beams of wood; the surface of which is converted into deep mud in Winter, and into dust as troublesome in Summer, to say nothing of the holes with which these public floors abound, when out of repair, as they usually are. There is a public Hospital, but so ill-managed that none but the most indigent will have recourse to it.
- Batouchan,
or Botus-
chan. 2. About fifty miles North-West of Yasi is *Potoshani*,* the second town in Moldavia, which in any other Country would be called a village, its best houses being reed-thatched, mud-built huts; its trade and population are proportionably inconsiderable.
- Roman. 3. *Rómano*, or *Róman*, about forty miles South-West of Yasi, is an Episcopal See. The town, which is of some size, is situated on a beautiful plain, surrounded by hills on the left bank of the river Moldova (or Moldava) and the right of the
- Fokschany. Sirét, (or Sereth.) 4. *Fokshani*, four days' journey (about 100 miles) South-West of Yasi, is a great thoroughfare on the confines of the two Principalities, one half being in Moldavia and the other in Vallakhía.
- Galatz. 5. *Galatzi*, Galátz, or Galách, on the Danube, is a place of some importance as a trading town, and one of the great thoroughfares between Moldavia and Constantinople. "In addition to these places, each *Kádilik* has a village (χώρα) bearing its name, but they are all wretched places, and merely consist of hovels; (καλυβοπηγία;) the misfortune, not the fault of the inhabitants, say the Thessalian Ecclesiastics (p. 334) before quoted; for who can feel any inclination to build a house in a place where he has no security that he may be able to inhabit it?"
- Government. The above remarks refer to the wars between Turkey and Russia, which are always ruinous to the Countries on the borders; but they might be extended to the Government of the Principalities itself, which is unhappily one of the worst in any civilized State. The resolute descendants of the ancient Dacians, whose forefathers so long resisted the Roman arms, were the last of the Europeans who submitted to the Turks. It was not till 1512 (Von Engel, *Moldau*, 162.) that the *Vaivoda* of Moldavia acknowledged themselves vassals of the Sultan; and in 1529, their allegiance to the Turkish Emperor was finally established on these conditions: that the *Hospodar* chosen by the Boyars should be confirmed by the Grand Signior; their churches and religious rites preserved inviolate; and a yearly tribute paid of 4000 ducats, 40 mares, and 24 foals. (Hammer, *Gesch.* iii. 201.) Their original form of Government, therefore, remained unaltered; but after the extinction of the Family of Dragosh in 1552, the sovereignty was frequently conferred on foreign adventurers, and has
- been ever since 1711 farmed out by the Turkish Government to Greeks in its service, especially to those who held the post of Dragoman, or Court Interpreter.
- The *Vaivoda*, or *Hospodar*, is assisted by a *Díván*, or Waywode, Council, which is the supreme Court of Justice, and decides without appeal in its extraordinary sessions, at which the Prince himself presides. It consists of the Metropolitan, (Archbishop,) *Logotheti Mare*, (Lord Chancellor,) *Dvornik Mare*, (Chief Justice,) *Halman*, (Commander in Chief,) *Vistiár Mare*, (Lord Treasurer,) and seven or eight inferior magistrates and the great officers. The last is usually a native of rank; the others are Greeks from the Phanál at Constantinople, followers, if not relations, of the reigning Prince. The inferior Members of the *Díván* have no voice either in deliberating or deciding on any measure; but their signatures are required to all public acts. (Thornton, ii. 348.) If unanimous they can control the will of the Prince, but as they are all appointed by him, and can be displaced at pleasure, he is sure of their concurrence. The *Logotheti Mare*, who is Keeper of the Great Seal, has two inferior *Logotheties* under him, who issue diplomas and have the superintendence of all Monastic foundations. There are also four inferior *Dvorniks*, who act as Judges in the metropolis, and nominate the justices established in the different Districts. The Code of Justinian is nominally the text-book of the Moldavian lawyers; but usage and precedent constantly supersede the written law. (Von Engel, i. 135. ii. 120.) The Prince, say the Thessalians quoted above, (p. 328.) "governs the whole place as a Monarch, subject, however, to the orders of the Sultan; he follows the laws of his predecessors, the local usages, and often legislates himself. He creates Nobles, (ἄρχοντας,) and appoints *Ispravniks* over the Districts, (καταδικία,) who hear the causes arising there, collect the revenue, and execute all the orders issued by the Prince's Court." (τῆς ἀνθεντικῆς αὐλῆς.) The revenue is said by them to exceed 3000 purses. (£150,000.) In 1785, according to Mr. Thornton's data,* (ii. 362.) it amounted to 5680 purses, (£284,000,) arising from the *Kharách*, or capitation-tax, the tax on small land-holders and merchants, or the Transylvanian emigrants, who pay less than the natives; together with duties on salt, wine, tobacco, bees, pasturage, and customs. As the Nobility and Clergy, both regular and secular, are exempt, except in case of an extraordinary requisition, from all imposts, taxes, and contributions whatever, the public burdens fall almost exclusively upon the poor; and are the more severely felt, as the taxes are universally farmed out to contractors, who make advances, and are empowered to levy the revenue claimed by "every expedient which fraud or violence may dictate." (Thornton, ii. 361.) The soldiers are also exempted, but as their number is not large, that privilege would not press upon the rest of the people, did it not act as a stimulus to the military to enforce the demands of the tax-gatherer with the utmost cruelty and rigour. The native force was first reduced to its present wretched state by the *Mavrokordatos* in the beginning of the last century. The militia consists of about 6000 men, infantry and cavalry, each of whom receives, annually, a quantity of cloth sufficient for a vest or outer garment. This and the exemption from taxes are their only remuneration; and a more wretched body of soldiery can hardly be

* *Botuchany*, in the Map published by the Society for the Diffusion of Useful Knowledge.

* From the *Osservazioni* of Raicevich; (Raitzevich;) though he forgets to give his authority. See Von Engel's *Geschichte der Moldau*, i. 131.

MOLDAVIA. imagined. They are commanded by Captains appointed by the *Hatman*, or Commander-in-chief, and are dispersed over the Country. The *Hatman* holds his Court, has his *nólet*, or Turkish band, a prison in his house, where he can fine and inflict punishment, and is considered as next in dignity to the Prince. The body-guard consists of *dalís* and *tufenkchís*, (musketeers,) Albanians of the Greek Faith, as daring, undisciplined, and insolent, as any of their Musulmán brethren. The *Aghá*, or General of Infantry, is also the Director of the Police and regulator of the markets, which he inspects, accompanied by his executioners, for the infliction of summary punishment in the Turkish fashion.

Investiture.

Court.

Religion.

Population.

The *Hospodár* receives his investiture from the Grand Vezír (*Vezír 'A'zem*) with rather more ceremony than a *Páshá*, though he has only two *túghs* (horse-tails) to mark his rank. At the Patriarchal Church in the Fanál, he is installed with nearly the same rites and services as were formerly used at the coronation of the Byzantine Emperors; and his entrance into his Capital is made with all the attendants and magnificence he can command. For these petty Sovereigns, whose dignities are uniformly sold to the highest bidder, and are seldom possessed more than two or three years, affect all the state and etiquette of the greatest potentates. They are always attended by their *Postelnik*, or Marshal, through whom petitions must be made; the *Comisso*, or Master of the Horse, who rides the charger given by the Sultan in grand processions; the *Grammaticos*, or Secretary, who has the care of the official correspondence; and the *Portár báshí*, or Master of the Ceremonies. There is also one Musulmán officer attached to the Court, the *Díván-efendí-si*, (Secretary to the Council,) who corresponds with Constantinople, decides causes in which Musulmáns are concerned, and serves to remind the Prince of his dependence on the Porte.

The established Religion is that of the Eastern, or Greek Church; the Metropolitan, or Archbishop, has two suffragan Bishoprics in his Province, Roman and Hush, (*χουσι*), and the Churches and Monasteries subject to them are extremely numerous. The Clergy, secular as well as regular, is said to be very illiterate and of relaxed morals, as is too often the case in the Eastern Church. All Religions are tolerated, though foreigners are not allowed to settle permanently in the Country.

The population, which can hardly exceed 400,000 souls, consists of Moldavians, Gypsies, Greeks, Jews, and a few Armenians; the latter are engaged in commerce, and found only in the large towns. The Moldavians, who call themselves *Rumunyë*, (Romans,) speak a Language which bears a close affinity to the modern Italian, for which it is not easy to account. They are divided into three classes: 1. the *Boyars*, or Nobles, viz. those who have themselves held any magistracy, or are descended from such; 2. the *Mazilies*, or yeomanry, a sort of middle class; and the villagers, (*χωριάτες*), or peasantry. They have in their Summer dress exactly the appearance of the Dacians represented on Trajan's column, and are apparently as hardy and resolute; but their resolution has been debased by ill usage into a pusillanimous obstinacy, which yields only to blows. Such, at least, is the account given by the Greeks, and those who follow their example of exacting what they want by the cudgel, and of making a very niggardly, if any remuneration. Mr. Thornton, however, (ii. 330.) found the Moldavians open to feelings of gratitude,

and very willing to assist when they were sure of good usage. Their favourite amusement is dancing, and their predominant excess, drunkenness; a very natural and pardonable fault in a Country producing much wine and suffering grievous oppression.

The present inhabitants, although closely resembling the Dacians in appearance, character, and perhaps in Language, are of modern date, and sprung from foreign colonists. They are, however, of the same race as the ancient occupiers of the soil; being a portion of the fugitives from the Country South of the Danube, who obtained a domicile at Marmarosh, in Hungary, near the close of the XIIIth century. About A. D. 1359, a party of those emigrants, under the guidance of a brave and powerful leader, named Dragosh, crossed the Carpathian Alps, and took possession of the Country to the East of them, at that time entirely unoccupied, in consequence of the desolation occasioned by incursions of the Barbarians from the coasts of the Black Sea. From Bogdán, the father of Dragosh, the Turks probably gave the name of Karà Boghdán (Black Boghdán) to Moldavia and its inhabitants. In 1390, it was reduced to vassalage by Sigismund, King of Hungary. (Von Engel, *Mold.* ii. 111.) In the early part of the XVth century, the use of the Slayonian character was introduced by Priests from Akhrida. (*Ibid.* 120.) The most flourishing period in the History of the Moldavian Princes is the reign of Stephen, son of the usurper Bogdán, who during forty-six years (1458—1504) maintained his authority unimpaired, and rendered himself nearly independent of all his more powerful neighbours. His son Bogdán, however, as before observed, found it expedient to acknowledge himself a vassal of the Sultan; and a change of rulers no less than fifty times in scarcely two centuries, from the death of his son Stephen in 1526, till the Moldavians were declared by the Grand Vezír to be rebellious *Ráyás*, (*ri'áyá*, conquered infidels,) and Nicolás Mavrokordato was placed on the throne in 1712, is a sufficient evidence of the wretched condition of their subjects. From that time the Dragomans of the Porte have been placed on the throne of Moldavia and Vallakhia, as often as intrigue or bribery enabled them to supplant their predecessors. Nineteen times had Yasi been entered by a new Prince from that date, till the Peace of Kaína-jí in 1774 gave Russia a right of interference in the internal administration of the Principalities, a right which seems rarely, if ever, to have been exercised. In 1784, the ancient privileges of the inhabitants, their rights, and duties, were more explicitly declared, and the Russian guarantee acknowledged by a *Khatti sheríf*. (Imperial Rescript signed by the Sultan himself. Von Engel, ii. 48.) This was again confirmed by the Treaty of Yasi, signed in January 1792. The Peace of Bukarest in 1812 established more decidedly the Russian right of interference, and by the separate articles of that signed at Adrianople in 1829, the Hospodárs are to hold their appointments for their lives; the tribute is to be a fixed annual money payment; and no fortresses to be held by the Turks on the Northern side of the Danube.

While the vocal flute,

Or number'd verse, by female voice endear'd,

Crowns his delight, and *mollifies* the scene.

Shenstone. The Ruined Abbey.

MOLLINEDIA, in *Botany*, a genus of the class *Polyandria*, order *Polygynia*. Generic character: calyx top-shaped, four-cleft, nearly closed; corolla none; anthers wedge-shaped; stigma subulate, germens numerous; drupes numerous, sessile; receptacle flat.

Three species, natives of the East Indies.

MOLLUCELLA, in *Botany*, a genus of the class *Didynamia*, order *Gymnospermia*, natural order *Labiata*. Generic character: calyx bell-shaped, five-cleft, expanded broader than the corolla, spiny.

Six species, natives of the Molucca Islands and Persia.

MOLLUGO, in *Botany*, a genus of the class *Triandria*, order *Trigynia*, natural order *Caryophylleæ*. Generic character: calyx three-leaved, corolla none, capsule three-celled, three-valved.

Six species, natives of Africa, Ceylon, and North America.

MOLLUSCA, in *Zoology*, an extensive class of animals, characterised by being invertebral, soft, inarticulated, acephalous, or furnished with a more or less prominent head at their anterior part, most frequently having eyes or tentacula, or crowned at its summit with arms; mantle various; sometimes with its edges free on the sides of the body, and sometimes having its lobes united so as to form a bag, which partly envelopes the body; *branchiæ* various, rarely symmetrical; circulation double, one particular, the other general or simple; heart unilocular, sometimes with two divided and widely separated auricles; no gangliar medullary cord, but scattered and not numerous ganglia and various nerves; body sometimes naked externally, and either destitute of solid parts within, or covering a shell or hard bodies, sometimes furnished externally with a sheathing or enveloping shell.

This extensive class has been divided by Naturalists into several subclasses and subordinate groups; but the consideration of these must be left to the general Treatise on the invertebral animals.

MOLOBRUS, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrected, cylindric,

pubescent, sixteen-jointed, with the two basal joints incrassated; eyes deeply emarginated; *ocelli* inequal, the anterior one minute, the other two larger, placed transversely; *palpi* exserted, incurved, three-jointed; wings incumbent, parallel.

Type of the genus *Tipula Thomæ*, Fabricius. Panzer, *Faun. Germ.* pl. lix. fig. 9. About forty species, natives of Europe, the greater part of which inhabit England.

MOLOCH, an Idol of the Moabites and Ammonites, concerning whom it would not be easy to collect further information than has been gathered by the indefatigable diligence of Thomas Godwin and of Selden. The former published his *Synopsis Antiquitatum Hebraicarum* in 1616, and it forms the base upon which afterwards, in 1625, he erected his *Moses and Aaron*; long, and deservedly, one of the most popular Books of reference in our Language. The Treatise of Selden, *de Diis Syris*, appeared in the same year with the first of these Works; and it is not possible, at this distance of time, to assign precedence with certainty to either author. It is by no means, however, a necessary consequence of any similarity which may be observed between them that one borrowed from the other. Both may have been honestly original.

The name Moloch, says Godwin, Molech or Milcom, is derived from מלך, a King, translated accordingly by the LXX ἀρχων, βασιλεύς. It was sometimes a suffix, as Adram-melech, Anam-melech, King Adram, King Anam, Gods of Sepharvaim, (2 Kings, xvii. 31.) and may be considered synonymous with Baal. Both received the same fiery offerings, (Jer. xix. 5. xxxii. 35.) in the valley of Hinnom; and, in the text last cited, Moloch appears plainly to be used in the end of the verse as an illustrative equivalent to Baal in its former part. Nor can it be urged in opposition to their identity that the Planet Jupiter was usually worshipped as Baal, Saturn as Moloch; for there is great confusion in the Planetary titles, the Sun himself being occasionally named Baal, Moloch, Saturn, or Jupiter; Moloch, however, assuredly agrees in many particulars with Saturn. The Idol of the latter is described as follows by Eusebius: "It was made of brass, wonderful for its greatness, whose hands, reaching towards the earth, were so hollow, (ready to clasp,) that the youths which were compelled to come unto him, did fall as it were into a mighty ditch of fire." (Præp. Evangel. iv. 7.) The Rabbi Simeon, in the Book *Jalkut*, commenting on *Jeremiah* vii., gives a similar, although more detailed and terrific, portrait of Moloch. "Though all other houses of Idolatry were in Jerusalem, yet Moloch was without Jerusalem in a place apart. How was he made? He was an Image of brass; he had seven chapels, and he was placed before them, having the face of a bullock, and hands spread abroad, like a man that openeth his hands to receive somewhat from another; and they set it on fire within, for it was hollow; and every man severally entered according to his offering. After what manner? Whosoever offered a Fowl went into the first Chapel; he that offered a Sheep into the second; a Lamb into the third; a Calf into the fourth; a Bullock into the fifth; an Ox into the sixth; and whosoever offered his Son, into the seventh." The seven Chapels, it is thought, may resemble the seven gates with which the Persians honoured the Sun, and both may bear mystical allusion to the seven Planets, of which that luminary is King or Moloch. Of the place of sacrifice, GEHENNA, or Tophet, we have already spoken; and opinions are

MOLO-
BRUS.

MOLOCH.

MOLOCH. much divided regarding the precise nature of the abominable offerings there tendered; whether the children were absolutely burned, or only consecrated to the service of the Idol by passing through two fires. Godwin affirms that "the Scripture speaketh of both;" and if this were distinctly proved, no further evidence could be needed. The Rabbis certainly understand both, as may be seen by reference to Aben Ezra or Rabbi Solomon, on *Levit.* xviii. 21.

This oblation of children is supposed by Godwin to have been voluntary, and therefore estimated as highly meritorious; and to have been in some manner a corrupt deduction from the offering of Isaac by Abraham. May it not rather have arisen from an instinct which prompts uncivilized Man, either from terror or from gratitude, to bestow upon his Deity whatever he considers to be his most precious possession? Is it not a part of the pious bribery of all false Religions?

Selden, of necessity, reports many of the above particulars, and he ranges, according to his custom, without order or method, over a boundless extent of Learning, in which all hope of pursuit is denied, except absolutely in his own track. We cannot therefore attempt abridgement. He argues at great length, that the Idolaters did not merely compel their children *πῦρ διέρπειν*, (*Soph. Antig.* 265.) before the God, but that they really and absolutely celebrated *τεκνóφονους τελετὰς*; and among other proofs he refers to the CVth *Psalms*, 37, 38. In that passage, however, Moloch is not mentioned by name; the offerings are said to have been made to Devils, *לַשִּׁרִּים*, and to the Idols of Canaan generally. In the other passages usually cited to the same purpose, (*Isaiah*, lvii. 5. *Ezech.* xvi. 20, 21. xxiii. 37. 39.) although the immolation of children is plainly noticed, Moloch does not appear in person.

The Prophet Amos (v. 26.) charges the Israelites, during their abode in the Wilderness, with "having borne the tabernacle of your Moloch and Chiun your Images, the star of your God, which you made to yourselves;" and the accusation is repeated by St. Stephen just before his martyrdom: "Yea, ye took up the tabernacle of Moloch, and the star of your God Remphan, figures which you made to worship them." (*Acts*, vii. 43.) The Commentators have exhausted a profusion of labour and research, perhaps not very usefully, on these passages. Their general meaning is sufficiently plain; that so early as their abode in the Wilderness, the Israelites bore about with them, in portable shrines, Idols distinguished by Planetary symbols. Solomon built a Temple to Moloch on the Mount of Olives. (*1 Kings*, xi. 7.) Manasseh, *sanguinarium ingenium*, as he is justly styled by Grotius, *Caii Caligulae et Neronis ingenio haud dissimile*, appears to have done the same; "he built altars to all the host of heaven," *i. e.* to the Planetary Idols; "and he made his son pass through the fire." (*2 Kings*, xxi. 5, 6.)

A long note by Grotius on *Deuteronomy* xviii. 10. is well worth attention, as illustrating the almost universal prevalence, at one time or another, not only in Antiquity, but even among the Savages of the New World, of certain abominations similar to those paid by the Ammonites to their "horrid King."

Thomas Burnet in a passage, respecting the orthodoxy of which we must be silent, (he is arguing against the eternity of future punishments,) touches, with noble eloquence, upon the sacrifices to Moloch. *Deum Christianorum concepimus credimusque numen optimum et*

sapientissimum; nec crudele, nec iniquum in genus humanum. In suo cultu nihil barbarum aut triste; nihil feri aut inhumani instituit aut permisit. Non vulnera aut caedes, aut cutis, aut carnis dilaniationes, neque, Molochi ad morem, vivos infantes ardentibus brachiis amplecti amat. (*De Statu Mortuorum et Resurgentium*, cap. xi.)

MOLOPS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Palpi* six, four maxillary, two labial; *antennae* moderate, composed of eleven short and somewhat moniliform articulations; *thorax* subcordate; *elytra* with the outer margin folded at the base; wings moderate; anterior *tibia* with a notch towards the apex on the outer margin.

Type of the genus *Carabus elatus*, Fabricius: *Scavites gagates*, Panzer, *Faun. Germ.* pl. xii. fig. 1. All the species inhabit Europe.

MOLOCHUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennae* setaceous, nearly as long, or longer than the body, basal joint stout, second minute, the remainder long, cylindric, a little clavate; *labrum* minute, pilose, heart-shaped; maxillary *palpi* quadri-articulate, the three basal joints small, the terminal one ovoid, compressed, truncate; labial triarticulate, the two basal joints short, terminal longer, ovate-truncate; *elytra* abbreviated, gaping at the apex; wings exposed; legs unequal, anterior shortest, posterior longest; *femora* very much clavate; *tarsi* four-jointed.

Type of the genus, *Necydalis umbellatum*, Linnæus. *M. minor*, Curtis, *Britt. Ent.* vol. i. plate xi. Nine species, found in flowers, especially of the umbelliferous kind; two of them occur in Britain.

MOLOSSUS, Geoffroy, Tem. In *Zoology*, a genus of animals belonging to the family *Cheiroptera*, order *Sarcophaga*, class *Mammalia*.

Generic character. Incisive teeth bifid, two above, grooved in front, two below small and deciduous; cuspid longish, conical, in the lower jaw nearly approximated, so as scarcely to leave room for the incisive; molar four on a side above, five below, their crowns studded with numerous points, except the front, which have but one; snout long, upper lip pendulous; auricles large, broad, and united at their base.

This genus of animals was founded by Geoffroy St. Hilaire, and named from its resemblance to a mastiff dog; the title *Dysopes* has however been given to it by Illiger. Besides the species included in the genus by Geoffroy, Temminck has ranged with it the *Nyctinomi* of that author, which merely differ in having six molar teeth, and are most probably, according to his view, very young animals, which have not shed any teeth; and Horsfield's genus, *Chiromeles*, he considers merely as an adult of this in its most perfect development. They have a very disagreeable physiognomy; their head is large, with a very broad snout, resembling that of a mastiff, whence they have been named; the ears large, arising near the commissure of the lips, project over the eyes, to which, says Geoffroy, they serve the purpose of protection rather than to favour the perception of sound. The tragus is placed in front, and external to the auditory passage, which distinguishes this genus from the greater number of this order, in which it is placed within the ear, forming as it were a second auricle; the muzzle has no hairs, the tongue soft, the nostrils situated in a kind of little collar extending beyond the lips. In all, the

MOLOCH.
—
MOLOS-
SUS.

MOLOS-
SUS.

MOLOS-
SUS.

hind limbs are very short, the fibula perfect, and often as large as the tibia; the tail long, but half of it enveloped in the interfemoral membrane; the wings are disproportioned to the size of their large and heavy body, being very narrow, and in some species so much so that they can hardly serve the purpose of more than a parachute; the thumbs of the wings short, but broad and strong. They live in caverns, are not able to fly well, but climb the trunks of trees and the walls with great vigour, and probably feed on insects. Temminck seems to have cleared up the difficulty as to the varying number of incisive teeth of this genus, by showing that it is connected with their shedding at different periods of the animal's existence, and that the only mode of ascertaining their complete development is examination of the cranial sutures; when the coronal and occipital crests are formed, then are the cuspid teeth fully developed, then do the lateral incisive teeth, and perhaps all the incisive of the lower jaw, fall out to make room for them. He has ranged the species under two groups or sections; those of the Old and those of the New World.

Section I.—*Molosses of the Old World.*

M. Cheiropus, Geoff.; *Cheiromeles Torquatus*, Horsf.; *Collared Molosse*. Rather more than five inches long, and the extent of the wings two feet; the outer toe on each hind foot separated from the others, and similar to the hind thumbs in the quadrumanous animals; it has no fur except some very short, rough, and lightly scattered hairs on the sides and front of the neck, forming a collar, and some on the thighs and interfemoral web; a very delicate kind of down, which cannot be felt, but may be seen with a lens, covers the belly, whilst the back is completely bare; the outer toe of the hind feet quite loose, and armed with a very large, broad, obtuse claw, which is hidden in a large tuft, or brush, of silky and rough hairs; upon the tail the skin lies in plaits, and is very ample. The colour of the fur is brown, but the skin may be seen marked throughout with little spots like shagreen. Native of the Indian Archipelago.

M. Plicatus, Geoff.; *Nyctinome du Bengal*, Geoff.; *Plaited Molosse*. Four inches and a quarter long and eleven and a half in extent, about the size of the common European Bat, *V. Murinus*; fur short, having a cotton-like feel, very close above, of a yellowish-ash colour, more or less inclining to grey, but lighter on the under parts; ears round, and placed near each other, but not united, their upper edge garnished with little tubercles; lips plaited vertically, and covered with short hairs; a row of hairs, originating from the sides of the body, cover the edge of the alar, but not the interfemoral membrane, which is bare, and invests half the tail. Native of Bengal, and very common about Calcutta.

M. Rupelii, Tem.; *Rupelian Molosse*. Rather larger than the last species; the ears very large and shading the face, but not joined at their base; the muzzle covered with a few, diverging, black hairs; lips broad, pendent, and plaited; the fur very abundant, fine, close, and smooth, of a uniform mouse-grey above, the same beneath, but lighter; both sides of the alar membrane, which are very narrow, edged with a broad border of close hairs; the toes covered with long, silky, whitish hairs. Native of Egypt.

M. Geoffroyi, Tem.; *Nyctinomus Aegyptiacus*, Geoff.; *Aegyptian Molosse*. Three inches and a half in length, and nine and a half in width; the fur very close, longer

on the back of the head and neck than elsewhere, reddish above, particularly on the occiput, brown on the belly, with a longitudinal, delicate white band passing down the middle, and reddish on the sides; a band of white on the alar membrane along the sides; tail half enclosed in the interfemoral membrane. From Egypt.

M. Tenuis, Tem.; *Nyctinomus Tenuis*, Horsf.; *Slender Molosse*. Three inches and three-quarters long, and from ten and a half to eleven inches in width; ears very large and wide, joined on the forehead; alar membrane very narrow; fur very short, soft, and smooth, blackish-brown above and ash beneath; the hind toes covered with white, silky hairs to near their claw-joints; the upper lip very broad, edged with a row of transverse, warty projections, which form on their outer edge eight little projections separated by grooves; the lower lip less prominent, but furnished with similar warty projections. From Java.

Section II.—*Molosses of the New World.*

M. Rufus, Geoff.; *le Molosse Marron ou Doguin*, Tem.; *Rufous Molosse*. Rather more than five inches long and thirteen wide; the muzzle is very large and short, presenting some resemblance to that of a mastiff dog; lips hairy, but not warty; the upper parts of the body deep chestnut, the under much lighter; the ears and membranes brownish-chestnut. From whence is not known.

M. Alecto, Tem.; *Black Molosse*. Five and a half inches in length and twelve in width; ears very much wider than their height, and forming semicircles; wings very narrow; hind legs very short; face and membranes black; the fur very short and delicate, resembling silk velvet, except on the rump, where the hair is long; the membrane between the arm and fore-arm covered with close, short hairs, which extend in a riband-like form along the arm, and are disposed in an angular space at the root of the two last toes; all the fur is very brilliant black. From the interior of Brazil.

M. Abrasus, Tem.; *Shorn Molosse*. Rather smaller than the last; head short and obtuse, ears short but wide, and not united at their base upon the broad forehead; fur short and close, and of a bright, lustrous chestnut on the upper parts; under parts bare, paler, and dingy; membranes black. From the interior of Brazil.

M. Nasutus, Tem.; *Nyctinomus Brasiliensis*, Geoff.; *Long-nosed Molosse*. Four inches long, rather more than ten and a half wide; nostrils prominent; ears rounded and ununited; fur short, rays soft and smoothish, dingy or tawny-brown on the head and upper parts; light ash-brown beneath; the hairs covering the hind feet very long and of a silvery whiteness; membranes brown. From Brazil, where they are very common.

M. Velox, Tem.; *Swift Molosse*. Three and a quarter inches long, ten wide; ears rather larger than high, and joined on the forehead; membranes not very wide but tolerably long, hairy above and beneath, in front of the neck a little glandular; the fur very short and smooth, very deep shining chestnut above, but a little lighter beneath. From Brazil.

M. Obscurus, Geoff., Tem.; *Dusky Molosse*. Rather more than three inches long, nine inches wide; ears wider than high, and connected at the base by a fold of skin, which runs into the nose; fur of two colours, white at the root, blackish-brown towards the tip on the upper

MOLOS.

parts, brown-ash with a white base beneath. From Brazil and from Surinam.

Besides these, Temminck mentions several other species, which he thinks require confirmation.

See Geoffroy St. Hilaire, *Annales du Musée*; Cuvier, *Règne Animal*; Illiger, *Prodromus Mammalium*; Temminck, *Monographies de Mammalogie*.

MOLT, MOLTEN. See MELT.

MOLURIS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* eleven-jointed, the third joint elongate, cylindric; all the following, with the exception of the apical one, obconic or cylindric-conic, the ninth, tenth, and last rather stoutest, the latter globose-ovate, the two others subturbinate; *labrum* coriaceous, exserted, transverse-quadrate, entire; *palpi*, maxillary, filiform, the terminal joint shorter than the preceding, subtriangular, compressed; body elongate-ovate, with the head and thorax narrower than the abdomen, the latter large, ovate, transverse-truncate at the base; *thorax* broader than the head, convex, subglobose, transversely truncate, anteriorly and posteriorly; *scutellum* wanting; *tibiæ* slender, furnished with short claws; *tarsi* heteromerous.

Type of the genus *Pimelia striata*, Fabricius. Olivier, *Ent.* vol. iii. plate i. fig. 11. Several species, found in the Northern parts of Africa, and in the South of Europe.

MOLY, Lat. *moly*; Gr. μῶλυ, from μωλύειν, to mitigate. See the Quotation from Pliny.

Homer is of opinion, That the principall and soveraigne hearb of all others, is *moly*; so called (as he thinketh) by the Gods themselves. The invention or finding of this hearbe hee ascribeth unto Mercurie; and sheweth that it is singular against the midnight witchcraft and enchauntments that bee.

Holland. *Plinie*, book xxv. ch. iv.

And yet more med'cinal is it than that *moly*,
That Hermes once to wise Ulysses gave.

Milton. *Comus*, l. 636.

Homer does not sing, neither does Pliny say, quite so much concerning MOLY as the excellent Philemon has here written down. As Ulysses is entering the Palace of Circe, he is encountered by Mercury under the semblance of a very graceful youth, who having warned him of his danger from the spells of the Enchantress if he should approach her without an amulet, plucks from the ground a plant, which he assures him will be a sure preservative.

Ὡς ἄρα φωνήσας πόρε φάρμακον Ἀργυφόντης,
Ἐκ γαίης ἱέρους, καὶ μοι φύσιν αὐτῆς ἔδειξεν.
Ῥίζη μὲν μέλας ἔσκει, γάλακτι δὲ ἑκκίλον ἄνθος.
Μῶλυ δὲ μιν καλίσσι βίοιο χαλκίδον δὲ τ' ἐρύσσειν
Ἀνδράσι γε θνητοῖσιν· οἷοι δὲ τι πάντα δυνάμει.

Od. K. 302.

The "midnight witchcrafts and enchantments that be," of Holland, are *summa veneficia* in Pliny; who adds that Moly is said to grow round Pheneus and Cyllene in Arcadia, very much as Homer describes it; that the root is circular and black, the plant itself being about the size of an onion, with the leaves of a leek. That it is not easily dug up, and that whereas Homer describes the flower to be white, other Greek writers call it pale yellow. (*tuteus*.) Several Botanists assured Pliny that it was found in Italy also; and a specimen was brought to him from Campania, gathered among almost inaccessible rocks after the labour of several days, in which the root (although, having been broken off, it was not entire) measured the incredible length of thirty feet.

Ovid has closely followed the steps of Homer in relating the Fable of Ulysses and Circe—

*Pacifer huic dederat florem Cyllenius album,
Moly vocant Superi, nigrâ radice tenetur.*

Met. xiv. 291.

And the allegorizing commentators *pro solitâ suâ crassitudine*, destroy the beauty of the invention by furnishing us with a literal, prosaic key. Moly, say Photius, Hephaestion, Maximus Tyrius, Lilius, Gyrardus, and similar illustrators, is no other than Reflection and Prudence, φρονήσις or σωφροσύνη; the blackness of root, and the stubbornness with which it resists the gatherer's hand, denote the difficulty of attaining Wisdom; the white flower, on the contrary, marks the happy issue to which she guides. Or, again, yet more frigidly, Mercury is Reason, he being the God of Science. Moly is Instruction, the root of which is black, as the principles of Instruction are obscure and bitter; but the flower is white, as that of Instruction is sweet, agreeable, and nourishing. Mercury gives the plant because all instruction is the gift of Heaven; and he does not bring it with him, but gathers it, in order to show that Instruction may be found every where.

Eustathius indulges in some etymological trifling. Μῶλυ οἱ παλαιοὶ φασὶ παρὰ τὸ μωλύειν λεγεσθαι, ὃ ἐστίν, ἀφανίζειν τὰ φάρμακα τῆς Κίρκης. Dioscorides (iii. 54.) and Theophrastus (ix. 15.) deny that there is any difficulty in gathering Moly. Lobelius, in some MS. marginal notes on Anguillara, (p. 90.) calls it the *Aglaophotis* of Democritus. "An hearbe," to revert to Holland, "worthie to be admired and wondered of man, by reason of that most beautiful colour which it had, and for that it grew among the quarries of marble in Arabia, confining upon the coasts of the Realm of Persia, therefore it was also named *Marmaritis*. And he (Democritus) affirmed that the Sages or Wisemen of Persia, called Magi, used this hearbe when they were minded to conjure and raise up Spirits." (xxiv. 17.) Holland in this instance also, no less than in the one already noticed, confounds ancient with modern Demonology, for Pliny himself writes of the Magi nothing more than *cum velint Deos evocare*.

The Moderns usually adopt the opinion of Galen, and consider Moly a sort of wild rue; and it has been employed in the service of other English Poets besides Milton. Thus Drayton introduces "Old Clarinax," a Hermit, his "sundry simples sorting," among which—

Here is my Moly of much fame
In Magicks often used.

The *Vth Nymphal*.

And William Browne, in his *Inner Temple Masque*, represents Circe charming away by this antidote the sleep into which she has first cast Ulysses by other spells.

Thrice I charge thee by my wande
Thrice with Moly* from my hande
Do I touch Ulysses' eyes.

"Moly," writes George Sandys, also in the Notes on his Translation of Ovid's *Metamorphoses*, (p. 479.) "growes most naturally in Egypt, and was lately brought from thence to Italy by one Guillardinus, a Phisitian of Padoa, as reported by Earle Bothwell, unto whom he show'd it, which is not to be extirped by man; in that, deadly, they say, unto those who attempt it." Here the reputed property of the MANDRAKE is assigned

* Ignorantly printed *Macy* by Davies.

MOLY.

MOLY. to Moly; but Sandys corrects the mistake by adding, "or rather in that the roote thereof, according to Pliny, is thirty foot long."

MOLYTES, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, twelve-jointed, rather short, stout, the scape not touching the eyes; funiculus seven-jointed, its two basal joints elongate, obconic, the four following short, transverse, somewhat rounded, the next more robust, applied to the club, which is oblong-ovate; head produced anteriorly into a rather long rostrum, short, convex, with an obsolete stria on each side, and the apex rather thickened; eyes oblong, depressed; *thorax* oblong-rounded, coarctate anteriorly at the sides, the base and apex truncate; *scutellum* minute, triangular; *elytra* united, ovate; legs rather long, robust; *femora* clavate, dentate; *tibiae* obliquely truncate at the apex, and furnished with a large horizontal hook within; *tarsi* quadriarticulate.

Type of the genus *Curculio Germanus*, Linnæus; Martyn, *Col.* pl. xxii. fol. 68. Six species, two of which are found in Britain, frequenting chalky distrists.

MO'MENT, Fr. *moment*; It. and Sp. *momento*; Lat. *momentum*, i. e. *movimentum*, from *move*, to move. See to **MOVE**. Applied to

MOME'NTAL,
MOME'NTALLY,
MOME'NTANE,
MOME'NTANY,
MOMENTA'NNESS,
MO'MENTARY,
MOME'NTOUS.

The *motion*, or to the *moving* cause; to the force of the *movement*; the *moving*, i. e. the active, the impelling cause; force or weight, met. the weight, importance, consequence. Also to

The mere *movement* or *motion*; the smallest *motion* or progression of time; (*momento temporis, horæ, &c.*)

And all we schulen rise aghen, but not alle we shulen be chaungid in a *moment* in the twynkling of an ighe, in the last trumpe.

Wiclif. 1 *Corynth.* ch. xv.

But we shal all be chaunged, and that in a *moment*, and in the twinclyng of an eye, at the sounde of the last trompe.

Bible, Anno 1551.

For oure exceedynge tribulacyon which is *momentany* and lyght prepareth an exceedynge and an eternall waight of glory vnto vs.

Id. 2 *Corinthians*, ch. iv.

No unbecoming deed
That argued fear, each on himself reli'd,
As onely in his arm the *moment* lay
Of victorie.

Milton. *Paradise Lost*, book vi. l. 239.

All these which in a *moment* thou behold'st,
The kingdoms of the world to thee I give.

Id. *Paradise Regained*, book iv. l. 162.

Air but *momentally* remaining in our bodies, hath no proportionable space for its conversion, only of length enough to refrigerate the heart.

Sir Thomas Brown. *Vulgar Errours*.

You will remember how transitorie this present life is, and howe short and *momentane* the pleasure of this filthie flesh is.

Stow. *The Mercians*, Anno 749.

None other fame mine unambitious Muse
Affected ever, but t'eternize thee:
All other honours do my hopes refuse,
Which meaner-priz'd and *momentary* be.

Daniel. *Sonnet* 55.

To this purpose also it will much conduce, that we meditate often of our own frailty and *momentaninesse*.

Hall. *Works*, vol. iii. fol. 83. *The Remedy of Profanenesse*, sec. 15.

How doth the *momentaninesse* of this misery add to the misery.

Id. *Ib.* vol. iii. fol. 110. *The Character of Man*.

He thought, and answer'd: hardly waking yet,
Sprung in his mind the *momentary* wit,
(That wit which, or in council or in fight,
Still met th' emergence, and determin'd right.)

Pope. *Homer. Odyssey*, book xiv.

According to the commerce that God had established between this and the other world, *momentary* sorrows are improvable unto everlasting joys.

South. *Sermons*, vol. x. p. 150.

Let me your counsel and assistance ask,
T' accomplish this *momentous* task.

Hughes. *The Birth of the Rose*.

But attentive mark
The due clock swinging slow with sweepy sway,
Measuring time's flight with *momentary* sound.

Warton. *Inscriptions*.

Now, to apprehend the probability of these things coming to pass, or rather to remove any opinion of their improbability, we ought constantly to bear in our mind this *momentous* truth, that in the hands of the Deity time is nothing, that he has eternity to act in.

Paley. *Sermon* 22. p. 327.

This preponderating weight being added to the force of the body of chicane in the Tiers Etat, compleated that *momentum* of ignorance, rashness, presumption, and lust of plunder, which nothing has been able to resist.

Burke. *Works*, vol. v. p. 100. *Reflections on the Revolution in France*.

MOMORDICA, in *Botany*, a genus of the class *Monoecia*, order *Monadelphia*, natural order *Cucurbitaceæ*. *Generic character*: male flower, calyx five-cleft, corolla five-parted, filaments three; female flower, calyx five-cleft, corolla five-parted, style three-cleft; fruit a gourd, when dry bursting with an elastic force.

Thirteen species, mostly natives of the East Indies.

MONACHISM. See **MONK**.

MONAD, Gr. *μόνας*; Lat. of the Lower Ages, *monas*; Fr. *monade*. An unity or singleness. An One. Cotgrave.

In the unintelligible Philosophy of Leibnitz a simple substance without parts.

But that which is of more moment yet; we have the authority of Ecphantus a famous Pythagorean for this, that Pythagoras his *monads*, so much talked of, were nothing else but corporeal atoms.

Cudworth. *Intellectual System*, book i. ch. i. sec. 12. fol. 13.

The *monadical* consistency of the matter being lost in the production of the æther.

More. *The Appendix to the Defence of the Philosophic Cabbala*, ch. ix.

MONAGHAN, a County of Ireland, in the Province of Ulster, is bounded on the North by Tyrone, on the East by Armagh, on the South by Louth, and on the West by Cavan and Fermanagh. It is 30 Irish miles (38 English) in length from North to South, and 19 Irish (24 English) in breadth from East to West; containing 280 Irish square miles, (450 English,) and consequently 179,600 acres Irish, or 288,000 English measure. It is divided into five Baronies, Trough, Dartree, Monaghan, Cremorne, Donaghmoyne, and nineteen parishes, all in the Diocese of Clogher. The population was computed by Dr. Beaufort to amount, in 1792, to 118,000 persons, inhabiting 21,523 houses. The census made by order of Parliament, 1813, states the number of houses at 27,066, and of inhabitants at 140,433; the numbers according to the census of 1821, were, houses 33,197, inhabitants 178,183, thus assigning 395 persons to the English square mile; and as the increase is known to have been considerable since that year, this County is probably at present one of the most densely peopled agricultural districts in the World.

A considerable proportion of the land is very fertile,

Mac Mahon.

consisting of a deep, rich loam, well suited for the growth of flax, which is cultivated more extensively here than in any other part of Ireland except Armagh. The attention of the cultivator is also much directed to the management of esculent vegetables, which form a larger portion of the food of the labouring population than is elsewhere usual in the simple mode of living of the Irish peasant. On the South-Eastern side the County is skirted by the range of mountains called the Fews; a part of the North-West is occupied by the Sliebh-Baught mountains, the ridge of which is the boundary line on the side of Tyrone. Neither of these mountains possess any picturesque beauty, but in general exhibit a dreary waste of moorland. The highest part of Sliebh-Baught, bearing the name of Cairnmore, has on its Eastern declivity abundance of good limestone, and a red grit, close-grained, and very hard, well adapted for forming millstones, for which purpose it is extensively worked. Potter's clay of excellent quality is dug in this County, but turned to no other advantage than that of supplying the limited demand of the potteries of Dundalk, where it is manufactured into a fine glazed ware. Coal occurs in some places, but the fuel is principally peat supplied by many small bogs, for there is no extensive tract of that nature. There is abundance of a hard whinstone of a greenish-grey colour, and excellent for the purposes of building, as well as for repairing the roads when broken small, according to the system pursued here time out of mind. Crieve, the highest part of the Fews range, contains lead-ore. Near its summit is a lake of about fifty acres in extent, deriving from springs so abundant a supply of water, that the stream by which it finds exit serves fourteen bleach-mills. The population drawn around these establishments has rendered this spot, though naturally poor and barren, a scene of activity, as well agricultural as manufacturing, so that it now displays good crops and a number of comfortable residences. It is in contemplation to conduct a canal through this County for the purpose of forming a communication between Lough Neagh and Lough Erne, and besides the level which might easily be traced, great facilities are presented by the constant supply of water contained in numerous small lakes scattered over the face of the country. Their number is 184, of which the largest are Lough Barrac and the Lake of Kilcrow.

The remains of antiquity which claim notice in this County are two round towers, one at Clones the other at Enniskeen, and the ruins of an ancient fortress at Castle Blayney, the residence of Lord Blayney. The revenue raised by the Grand Jury for local charges usually amounts to £20,000. In 1824 it was £19,128. The indigenous possessors of Monaghan were the Sept of Mac Mahon; according to Sir John Davies, "the proudest and most barbarous among the Irish that do ever soonest repine and kick and spurn at the English government." (*Historical Tracts*, p. 241. London, 8vo. 1786.) All their lands were declared escheated during the Rebellion of O'Neale in the reign of Elizabeth, and on its suppression they were partitioned out anew, with proviso that none of the feoffees should retain or resume the name of Mac Mahon, as most of them belonged to that obnoxious Sept. The principal grant, however, was made to Walter Earl of Essex, who, besides lands in other parts of the County, received the entire Barony of Donamayne. On the settlement of Ulster by James I., a considerable number of Scotch colonists were introduced, and subsequently numerous

small grants were made to Cromwell's soldiers in lieu of arrears of pay, so that a large proportion of the lower orders are Protestants. There are some estates the rentals of which amount to £20,000, yet even in these the lands are let in small farms of various sizes from six to twenty acres. The great proprietors are for the most part absentees, and the usual consequences may be observed in the state of the country, which is far less prosperous than might be expected from its natural fertility; still the peasantry is certainly not in the state of depression and misery which Wakefield represents.

Monaghan, the County town, is a small and insignificant place, formerly of greater importance as a Bishop's See and the seat of an Abbey. On the site of the Abbey, ruined in the wars which long ravaged Ulster, a fort was built in the reign of Elizabeth for the purpose of keeping the natives in subjection. Distant 62 miles N. W. of Dublin. Clones is a pleasant town, 10 miles S. W. from Monaghan, 61 from Dublin, with considerable ruins of an Abbey. Carrickmacross is 19 miles from Monaghan, and has a considerable vein of coal in its immediate neighbourhood. Castle Blayney is 51 miles, and Ballybay 53 from Dublin.

The first, the most ancient, most general, and most approved, was
the government of one ruling by just laws, called *monarchy*.
Ralegh. *History of the World*, book i. ch. ix. sec. 2. fol. 102.

Monarchical their State,
But prudently confined, and mingled wise
Of each harmonious power.

Thomson. *Liberty*, part iv. l. 695.

Amid his subjects safe,
Slumbers the monarch-swain; his careless arm
Thrown round his head, on downy moss sustain'd;
Here laid his scrip, with wholesome viands fill'd;
There, list'ning every noise, his watchful dog.

Id. *Summer*.

I proceed to examine the next supposition of the church monarch-
ists, which is, That Saint Peter's primacy, with its rights and pre-
rogatives, was not personal but derivable to his successors.

Barrow. *Works*, vol. i. p. 76. *Of the Pope's Supremacy*.

Our theory affords a presumption, that the earliest governments
were monarchies, because the governments of families and of
armies, from which, according to our account, civil government
derived its institution, and probably its form, is universally monarchi-
cal.

Paley. *Natural Philosophy*, vol. ii. book vi. ch. i. p. 119.

The monarchick, and aristocratical and popular partisans have
been jointly laying their axes to the root of all government, and
have in their turns proved each other absurd and inconvenient.

Burke. *Works*, vol. i. p. 55. *A Vindication of Natural Society*.

MONARDA, in *Botany*, a genus of the class *Dian-
dria*, order *Monogynia*, natural order *Labiatae*. Ge-
neric character: calyx cylindrical, striated; corolla rin-
gent, superior, lip linear, involving the filaments, lower
lip reflected, three-lobed, the middle lobe longest.

A North American genus of twelve species.

MONAS, in *Zoology*, a genus of *Infusorial Vermes*.
Generic character. Body extremely minute, single,
transparent, in the form of a point.

Type of the genus *M. punctum*, Lamarck; Müller,
Inf. pl. i. fig. 6. The Monads are the most minute and
the most simple of all known animals; they are found
in stagnant waters, or water impregnated with vegetable
matter when the weather is warm. The *M. termo* is
the smallest of known animated beings, myriads being
found in a single drop of water.

MONEDULA, in *Zoology*, a genus of *Hymenopte-
rous* insects.

Generic character. *Antennæ* composed of numerous
articulations, slightly increasing in width towards the
apex; *palpi*, maxillary, six-jointed, produced beyond
the apex of the *maxillæ*; labial four-jointed; mandibles
with two or three teeth within; *labrum* elongate-trian-
gular; wings anterior, with the marginal and last sub-
marginal areolets divided by a very distinct space.

Type of the genus, *Bembex Carolina*, Fabricius,

Coqueb. Illust. dec. i. pl. vi. fig. 2. Several species,
natives of temperate climates.

MONERMA, in *Botany*, a genus of the class *Trian-
dria*, order *Digynia*, natural order *Gramineæ*. Generic
character: glumes opposite, equal, one-valved, cartila-
ginous, furrowed; chaff membranaceous, transparent,
scales lanceolate, entire, smooth; spike simple.

Two species, natives of the South of Europe.

MONETIA, in *Botany*, a genus of the class *Tetran-
dria*, order *Monogynia*. Generic character: calyx four-
cleft, pitcher-shaped; corolla, petals four, linear, revolute;
berry two-celled, cells two-seeded, one of the seeds
usually abortive.

One species, *M. barlerioides*, native of the East Indies.

Chaucer. *The Romant of the Rose*, p. 221.

And eke to coygne the money

Of sondry metall, as it is,

He was the first man of this.

Gower. *Conf. Am.* book iv. p. 113.

And Jesus wēt into y^e tēple of God, & cast out al the y^e solde &
boughte in y^e tēple, & ouerthrew y^e tables of y^e mony chāgers &
y^e seates of the that solde doues.

Bible, Anno 1551. *Matthew*, ch. xxi.

Above all things, good policie, is to be used, that the treasure
and moneyes, in a state, be not gathered into few hands.

Bacon. *Essay* 15. p. 84.

I remember a cruele moneyed man in the country, that would
say; The Deuil take this usury, it keeps us from forfeitures of mort-
gages and bonds.

Id. *Essay* 41. p. 242.

How can they justify to have turn'd those domestic privileges
into the bar of a proud judicial court, where fees and clamours
keep shop and drive a trade, where bribery and corruption solicits,
paltring the free and moneyless power of discipline with a carnal
satisfaction by the purse.

Milton. *Works*, vol. i. p. 71. *The Reason of Church Government*,
&c. book ii. ch. iii.

Little success is like to be found in managing a dispute against
covetousness, which sways and carries all before it, in the strength
of that great queen regent of the world, money, the absolute com-
mandres of fleets and armies; and (which is more) very often their
commanders too.

South. *Sermons*, vol. iv. p. 418.

To prevent such abuses, to facilitate exchanges, and thereby to
encourage all sorts of industry and commerce, it has been found
necessary in all Countries that have made any considerable advances
towards improvement, to affix a public stamp upon certain quantities
of such particular metals, as were in those countries commonly
made use of to purchase goods. Hence the origin of coined money,
and of those public offices called *mints*.

Smith. *Wealth of Nations*, book i. ch. iv. p. 33.

A public bank by this expedient, might cut off much of the deal-
ings of private bankers and money-jobbers.

MONKEY. The It. *mona*, or *monna*, is derived by
Menage from the Gr. *μῦμα*, *simia*. *Monkey*, Skinner
says, is clearly enough *monikin* vel *monkin*. *Homuncu-*
lus, a little man; *nihil enim homini similis*.

There is to this day a merrie tale; that his *monkie* (set on as it
was thought by one of his chamber) tore his principall note-boke all
to pieces, when by chance it lay forth.

Bacon. *King Henry VII.* fol. 243.

It is reported of Cæsar, that passing through a certain town and
seeing all the women of it standing at their doors with *monkeys* in
their arms, he asked, whether the women of that country used to
have any children or no? South. *Sermons*, vol. ii. p. 220.

MONMOUTHSHIRE, the ancient Country of Boundaries.
Gwent, is one of the Western Counties of England; it is
bounded on the North by the Counties of Brecknock
and Hereford; on the East by that of Gloucester; on
the South by the river Severn, and on the West by Glam-
organshire. It is 33 miles in length, 26 in breadth,
and about 110 in circumference, extending over an area Extent.
of 550 square miles, or 352,000 acres. Although thus
comparatively small in point of territorial extent, it is
yet in respect of the beauty of its natural scenery, its
picturesque remains of ancient times, its agriculture,
trade, and commerce, one of the most interesting dis-
tricts of England.

The country rises gradually from the banks of the
Severn, as it advances towards the Northern boundary.
Much of the beauty, as well as of the value of this Rivers.
County is derived from its numerous streams. The
Severn, on the Southern boundary, spreads out into
an expansive estuary, known by the name of the
Bristol Channel; it forms the foreground of an exqui-
site landscape, and indents the coast by numerous
creeks. The Wye, after a long course through Wales
and Herefordshire, touches this County at Monmouth,
and thence, with many windings, it flows through a
country every where most picturesque and interest-
ing, dividing the County from that of Gloucester, and
is finally lost in the Severn below Thomwell. The
Monnow has its sources among the black mountains of
Brecknockshire, forms the boundary line on the North-
East, between this County and that of Hereford; and
after it has been swollen by the waters of the Honddy
and other tributary streams, it joins the Wye at Mon-
mouth. The Trothy collects the waters which flow
from the upland districts of the County, then traverses
a valley lying in a direction parallel to that of the Mon-
now, and at last falls into the Wye below Monmouth.
The Usk has its head waters in Brecknockshire; re-
ceives the Avon Llywel, the Otwy, and many other tri-
butaries; and after a long course, fringed with woods
or bounded by noble meadows, forming a scene of per-
petual beauty, it enters the Severn by a spacious outlet.
The mountains of Brecknockshire also give rise to the
Ebwy, which, after it has passed under the Beacon hill,
traversed the wild valley to which it gives its name, re-
ceived the Scowy, together with a variety of streams and
torrents, falls into the estuary of the Usk, below New-
port. The Rumney forms the Western boundary line
between this County and that of Glamorgan; and serves
to diversify the picturesque beauties of the Brecon, the

MONK.
—
MON-
MOUTH-
SHIRE.

MON-
MOUTH-
SHIRE.

Soil.

Glamorganshire, and the Monmouthshire hills, among which it fights its way to the sea; when it reaches the lowland moors, it flows in a deep navigable channel. The Wye and the Usk are navigable by a tide which rises, at the equinoxes, sometimes to the height of sixty feet.

The soil, formed of mountain *debris*, vegetable matter, and alluvial deposits, varies greatly both as to its composition and its productive powers. The Southern part of the County contains extensive tracts of moor or marshlands, which in some places form a great depth of rich, unctuous, loamy soil, and in others a vast body of black peaty earth; tracts also of a light loamy soil, well fitted for the growth of trees; and tracts, moreover, of a soil composed of a mixture of clay and loam, forming excellent meadows, and land well adapted for the culture of corn, turnips, and potatoes. The Eastern division of the County, extending Westward from the boundary line, so as to include the valley of the Usk, is characterised by a soil of a faint red colour, arising from a portion of iron with which it is mixed. This is a most fertile district. The Western and hilly part of the County is distinguished by a thin, peaty soil, imposed upon strata of stone lying over mines of coal and iron-ore, and is under a mixed system of husbandry, between pasture and arable. This district contains a good deal of marsh and meadow land, and many extensive sheepwalks.

Minerals.

The mineral riches of the County consist of coals, iron-ores, lead mines, limestone of the best quality, millstones, and building-stone quarries. Woods and coppices are numerous and extensive, especially beech and oak.

Agricul-
ture.

Wheat, barley, oats, beans, peas, turnips, and potatoes, are the principal crops which are cultivated. Lime is much used as a manure; and Summer fallowing is still practised, a custom which a more general introduction of the green-cropping system might advantageously supersede. The cultivated fields in the valleys and on the slopes of the hills are finely intermingled with woodlands and meadows; and Bristol, Bath, and other adjacent towns, afford a ready market for all the various kinds of agricultural produce. This County is admirably adapted, from the peculiarity of its physical qualities, for the purpose both of rearing and breeding cattle. The breeding districts are situated among the hills and dales of the Western division, while the meadows on the Wye, the Usk, and the Severn afford equally eligible situations for fattening. Fine, spirited mules are bred in the country, and in order to maintain the good qualities of the breed, stallion asses are brought from Spain, or the South of France, at high prices. The mules are used to carry coals into the upland country, iron-ore from the mines, and heavy articles from the navigable rivers and canals to their respective depots. The small farming system is still prevalent in the country; few of the farms exceed an annual rental of £200, and many are under £60; but many of the estates are extensive: leases are usually granted for a term of twenty-one years, but to this rule there are many exceptions.

Roads.

Till the Turnpike Act came into operation, the roads of this County were deep hollows between high hedges; so that when Mr. Valentine Morris was asked at the Bar of the House of Commons, "What roads there were in Monmouthshire?" he replied, "None." "How then do you travel?" "In ditches." Specimens of these may be still found in different places; but the country is now traversed in every direction by good roads.

Many years ago, a railway was laid between Pontnewydd and the Blænavon iron works, a distance of more than five miles, with a rise of 613 feet; and others have been made since that time. There are also several canals in the County. Monmouthshire canal was begun in 1792, and finished in 1798. It consists of two branches, which unite in the plain of Malpas; one of the branches is eight and the other is eleven miles long; the perpendicular fall of the water in the first is 365 feet, a fall which is surmounted by means of thirty-two locks; the fall in the second branch is 447 feet, and it is overcome by the intervention of forty-two locks. The barges used on the canal carry from 25 to 28 tons.

Population, in 1801. 45,582
1811. 62,127
1821. 71,833

MON-
MOUTH-
SHIRE.

Canals.

Population.

As Monmouthshire forms a connecting link between England and Wales, the manners and customs of the inhabitants are, as may be expected, a mixture of those prevalent in both Countries. In the low country districts the English Language is generally spoken; but in the Western and mountainous parts of the country, the *Gwentian*, one of the three dialects of the Welsh tongue, prevails among the natives, who still brand every thing assimilating to English with the opprobrious name of Saxon. The houses are generally whitewashed with lime once a year, and sometimes oftener; a custom which gives them the appearance of cleanliness, cheerfulness, and comfort.

Formerly the manufactures of the County were neither numerous nor extensive. Some flannels, a few varieties of coarse cloth, woollen stockings, and knit caps, comprised nearly the whole of them; and they were carried on chiefly by the inhabitants of the mountains, and brought by them to the great Fairs for sale. The manufacture of caps was long ago removed to Bewdley, in Worcestershire, where they are made in large quantities, and sold to seafaring men under the name of Monmouth caps. The japanned goods of Pontypool, once so highly prized, have in great measure been superseded by those of Birmingham. Iron is the principal manufacture of the County, and, with many interruptions and fluctuations, has been carried on in it from time immemorial. The large quantities of cinders, and the number of buried furnaces which have been discovered at various times, prove that this branch of industry was pursued by the Britons and Romans.

The County sends two Members to the House of Commons, and the Borough of Monmouth one.

MONMOUTH, the County Town, is finely situated at the junction of the Monnow with the Wye, from which position it has obtained its name. It is surrounded on all sides by gentle hills covered from top to bottom with woods, corn-fields, and pastures, and in every direction are excellent roads and walks, which command many diversified and interesting views of the town and the adjacent country. The town is laid out irregularly. Seen from the banks of the Wye, the houses rise on the sides of a hill, like the seats of an amphitheatre, with the elevated spire of the church towering in the midst, and the eminence crowned by the castle house. The houses are all white washed, and many of them stand detached from each other, with gardens, orchards, and shrubberies intervening. The public buildings are numerous. St. Mary's Church is a light and well-proportioned edifice of pointed architecture. St. Thomas's Church, now a Chapel to that of St. Mary, is a very

Manufac-
tures.

Monmouth.

MON-
MOUTH-
SHIRE.

ancient structure. Besides these are a Free School, Market-place, Town Hall, and County Gaol. Population, in 1811, 3503; in 1821, 4164. The Iron-works near the town furnish employment for a good many hands; and many of the inhabitants are employed in the preparation of oak-bark, which is brought from the forests on the banks of the Wye, and picked, pared, and cleaned, by men, women, and children, before it is sent to Chepstow for exportation to the South of England and different parts of Ireland. Monmouth is a Borough, whose first Charter was granted by Edward VI. in 1549. It first sent a Member to Parliament in the 27th of Henry VIII., and in 1680 the right of election was declared to be in the burgesses inhabitants, in conjunction with the burgesses inhabitants of the towns of Newport and Usk. No Roman remains can now be traced in the town, but a few coins of Constantine the Great were dug up in a garden in 1767; it is, however, supposed by Horsley and other well-informed and judicious antiquaries to be the site of the *Blestium* of Antoninus. It appears to have been surrounded by walls and a moat, part of which, with four gates, were still remaining in the time of Leland. The ruins of the Castle, constructed with red grit stone, are seen on a ridge overlooking the meadows, but it is too closely environed by buildings to produce any picturesque effect from a distance. Henry V., hence called Henry of Monmouth, was born in this fortress. The Castle was built at different times; was long possessed by the descendants of John of Monmouth; became afterwards a part of the Duchy of Lancaster; and now belongs to the Duke of Beaufort. Distant 25 miles W. from Gloucester; 132 miles W. by N. from London. Troy House, a seat of the Duke of Beaufort, stands about half a mile from the town, and contains the reputed cradle of Henry V. and the armour which he wore at Agincourt.

Abergavenny.

To our former notice of ABERGAVENNY may here be added, that it once was a corporate town, and a place of great population and importance. In Leland's time, it was "a faire waulled town, neatly well inhabited." The decline of its importance arose partly from being deprived of its Charter by William III. on account of disaffection to his Government; and partly from the loss of its trade with Wales, by the opening of turnpike roads. The town is long and straggling, and the streets in general are narrow. It was once fortified, and Tudor's gate, a strong Gothic portal, and part of the walls still remain. The ruins of the Castle are extensive, but much dilapidated. They however possess great beauty from the abruptness of their site, which overlooks the vale of Usk. The ancient Priory is near the church, and contains many curious and interesting monuments. Among others, on the North of the choir is the figure of a man in a coat of mail with a bull at his feet, supposed to be the monument of Sir Edward Nevil, with this inscription:—

His force was much; for he by strength
With bull did struggle so,
He broke cleane off his horns at length,
And therewith let him go.

There is a Free School in the town, founded by Henry VIII., which has the privilege of sending a Fellow and a Scholar every fourteen years to Jesus College, Oxford. A spacious Market-place has lately been erected. Population, in 1811, 2815; in 1821, 3388. Distant 16 miles W. from Monmouth.

VOL. XXV.

MON-
MOUTH-
SHIRE.

Pontypool.

Pontypool, a corruption of *Pont ap Howel*, or Howel's Bridge, is situated on the edge of a steep cliff overhanging the Avon Llwyd, and on the slope of a declivity under impending hills, partly bare, and partly covered with wood. A canal is seen winding above the town, and a torrent descending from a lake at the foot of the high mountain, called *Mynydd Maen*, flows under the canal, and, rushing along the outskirts of the town, joins the Avon Llwyd, which rolls in an abyss beneath. The town consists chiefly of two streets, but as many of the houses are detached, it has a straggling appearance. The Parish Church is a pointed building, with a large square tower, but the town itself is modern, and owes, if not its origin, the greater part of its importance to its Iron-works, collieries, and weekly market. It obtained celebrity on account of its japan ware, first produced by Thomas Allgood, in the time of Charles II. This manufacture is still carried on by his descendant, but by no means to the same extent as formerly. But the Iron-works established by the Hanbury family have tended more than any other cause to the increase and prosperity of the town. Its situation, indeed, near a region rich in mineral treasures, in the midst of forges and collieries, and at the head of a canal, renders it peculiarly commodious for the establishment of iron-manufactories; and perhaps, says Mr. Coxe, another generation may see a new Birmingham start up in the wilds of Monmouthshire. It is the principal mart for the natives of the mountainous district. Population, in 1811, including the whole parish of Trevethin, 2423; in 1821, 3931. Distant 15 miles from Monmouth, and 146 from London.

Newport is situated on the right bank of the Usk, Newport. four miles from the Severn. Its Welsh name was *Castell Newydd*, or New Castle. Leland mentions it as "a toun yn ruine;" and Churchyard's description of it in doggerel verse is in general correct at the present time. It is built partly upon a flat, and partly on a declivity, and consists chiefly of one long, narrow, straggling street, which is dirty, ill paved, and lined with houses of a gloomy appearance. It communicates with the opposite bank of the Usk by a fine bridge of five arches. St. Woolas Church, which stands on the outskirts, is of pointed architecture. The town was once surrounded by walls. In the high street is an old spacious building, called the *Murenger's* house, an officer of great antiquity in fortified towns, who superintended the walls, and collected the tolls for keeping them in repair. On the bank of the Usk, a little to the North of the bridge, stands the Castle; it is a massive structure, but of small dimensions and simple form. Population, in 1821, 951. The Charter of the town was obtained from James I. It is governed by a Mayor and twelve Aldermen; and, together with Monmouth and Usk, sends a Representative to Parliament. As this is the only Port in the South-Western part of the County, the inhabitants are chiefly supported by foreign coasting and inland trade. It possesses a good haven, in which the tides commonly rise 36 feet, though they have been known to attain the height of 42 feet. Distant 8 miles from Pontypool, 147 from London.

Usk is pleasantly situated on the left bank of the river Usk, from which the town derives its name. Its position at the termination of the hilly district, surrounded by well-wooded undulations and cultivated plains, is very striking. As most of the houses stand separately with intervening gardens, the site of the town is of considerable extent. It has little commerce, and only one manufacture, japan

MON-
MOUTH-
SHIRE.
—
MONO-
CEROS.

ware. The river Usk is celebrated for its salmon, and several weirs are erected in the vicinity of the town. The ruins of the Castle stand on an abrupt eminence to the East of the river, and consist of two straight walls converging to each other, and strengthened at the point of union by two round towers. Usk is a Borough, and, in conjunction with Monmouth and Newport, sends a Member to Parliament. Population, in 1811, 844; in 1821, 1388. Distant 14 miles from Monmouth, and 144 from London.

British Topography, vol. i. p. 787, in which a List of Books, Maps, Plans, and Views descriptive of the County will be found, 1780; *Beauties of England and Wales*, vol. xi.; here also will be found a List of Books on the same subject, 1810; Coxe, *Historical Tour in Monmouthshire*, 2 vols. 4to. 1801; Willett, *Survey of the History, Antiquities, and Scenery of Monmouthshire, with a Glossary*, Chepstow, 1813.

MONNIERA, in *Botany*, a genus of the class *Diadelphica*, natural order *Dosmeai*. Generic character: calyx five-parted, the superior segments long; corolla ringent; stamens, two, superior with two anthers, inferior three; capsules five, one-seeded.

One species, *M. trifolia*, native of Guiana.

MONOCENTRUS, Schneid., from the Greek *μόνον*, single, and *κέντρον*, a spine, (*spiculum*.) In *Zoology*, a genus of animals belonging to the family *Percoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. The head large, covered with scales; forehead rounded; mouth large, the jaws covered with a very rough skin, the gill-flaps dentated on their posterior edge; the body short; the scales on the back large, ciliated, and terminating in points; instead of the first dorsal fin four or five large spines, and in place of the ventrals one very large spine on each side, in the angle of which a few almost imperceptible soft rays.

There is but one species known, which was described by Houttyn, in the *Acta Haarl.* vol. xx.; it is the

M. Carinatus, Schneid., and is further remarkable for the deep groove into which it can at pleasure depress the dorsal spines. It is found in the sea about Japan.

See Cuvier, *Règne Animal*.

MONOCEROS, i. e. unicorn, an animal having only one horn, *μόνον κέρας*.

Jacobus de Dondis in his catalogue of simples, hath amber greece, *os in corde corvi*, the bone in a stag's heart, a *monocerot's* horne, bezoar's stone. Burton. *Anatomy of Melancholy*, fol. 367.

The MONOCEROS, Willughby, Schneider, in *Zoology*, is a genus of animals belonging to the family *Scomberoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. A large projection resembling a horn upon the nose; teeth in a single row, simple, conical, pointed, and close set; body covered with shagreen-like skin; on each side of the tail two little carinated plates.

This genus very nearly resembles the *Acanthuri* in their general form, the smallness of their scales, and their caudal plates, but they are distinguished by the sharp instead of dentated edges to their teeth, and more especially by the remarkable prominence above the nose to which it owes the name of *Sea Unicorn*; this process is horizontal, cylindrical in shape, with a broad base, on the sides of which are placed the nostrils, and tapering to near the tip, when it again slightly expands, the body and tail are much compressed.

M. Fronticornis, Lacep.; *Chætodon Unicornis*, Lin.;

Fuscous Monoceros. The general colour is greyish-brown, but the dorsal and anal fins varied with curved yellow or golden streaks; the lateral line follows the curve of the back to the ridge of which it is near; the caudal fin is crescent-shaped, and the horns of the crescent so long that they almost include a complete circle. It is found on the coast of the Isle of France, and is about fifteen inches long, but in the Red Sea, where it is also met with, it attains the length of about three feet and a half; it feeds upon marine plants, and in the Arabian Sea is said to swim in shoals, and to use its horn courageously if attacked.

M. Tuberosus, Lacep.; *Spotted Monoceros*. Differs from the last species, in the greater size of the head, and in the horn not being so distinct, but forming a kind of broad protuberance above the nostrils, and bounded by a groove which passes from the front corner of the eye to the tip of the muzzle; the caudal fin, which is crescent-shaped, is not so deeply hollowed, nor consequently are the horns of the crescent so prominent. The general colour is grey more or less mingled with brown, but marked above and on the dorsal and caudal fins with a great number of little lenticular black spots; the spots on the pectoral fins much broader; there is no visible lateral line. It is about two feet long, and found in the same districts as the former.

Willughby, *Historia Piscium*; Lacepede, *Histoire des Poissons*; Cuvier, *Règne Animal*.

MONOCEROS, in *Zoology*, a genus of *Gasteropodous Mollusca*.

Generic character. Shell ovate; aperture longitudinal, emarginate at the base; a conical tooth at the base of the right lip.

Type of the genus, *M. imbricatus*, Lamarck; Favanne, *Conch.* pl. xxvii. fig. D. 1. All the species inhabit the coasts of America; they differ from the *Purpure* by the prominent tooth at the base of the right lip.

MONOCHAMUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* as long or longer than the body, setaceous, eleven-jointed, basal joint robust, second very minute, third the longest, the remainder decreasing in length to the end; *labrum* suborbicular; *maxillæ* bilobed; *maxillary palpi* long, four-jointed, basal joint short, slender, second longer, robust, third stouter, subclavate, fourth longest, subfusiform; *labial* triarticulate, basal joint short, second subclavate, terminal subfusiform; *thorax* cylindric, with a spine on each side; legs long; intermediate *tibiæ* with a slight denticulation; *tarsi* four-jointed.

Type of the genus, *Cerambyx sutor*, Linnæus; Don. *Brit. Ins.* vol. xiii. pl. 435. fig. 1. Several species, two of which are indigenous; they subsist upon timber.

MONO'ULAR, } Fr. *monocule*; It. *monocolo*;
MONO'CULOUS. } i. e. one-eyed; having only one eye; Gr. *μόνος*, and Lat. *oculus*.

He was well served who, going to cut down an ancient white hawthorn tree, which, because she budded before others, might be an occasion of superstition, had some of the prickles flew into his eyes and made him *monocular*. Howell.

We judge truth to be circumscrib'd by the confines of our belief, and the doctrines we were brought up in; and with as ill manners as those of China, repute all the rest of the world *monocular*.

Glanvil. *The Vanity of Dogmatizing*, ch. xv. p. 129.

MONODON, Lin., from the Greek *μόνος*, single, and *ὀδὸν*, a tooth; *Narwhale*, Shaw. In *Zoology*, a

MONO-
CEROS.
—
MONO-
DON.

MONO-
DON. genus of animals belonging to the family *Cetacea*, order *Cetacea*, class *Mammalia*.

MONO-
DONTA.

Generic character. Two teeth, of which one is generally deficient in the extremity of the upper jaw, very long, projecting, pointed and directed forwards in the axis of the body; no other teeth; blow-hole single, and on the back of the head; pectoral limbs webbed, no hind limbs.

The general form of the Narwhales resembles that of the Porpoise, but is rather longer in proportion. From the intermaxillary bones in the upper jaw project the remarkable tusks of this animal, which are very long, taper towards their tip into a point, and are spirally grooved throughout their whole length; the tusk is usually about a fourth of the total length of the animal, and its diameter at the base about a thirtieth part of the whole length of the tooth; in texture it resembles ivory, but it is tougher, heavier, and less liable to change its beautiful colour. It projects far beyond the upper lip, which encircles its root like a sheath. There is rarely more than one tusk visible, but there is always a second rudiment in the intermaxillary bone, of which the growth appears to be suspended, and it seems indifferent on which side the tooth grows, as sometimes the long tusk is found on the right, sometimes on the left side, and they are found in both sexes, though most developed in the male.

M. Monoceros, Lin.; *Narwhale*. About fifteen feet in length, exclusive of the tusk, which is about five feet more; the head is blunt, the body rather conical with a ridge extending along the back, and probably supplying the place of the absent dorsal fin; some are grey, some black, and others of a shining white or tinged with light grey, and marked with little, unequal, irregular, black spots; the under surface pure white, and quite smooth. They are natives of the North Seas, living together in numbers among the floes of ice, and swimming with extraordinary rapidity; they are said to be the natural enemies of the White Whale, and instances have been mentioned of such animals having been taken with the tusk of the Narwhale deeply implanted in their bodies. Occasionally, but very rarely, the Narwhale leaves the high Northern latitudes in which it usually lives. It has been found three times on the British coast: once on the Isle of Man, in 1648; a second time in 1800, at Frieston, in Lincolnshire, of which an account is given in the *Memoirs of the Wernerian Society*, vol. i. p. 147; and a third time in 1808, in Weesdale Sound, Zetland, which is also mentioned in the *Memoirs of the Wernerian Society*.

The other species are not at present satisfactorily described.

See Linnæi *Systema Naturæ* a Gmelin; Lacepede, *Histoire Naturelle des Cétacées*; Cuvier, *Règne Animal*; Fleming, *British Zoology*.

MONODONTA, in *Zoology*, a genus of *Gasteropodous Mollusca*.

Generic character. Shell oval or conoid; aperture entire, rounded, with the border disunited above; *columnella* arched, and truncated at the base; aperture with an operculum.

Type of the genus, *M. pagodus*, Lamarck; D'Ar-
genville, *Conch.* pl. viii. fig. A. Several species, all
marine shells, inhabiting the Tropical Seas.

MONODY, Gr. *μονωδία*: *μονή*, one, and *ὠδή*, an
ode or song.

A song by one. See the Quotation from Bishop
Newton.

In this *monody*, the author bewails a learned friend, unfortunately
drowned in his passage from Chester on the Irish seas, 1637.

Milton. *Lycidas*. Title.

It is called a *monody* from a Greek word signifying a mournful or
funeral song, sung by a single person.

Bishop Newton. *Note on Milton's Lycidas*.

MONOGAMY, } Fr. *monogamie*; Gr. *μόνος*, one,
MONOGAMIST. } and *γάμος*, marriage; contradistin-
guished from Bigamy, *q. v.*

If he had ever read the booke following, of *monogamie*, he might
have found his Tertullian (then Montanizing) to upbraid the true
and catholike church, which he calls Psychicos, with the usuall prac-
tice and allowance of the second mariages of their bishops.

Hall. *Works*, vol. i. fol. 709. *The Honour of the Married Clergie*,
sec. 19.

You behold before you, sir, that Doctor Primrose, the *monogamist*,
whom you have been pleased to call great.

Goldsmith. *The Vicar of Wakefield*, ch. xiv.

MONOGRAM, Lat. *monogrammus*; Gr. *μονόγραμμα*,
μόνον, alone, and *γράμμα*, a writing, a delineation,
from *γράφειν*, to write, to delineate; as if delineated,
lined, or done in lines only, (*signum nominis, continu-
ato literarum ductu*, Vossius, *de Vit.* lib. iii. c. 27.)

In compasse of no art it came
To be described by a monogram.

Ben Jonson. *The Underwood*, p. 223. *My Answer*.

Though it be but as it were a *monogrammal* description, and a
kind of rude draught as it were with a cole.

Fotherby. *Atheom*, p. 355.

MONOLOGUE, Gr. *μόνος*, one, and *λόγος*, a
speech; Fr. *monologue*, is applied to the person who
speaks.

A speech by one, *i. e.* alone; a soliloquy.

I can show in Shakespear many scenes of rhyme together, and the
like in Ben Jonson's tragedies; in Catiline and Sejanus sometimes
thirty or forty lines; I mean besides the chorus or *monologues*.

Dryden. *An Essay of Dramatick Poesie*.

Whether the *monologues*, or long speeches—the *μάνραι ἰστοίς*, as
Plato calls them—were performed in the same way as the rest of the
dialogue, or as it has been imagined, were distinguished by being
more measured and musical, is a point not easily cleared up.

Twining. *Aristotle. Treatise on Poetry*, vol. ii. p. 27. notes.

MONOMACHY, Fr. *monomachie*; Gr. *μονή*, one,
and *μάχη*, fight, battle, combat.

A single combat; one against one.

Two armies are ready to joyn battell, the field is sure to be bloody
on both sides; either chuses a champion; they two fight for all.
The life of one shall ransom a thousand. Our philosophers, our
lawyers shout for applause of this *monomachy*, as a way neere, easie,
safe: I dare not.

Hall. *Works*, vol. i. fol. 309. *Epistle 2. dec. 4.*

The morning came—and man to man,
The grand *monomachy* began.

Smart. *The Duellist. Fable 5.*

MONOMOTAPA.

MONO-
MOTAPA.

Name, divi-
sions, and
boundaries.

MONOMOTAPA, or rather Manamotapa, is the title of the Sovereign of an African State of great extent in ancient times, and still very considerable when the Portuguese formed their establishments on the Eastern coast of that Peninsula. "It is situated," says Father John dos Santos,* (*Ethiopia Oriental*. part i. cap. 10. fol. 55.) "in the Country called Mocaranga, the whole of which anciently belonged to the Manamotapa, but is now subdivided into four Kingdoms; viz. 1. that of the Manamotapa himself; 2. that of the Quiteve, (Kitéve,) i. e. Sofála; 3. that of the Sedanda, i. e. Sabia; 4. that of the Chicanga, i. e. Maníca." The Sovereigns of these Principalities, whose titles, like that of the Cæsars, (De Barros, i. 10. l. tom. ii. 383.) are continued through the whole line, were the descendants of a former Manamotapa, who portioned out a part of his territory between three of his sons, who bore those names respectively; reserving, however, for himself a much larger domain than those of all the other three put together. (Dos Santos, i. 10. fol. 55.) "This great Kingdom of the Manamotapa," says the same writer, (*Ibid.*) "is more than 200 leagues in length and almost as much in breadth. It is bounded on the North-West by the territory of another very great King, called Abútua, with whom the Manamotapa is frequently at war. They say that Abútua, for that Country bears the same name as its King, extends inland to the confines of the Kingdom of Angóla, with whose Cafres they maintain a commercial intercourse, as the latter do with the Portuguese who go from Angóla to Portugal. And of this I have no doubt," continues Dos Santos, "for the Cafre merchants from Abútua brought for sale to the Kingdom of Maníca a blanket (*cubertor de papa*) which came by the way of Angóla, and it was purchased by a Portuguese who was then in Maníca, and I saw it at Sofala." On the East the Manamotapa is bounded by the river Zambeze, which the Cafres, his subjects, call *Empando*, i. e. Rebel, because it prevents him from extending his empire on that side. To the South-East this Kingdom stretches as far as the Ethiopic Ocean, where it is terminated by a point of land only ten or twelve leagues broad between the Luábo and Tendancúlo rivers. The latter is its Southern boundary, separating it from Sofálah, the Kingdom of the Kitéve. (Dos Santos, i. 2. l. fol. 44.)

Zambeze or
Quama
River.

"The Zambeze (Zambere, by an error of transcription in De Barros) rises so far in the interior that no one knows its origin. The Cafres say, according to a tradition handed down to them from their forefathers, that this river springs from a great lake in the middle of Ethiopia, from which other very large rivers spring, each bearing a different name and flowing in a different direction." In the midst of this lake there are many isles peopled by Cafres, rich, and abundantly provided with food and cattle. The Zambeze receives its name from

a large nation inhabiting its banks where it issues from the lake. It is extremely impetuous, and in some places more than a league in width. At about thirty leagues from the sea it forms two arms, each nearly as broad as the main stream; the largest is the Luabo, which again subdivides into the Old Luábo and the Old Cuama. The smaller arm is the Quilimane, (Kilimáne,) called *Rio dos bons sinaes* (River of the good tokens) by Vasco de Gama. It likewise throws out a large arm called the *Rio de Linde*, so that "this great river Zambeze enters the sea by five mouths, or arms, of great width and much water." The Kilimáne is only navigable in winter, the Luábo throughout the year, and their mouths are thirty leagues distant from each other.* The Zambeze is navigable upwards, always in a West North-West direction, for 200 leagues, as far as the Kingdom of Sacumbè, which is much above the Fort of Tete; the river there (in Sacumbè) makes a great fall (*queda*) from some rocks; and its channel above that place is filled with shelves and shoals for the space of twenty leagues, as far as the Kingdom of Chicóva, where there are the silver mines. For this space the river is not navigable on account of the rapidity of its current and the frequent shelves of rock; but from Chicóva upwards it is navigable again, no one knows how far.

The Luábo, its principal branch, receives its name from the Island of Luábo at its mouth, in nineteen degrees South nearly, and sixty leagues from Sena. The Island lies between the Luábo on the South, and the old Cuama on the North, and is about five leagues in length and breadth. Its inhabitants are Moors and Cafres, curly-headed and very docile; almost subject to the "Captain of the Cuama Rivers," who regulates their trade with Mosambike. The goods are brought in large vessels, called *pangayos*, and here put on board *almá-dias*, a smaller kind of boat, (*embarcações pequenas*), in order to be sent up the river. There are many Islands in the river, the largest is Chingoma, formed by the fork at the head of the Delta, where the Luábo and Kilimáne begin. It is the richest and most fertile of all. Inhangoma, near the fort of Sena, is about ten leagues long, one and a half broad, very low, flat, and productive. The river is so full of shallows and rapids that it cannot be navigated in the dark. From Sena to Tete upwards is a distance of sixty leagues; and midway are those very famous and renowned mountains (*muy famosas e nomeadas serras*) of Lupata, ninety leagues distant from the Indian Ocean, and four or five leagues in breadth. They are very lofty and rugged, full of precipices, and formed of a rough gravel as hard as iron. They traverse a great part of Ethiopia; and being very lofty, and passing through many Countries, the Cafres call them the Backbone of the World. (*Espinhaço do mundo*.) Notwithstanding they are so very high, broad, and formed of living stone, the river Zambeze has strength enough to force its way through the midst of them with such violence that its stream is terrific, and the rock in many

mountain.

* This writer, who passed some years as a missionary in Eastern Africa, is almost the only good authority for that Country, as De Barros has evidently copied Lopez and Galvarn, whose errors are noticed by Dos Santos. Lopez, moreover, appears never to have been at Mosambike. De Faria y Sousa is a mere compiler, and not sufficiently careful as to his authorities. No English writer except Purchas seems to have known the original of Dos Santos's Work; for the translation reprinted by Pinkerton (*Coll. of Voy.* xvi. 705.) is merely a very indifferent abridgement.

* According to Captain Owen (*Tables of Longitudes*, &c. No. 5.) the mouth of the Kilimáne is in 18° 1' 24" South, and that of the Luábo in 18° 57' 36" South, leaving an interval of 56' 12"; as near an approximation to the rough calculation of Dos Santos as could be expected. The leagues here mentioned were probably common leagues, equal to about two geographical miles.

MONO-MOTAPA. places forms a cliff on each side of it, as perpendicular as if it had been cut with a chisel and a plummet. In other places the tops of the mountains impend over the river as if they were ready to fall upon the vessels passing beneath. The stream is here not above fifty fathoms (*braças*) wide, and its navigation, for these five or six leagues, is extremely hazardous.

Mongás. Both Sena and Tete are on the Southern side of the river, and the continuation of the chain of mountains on that side forms the Kingdom of Mongás, the Sovereign of which is independent of the Manamotapa, by whose State his territories are nearly surrounded. His subjects, gentile Cafres, are rather of dark complexion, but strong in make, and the most warlike of all the Tribes on these rivers, so that they gave the Portuguese a great deal of trouble in the conquest of their Country. At the foot of these mountains, on the opposite side of the river, and not far from it, there is a lake three leagues in circuit, very deep, with a very lofty, rocky island, five hundred fathoms in circumference, in its centre. This lake is called Rufumba by the Cafres, and abounds in good fish, sea-horses, and very large lizards. (*Ibid.* fol. 51.) The grove (*bosque*) of Chipanga on its banks, in which the Cafres bury their dead, is held in great veneration, because the lizards from Rufumba, whose bodies they believe to be occupied by the souls of the deceased, bask in the sun on the skirts of it. Near this lake there is a hot spring, called Maembe by the Cafres, which has five different vents (*olhos*) a little more than a fathom distant from each other; in two of them the water is tepid; in two others very warm; and in the fifth boiling, so that no one can bear to put his hand into it, and it is hot enough to boil an egg or scald a pig. The stream from these springs flows into the lake Rufumba. At Empongo, above Tete, there are three more warm springs which are covered by the river in the time of its inundations: for the Zambeze and its tributaries rise periodically, and are at their greatest height in March and April, (*Ibid.* fol. 45.) at which season the Country is very unhealthy. These inundations, on the other hand, render the neighbourhood extraordinarily fertile; fruit and every kind of vegetable abound, and poultry were brought down for sale by the Cafres in their *almádi*as in such quantities, that a fowl cost only 18 or 20 reis, (less than 1½d.) All kinds of Tropical produce are either the natural growth of the Country, or raised with the greatest ease. Canna fistula (*Cassia fistula*) and many other medicinal plants are common in the woods.

Lake Rufumba. Grove of Chipanga. Inundations. Animals. Sea-horses, called *Zovo* or *Zoô* by the Cafres, and lizards (*lagartos*; *crocodiles*?) are very numerous in the rivers; and there are many wild animals peculiar to the Country. The mountainous regions in the interior probably have rich veins of gold and silver: of the former the finest is found in Chiróro in the territories of the Kitéve, King of Sofálah. It is obtained by washing the mud and gravel brought up from the beds of lakes and torrents, and is considered as exclusively the property of the Sovereign; every Cafre, therefore, who discovers a mine and takes any of the gold is punished by death and the confiscation of his goods; and whenever that metal is seen any where, a bough is placed beside it to warn passengers not to approach; the place so marked is therefore shunned with the greatest care. "The cause of all this rigour," says Dos Santos, (fol. 59.) "is the anxiety of the Manamotapa to prevent the Portuguese from knowing that there are such large mines of gold in his Country, lest, through covetousness of it, they should

make war upon him and take his Kingdom." The natives told the good Father wonderful tales of gold growing like a plant, and sprouting out of the ground in large lumps. To these stories he seems not to have given much credence; but he adds the following remarks, derived chiefly from his own observations, which probably are correct and deserving of notice. "This gold is found in many fashions; that is to say, in small dust like sand; in grains like beads large and small; in fragments, (*lascas*;) some so massive (*mociças*) that they appear as if smelted; others branching out (*feitas em raminhos*) with many knobs; (*esgalhos*;) others mixed up and enclosed in earth, so that when it has been washed or shaken out they appear hollow within like a honey-comb, or scoria (*borra*) of iron which issues from a Smith's furnace, and have their gaps and hollows (*vaôs e buracos*) filled with red earth, which, though not yet converted into gold, shows well by its colour that it would in time be converted into it: (*que tambem se ha de converter nelle.*) Gold is also extracted from stones, especially in the Kingdom of Maníca, and is then called Matúca gold. This is the lowest of all and of the fewest carats; (*quilates*;) but that which is in branches or knobs (*em raminhas ou esgalhos*) is the finest and of the most carats." (*Ibid.*)

The principal silver-mines are in the Kingdom of Chicôva, in the interior and North-East of the territory immediately under the Manamotapa. They are on or near the banks of the Zambeze. The ore (*pedras de prata*) when smelted, rendered three parts of fine silver and only one of scoria, whence it is inferred that these are the richest mines and contain the finest silver of any yet known. (*Ibid.* fol. 61.) Besides these mines of gold and silver, there is in this land of Mocaranga much iron, and so good that it is carried thence by some Portuguese to India to make gun-barrels. (*espingardas*.) There is likewise much copper; both of these metals the Cafres extract from the earth and smelt, making of the iron arrow-heads, spear-heads, (*ferros de azagayas*;) swords, knives, and most of the iron tools of which they are in want: of the copper they make bracelets, (*manilhas*;) which both men and women wear on the legs (if we may so say) as well as on the arms. Near the village (*povoação*) of Massapa, the principal trading place (*feira*) in the interior frequented by the Portuguese, there is a very large and lofty chain of mountains called Fura, whence a great part of the Kingdom of the Manamotapa can be seen; and on that account the King will not allow the Portuguese to go up to this mountain, lest they should covet the greatness and beauty of his land where so many and so great mines of gold are hidden. On the top of this mountain there are still standing some pieces (*pedaços*) of old walls, and some ancient ruins of stone and mortar, (*cal*;) which clearly prove that there were strong houses and chambers, a thing not to be found in all Cafrária; for even the King's houses are made of wood, plastered with mud and covered with straw. These houses were anciently, according to traditions received from aged Moors, the factory of the Queen of Sheba, (*sectoria da Raynha Sabbá*;) and much gold was thence carried down the rivers of Cuama to the Ethiopic Ocean; the which they navigated in ships, always following the coast of Ethiopia as far as the Red Sea, and entering it they sailed up till they reached the shores which border upon Egypt. Others say it was the factory whence Solomon got his gold, and therefore Ophir; for there is little difference between Phura or

Courts.

Errors of
Botero, &c.

Royal en-
signs.

Executions.

Wives.

Oaths.

Princes.

The Manamotapa, though very powerful, has no other Kings for his vassals. He has some subjects who are great Lords, like the titled Lords (*senhores de titulo*) in Portugal, who have territories and subjects; but they are not called Kings by the Cafres, but *Encosses* or *Fumos*; whence certain writers who have described this Country and its customs, such as John Botero, an Italian, and Luis de Guzman, were greatly in error, having followed Osorio and others, who first wrote on these matters, in every thing. The Manamotapa, so far from having Kings for vassals and their children at his Court as hostages, has very few servants, and is attended with little pomp, in the same manner as the King of Sofalah. The accounts published by Philip Pigafetta from the narrative of Edward (Duarte) Lopez, are equally erroneous, especially with respect to the Amazons, who live, he asserts, in the Kingdom of the Manamotapa, since there are no such women in that Country, nor any memory of that which he says. The account which these authors give of the insignia of that Prince is equally groundless. Bows and arrows are carried by every Cafre, as commonly as a Portuguese wears a sword: the Manamotapa, therefore, when he goes out takes his bow and arrows, and the Cafres who accompany him do the same thing according to their custom, not as warriors. He is preceded by a Cafre beating on one thigh (*coixa*) that it may be known that the King is coming. When the Manamotapa does not take his bow, it is carried by a Cafre whose duty this is; he is called *Masocorira*, which is much the same as page. (*moço da camara*.) The King carries in his hand a javelin (*azagaya*) of black wood, tipped with a point of gold, or three pieces of wood about a cubit long, carved and slender, (*de obra de hum covado, lavrados e delgados*), which they call *Fimbos*. When he speaks with any Cafre whom he wishes to kill, he lets one of these three *Fimbos* drop, and his executioners, called *Infices*, who are present, take him and kill him with a javelin; and thus all condemned persons die, because there is no gallows in this Country. The Manamotapa has many wives, and the chief of them, called *Mazarira*, whom he loves very much, is his whole sister. She is much attached to the Portuguese, protects them, and speaks for them to the King; and for that reason when they give the *Curva* to the King, they likewise give a present of clothes (*roupas*) to this wife. Without a gift no one can speak to the King or to this wife. The Cafres give her a cow, or a goat, or some clothes; and when they are so poor that they have nothing to give, they carry her a sack of earth in acknowledgment of their vassalage, or a bundle of straw to thatch her houses, for all those in this part of Cafraria are so thatched. "The Manamotapa who now reigns," says Dos Santos, (fol. 63.) "is named Mambo; his subjects when they wish to confirm any thing, swear by his life, saying *She Mambo*, and when they speak with him they say *She dico*, which is much the same as 'Your highness.'" The King's sons are called *Manambo*. The Manamotapa allowed the Missionaries to establish themselves in his Kingdom, and built churches for them in Massapa, Luanze, and Bucuta, the three principal places in his Kingdom; so that they hoped for much fruit in the souls of his subjects. (*Ibid.* fol. 62.) They are very superstitious, and much given to divination, for which end they

cast lots, "and many times doth the Devil speak in them," says Father Dos Santos, (*Ibid.* fol. 63.) lying to them commonly as his is custom; but not even that sufficeth to withhold them from trusting him and giving credit to his lies." When the Manamotapa dies, his favourite wife takes poison in order to die with her husband; and his pets, such as dogs, lambs, &c., are killed, that he may have them in the other world. The corpses of malefactors who have been executed by order of the Emperor, are hung up that the moisture which drips from them may be collected in a vessel placed beneath; and from it he makes an unguent supposed to lengthen life, and act as a preservative against the power of charms and witchcrafts. The manners, customs, ranks, and laws of his subjects are nearly the same as those of the Cafres under the Kiteve, King of Sofalah; and their Language, called *Mocaranga*, is the best and most polished of all the Languages spoken by the Cafres; "and while the Moors of Africa and Arabia speak from the throat, (*de papo*), as if tearing and vomiting out their words, these *Mocarangas*, on the contrary, pronounce them with the point of the tongue and the lips, so that they utter many words as if whistling, which they hold to be very graceful." (*no que tem muyta graça*.) (*Ibid.*) It appears from the words collected by Salt to be closely allied to the Bechuana and Kosa. One of the peculiar customs of the *Mocarangas* is their care never to cut their hair or beards. This may have arisen from a fear of losing their hair entirely, for it is naturally very meagre and scanty, but never turns grey till they are very old, and they often live to 90 or 100 years. A white whelk (*buzio*; *Buccinum* of Linnæus) hung like a jewel from the hair on the head is their principal ornament. The Manamotapa also wears a large one on his breast. These whelks, called *Andóros*, are much detested by the Kiteve, being the proper device (*diviza*) of his enemy.

The three great trading places (*feiras*) in Mocaranga, are Massapa, Luanze, and Manzovo, villages (*povoações*) distant from each other, and very remote from Tete. At those places the inhabitants of Sena and Tete have houses called *Churros*, where they deposit and sell their goods. A Portuguese, styled Captain, appointed by his Countrymen established on the Zambeze and approved by the Manamotapa, is always resident at Massapa, the principal *feira*. He is called by the Manamotapa his "Great Wife," a title which he always gives to the Portuguese whom he most wishes to honour; such as the Captains of Sena, Tete, and Mosambike. The Captain of Massapa has supreme jurisdiction and authority over all the Cafres who frequent Massapa, and over those established in its borders, and can pass sentence in all causes, and condemn malefactors even to be hung, without appeal from his sentence. This authority he receives from the Manamotapa; and by the Viceroy of India he is appointed Judge and Chief of all the Portuguese settled there. He is likewise administrator to the effects of the deceased. All the Captains of Sofalah, Sena, and Tete have a similar authority and jurisdiction. (*Ibid.* fol. 54.) The Captain of Massapa also collects the duties levied on the merchants by the Manamotapa, viz. one out of every twenty cloths brought for sale, on payment of which they are secured from any further demand, and at liberty to travel and trade wherever they will. As no one can proceed thence into the interior without a license from the Manamotapa or the Captain, this place is called "the Gates of Mas-

MONO-
MOTAPA. sapa," and its Captain "the Captain of the Gates." (Capitão das Portas.) He holds his office for life, and is distinguished by a javelin of black wood, a yard (vara) long, more or less, tipped with a long point of gold, like the iron head of a lance. He also wears a bracelet of gold. On entering his post, the Captain of Mosambique is required to present to the Manamotapa cloths (roupas) and beads (contas) to the amount of 300 cruzados, (about £40,) in return for which all merchants, Christians and Moors, are allowed to travel through the Country without let or hinderance during the three years of his Captaincy; and when so secured, "they pass through it with bags of gold," says Dos Santos, (fol. 54.) "much more safely than they could travel in Portugal, for to this day it hath never been known that any Cafre robbers assaulted a Portuguese on the road or robbed him, save by the order of the Manamotapa himself, a thing which he sometimes doth, to avenge himself of some grievances which he hath or pretendeth to have had from the Portuguese; particularly when the Captain of Mosambique, newly entered, doth not pay him, or delay to the second year payment of the cloths which it is the custom to give him in the first: for which cause he in the mean time orders, throughout all his lands, an *empata*

MONO-
POLIZE. Empata.

to be laid on the goods (*fazendas*) of the merchants, and all their merchandise which they find to be seized; (for this they call *empata*;) and in this manner he pays himself that which is due to him very largely, and satisfieth himself for the grievance which he hath received." These *empatas* cost the merchants many thousand cruzados, for which they never receive any compensation either from the King or from him who was the cause of them. (*Ibid.* fol. 55.) This is the payment called by the Cafres *Curva*; from Sena it is delivered by an Ambassador sent by the Captain to the Manamotapa; from other settlements it is delivered to ambassadors styled Mutúme, sent by him to receive it.

Curva.

MONONYCHUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, twelve-jointed, short, slender; funiculus seven-jointed, the articulations obconic, the exterior ones gradually shorter; club oblong, oval, acuminate; head longitudinally carinated, produced anteriorly into an elongate rostrum, which is slender, bent, cylindric, lodged during repose in a pectoral groove; *thorax* transverse, much attenuated in front, coarctate, produced behind towards the scutellum; *elytra* subquadrate, with an impression near the scutellum, shorter than the abdomen; *femora* simple; *tibiae* with spines on the outer margin near the apex, which is truncate; *tarsi* with a single simple claw.

Type of the genus *Rhynchænus Pseudacori*, Fabricius; Curtis, *Britt. Ent.* vol. vii. pl. 292. Several species found in Europe, one of which inhabits the South of England: the *larvæ* inhabit and subsist upon seeds.

MONO'POLIZE, } Fr. *monopoler, monopole*; It.
MONO'POLIST, } and Sp. *monopolio*; Lat. *mono-*
MONO'POLY. } *polium*, from the Gr. *μόνος*, one,
and *πᾶν-εἶν*, *vendere*, to sell. "When he came to name *monopolium*, he craved leave before hand; for that he was to use a strang and foraine worde." Suet. in *Tiber.* c. 71.

[A master merchant] can finde the meane, to make *monopolies* Of euery ware that is accompted strange.

Gascoigne. *The Steele Glas.*

And therefore is thys ware Judas all in thyne owne hande. Thou hast a *monopoly* thereof.

Sir Thomas More. *Workes*, fol. 1303. *Vpon the Passion.*

And in very truth, many have gotten great gaine and profit by this commoditie and merchandise, and namely, with their craftie devise of *monopolies*, that all might passe through their hands only: notwithstanding there hath not ben any one disorder more repressed, and reformation sought by sundry edicts and acts of the senate in that behalfe: every prince hath been continually troubeled here about with grievous complaints out of all provinces.

Holland. *Plinie*, book viii. ch. xxxvi.

But especially care must be taken, that *monopolies*, which are the cankers of all trading, be not admitted under specious colours of the public good.

Bacon. *Works*, vol. ii. p. 273. *Advice to Sir George Villiers*, sec. 20.

Only there passed a law, at the suit of the merchant-adventurers of England, against the merchant-adventurers of London, for *monopolizing* and exacting vpon the trade.

Id. King Henry VII. fol. 163.

It may be doubted there was in it the fraud of some old patentees and *monopolizers* in the trade of bookselling.

Milton. *Works*, vol. i. fol. 161. *Of Unlicensed Printing.*

He thinks he can never trade to his advantage, unless he can have the *monopoly* of every thing he values.

South. *Sermons*, vol. v. p. 377.

Mr. Martin spoke of a "country that groaned under the burthen of monstrous and unconsonable substitutes to *monopolitans* of starch, tin, fish, cloth, oil, vinegar, salt, and what not.

Oldys. *Life of Sir Walter Raleigh*, fol. 141.

For how do some (as it were) *monopolize* the covenant of grace wholly to themselves, calling themselves the only people of God, the saints, the godly.

South. *Sermons*, vol. x. p. 10.

Joy is an import; joy is an exchange;

Joy flies *monopolists*; it calls for two;

Rich fruit! heaven-planted! never pluckt by one.

Young. *The Complaint. Night 2.*

Descamps says, that Leley growing jealous of Roestraten, proposed to him a partition of the art; portraits were to be *monopolized* by Leley.

Walpole. *Anecdotes of Painting*, vol. iii. ch. i. p. 75. note.

MONOSTROPHIC, Gr. *μονόστροφος*, an ode having or consisting of one strophe,—*μονή στροφή*.

The measure of verse used in the chorus is of all sorts called by the Greeks *monostrophic*, or rather *apolelymenon*, without regard had to strophe, antistrophe, or ephod, which were a kind of stanzas fram'd only for the music then us'd with the Chorus that sung.

Milton. *Preface to Samson Agonistes.*

MONOSY'LLABLE, } Fr. *monosyllabe*; It. *mo-*
MONOSY'LLABLED. } *nosillabo*; Sp. *monosyllaba*;

MONO-
SYLLA-
BLE.
—
MONO-
TONE.

Lat. *monosyllabus*; Gr. *μονή*, one, and *συλλαβή*, a syllable, (or, as Ben Jonson writes it, a syllabe,) *comprehensio literarum in unum integrum sonum*. Martinus. See SYLLABLE, and DISSYLLABLE.

A word of one syllable.

It shall suffice us to take things as we find them, and to hold it for granted, that this *monosyllable* (for so it is in many languages) comprises all that intellectual and affective world which concerneth man; and in plaine termes to say, that when God saies, The heart is deceitfull, hee meanes the understanding, will, affections are deceitful. *Hall. Works*, vol. i. fol. 462. *The Great Imposter*.

Nine taylors, if rightly spell'd,
Into one man are *monosyllabled*.

Cleveland.

Poetry requires ornament, and that is not to be had from our old Teuton *monosyllables*. *Dryden. Æneid. Dedication*.

Conjunction, preposition, adverb join
To stamp new vigour on the nervous line:
In *monosyllables* his thunders roll,
He, she, it, and, we, ye, they, fright the soul.

Churchill. *The Rosciad*.

MONOTHE'ISM, } Gr. *μόνος*, and *θεός*, God.
MONOTHE'IST. } A belief in one God.

A people whose ancestors were ignominiously prone to idolatry, through a series of ages, in opposition to every principle of common sense, to the express prohibitions of Jehovah, and to every motive of gratitude or of interest, have continued firm in their abhorrence of idolatry, and in their adherence to pure *monotheism*, under every persecution.

Cogan. On the Passions, vol. iv. p. 322. *On the Jewish Dispensation*, ch. ii. sec. 7.

The general propensity to the worship of idols was totally subdued; and they became *monotheists* in the strictest sense of the term. To this point all the dispensations of God were directed; and it is precisely at this point that the sacred history terminated.

Id. Ib. p. 321.

MONOTOMA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* shorter than the thorax, rather stout, the basal joint obconic, very large; the second smaller, the seven following very short, granular; the tenth large, globose, with an acute appendage at the tip; *palpi* unequal, subfiliform; the maxillary with the last joint elongate, attenuated to the apex, truncate; head large, porrect, triangular; eyes globose, prominent; *vertex* with an angular protuberance; *thorax* oblong-quadrate, truncate anteriorly, with the angles acuminate, prominent, the lateral margins crenulated; body oblong-ovate, depressed; *elytra* broader than the thorax at the base; the apex truncate; *abdomen* exposed at the tip; legs short; *femora* clavate.

Type of the genus *M. picipes*, Herbst, *Col.* vol. v. pl. xlv. fig. 2. Four species, natives of Europe; three found in England: frequent putrid wood.

MO'NOTONE, } Gr. *μόνος*, one, and *τόνος*, tone,
MONOTO'NICAL, } from *τείν-ειν*, *intendere*; *vocem vel*
MONO'TONOUS, } *sonum intendere*; to stretch the
MONO'TONY. } voice or sound.

One *tone* or *tune*, *sc.* continued; a continuance of one or the same *tone*, or sound.

A kind of chaunt that frequently varies very little from a *monotone*. *Mason. On Church Musick*, p. 95.

Every line was perhaps uniformly recited to the same *monotonous* modulation with a pause in the midst.

Warton. History of English Poetry, vol. ii. *Emendations to* vol. i.

Our earliest poets were fond of multiplying the same final sound to the most tedious *monotony*. *Id. Ib.* vol. i. p. 21.

Monotony is the great fault into which writers are apt to fall, who are fond of harmonious arrangement: and to have only one *tune*, or measure, is not much better than having none at all.

Blair. Lecture 13, vol. i. p. 330.

MONOTROPA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*. Generic character: calyx none; corolla with deep divisions; persistent, each of the segments with a hooded, nectariferous base; anthers horizontal, one-celled; stigma orbicular, naked; capsule five-celled, five-valved; seeds numerous, minute.

A genus of parasitic plants, usually growing on the roots of trees. The *M. hypopithys* is a native of England, growing in plantations of beech trees.

MONSIEUR, *i. e.* *mon sieur*; applied very early by our Poets in derision to a Frenchman.

A shoeless soldier there a man might meet
Leading his *monsieur* by the arms fast bound;
Another his had shackled by the feet,
Who like a cripple shuffled on the ground.

Drayton. The Battle of Agincourt.

MONSONIA, in *Botany*, a genus of the class *Polyadelphia*, order *Dodecandria*, natural order *Geraniæ*. Generic character: calyx five-leaved; corolla, petals five, toothed; stamens united into five bundles of three each; style five-cleft, fruit beaked, of five capsules with long spiral awns.

A genus of five species, natives of the South of Africa; the flowers of these are very showy, especially the *M. speciosa*, which is a hardy green-house plant, easily raised from cuttings.

MONSOON, Fr. *monson*, *mousson*. Thevenot says the word is Arabic, and means *season*. Maffee that it is from the Lat. *motiones*.

That the *monsoons* and trade winds should be so constant and periodical even to the 30th degree of latitude all round the globe, and that they should so seldom transgress or fall short of those bounds, is a subject worthy of the thoughts of the greatest philosophers. *Ray. Of the Creation*, part i. p. 104.

They often lose the benefit of their *monsoons*, and much more easily other winds, and frequently their voyage.

Boyle. Works, vol. iii. p. 771. *Observations and Experiments about the Saltness of the Sea*, ch. ii.

The MONSOON, or *Trade Wind*, Portuguese *Monção*, is certainly derived, as Thevenot says above, from the Arabic *Maúsim*, season, and denotes the periodical return of the phenomenon. "All this coast of Ethiopia," says Father John Dos Santos, (*Ethiopia Orientalis*, part i. p. 56.) "can be navigable only with two winds, which blow for six months from East, and for other six months from the West, and these they call *Monções*." The Ancients had remarked the *Etesian Winds*, as they termed them, and they are employed by Lucretius, among other places, in one most glowing and harmonious passage descriptive of the four Seasons, which it may be well to compare with the wordy inflations of Thomson.

*It Ver, et Venus, et Veneris prænuntius ante
Pinnatus graditur Zephyrus vestigia propter;
Flora quibus Mater præspersgens ante vias,
Cuncta coloribus egregiis et odoribus opplet.
Inde loci sequitur Calor aridus, et comes una
Pulverulenta Ceres et Etesia flabra Aquilonum.
Inde Autumnus adest, graditur simul Evius Evan:
Inde alia tempestates ventique sequuntur,
Altitonans Vultur, et Auster fulmine pollens.
Tandem Bruma niveis adfert, pigrumque rigorem
Reddit. Hyems sequitur, crepitans et dentibus Algas.* v. 736.

MO'NSTER, v.

MO'NSTER,

MO'NSTROUS,

MO'NSTROUSLY,

MONTRO'SITY, or

MONSTRUO'SITY,

MO'NSTROUSNESS.

Fr. *monstre*; It. *mostro*; Sp. *monstro*; Lat. *monstrum*, which Vossius thinks is by syncope from *monestrum*, and this from the verb *monere*; to call to mind, to warn; applied to any thing extraordinary, considered as a warning from their Gods. Generally,

"Alas!" quod she, "that ever this should happen!
For wend I never by possibilitie
That swiche a *monstre* or *mervaille* might be.
Chaucer. The Frankleines Tale, v. 11656.

For certes Nature had soch lest,
To make that faire, that truly she
Was her chiefe patron of beaute,
And chiefe ensample of all her werke
And *monster*. *Id. The Dream*, p. 326.

These *monstrefull* thingis I devise to thee
Because thou shuldest nat of them abasshid be.
The Marchantes Second Tule. Imputed to Chaucer.

Onely hir thought dwellethe with hem stable, that wepeth and
bywailleth the *monstrous* chaunginge that they suffren.
Id. Boecius, book iv. p. 438.

And Mercuries swerde out he drouh
And so he bare him, that he slough
These dredfull *monsters* all thre.
Gower. Conf. Am. book i. p. 20.

————— Sure her offence
Must be of such vnnaturall degree,
That *monsters* it.
Shakspeare. Lear, fol. 285.

MENEN. Pray now sit downe.
CORIO. I had rather haue one scratch my head i' th' sun,
When the alarum were stricke, then idly sit
To hear my nothings *monster'd*.
Id. Coriolanus, fol. 11.

Where thou perhaps under the whelming tide
Visit st the bottom of the *monstrous* world.
Milton. Lycidas, l. 158.

For if I woulde enter to describe the *monstruousnesse* of it, I
should rather wander in it, it is so brode, than have anye readye
passage to the ende of the matter.
Ascham. Works, p. 84. *Toxophilus*.

After ten great miracles in Egypt, and some in the same place,
they melted down their stolln ear-rings into a calf, and *monstrously*
cryed out: These are thy Gods O Israel, that brought thee out of
the land of Egypt.
Sir Thomas Brown. Vulgar Errours, book i. ch. ii. p. 11.

We desire no records of such enormities, sins should be ac-
counted new, that so they may be esteemed *monstrous*. They omit
of *monstrosity* as they fall from their rarity; for, men count it venial
to erre with their forefathers, and foolishly conceive they divide a
sin in its society. *Id. Ib.* book vii. ch. xix. p. 468.

We shall tolerate flying horses, black swans, hydras, centaurs,
harpies, and satyrs; for these are *monstrocities*, rarities, or else
poetical fancies, whose shadowed moralities requite their substancial
falsities. *Id. Ib.* book v. ch. xix. p. 318.

This is the *monstruositie* in loue lady, that the well is infinite,
and the execution confin'd; that the desire is boundlesse, and the
act a slaue to limit.
Shakspeare. Troylus and Creseide, fol. 91.

Whose *monstrousness* doth so perplex,
Of reason and deprives me
That, for their sakes, I loath my sex,
Which to this sadness drives me.
Drayton. The Muses' Elysium. Nymphal 4.

Humour, avant, I know you not, begone. Let who will make
hungry meales for your *monster-ship*, it shall not be I.
Ben Jonson. Every Man in his Humour, act iii. sc. 4.

These truths with his example you disprove,
Who with his wife is *monstrously* in love.
Dryden. Juvenal. Satire 6.

We sometimes read and hear of *monstrous* births, but we may
often see a greater *monstrosity* in educations; thus when a father
has begot a man, he trains him up into a beast.
South. Sermons, vol. ii. p. 189.

VOL. XXV.

Down sunk the *monster-bulk* and press'd the ground:
His arms and clattering shield on the vast body sound.
Dryden. Virgil. Aeneid, book x.

————— Tis so strange, that your *monstership's* crany
Should be envied by him, much less by Delany.
Swift. Dr. Delany's Rep y.

A *monster*, which hath not the shape of mankind, but in any
part evidently bears the resemblance of the brute creation, hath
no inheritable blood, and cannot be heir to any land, albeit it be
brought forth in marriage.
Blackstone. Commentaries, book ii. ch. xv. sec. 4.

MONSTRATION, Lat *monstratio*, a showing. See
MONSTER, ante.

Evidence, proof.

Richarde his sonne comming by the way and meeting it, & be-
ginning for compassion to weepe, the blood burst incontinent out of
the nose of the dead king at the comming of his sonne, geuing thereby
as a certaine *monstracion*, howe he was the author of his death.
Grafton. Henry II. The thirty-third Yere.

MONTAGUA, in Zoology, a genus of *Mollusca*.

Generic character. *Branchiæ* in continuous rows
across the back; a cluster of short *papillæ* on the right
side.

Type of the genus, *Doris longicornis*, Montagu, in
Linnæan Transactions, vol. ix. pl. vii. fig. 1. Two
species, found on the coasts of Britain.

MON'TANIZE, } To think as *Montanus* thought;
Mo'NTANISM, } to adopt, to follow, the doctrine of
Mo'NTANIST, } *Montanus*.
MONTANI'STICAL. } See the HISTORICAL Division,
ch. xlii. p. 159.

Tertullian, together with such as were his followers, beganne to
montanize, and pretending to perfect the seueritie of Christian
discipline, brought in sundrie vnaccustomed dayes of fasting, con-
tinued their fasts a great deale longer, and made them more rig-
orous than the vse of the church had beene.

Hooker. Ecclesiasticall Politie, book v. sec. 72. fol. 392.

Whereupon, Tertullian proclaiming enen open warre to the
church, maintained *Montanisme*, wrote a booke in defence of the
new fast; intituled the same, A Treatise of Fasting, against the
opinion of the carnall sort. *Id. Ib.*

After notice taken how the *Montanists* held these additions to be
supplements of the Gospell, &c. *Id. Ib.*

This tradition after that in an emulation of the *Montanistical*
vaunt of virginity, it had gotten head in the church, ranne like
fire in a traine.

Hall. Works, vol. i. fol. 735. *The Honour of the Married Clergie*,
sec. 16.

MONTGOMERYSHIRE, a County of North
Wales, bounded by Shropshire on the East, by Merio-
nethshire and Cardiganshire on the West, by Radnor-
shire on the South, and by Denbighshire and Mon-
mouthshire on the North. Its dimensions are 33 miles
in length from North-West to North-East, and 25 from
South-East to North-West, and it contains about 492,000
acres, of which 60,000 are under cultivation, 180,000 in
pasturage, and the remainder waste or woodland.

The general aspect of the County is mountainous. A
rich and extensive vale follows the course of the Severn, Mountains.
and hence the ground rises to the North-West till it
attains a considerable elevation which traverses the whole
County, and is familiarly known as the backbone of Mont-
gomeryshire. The Freidden or Breidden hills on the
East, in which the Mael y Gofa and Cefn y Gofa are
conspicuous, abut on Shropshire. The Biga mountains
stretch on the North of the valley of the Severn till they
join Plinlimmon, partly situated in this County, partly
in Cardiganshire; and besides these ranges there are
numerous isolated and lofty crags for the most part ver-
dant to the summit. The rivers chiefly flow from the ridge

2 M

MON-
STER.MONT-
GOMERY
SHIRE.Extent.
Boundaries.

MONTGOMERYSHIRE.

Rivers.

connected with Plinlimmon, and Montgomeryshire has more streams than any district in Great Britain of equal extent. The Severn, rising from Plinlimmon itself, flows in a North-Eastern direction, receiving many tributaries; salmon ascend nearly to the very foot of the mountain, and the stream is navigable almost as high as Welsh Pool, whence a canal is formed for more extensive internal communication. The Wye takes a South-Eastern course from the same range, and enters Radnorshire, being first joined by the Bedw at Llangerrig. The Virnwy, remarkable for its variety of fish, rising at Bwlch y Groes, and augmented by the Tanat, falls into the Severn near Llandrinig. Besides these waters, the Maw, the Traethbach, the Cieriog, the Dee, and the Dovy flow through various parts of the County.

Climate.

The climate of Montgomeryshire is temperate and salubrious, and a good deal equalized throughout the year. The West wind blows on an average nine months, and the Easterly winds in the remaining three; the strongest winds are from the South-West and North-West. The soil of the mountains is chiefly of a schistose, and that of the valleys of an argillaceous nature. The Midland, Western, and South-Western parts of the County are unfavourable to the growth of corn, as well from the ungenial nature of the soil as from their bleakness and great exposure. The narrow valleys are more friendly to vegetation, and highly productive both in corn and grass; but the finest arable land lies on the Eastern side of the County bordering on Shropshire, where agriculture has of late received considerable improvement, and the management of land varies but little from that of the adjacent County. On the whole, Montgomeryshire, although barren and mountainous in many parts, has a greater mixture of fertile vale and plain than several of the other Welsh Counties.

Mineralogy.

Minerals are abundant. A remarkably rich lead mine was many years since opened at Llangynnog, which yielded immense profits to the proprietor, the ore being galena, or lead glance. It was at length inundated by water, but there is a prospect of its being recovered; and other promising veins have been opened. The principal slate quarries are near Llangynnog. Near the confluence of the Virnwy and Severn is also a quarry whence the slates are sent down the Severn to Bristol. Limestone occurs, but not very abundantly in this County. The only rocks containing it to any considerable extent are near Llanymenech. Coal is almost entirely wanting.

Agriculture.

Agriculture is the chief business of Montgomeryshire, together with some manufactures which depend immediately on its great production of wool. The arable lands are chiefly confined to the vales, while the uplands are devoted to the pasturage of sheep and cattle. The hills form almost entirely sheep walks, and the flocks, like those of Spain, are driven from distant parts to feed on them during Summer. The farms in the small valleys are in those cases only appendages for Winter habitations and provisions. Only a small portion of the grass lands, chiefly those in the vales of the Severn and Virnwy, are adapted for fattening cattle. Here a few are annually fed for the Shrewsbury market. The cattle are chiefly of a provincial kind. The sheep are of two kinds, one peculiar to the Kerry hills, the only variety in North Wales that produces perfect wool, the other a black-faced, fine-woolled kind bred near Welsh Pool. A breed of horses, peculiar to this County and that of Merioneth, is much used here.
